The Second Day.

It was just 9 A. M. when the first gun was fired, the opening event having twenty-eight entries. The weather was very pleasant, the sun being warm and clear, the air pure, and the wind just strong enough to make the flight of the targets interesting. During the day a large number of visitors occupied the seats of honor, among them being a goodly proportion of ladies, who evinced deep interest in the skillful work. During the afternoon Milton F. Lindsley, superintendent of the American Wood Powder Co., who reached town on Tuesday night, gave an interesting exhibition of rapid second-barrel work, which was generously applauded by the spectators.

The programme events went off in rapid order, the scores being good all the way through. The amount of added money was $155, as on the opening day, and there were the same number of average premiums as well as special premiums in No. 4 event. After a hard struggle the average premiums were won as follows: E. D. Miller, 91 1-10, fine moquette rug; S. W. Rhea, 88 2-10, fine derby hat; A. F. Smith, 87 6-10, silver-mounted alligator cigar case; L. J. Alston, 87, 6¼lb. keg black powder; R. Van Gilder, 85 8-10, 100 loaded quick snot shells.

As usual, there were a number of ties for the premiums in event No 4, but the final winners are given below in order from first to eighth: E. D. Miller, year's subscription FOREST AND STREAM; S. J. Dolive, 6¼lb. keg wood powder; H. Smith, rocking chair; Jas. Jordan, 100 loaded wood powder shells; R. Gilmer, bag shot; J. Slocum, 100 Laguiappe cigars; Geo. Wilson, 100 loaded quick shot shells; F. S. Stewart, 100 loaded wood powder shells.

It was 4:30 when the programme was finished, and after shooting a couple of extra events the party started for their hotels or homes.

The Final Day's Contests.

As a rule a third day is usually devoid of special interest but in this instance there was an exception to the general rules. The morning opened cloudy and threatening but along toward noon the clouds broke and the sun showed its face. Shortly after dinner, however, the air changed, becoming considerably cooler, the wind began to freshen and the clouds to thicken. By 2 o'clock everybody feared rain, but it was not until 3:30 P. M., when No. 9 event was in progress, that the clouds broke. But when they did break they caused a stampede for a few moments, the rain coming down in torrents and driving everybody to shelter. It soon slacked, however, and the programme was finished by 4:30 o'clock, after which a couple of open sweeps wound up the tournament. The attendance during the day was nearly as heavy as on the previous days, and it would have been still better had it not been for the threatening aspect of the weather.

The contest for average moneys during the day was a hard and close one between Miller, Wagner, Rhea, Hunter, A. F. Smith,

A. E. MEAD.

Roger Van Gilder and Jordan, and the fight continued to the finish. The following table will show how the chances were at the end of each event, the figures showing the number of targets that each man had lost:

	1	2	3	4	5	6	7	8	9	10	Ave.
Miller	2	4	7	9	9	12	14	17	17	17	90
Hunter	2	4	5	8	8	12	16	17	18	18	89 4/10
Wagner	2	4	5	7	8	12	13	16	17	18	89 4/10
Rhea	2	5	7	10	12	14	14	15	18	18	89 4/10
R. Van Gilder	0	3	7	10	13	17	17	19	20	21	87 6/10
A. F. Smith	3	4	7	9	9	15	18	20	22	23	86 5/10
Jordan	4	7	8	11	13	14	17	20	21	24	85 8/10
Johnson	0	2	7	9	10	15	17	21	23	27	83 4/10

When Miller went in to shoot in the ninth event he warned his opponents to "look out for breakers," as he proposed to "break the next 30 straight."

"A little bit of bluff, Enoch," said those who were crowding him, "but even if you do break straight we'll make you think you've been to a 'shooting match.'"

And they did, as the above table shows, Hunter losing his first target and breaking 29 straight, while Billy Wagner lost only 2, Dr. Rhea 3, R. Van Gilder 7 and James Jordan 8. This was as

neat a struggle as one often sees, and in keeping his promise to break 30 straight Miller proved that his nerve and staying powers are still under good control.

And by the way, this Joe Hunter, who pushed the boys so closely, is a revelation to the craft. Hunter is one of the most prominent and popular pension attorneys in the South, having his headquarters in Washington, D. C., where he employs over a score of clerks. Joe has spent the best part of his time for a couple of years in wielding the rod and gun, being an enthusiastic sportsmen, but until the present season he had done very little target work. When he ran up his big averages at the Capital City Gun Club's tournament the "talent" smiled, saying "Wait till he gets on strange soil and among strange people and see how soon he'll prove to be an 'in-and-outer!'"

But for once the "talent" was mistaken, as Joe waltzes down to Tennessee soil and rolls up averages of 94 4-10, 85 8-10, and 89 4-10 in three days work, and this while shooting at unknown angles. He will bear considerable "watching" at future tournaments.

Another man who proved himself to be a "stayer" is Mayor S. W. Rhea, whom I have previously mentioned in connection with the Bristol Gun Club. Mayor Rhea is a man about 6½ft. in height, weighing about 195lbs., with a sandy complexion, the true "shooting eye," and an inexhaustible fund of good nature, which enables him to take either victory or defeat with equal grace.

Roger Van Gilder, secretary of the local club, and his brother Sommer, the club's popular captain, are both enthusiastic and expert shots, and considering the fact that they did all the hustling besides a large share of the clerical work during the tournament, their work was highly creditable.

"Good Old Billy" Wagner, who a few years ago ranked among the best target shots in the country, is coming back into his old-time form, and will soon make the boys hustle to beat him. A little over a year ago Billy was afflicted with some sort of a kidney trouble, which caused him to temporarily retire from the arena; but he is now recovering his health, much to the delight of his shooting friends.

Lemuel J. Aston, whom I have mentioned in connection with the Lefever Arms Company, is another rattling good shot and one who will surprise the talent at the coming New York State shoot at Syracuse.

Auburn-haired Charley Ross, spectacled Frank Mead, his brother Arthur, James C. White, Thomas C. Eldridge, S. B. Dow, J. E. and J. M. Ross, all are first-class shots and genial fellows withal.

Frank Mead is considered, when in condition, one of the best shots in the Knoxville Gun Club, but at present he is unable to do a great deal of shooting, having just began to recover from an eight-months' sickness. To Mr. Mead the writer is indebted for a very pleasant drive, taken on the morning after the close of the tournament, all the sights in and about the city being taken in en route.

Messrs. Dolive and Irvine, who shot through all the events, and made a good showing, hail from Orlanda, Fla., and were in Tennessee on a trip which combined pleasure and business.

The following is a list of the prizes won in order in event No. 4 on the final day: E. D. Miller, year's subscription *Outing*; J. H. Hunter, 6¼lb. keg wood powder; Paul North, rocking chair; R. Irvine, 100 loaded wood powder shells; J. Dolive, bag shot; J. C. White, 100 fine cigars; A. E. Mead, 100 loaded quick-shot shells; C. H. Townsend, thie straw hat.

This event had rather a peculiar termination. There were 28 entries, the event being at 20 singles. When the scores were footed up it was found that of the 28 the high score was 18 and the low score 12, a difference of only 7 targets between high and low scores. This is a showing which is seldom made at any tournament. There were of course only seven winners for the eight premiums, and when the disposal of the eighth premium was discussed the management insisted upon it being accepted by "yours truly." Thus it is that a non-contestant is credited with winning a prize.

The following is a list of the premiums awarded for the best averages in all regular events during the third day: E. D. Miller first, handsome silver cup; J. Hunter, T. W. Rhea, Wm. Wagoner second, dressing case; R. Van Gilder third, steel engraving; A. F. Smith fourth, 6¼lb. can black powder; Jas. Jordan fifth, 100 loaded quick-shot shells.

The following scores were made for the special premiums offered for the best aggregate scores made in No. 4 event during the three days:

1. } E D Miller..... 19 19 18—56
   } Wm Wagner.... 19 19 18—56
2. R Van Gilder.....18 19 17—54
3. J H Hunter.....19 17 17—53
4. S Van Gilder.....19 15 18—52
5. C C English .....16 18 16—50
6. A F Smith.....15 16 18—49
7. J Dolive.....16 18 14—48
8. C B Ross.....13 16 18—47
9. W A Connor.....12 17 17—46
10. R Irvine.....15 15 15—45

The premiums were as follows, the Smith gun being won by Miller on a shoot-off: 1st, L. C. Smith hammerless gun; 2d, fine etching; 3d, $5,000 one year paid up accident insurance policy; 4th, box 100 perfectos cigars; 5th, meerschaum pipe; 6th, cut glass wine set; 7th, traveling bag; 8th, fine silver flask; 9th, gents toilet set; 10th, cut glass bottle filled with fine extract.

The special premiums offered for the highest aggregate scores during the three days in No. 6 event were won in the following order:

1. C D Miller.....23 25 22—70
2. J H Hunter.....24 22 21—67
3. S W Rhea.....21 21 23—65
4. A F Smith.....23 22 19—64

These were the premiums: 1st, hammerless gun; 2d, solid silver flask; 3d, pair of fine opera glasses; 4th, silk umbrella. Wm. Wagner, C. Ross and James Jordan tied with Hunter for second premium but the latter won on the shoot-off. Alston tied with Rhea for third premium and was shot out, as was North who tied with A. F. Smith for fourth premium.

After the party left the grounds they repaired to the sporting goods store of George Brown on Gay street where the prizes were distributed. The next thing in order was the disposal of supper and packing of grips. This completed a party comprising Dr. Rhea, D. C. English, E. D. Miller, J. H. Hunter, Wm. Wagner, S. T. Anthony and the writer accepted an invitation from Mr. S. B. Dow to visit the rooms of the Chilhowee Club where they were handsomely entertained. The evening was passed with friendly pool and billiard contests until near midnight when the party returned to their respective hotels to prepare to leave for their homes on the 1:52 A. M. train. At 1:15 I was obliged to say "good-night" to the party as business nessecitated my remaining over until Friday noon. A good night's rest and a pleasant drive with F. S. Mead, the ride combining both business and pleasure wound up my stay in Knoxville and when I started away at 12:20 on Friday noon it was with sincere regret at having to leave the place and the genial-hearted sportsmen who had made the stay so agreeable.

In summing up this tournament I wish to express on my own behalf as well as on behalf of the others who attended from the northern section of the country my appreciation of the royal treatment we received as well as of the masterly manner in which all the details were attended to. From the first to the last shot not a hitch occurred, and not once was there heard a complaint or a growl of any kind. The members of the club one and all were untiring in their efforts to cater to the comfort of the shooters and to keep the events running smoothly and promptly, and in no particular did they fail. Their action in abolishing the obnoxious "expert" rule is one which will endear the club to all true sportsmen, and will serve to greatly swell the entry lists at their next tournament.

As a sort of a wind-up argument I can do no better than to quote the expressions of some of the participants:

E. D. Miller.—The finest tournament and the fairest lot of sportsmen I've seen this year.

J. H. Hunter.—A dandy shoot, a daisy programme and a lot of entertainers who are almost good enough to be pension sharks.

Wm. Wagner.—A club comprised of gentlemen who believe in acting gentlemanly at all times.

M. F. Lindsley.—If you can name a better tournament to date do it right away.

L. T. Alston.—If you can do any better than this in the North don't forget to let me have the dates.

Mayor S. W. Rhea.—The boys spread themselves in great shape and pleased everybody.

J. T. Anthony.—This was a tournament worth attending and we've met a lot of sportsmen who are all gentlemen.

Paul North.—Well, boys, you've made a great hit, and I'm deuced glad I came.

The scores of the final day's shoot are given below:

C. H. TOWNSEND.

Kansas City.

KANSAS CITY, May 26.—An interesting 50-bird race took place at the Kansas City Shooting Park on Monday afternoon between Frank J. Smith, president of the Kansas City Gun Club, and W. B. Bryant, of the Gate City Club, and the veteran Smith defeated his opponent by a score of 42 to 41. The race was a friendly one, and Oscar Cogswell, treasurer of the Missouri State Association, was selected as referee.

The day was a pleasant one, and the birds generally were strong, hard flyers and quick to wing, this being especially the case from the tenth to the forty-fifth bird, and both men made some wonderfully clever kills, Smith particularly distinguishing himself by some remarkable work at long range with his second barrel. The score:

The Stockyards Gun Club, organized last week, held its inaugural shoot at the Kansas City Shooting Park on Monday last. The club has a membership of twenty, but only fourteen entered for the club trophy, the conditions of which race is 15 single blue-rocks, American Association rules, rapid firing system. Being the first time that many of the contestants had shot at targets, the scores were not up to championship form. George Hockwell, an old live-bird shot, and Bob Bass, a good man in the field, tied on 10 for the medal, and in the shoot-off Hockwell won.

The Kansas City Gun Club held its regular monthly medal shoot this afternoon. There were nineteen entries, and the shooting generally was high class. J. B. Porter, D. S. Gordon and J. P. Jackson tied on 10 straight, and in the shoot-off Porter won. The score was as follows: J. B. Porter, D. S. Gordon and J. P. Jackson 10; J. R. Elliott, J. A. Bolen, D. Hughes, F. J. Smith, Oscar Cogswell, W. S. Halliwell and J. L. Porter 9; J. K. Guinotte and George Mock 8; E. W. Kinnan, C. Dold, Geo. B. Orr and C. F. Holmes 7; W. G. Peters 6; J. E. Guinotte and M. Fisher 5.

Mr. Gates Will Try Again.

SYRACUSE, N. Y., May 24.—H. L. Gates of this city and C. H. Mowry of Syracuse, shot a match at 100 kingbirds each at Maple Bay to-day, the result being Mowry 85, Gates 76. The wind blew a gale and the targets consequently took some very erratic flights. Mr. Gates is by no means satisfied with the result and will give Mr. Mowry another go in the near future.

DRIVERS AND TWISTERS.

THE Interstate Manufacturers' and Dealers' Association's tournament, to be held at Woodlawn Park, Long Island, on June 7, 8 and 9, is expected to be one of the biggest affairs of the season. The shoot will be held under the direct management of the Fountain Gun Club. A decided innovation will be made, inasmuch as on the last day the shooting will be at live pigeons. On the first two days Keystone targets will be used. Trains will connect with each boat at Bay Ridge, all trains stopping at the grounds. As this will be the first Association tournament ever held in this vicinity a big crowd of spectators are expected each day. The tents of the various firms will be pitched to the left of the club house and will present a picturesque appearance. The tent of FOREST AND STREAM, as at previous tournaments, will be the centre of attraction for all the shooters. Thursday will be live bird day, and a number of very interesting events are scheduled. The events will vary from 5 to 10 birds.

* * *

Next week's tournament of the Illinois State Sportsmen's Association will be a great affair, in fact rumor would lead one to infer that it will exceed any previous tournament held in the West. FOREST AND STREAM will be there in the person of E. Hough, who stands at the head of the list among sporting writers in this country.

* * *

Shooters are advised that the tournament of the Atlantic City (N. J.) Gun Club will begin on July 4 and end on July 7. The original announcement gave the dates as July 5, 6 and 7. Shooters from Pittsburg, Staunton, Washington, Williamsport, and various parts of New York, New Jersey and other States have promised to be on hand to enjoy the shooting and bathing.

* * *

William R. Hobart informs us that the next shoot of the New Jersey Trap Shooters League will be held on Saturday, June 11, on the grounds of the South Side Gun Club, near the Emmett street station of the Penn. R. R. in Newark. Two sets of five traps each will be used, and it is expected that 10,000 targets will be thrown.

* * *

In talking over guns and other parts of a shooting outfit at Knoxville one of the party asked E. D. Miller how many sets of barrels he had worn out in the last three years. "Not one," said the Springfield man, "this Parker gun I have used for three years and still use the set of barrels that were on when I received it. Out of that set I have fired at least 35,000 shots, and beside that I suppose at least 10,000 shots have been fired by friends at various tournaments."

* * *

The Standard Keystone Trap and Target Company has just issued a new edition of its manifold trap score book, the price of which is $3 per copy. This is a handy thing for clubs.

* * *

The White House Gun Club will hold a big tournament at White House, N. J., on July 12 and 13 and a large turnout is anticipated. White House is about an hour and three-quarters' ride from New York on the main line of the N. J. Central.

* * *

The N. Y. State Association for the Protection of Fish and Game will have a royal time at Syracuse on June 13 to 19 inclusive, when its thirty-fourth annual convention and trap tournament will be held at Maple Bay under the auspices of the Onondaga County Sportmen's Club. As a special inducement to non-residents of the State the management has generously decided to use two sets of traps in the target events, one set to be confined to the use of residents of New York State, and the other set to be open to the World. There will be over $2,000 worth of merchandise prizes to be awarded in two events on June 14, in addition to a number of cash prizes. These will be State events. Charley Mowry of the *Sporting Goods Gazette* says the tournament will be "the greatest on record," and we know Charley enough to take his word.

* * *

Anent the above it may not be amiss to state that the Syracuse Rifle Club, whose ranges adjoin the grounds of the Onondaga County Sportsmen's Club, will offer a big attraction in the way of a prize rifle shoot to be held on June 14, 15 and 16. Some rattling good prizes will be offered. There will also be a fly-casting tournament on the lake on June 16.

* * *

The members of the Knoxville Gun Club were so well pleased at the success of their tournament that they propose adding $1,000 to their purses in 1894.

* * *

The Rocky Mountain Sportmen's Association will hold its fourth annual tournament June 21 to 24 inclusive. It has not yet been definitely decided where it will be held, but it will in all probability be at Colorado Springs. The secretary is Milward Hewitt, Denver.

* * *

The Bath Gun Club (formerly Sagadahoc Gun Club) will hold their first annual tournament June 7 or 9, to dedicate their new grounds and club house. All the clubs in the State will participate, and the event will be one of importance in that section of the State.

* * *

It is probable that the big match between teams from Connecticut will be shot during the Keystone tournament to be held at New London in August.

* * *

June 18 will be live bird day at Syracuse, and 2,000 pigeons have been procured for the occasion. On the other days kingbird targets will be used.

* * *

The fall tournament of the Wilmington Rod and Gun Club of Wilmington, Del., will be held on Wednesday and Thursday, Oct. 12 and 13. All communications sent to J. K. Woodward, Sec'y, No. 107 East Eighth street, Wilmington, Del.

* * *

Hereafter the clubs with the North handicap system are likely to have much better entry lists than those which use the abominable "expert" and "amateur" classification. No man in this country can afford to shoot from unknown traps against the average amateur.

South Side Defeats Park City.

NAUGATUCK JUNCTION, Conn., May 25.—The following was the result of a team match, eight men to a team, twenty-five Keystones per man, between the South Side Gun Club of South Norwalk and the Park City Gun Club, of Bridgeport, shot here to-day:

South Side Gun Club.		Park City Gun Club.	
Hendrie	20	Blakeslee	19
Ferris	16	J A Wilson	18
Seymour	18	Wm Wheeler	20
Coleman	14	Dean	16
E H Fox	20	Longdon	15
Sanford	17	Hubbard	14
Drake	16	Smith	16
Northrop	12—133	Thomas	12—130

Oneida County Sportsmen's Association.

UTICA, N. Y., May 27.—This was a rainy day, but nevertheless our badge and club prize events were fairly filled and the scores were fair. Below are given the results:

Badge shoot, 25 singles:

Kallies	18	Kilbourne	8
Wheeler	14	Hanuing	10
Hunter	23	Harris	19
Smith	20	Crouse	14
Lane	18		
Gilmore	15		
Hicks	16		

Club shoot, 25 singles:

Kilbourne	24	Mayhew	22
Hunter	25	Gilmore	18
Smith	24	Lane	23
Harris	24	Crouse	21
Wheeler	18		
Dexter	20		
Hicks	17		

G.

Ohio Trap Shooters' League.

COLUMBUS, O., May 24.—*Editor Forest and Stream:* I neglected to state in the report of the Ohio Trap Shooters' League tournament held in this city May 10, 11 and 12, that bluerock targets and traps were used exclusively. Two sets of five expert traps with Paul North's electric trap pulls completed the outfit. They all worked satisfactorily. Mr. North sold a set of the pulls to a club whose members were present and pleased with the simple device. Geo. W. Osborn, Toledo, O., won first average in three days' shoot, M. C. Sanford, Clyde, O., second; Osborn won by ten birds. Mr. Sanford won the elegant onyx and gold watch chain donated for first average in three silver cup races by the Tracy-Wells Co., wholesale dealers in sporting goods, Columbus, O.

J. E. PUMPHREY.

Fifteenth Iowa Annual.

DES MOINES, Iowa, May 24.—Mudhens were playing tag on the grounds of the Highland Gun Club, of Des Moines, this morning. A large, corpulent muskrat sat on the cashier's desk and a spotted watersnake executed a serpentine dance upstairs, where you usually go to get lunch. A daring expedition planned by the president went into the club house in a boat and rescued a few of the archives. There was a good deal of green mud on the archives and the L. C. Smith cup had four frogs in it, but Mr. Perkins had the cup and the archives cleaned up, and allowed that the fifteenth annual meeting of the Iowa State Association could go on all right, inasmuch as the tall men would not need boats and the short men could have boats if they wanted them, and the trappers could sit on a ratt. Mr. Converse, his associate in crime, spread out his toes, gazed with pride at the nice pink web which now adorns those appendages on all Des Moines shooters and inquired, "What's the matter with swimming?"

There were many visitors from other points in Iowa, however, and also a few from outside the sea-board State, who objected to swimming or shooting from a boat. To humor these, the Des Moines boys abandoned the idea of a marine drill on the bottoms of the turbulent Des Moines River and sought out new grounds. They found a lovely spot, high and dry, at Valley Junction, five miles west of town on the Rock Island road, nearby where a pretty little creek debouches into the evil-minded Raccoon River. Here was a wide amphitheater, nearly ringed by woods and green sloping hills, and all the scene was fresh and beautiful. As carpet nature had spread down a cloth of green and gold, for in Iowa dandelions are just now in bloom. Upon this carpet the association management spread their white and snowy tents, and thus, under circumstances whose charm is rarely equalled at a shooting tournament, there began to day one of the pleasantest and most important events of the whole shooting circuit.

The weather to-day was cloudy by fits, with a brisk breeze, and occasional drops of rain, but the day was good for shooting. The attendance, in spite of the ravages of the Iowa floods, was good. Only targets were shot to-day.

One feature was noticeable, and that the care taken for the shooters' comfort. We have a big shoot in Illinois each June, but it is no such pleasant affair as this one, even under its impromptu arrangements, because at it the shooters are not so well taken care of. To-day, in the big dining tent, at a nice series of clean little tables, there was served a luncheon which puts to absolute shame the stand-up-and-gobble affairs of Kansas City, Chicago, and a lot of other places which ought to do better. Let us be seemly in our shooting these days, for the shooter of to-day is an advancing man. Credit to Des Moines, because she remembered that, and treated the shooters like gentlemen. This lunch tent was a goot deed in a naughty world.

Possibly there may be a few depraved mortals who would like to look at scores. They will find most of these in condensed form. No paper on earth to-day can keep up with all the shooting if it prints target scores in full. To run such scores in full for one meeting is to be unjust to some other meeting equally important. In a rapid-fire target shoot, under the present mechanical bang-bang, divide-the-ties, hurry-up-and-start-the-next-shoot system, it makes no difference to the great North American reader whether a given shooter missed his first or his seventh bird in a certain 10 birds sweep. The great North American reader may think it does, but it doesn't. Customs change. Necessities make customs. FOREST AND STREAM has been the first journal to see the necessities in this case, and has set the pace as usual. The other journals are following, as usual. Very soon the great North American reader will find only the target totals in any paper which prints the shooting news. He will be glad of it, too. He will see more shoots and get more fresh news. In one year there has been a vast shaking up in the methods of sporting journalism. FOREST AND STREAM has done most of the thinking over these matters. All the others will swing into line—in fact, are doing so now. Quite a long line. FOREST AND STREAM in front. May the devil take the hindmost.

Sure-fire, five moneys in each shoot, ties divided, five traps, pulled by P. Nonh electric piano, everybody walked. Shoot No. 1, 10 singles, $1:

Mr. E. D. Trotter of Kingsley, won the cup. Mr. Trotter is a member of Le Mars Gun Club, and comes from the English colony of that place. He shot a hammer Greener, old and weary, which had been restocked, apparently with a piece of pine painted red. It was a horrible looking gun. He used wood powder and 7s, loaded by Perkins & Perkins of Des Moines. Mr. Trotter is 29 years old, blonde, and on the whole better looking than his gun.

The L. C. Smith cup was won last year by Charlie Budd. He kept tobacco in it. I don't think he ought to do that.

THE CONVENTION.

The annual convention, held at the Kirkwood parlors this evening, was an animated and encouraging meeting. The sentiment for actual protection was clearly manifest. It is wrong to call the Iowa Association merely a trap-shooting body, for its members and nearly all they can under their laws to better the supply of game and fish. Since the election of the president of the association, Mr. J. G. Smith, of Algona, to the State Legislature, there has arisen a great interest among his shooting friends in protective work. Mr. Smith is doing all he can in the Legislature, and he has the cordial support of all these Iowa shooters.

The following representation was on hand: Messrs. G. E. Converse, G. E. Hughes, A. C. Miller, Chas. Grimm, Geo. K. Martin, J. Kersker, W. Burnett, F. C. Cruttenden, C. O. Perkins, J. A. Yearnshaw, A. J. Zwart, C. W. Budd, Nelson Royal, S. P. Selby, G. P. Christiansen and W. L. Read, all of Highland Gun Club, of Des Moines; Mr. Lindley, of Panora Gun Club; Messrs. Mose Chandler and W. M. Evans, of Red Oak Gun Club; Messrs. E. D. Trotter, H. J. Trotter, C. A. Tyler, of Le Mars Gun Club; Mr. W. F. Smith, of Webster City Gun Club; Messrs. J. G. Smith, S. L. Sessions and G. S. West, of Algona Gun Club; Messrs. E. E. Hageman and Chas. A. Jekel, of Independence Gun Club; Mr. John Georgson, of Kelley Gun Club; Messrs. J. F. Kroy and Lew Maser, of Forester Gun Club, Davenport; Messrs. W. L. Butler and C. H. Wells, of Boone Gun Club; Messrs. H. H. Arff and E. G. Abbott, of Charter Oak Gun Club; Mr. Wm. Butler, of Clarinda Gun Club; Mr. D. K. Douthett, of Osceola Gun Club; Messrs. N. S. Young and Al Runge, of the Big Four Gun Club, Burlington; Mr. J. M. Thornton, of Knoxville Gun Club; Messrs. A. Walker, M. Walker and F. W. Porterfield, of Atlantic Gun Club.

THE PRESIDENT'S ADDRESS.

Mr. Smith, president of the Association, addressed the meeting in the following remarks:

"GENTLEMEN OF THE ASSOCIATION—Fifteen years ago a small number of sportsmen from different parts of Iowa met in the city of Des Moines to organize a State association for the protection of game and fish. It was a well-known fact that if something was not done our woods and prairies would soon be without game and our lakes and streams be without fish. At that time there were not over five or six shooting or fishing clubs in the State, and a man who was a member of a shooting or fishing club was looked upon as one who was trying to interfere with the rights of his fellow men. Most people acted as though they thought the game and fish would last forever. The few sportsmen that met here fifteen years ago soon came to the conclusion that we must have better game laws and that those laws must be enforced. It oftentimes takes public sentiment a long time to move in the right direction, but that movement in the right direction is sure to come. And to-day we find but very few people in the State that do not think we ought to have our game and fish laws well enforced. They have seen the game and fish disappear, and their only hope is the enforcement of our game and fish laws. Clubs are being organized in almost every town in the State, and although not as well represented at the State Association as I think they ought to be, most of them are doing something toward protecting the game and fish.

"The twenty-fourth General Assembly appropriated $4,000 for the support of the Fish Commission, and we hope it will be well used.

"We have had a change in the office of Fish Commissioner, and I hope we have a man in the office who will interest himself in the work and do it well. There is no reason why every lake and stream in the State of Iowa should not be well stocked with fine fish, and I ask every member of this Association and every member of a shooting or fishing club in the State to help the Fish Commissioner in his work. Let our legislatures see that the money appropriated is well spent and we shall have no trouble to get all the money needed for the work. Hundreds of thousands of dollars are sent out of Iowa every year for fish. With good work on the part of the Fish Commissioner a large share of the money could be kept at home.

"The old saying that "all work and no play makes Jack a dull boy," is a very true one. Give the boys a fish pole and a gun. Let them rove over the prairies and sail on the lakes and streams and we will have strong healthy men. The best men of our nation have been those man who have taken their rod and gun and gone to the forest and prairies, the lakes and streams, in search of fish and game, and left all care behind. They exercise the mind and muscle and at the same time breathe the pure air of heaven."

Mr. Nelson Royal, the able secretary for the past year, continued the story of the efforts of protective legislation, and predicted better results soon. He begged the members to remember that this was the principal object of the Association.

Mr. C. O. Perkins, treasurer, submitted his report, showing a balance on hand at the beginning of this shoot of $249.40.

Upon motion of Mr. Sessions, of Algona, the president was requested to put forward the new State Fish Commissioner, the Hon. Judd Griggs, lists of the officers of all the State clubs, with the assurance that such clubs would give all the local assistance in their power.

After spirited discussion on the nominations for next year's meeting place, the town of Clear Lake, Iowa, was chosen. Clear Lake has no gun club, but it has Charlie Grim. The nearby towns will take as much interest as though it was their own meeting and the shoot will be a success. This year shooters were on hand from all the corners of the State. Next year there should be an attendance equally good. Clear Lake is a pleasant spot and no one will regret the trip.

When it came to the election of officers it was realized that there was only one man for president, the same who has had an air-tight cinch on the position for many years, Mr. J. G. Smith. The list was chosen as below: Pres., J. G. Smith, of Algona; First Vice-Pres., N. S. Young, of Burlington; Second Vice-Pres., C. A. Tyler, of Le Mars; Sec'y, Chas Grim, of Clear Lake; Treas., S. S. Sessions, of Algona. Directors—C. W. Budd, of Des Moines; W. F. Hammond, Grinnell; W. H. Evans, Red Oak; J. H. Kroy, Davenport; E. E. Hegman Independence. Law Committee—L. L. L. Delano, Atlantic; Nelson Royal, Des Moines; J. M. Gordon, Burlington.

General discussion of the common cause ensued. Members from the upper portion of the State told how the prairie chicken of Iowa had been eaten up by the freezers, which remained a constant incentive to shooting before the season opened.

Mr. Sessions found it hard to catch the law-breakers. Mr. Grim cited cases where they had been caught. Mr. Smith told of several arrests and fines. Adjourned at 11:30 P.M.

Wednesday, Second Day, May 25.

The weather was very pleasant, a brisk breeze after noon making the live birds faster. The live bird shooting was the greater attraction, 1,100 birds being shot. These averaged about as birds in this parallel do at this season; some very good, some very poor.

The sport of live bird shooting cannot be said to have been exemplified here to-day. In the hurry to run off the events the squad system, walk around, five traps, was adopted. As soon as a man had shot at No. 1 trap he passed to No. 2, and the puller went with him, the King traps, patent flapper, being pulled by loose ropes. The shooter in each case, therefore, stood directly behind the trap which held his bird, and could cover the trap direct. This is mere tournament work. It is not sport and it is not pigeon shooting, and one can not forbear surprise at seeing it here, where the study should be not to hasten through a programme, but to show sport at its best.

With all due respect also it is suggested that there should not be again seen the method of gathering birds in use to-day. In these days of advanced methods at the trap, each bird is gathered as soon as shot, and the pitiable spectacle of crippled birds is not presented. This is the modern method, and it is now general. It should have been followed here by all means. Here no birds were gathered until all five traps were shot down. At best, this is a bad method, but even this method was not observed. At 10 A. M. I saw 25 birds gathered at one time, cripples and all. At 2 P. M. I saw 16 birds brought in at one time, and of these 7 were flapping. It is not criticism, but only kindness, to suggest that it is due to modern sportsmanship that such practices as the above should not occur at a State shoot, or at any shoot. It is true that time can be saved and money made in this way, but is not far more lost than all that can be gained? It costs but little to hire an extra boy or so to gather birds. These should be instructed to kill a crippled bird at once, and never to indulge in such barbarities as throwing a dead bird at a living crippled one. The flower of a State's sportsmanship, such as we saw here, can easily teach boys and men that shooting is not inhuman. It can and should do this. It is believed, however, that the necessity for this reluctant comment arose not so much from deliberate plan as from the hurry and confusion of the effort to push the shooting rapidly as possible. The scores:

THE FLOOD SUFFERERS' BANQUET.

It would be hard to imagine a pleasanter affair than the banquet extended visiting shooters by the Highland Gun Club, of Des Moines, this evening. There were 63 gentlemen present, and these discussed an elaborate menu, following which an hour of entertainment was passed in listening to the silver-tongued exponents ordered up by Mr. Royal, who presided happily as toast master for the evening.

Mr. Ward was called upon to speak for the Highland Gun Club. He described the history and progress of that fine body, and extended hearty words of welcome to the visiting contingent.

Mr. C. A. Tyler, of Le Mars, spoke of the pleasant time enjoyed by all, and predicted greater growth for the Association. Mr. N. S. Young, of Burlington, and W. L. Read, of Des Moines, made brief and felicitous addresses. The representative of FOREST AND STREAM was also called upon.

Hon. Judd Griggs, now of Spirit Lake, Ia., and since April State Fish Commissioner, spoke of the prevailing lawlessness in fish matters. He doubted whether there were half a dozen fishways in Iowa. He had lately taken 6,000yds. of seine out of the Mississippi River. He had an opinion making the Muscatine slough an Iowa water, and proposed to make it hot for the market fishers who marauded there. They put seines and gill-nets across the mouths of all the rivers along the Mississippi in the running season, and it was no wonder that no fish got up the streams. He intended to stop that. He might not be a scientific man, but he knew a seine when he saw it, and he didn't agree with ex-Governor Larrabee that the sole duty of the Fish Commissioner was to run the State hatchery. There should be no net permitted by law closer than 10 rods to the mouth of any river. The law permitting spearing of suckers and buffalo fish should be changed, for the spearers speared everything. There should be a law permitting the sale of confiscated nets. He was glad the sentiment of the shooters was with him, and should be glad to see the duties of State Game Warden added to his office.

Mr. Griggs's remarks were carefully listened to and applauded warmly. Indeed all through the evening there was a very marked interest shown in the matters of protection. It is evident that Iowa is waking up on this, and will now do more practical work than ever before.

Mr. Richards, representative of the *American Field*, was called for, and made a pleasant speech in full accord with the tenor of the evening. The sporting instinct was inherited, he said, and once born in a man, it was hard to kill. He remembered well his first pistol and his first gun, and the powder and ball he used to steal in his father's absence. The sportsman of to-day needed no apologe, for his work was not altogether one of destruction. Dr. Porterfield, of Atlantic, spoke briefly. Uncle "Mose" Chandler, of Red Oak, well on to 65 years of age, thought that perhaps he was too young to have much experience in shooting or talking, but he intended to keep on shooting, at least, till he learned to get more than half his birds. Mr. C. W. Budd said that rather than do any talking he would draw his money and pull out. Mr. Chas. Grim, of Clear Lake, said he would see everybody again next May.

The banquet was the most enjoyable feature of the shoot. It was quiet, dignified and highly commendable in every particular. Some such feature would help the tone of every tournament, though perhaps not every tournament could offer one so fortunate and well ordered.

Thursday, Third Day, May 26.

The weather continued pleasant and the shooting continued steadily, although some of the shooters had been obliged to leave for home. The live bird coops were empty by noon, and after lunch each train bore away its quota of shooters. The tournament closed with the day. Following are the scores of the day:

No. 12, 6 live birds, $4:

Grim	210012—4	Hughes	101011—4
Bingham	121121—6	Leopold	202112—5
Peck	100022—3	Converse	110110—4
Christiansen	011020—3	Ketchum	111011—5
Runge	111110 5	Berry	101111—5
Budd	211112—6	Hoover	100110—3
Young	111122—6	J B Smith	212212—6
Abbott	011021—4	H J Trotter	002001—2
Arff	011111—5	Evans	202111—5
Chingren	122111—6	Hagerman	211101—5

No. 10, 7 live birds, 5 unknown traps, $5:

Bingham	0122212—6	Christiansen	0022101—4
Arff	1202011—5	Berry	1000110—3
Abbott	0200211—4	J B Smith	0100022—3
Peck	0220101—4	Powell	1221000—4
Chingren	1120101—5	Budd	2211122—7
Hughes	2022111—6	Carss	2012102—5
Grim	1010111—5	Yearnshaw	0012121—5

The above closed the live bird shooting. The target scores follow:

No. 13, 10 singles, $1.50: J. G. Smith 7, Chingren 9, Hughes 9, Grim 9, Georgson 6, Saul 6, Abbott 8, Durant 8, Hageman 8, Arff 6, Converse 7, Ketchum 2, Berry 6, Powell 8, Bingham 10, Budd 10, Hoover 7. Christiansen 8, J. B. Smith 7, H. J. Trotter 9, Tekel 9, Evans 5, E. D. Trotter 7, Leopold 9.

No. 14, 15 singles, $2.50: Chingren 12, Georgson 11, H. J. Trotter 14, J. B. Smith 13, Powell 14, E. D. Trotter 14, Saul 10, Bingham 14, Grimm 13, Christiansen 13, Budd 15, Converse 11, Abbott 11, Arff 13, Leopold 13, Hughes 12, Hageman 13.

No. 15, team shoot, two men to constitute a team, 40 targets per team:

Hughes	1110111111111111111—19

Extra sweep, 10 singles, $1: Bever 7, Chase 7, Richards 8, Jordon 7, Peck 5, Hoover 9, Russell 7, Angleberger 8, Georgson 7, E. D. Trotter 8, H. J. Trotter 9, Arff 10, J. B. Smith 8, Grimm 8, Perkins 5, Bingham 8, Langley 8, Chingren 5, Hughes 9, Christianson 9, Lewis 7, Searight 9, Wm. Butler 5, Pete Butler 4.

Extra sweep, 10 singles, $1: Budd 6, Georgson 9, Abbott 8, Grimm 9, Perkins 9, Richards 8, Angleberger 5, Sessions 9, Powell 8, Hoover 8, H. J. Trotter 9, Burnett 4, Butler 5, Chingren 10, Hughes 8, E. D. Trotter 8, Hageman 8, Sanford 8. Lewis 7, J. B. Smith 10. Peck 4, Bingham 8, Byers 8, Langley 8, Christianson 8, Searight 6, Chase 7, Arff 6, Berry 6.

Extra sweep, 15 singles, $1.50: Grimm 14, Bingham 12, Budd 13, Georgson 15, Richards 11, Arff 11. Abbott 12, Angleberger 11, J. B. Smith 14, Chingren 13, Hughes 14, H. J. Trotter 13, E. D. Trotter 13, Wm. Butler 6, Langley 11, Christiansen 12, Berry 7, Beyer 11, Lewis 10, Hageman 13, Chase 8, Searight 12, Hoover 11, Sanford 11.

Mr. Christiansen won the individual championship of the tournament and the special prize, $25, for the best average in shoots Nos. 3, 7 and 9.

The following is a summary of the conditions governing in this pleasant and successful tournament: All matches open to the world except Nos. 5 and 11. Highland Gun Club rules to govern. Bluerock traps and targets used. Cost of birds included in entrance fee save in Nos. 5 and 11. The birds deducted from purses. All purses in target matches divided into five moneys, 30, 25, 20, 15 and 10 per cent., except No. 5. Purses in live bird matches divided into four moneys, 40, 30, 20 and 10 per cent., save No. 11. Contestants had the privilege to draw their proportion from any purse in case of ties.

THEY SAID IT.

President J. G. Smith.—We passed a bill through the House at the last session of the Legislature protecting Mongolian pheasants for a term of years. The Senate killed it along with our other bills. A friend of mine had arranged to send on a quantity of these birds from Oregon, and we should have been glad to see the experiment of naturalization tried in Iowa.

C. O. Perkins—Where did I get my sore throat? Why, in looking for a site for the tournament.

G. E. Converse.—About my sore throat? I had to climb a tree to escape the flood, and the wind blew through the branches.

Nelson Royal.—This is tough. I have to try a lawsuit, but I would a lot rather come out and try to shoot.

W. H. Perry.—I see that the Highland Gun Club has bought out the tie men in the fifth prize of the team trophy shoot, that Irish setter up by Claremont. Pass which I offered as a special. I would like to state that that pup is not borned yet, but just taking it as a futurity stakes, a chance in that tie was easy worth $2.50.

Charlie Grim.—The croppy fishing at Clear Lake is good. I shall endeavor to take a lot of you out on the lake next year and drown you. The purity of the trap must and shall be maintained.

Charlie Budd.—Don't pay any attention to anything Charlie Grim may say to you. He is sort of off in his head.

Eddie Bingham.—This dividing up a tie purse among a dozen shooters doesn't leave much. I'd rather cut the cards for the whole business, all or nothing.

S. S. Sessions, Our ossified man.—You may expect me in Chicago at that June shoot. I will have a roll too large to carry in anything but a shawl-strap. I will need two shawl-straps when I come back.

C. A. Tyler.—Wait a minute. If that bird walks this way I'll disfigure it for life. Some fellows can't shoot on the ground.

E. D. Trotter.—I'm thinking of having a new stock put on my gun in the fall.

W. Butler.—I'm a conductor on the Northwestern and can conduct a little, but I'd rather run a train than a shoot. Hear 'em holler!

Mose Chandler.—I broke one target 65yds. Forgot to cock my gun. I'm gettin' sort o' absent-minded, but it don't make any difference when you have a gun like mine.

Hon. Judd Griggs.—They tell me I have collected more fines since April than my worthy predecessor did during his whole term in office. I'm going to see whether there isn't a God in Israel.

Everybody Asked.—Yes, it has been as pleasant a shoot as I ever attended. E. HOUGH.

Mankato Shots at Bluerocks.

MANKATO, Minn., May 18.—*Editor Forest and Stream:* The tournament of the Mankato (Minn.) Gun Club held in this city, May 10-11 and 12 was fairly well attended. The weather the first day was cloudy, with some rain. The second day was clear and bright; the last day was cloudy with some rain. Bluerock targets and traps were used.

No 1, 10 singles. No. 2, 5 pairs. No. 3, 20 singles:

Miantonomis of Newport.

NEWPORT, R. I., May 23.—The Miantonomi Gun Club reorganized May 11 with the following officers: President, Col. John Hare Powell; Vice-President, Wm. Findlay; Secretary-Treasurer, E. W. Openshaw; Captain, John H. Martin. We have at present twelve members and four applications for membership. We will use standard Keystone and bluerock targets and birds. We have our first shoot at our new house on Easton's Marsh on 'Lection Day (May 31). We intend to shoot under the old Association rules, 5 traps set at known angles, trap puller to pull any trap he sees fit. E. W. OPENSHAW, Sec'y.

Some Texas Guns.

SAN ANTONIO, May 23.—A grand shoot was held yesterday by the San Antonio Gun Club upon their grounds at Lakeview. A large crowd of shooters was in attendance and many visitors were present. Quite a number of ladies viewed the shoot from the club's new pavilion and seemed to enjoy the sport very much. The club has made every arrangement to entertain visitors, and gentlemen and their lady friends will always find a welcome.

The medal shoot opened promptly at 3 o'clock and 26 shooters faced the traps with the following scores to their credit. 20 singles and 5 pairs U. S. targets: Shields 9, Barr 13, Brown 20, Grossmann 15, France 21, Vetter 23, Houghtelling 16, Thiele 20, Learn 11, Witchell 13, Rothwell 22, Philips 22, Mitchell 12, Prescott 15, Frank 8, Samuels 8, Newton 11, Stevens 9, McCormack 22, Cones 17, Temple 19, Ryan 17, Vernor 19, Pancoast 17, Scott 18, Canfield 18. The first medal was carried off by Mr. Vetter with a score of 23. Philips seems bound to win the second medal, as he won it from Canfield on the fine score of 22.

The second shoot was a match at 15 singles, 14 men on a side, Thiele and Rothwell choosing, resulted as follows:

Thiele 10, Vetter 9, McCormack 10, Philips 14, Frank 5, Ryan 5, Brown 11, Houghtelling 12, Scott 7, Temple 9, Gossman 16, Barr 7, Samuels 8; total 118.

Rothwell 13, Newton 10, Canfield 11, Learn 8, Cohn 11, Stevens 4, Tendick 12, Mitchell 4, Shields 7, Withell 11, Bryan 7, Vernor 9, Capman 5, France 8; total 120.

Third shoot was at 15 singles, Thiele and Vernor choosing sides, 11 men on a side.

Thiele 13, Vetter 13, Houghtelling 9, Rothwell 13, Newton 10, Temple 6, Brown 7, Grossman 6, Stevens 8, Barr 12, Chapman 5; total 102.

Vernor 11, France 10, McCormick 12, Philips 9, Tendick 9, Canfield 10, Cones 6, Ryan 6, Samuels 7, Learn 7, Witchell 7; total 94.

This shoot wound up the day's sport. Since the last shoot the club has finished its pavilion, and Mr. J. R. Tendick has erected a grand stand for the trap puller and scorer, and had raised a flag upon same. The grounds are now ahead of anything in the State, and improvements still going on. W. L. SIMPSON, Sec'y.

A book to read *now*; and to be put in one's pocket for reading again in camp.

Cloth, 126 pages. Price $1.00.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

SOME anglers labor under the false impression that large dealers and manufacturers charge more for their goods than the keepers of small shops. A glance at our new Illustrated Catalogue and Price List for 1892, which we will mail on receipt of 6 cents to cover postage, will show how much they are mistaken.

ABBEY & IMBRIE,

Manufacturers of All Grades of Fishing Tackle,

18 Vesey Street, New York.

Notice to Fishermen! Cut Prices for 1892!

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down prices and not decreasing the quality, it increases my business every year.

ANTI-STIFF

STRENGTHENS THE MUSCLES

It is a marvelous preparation for Strengthening the Muscular System. With Anti-Stiff there is no faith required; it goes straight for the muscles, and you can feel it at work. It has a peculiarly warming, comforting, and stimulating effect on all weak or stiff muscles and sinews. Quick in its action, cleanly and pleasant in use. Rub it into the muscles every night for a fortnight, and you will be pleased at its supporting and strengthening properties. There is not, nor has been, anything like it till now. It differs from all Oils, Embrocations and Liniments, both in substance and effect. Some Athletes are so fond of it that they rub it all over them.

Price 20c. and 35c. per box.

Trainers size, $1.00.

Wants and Exchanges.

Advertisements under this head, strictly limited to WANTS AND EXCHANGES, will be inserted at the special rate of three cents a word each insertion. The money must accompany the order.

FOR SALE OR EXCHANGE FOR CITY property. Large square country house with wide verandas, 13 rooms, exclusive of halls, attic, pantry, etc. Spring running water, hot and cold, on each floor. Set stone tubs in laundry. Bath room and two closets. House lit from Springfield gas machine, heated with wrought iron furnace. Hardwood floors. Whole inside finely finished. Barn for two horses and carriages. Six acres finest lawn and meadow entirely surrounded with stone wall. *Location unsurpassed*, 45 minutes from Hartford, 3 hours from New York. The Farmington River and several other good trout streams within one mile—one running through meadow. Good grouse, quail and woodcock shooting within same distance. (Squirrels, foxes and coons within easy reach). An ideal spring, summer and autumn home for gentleman with his family. Will sell for $5,000, half cash (one-third of its cost), as I have no further use for it. Address J. H. RIDWELL, Collinsville, Conn., or W. H. HOYT & CO., 5 Vanderbilt avenue, N. Y., or J. C. WASSERBACH, Hartford, Conn.

BEAUTIFUL BIRD PICTURES.

I have several plates of Audubon's Birds which I will sell cheap. These are the edition of 1856, on heavy paper, and give the birds the size of life and in their natural colors. Among the species represented are: White-headed eagle, price $12; duckhawk, $10; pine grosbeak, $7; kingbird, $4; wood wren, $4; black duck, $12; and some others. These when framed would make superb ornaments for a sportsman's dining room. Address J. J. A., FOREST AND STREAM office.

Extended pedigrees of any of the above on application. Bitches entrusted to us receive the best of care. Fine specimens of the above breeds for sale at reasonable prices, including several good stud dogs and brood bitches in whelp.

Young Stock Always on Hand.

IN STUD.

SIMONIDES,

No. 17,068. Black, white and tan.

Winnings: 1st, I. S. Derby, 1889; 2d, Southern Derby, 1889; 2d, All-Age, 1890; 2d, Inter-State All-Age, 1890; 1st, Inter-State All-Age, 1892; 1st, N. O. Bench Show, 1892.

Fee $50.

CAPTAIN BETHEL,

No. 16,147. Black, white and tan.

Is a wonderful field dog, very fast, runner-up Rowdy Rod Inter-State Trials, 1891. Sire of Wun Lung and Glenn. He transmits his qualities to his offspring. All of his get have proved remarkably good ones. Litter brother to Dimple, winner of Southern Derby, 1888.

Fee $35.

RETREAT KENNELS,

Hammond, La.

For particulars and engagements address F. F. MYLES, New Orleans, La.

In the Stud.

REFUGE II.

(Plinlimmon ex Recluse.)

Winner of over forty prizes, including the *medal for the best stud dog*, Agricultural Hall, London, 1891. He is the sire of Refugee, Recluse II., Rudyard Lady, Young Refuge, Highland Chieftain, Baron Clevedon and many other prize winners. He is the best-headed and heaviest-boned dog ever sired by Plinlimmon.

Fee, $60.00.

Champion Kingston Regent.

(Prince Regent ex Lady St. Gothard.)

Fee, $50.00.

Marquis of Ripon.

(Prince Regent ex Lady St. Gothard.)

Fee, $40.00.

Prince Clifford.

(Prince Battenburg ex Lady Dolly.)

Fee, $20.00.

NEW YORK ST. BERNARD KENNELS,

138TH ST. AND THE HUDSON RIVER.

HENRY JENNINGS, Manager.

MENTHON KENNELS' ST. BERNARDS,

PHŒNIXVILLE, PA.,

AT STUD.

The Giant Rough-Coated St. Bernard

LORD BUTE, A.K.C.S.B. 22,029.

As a stud dog Lord Bute has no equal.

FEE $100.

The Handsome Rough-Coated St. Bernard

Lord Thorndale, A.K.C.S.B. 18,337.

A son of Champ. Hesper. A sure stock getter.

FEE $35

Stud Cards and Catalogues on application.

FOX-TERRIERS IN STUD.

Starden's King	$25
Brockenhurst Tyke	15
Reckoner	15
Champion Raby Mixer	15

$100 will be given for the best pup sired by any of these dogs during the year 1892. Prize to be competed for at the New York show of 1893. Donor not to compete.

HILLSIDE KENNELS, LANCASTER, MASS.

Puppies always on hand.

Chestnut Hill Kennels'

COLLIES AT STUD.

Christopher, - - $50.

Wellesbourne Charlie, $50.

30 per cent. off to members of Collie Club.

IRISH TERRIERS.

Breda Bill, - - $20.

Puppies and grown stock for sale. Dogs of all breeds taken to board, conditioned for shows, kept at stud and sold on commission.

Address CHESTNUT HILL KENNELS, Chestnut Hill, Philadelphia.

ARISTOCRAT

(Ch. Plinlimmon ex Lady Adelaide.)

Winner of forty first and special prizes, including five first and four specials this season, won almost consecutively. The tallest and heaviest son of Plinlimmon. He is the sire of Lord Courtenay, winner of second prize at the late St. Bernard Club show, Birmingham, also Baronet, winner of over forty prizes and specials, and numerous others. The above named progeny proves him to be one of the most successful stud dogs of to-day.

Fee $50.

YOUNG KEEPER

(Keeper ex Surprise, by Guide.)

This young dog has a massive and typical head. This with his superb breeding should be of especial value to bitches weak in that respect.

Fee $25.

DUTCHESS KENNELS, 1639 Third Ave., N. Y.

EDWARD BOOTH, Manager.

AT STUD.

THE MASTIFF ORMONDE,

Son of the great Cambrian Princess.

Ormonde has won 1st at Rockford, Freeport, Cleveland, Cincinnati, and Chicago. Is sire of 1st and 2d prize winners, Rockford, Freeport and Chicago, 1892. Some grandly bred pups for sale. Send stamp for catalogue.

CHAS. E. BUNN, Peoria, Ill.

Great Dane at Stud.

CHALLENGE PEDRO

A.K.C.S.B. 20,425.

Sire, Mentor II. Dam, Minerva.

To a limited number of approved bitches.

SHOQUOQUION KENNELS, Lyons, Iowa.

STUD POINTER.

Champion Pommery Sec

(Ch. Graphic ex Lady Vinnie).

For stud fee, list of winnings, etc., address WM. H. HYLAND, North Tarrytown, N. Y.

NEW YORK'S OPPORTUNITY.

AT a meeting of the New York State Association for the Protection of Fish and Game in Syracuse next Monday evening, the committee appointed at the February convention will report; and a plan will be submitted for enlarging the activities of the Association and making it more efficient as a game fish protective body. This may be made a turning point in the Association's history. It is hoped that clubs will send not only strong teams for the tournament competitions, but delegates as well who are interested in this branch of the Association's work, and who will give it due consideration.

This opportunity for more effective organization and renewed devotion to the original purposes of the Association should be improved to the utmost.

COLD STORAGE OF GAME.

THE game dealers, refrigerating concerns and other interested parties in this city are to have a meeting to take action respecting the defense of the New York Refrigerating Company in the suit against it for having in possession game in close season.

Aside from the question of the refrigerating company's liability as warehousers of game belonging to other people, the points involved have already been passed upon in this State and elsewhere, and the law has been upheld. The ruling decision in New York is that of the Phelps-Racey case. As President of the New York Association for the Protection of Game, Royal Phelps brought suit against Joseph H. Racey, a game dealer of this city, to recover penalties for violations of the game law. The three counts were: (1) possession and exposure for sale of quail in close time, (2) possession and exposure for sale of pinnated grouse in close time, and (3) possession of quail in close time. The defendant admitted the allegations of the complaint, but it was alleged as a defense that the defendant had invented an apparatus to preserve game, and that the game specified in the complaint was put up by him in such apparatus in the month of December, when the killing of it in this State was not prohibited, or it was received from the States of Minnesota and Illinois, where the killing was at the time legal.

The General Term found for the plaintiff on the first and second counts, and for the defendant on the third count. Both sides appealed to the Special Term and then to the Court of Appeals, where the counsel for the defense contended that the statute was invalid, since it was a regulation of internal commerce affecting other States and was unconstitutional. The Court of Appeals (Church, Ch. J.) held: That the prohibition of the sale or possession of game in the period specified was plain and unambiguous; that "the fact that the defendant had invented a process of keeping game from one lawful period to another is not provided for in the act, and is immaterial;" that the Legislature had power to pass the act, which is not in conflict with the State Constitution, nor in violation of the provision of the Constitution of the United States authorizing Congress to regulate commerce among the States.

This decision was rendered in 1875. The terms of the law of that date were in effect identical with those of the present statute. The decision in the Phelps-Racey case has heretofore been accepted as final, and game dealers have not contested the law forbidding sale or possession in close season.

MUZZLE VS. BREECH.

THE offer of the Syracuse Rifle Club to give opportunity for a test under certain conditions of the accuracy of the muzzleloading rifle as compared with the breechloading arm is intended to bring to a settlement this much-talked-of question of exactness in placing the bullets.

Suppose the muzzleloaders come out ahead, what then? It will not make one hunter the more fling aside his handy breechloader and take out a muzzleloader with all its paraphernalia of ammunition. The various boards on the lookout for the best military rifle would not be influenced in the smallest degree by the fact that ten or a dozen shots from a heavy muzzleloader made a string a few inches shorter than the same number of shots from a breech arm. In every branch of small-arm work there are a number of factors which go to make up the concluding decision as to the best arm. Accuracy is one, and an important one; safety is another, and a vital one. Convenience comes in for much consideration; price is to be considered. This test at Syracuse keeps an eye simply to the one point of accuracy. To many devotees of the rifle at the ranges this is the one great point always in regard. Everything has been sacrificed to it, and for a fraction of an inch on a string no care or labor is regarded as too great for these target enthusiasts. There have been extravagant claims made on both sides regarding this one point of accuracy. To put a quietus on some of this talk the Syracuse shoot ought to go through, but win or lose, the breechloader is the arm of the future, and the student of the art of shooting does best service by improving the breechloader in every detail.

RESULTS OF THE SALMON ANGLERS' PETITION.

THE salmon anglers' petition was presented to the Canadian Minister of Marine and Fisheries on May 13. No written reply has yet been made, but the Honorable Mr. Tupper's attitude and reception of the arguments of the counsel to whom Mr. Blanchard intrusted the conduct of the petition were very satisfactory.

It was admitted that the continuous decline in the catch of salmon is a matter of grave concern and can only be met by keeping up free access to the spawning beds for a sufficient stock of breeding fish. That the commercial interests of Canada and the special interests of anglers and riparian proprietors are identical in this respect, is evidently the view of the Department. It is satisfactory to learn that the questions involved have been and are really occupying the Minister's most serious consideration. In dealing with them his hands will be materially strengthened by the information and statistics furnished him in support of the petition. There is no doubt of Mr. Tupper's willingness to meet the petitioners views so far as possible. At the same time, as was pointed out by him, there are many difficulties, both of a practical and a political nature, which require close consideration and time to settle.

At all events whether the nets are ultimately to be lifted three times a week or not, one great point has been gained. The existing regulations as to the observance of the Saturday to Monday close time, and as to the nature and location of estuary nets are to be strictly enforced. Mr. Tupper also hopes to accomplish a good deal in the way of limiting the number and extent of these nets. The fault hitherto has not been so much in the character of the regulations as in their being disregarded and evaded by the netters. If they are made operative, and supplemented by a strict supervision on the part of the riparian owners, the good result which must be an immediate outcome will not only strengthen the anglers' case in the event of further restrictions on the nets being still found necessary, but will probably convince the netters themselves that nothing is asked that does not benefit them directly and much more in proportion than the anglers.

The results secured may be considered fairly satisfactory for the present, in view of the selfish course pursued by the committee from the Restigouche Club.

The anglers owe a debt of gratitude to Mr. Lash, Q. C., and Mr. Creighton, the clerk of the Senate, retained as counsel by Mr. Blanchard, for their able presentation of the case. The labor involved in Mr. Creighton's examination and collocation of statistics was thoroughly and efficiently performed; his array of facts and figures conclusively showed the necessity of taking immediate steps to prevent further needless and improvident destruction of the salmon. It is a pleasure to recognize also the active and efficient co-operation of Mr. James Grant, President of the St. Marguerite Salmon Club. All those named and others have done material service in forwarding the petition set on foot by Mr. D. H. Blanchard of Boston. It was by the unselfish devotion of time and money and effort by Mr. Blanchard that this movement for salmon preservation was put through; and to him must be given a generous share of credit and gratitude for what has been accomplished.

FISHERIES ON THE GREAT LAKES.

MR. HERSCHEL WHITAKER has given a very interesting sketch of the early history of the fisheries on the Great Lakes, drawn from the accounts of Hennepin, Capt. John Carver, George Heriot, Henry R. Schoolcraft, Blois and other authors. The marvelous abundance of whitefish, lake trout, lake herring, sturgeon, pike and similar fishes is clearly set forth, and the statistics of the fisheries as far as known, are briefly recounted from 1830 to 1885.

A notable decline of the fishing industry since the introduction of the trap net is chronicled by Mr. Whitaker. This net was introduced about 1850, and its extension into deep water was followed by enormous captures of adult fish, as well as by the extensive destruction of immature fish, which have little or no commercial value. To quote from the author: "The result of this system of fishing is most destructive, tons upon tons of fish being thus taken which have never spawned, whereas if they were permitted to remain in the water to reproduce their kind, artificial methods would be greatly aided."

The introduction of freezing apparatus for the preservation of fish, though unpopular at first, has gradually grown in favor, and has greatly improved and extended the industry. Indirectly it serves to protect the fish by making it possible to carry on the fishing in nearly every month of the year, thus relieving the strain upon the spawning fish.

To arrest the waste of fish and restore the supply, Mr. Whitaker would stock the waters liberally and provide for the enforcement of just protective laws, preventing the taking and marketing of immature fish. He finds the present warden system imperfect in most cases, because the pay of the officers is not sure and fixed, and would follow in this respect the State of New York, which, he says, has the best warden law of any State in the Union. In conclusion he advocates a general awakening of the Lake States to the necessity of action for the maintenance and future increase of their fisheries.

SALE OF REARED TROUT IN CLOSE TIME.

THE article of Mr. W. L. Gilbert, which we publish on another page, is a fair presentation of the private fishculturists' view concerning the sale of brook trout during the close season for wild trout. The writer observes, justly, that the successful cultivation of trout has passed beyond the experimental stage, and that the industry is capable of great extension, provided the fish can be sold from Jan. 15 to April 1, when the demand for them is largely increased owing to the scarcity of choice food fish of other kinds. There is no doubt also that large tracts of land and water, which are now lying waste, could be redeemed and made valuable for trout cultivation if the laws of several States could be changed so as to allow private parties to sell fish when and how they pleased.

The law framed by Mr. Gilbert, and intended to accomplish the objects desired by himself and other fishculturists, passed both branches of the Legislature of Massachusetts, but was vetoed last week by Governor Russell, and, we think, with justice.

A law which allows the sale of artificially reared trout during the close season for wild trout will open the way

for the illegal sale of the latter, as we have frequently pointed out in our columns, and the legitimate outcome of such traffic would be the depletion of streams in which the great public is most interested, and this for the benefit of only a few trout breeders. Throw around the brook trout all the safeguards which the law can give it and its struggle for existence will still be a severe one. The steady onward march of civilization, with its increased demand for fish and with its ever-growing pollution of waters and consequent restriction of spawning grounds, will sufficiently limit, and we fear too seriously limit, the increase of trout and salmon. Let us then not still further endanger the future of these noble fishes by encouraging their sale during the season of spawning and development of the eggs.

SNAP SHOTS.

THE great American showman was so well known that foreign letters addressed to "P. T. Barnum, America," used to reach him without delay. FOREST AND STREAM has become so much of an institution in the West that a Colorado letter addressed simply "FOREST AND STREAM, Chicago, Ill.," finds its way promptly into the hands of our Western representative. This speaks well for our growing fame and is gratifying, but correspondents who may desire early attention will do well to send to the home office, 318 Broadway, New York.

The big seizure of illegal game in a storage ice house, which has brought Game Protector Robert Brown, Jr., of the first district, into such prominence, is by no means the first important action of that officer in the pursuance of his duties. In the summer of 1890 Protector Brown accomplished the arrest and secured the conviction of 107 "bunker fishermen" who were taking menhaden on Raritan Bay contrary to the law. Among these were six captains of vessels who were fined $100 apiece.

It is said that there are in New England, in round numbers, 400,000 French Canadians. But there is only one pen that can delineate the Canuck as he canucks; that is the pen of Rowland E. Robinson, the author of "Uncle 'Lisha's Shop" and the creator of Antoine Bissette.

Natural History.

DOES THE RATTLESNAKE SPIT?

Editor Forest and Stream:

Do snakes spit venom? I think not, Prof. Cope to the contrary notwithstanding. Does the rattlesnake, in coil, awaiting an opportunity to strike, hold his mouth open and fangs erect, dripping poisonous saliva, which by forcible expiration of air from the lungs is spat out at his enemy? I think not, unless on very rare occasions. I have seen rattlers in coil, and seen them strike from coil very often, but never saw one holding its mouth open, with erect fangs, dripping poisonous saliva. That which I have considered most remarkable in this reptile is the lightning-like suddenness and celerity of its stroke. The jaws are separated, the fangs erected and the stroke delivered with such celerity as to render it difficult for the eye to follow the movement or take in what has happened. This suddenness and celerity of the stroke seems to me to be a very dangerous characteristic. It is so unexpected in a reptile so slow and apparently torpid in its general movements. It is certain that not a few persons have lost their lives by striking at a rattler in coil with too short a weapon, the snake dodging the blow with astonishing quickness and at the same instant striking back at the assailant with deadly effect. I have never seen the rattlesnake eject its venom, but I have seen the copperhead do it repeatedly, but not by spitting or expectorating it. The ejection takes place when the snake strikes ineffectually at an object beyond its reach and is literally a wholly involuntary thing. The venom may be thrown as much as two or three feet as the result of the ineffectual stroke. I do not undertake to say that what Prof. Cope states has not happened, but I do say it does not happen as a rule, with either the common mountain species or the diamond rattler of the South. To me the statement of poisonous saliva dripping from the fangs of an open-mouthed rattler seems incomprehensible. The saliva of a snake is not poisonous; it is extremely viscid and will not drip any more than the slime will drip off an eel, nor does a snake possess the power to expectorate, or spit at all, and certainly not with its mouth wide open. I think we should hear further from Professor Cope what he actually intended to say. Scientific statements concerning so deadly and dangerous a creature as the rattlesnake ought to be very strictly accurate, and it appears to me that the frightful celerity of the stroke should be emphasized. Readers of FOREST AND STREAM will remember the unhappy fate of the English gentleman who about a year ago struck at a diamond rattler in Florida, with the result that the snake dodged the blow, and striking back at his assailant at the same instant, drove its fangs into his head, and he died in great agony in a short time. Shortly after that sad occurrence we read again of a gentleman from the North attacking one of these formidable creatures with a buggy whip. Some years since I encountered a company of "sang" hunters in the mountains in Rockingham county, Virginia, who had just had an adventure with a rattler. A young man finding one in coil struck at it with his "sang" (ginseng) hoe, and the rattler dodging the blow struck back and drove his fangs against the hoe handle so forcibly as to leave their marks on it about an inch below the young fellow's hand. In my judgment there is no danger of any one having any poisonous saliva spat into his face by a rattler in coil, but a well-grown diamond rattler if struck at in coil with a buggy whip or short stick, might easily plant his fangs between the eyes of his assailant. If such a snake had not foolishly disarmed himself by dribbling away and spitting out his "poisonous saliva" his bite would be almost certainly fatal. According to information personally collected by me of a number of persons who have themselves recovered or known others to recover from the bites of the mountain rattler, I believe its bite is much less deadly than has been generally supposed.

WOODSTOCK, Md. M. G. ELLZEY, M.D.

Editor Forest and Stream:

In response to the request made in your last issue for the views of correspondents as to the cause or exact process of the "spitting" of the rattlesnake and other venomous serpents, I give here the views of Prof. S. Weir Mitchell, whose careful experiments entitle his opinions to great weight. Describing the striking of these reptiles he says: The snake "throws himself into a spiral, and about one-third of his length, carrying the head, rises from the coil and stands upright. * * * Then his head and neck are thrown far back, his mouth is opened very wide, the fangs held firmly erect, and * * * he strikes. The blow is a stab and is given by throwing the head forward while the half-coils below it are straightened out. * * * As they (the fangs) enter the temporal muscle closes the lower jaw on the part struck and forces the sharp fang deeper in. At this moment the poison duct is opened by the relaxation of the muscle which surrounds it and the same muscle which shuts the jaw squeezes the gland and drives the venom through the duct and hollow fang into the bitten part. In so complicated a series of acts there is often a failure. The tooth strikes on tough skin and doubles back or fails to enter, or the serpent misjudges distance and falls short and may squirt the venom 4 or 5 t. in the air in so doing." J. S. M.

LA GRANGE, Ky., May 30.

THE CLASS IN NATURAL HISTORY.

PERSONÆ.—*Tom, Dick, Harry, S. M. E., and the Editor of* FOREST AND STREAM *as Teacher.*

The class, in place for recitation. The uplifted hand of S. M. E. is observed.

Teacher.—E., what's wanted?

E.—Please, sir, will you explain this occurrence? Last fall, while in Tenderfoot Cañon, Belt Mountains, the dog flushed a ruffed grouse, its whir was distinctly heard, making its way down the cañon. I was walking ahead of our party with two rifles and a shotgun on my shoulder (we were moving camp) when I saw the grouse on a tree some 30yds. away, facing me, tiptoeing on a limb, its neck erect, the whole looking like a brown streak set up as a study; he was quickly covered with the shotgun. Then, thinking of a new Lyman peep on the .45 90, the shotgun was laid down and the rifle picked up; this was in its canvas case, and before it could be taken out the bird flew directly toward me and about 10ft. from the ground, its eyes being on me all the time.

Standing perfectly motionless, as it drew near I raised my open right hand, expecting it to swerve to one side. To my surprise, it came full force against my outstretched hand, forcing it out of the way without the slightest apparent effort and passing on into and beyond a thicket in the rear.

Query.—What prompted its action; was it fear, anger, or curiosity? The chances are it had never been fired at or hunted before.

Another queer incident:

In driving along a grade on a mountain side my pointers put up a jack rabbit some 300 yards away and below us. The rabbit ran (or flew) up the mountain side until striking the grade. My companion was walking ahead of the team some thirty yards and seeing the rabbit approach in the trail he stopped, then lay down in the road; the rabbit came on and ran squarely over him, as did the dog also, neither of them changing their course the slightest, except to swerve out a foot or so to pass the team and wagon. I, in the meantime, yelling with laughter and encouraging the dog in his efforts to catch "long legs and ears." He didn't catch him, all the same. I can understand the action of the rabbit, but have Tom, Dick, Harry or Prof. Editor any reasonable explanation of the action of the grouse, or a similar case to report?

S. M. E.

GREAT FALLS, Mont.

KEEP A NOTEBOOK.

THE sportsman who shoots for pleasure, rather than for a big record, picks up many interesting bits of natural history lore that others pass by unheeded. Being careless or lazy they often fail to record these little scraps of personal observation and so much valuable knowledge and many interesting and amusing incidents are lost. Here is an example: Mr. C. B. Holden of Worcester, Mass., a veteran sportsman, and trap-shooter, while passing to and from his house, noticed underneath a pear tree a large pile of pear cores and pieces of pear, apparently bitten off or as the boys would call them "chankins." Being a careful student of all things pertaining to nature, Mr. Holden decided to investigate and discover if possible what sort of creature went to the trouble of depositing the bits of pear all in a pile.

Taking his stand near the tree one day, after watching quietly for some time he detected a movement among the top branches of the pear tree, and soon saw a red squirrel bite off a pear and carry it to a larger limb near the ground, where he proceeded to nibble away at the pear, dropping the pieces to the ground till he came to the seeds, which he quickly extracted and ate, dropping the remainder of the pear on the pile, and immediately returning to the top of the tree for another pear, which he gnawed to pieces in the same manner. This was repeated several times, the squirrel returning always to the same spot on that particular limb to do his eating. This accounted for the remarkably large pile of "chewed pear."

Nothing remarkable in it to be sure, but stored away in the minds of our observant sportsmen are thousands of such little bits of knowledge acquired through personal research during their many days spent in the woods and fields.

And these little things that escape the majority of sportsmen, are the very things that make up the valuable fund of reminiscence, so pleasing to draw upon when a few congenial spirits are thrown together about the camp fire at the lunch on the bank of some trout stream.

"PODGERS'S" COMMENTARIES.

REFERRING to your remarks in last issue of FOREST AND STREAM on the subject of the destruction of birds for their feathers, which fashion has decreed shall adorn women's hats, you draw it mild in your estimate of the number of birds that are destroyed and used for this purpose.

I have personal knowledge that one party sent out South by dealers in millinery killed more than fifty thousand birds.

It would naturally be supposed that women with their presumed tenderness of heart toward birds would rise in revolt against a fashion that led to such cruel work, but it is about as useless to undertake to enlist their sympathies in any cause that conflicts with fashion as to blow against the wind. They will shed tears in sympathy, but take one feather out of a love of a bonnet? not much! and the man don't live that can make any woman do it, nor can he make her change the style of wearing her hair if she is conforming to the fashion. She will make any sacrifices, leave parents, home, friends and share poverty with the man she loves, but if he wants to try the extent of his influence on her, let him ask her to wear her hair some other way, that may be much more becoming, although possibly not the style at the moment. Do you think she will do it? Just try it on and see. What a lamentable failure all your boasted influence will be, and how small you will sing at her positive refusal to change one hair, and it is pretty much so as regards a hat or bonnet. So you see how futile it is to attempt any reform in the question of wearing birds and birds' feathers. The only thing that can save the birds from almost utter annihilation is a change of fashion, pray for that; even though the prayer of the wicked availeth not. What are the fiats of kings and emperors to the arbitrary ruling of a fashion? In old times, perhaps, such a thing might have been, but that was before women knew their power. They were humble creatures then, meek and lowly, but now? "Things is different," Can't come any such game over them in these days. They are playing the first violin and man comes in a poor second. The moral of it all is that as long as it is the fashion to wear feathers in hats they won't abate a bird to save your life nor the birds' lives, and we will have to do as we are always obliged to do in such an unequal contest—give it up.

Bears and bear stories having gone out for the present from FOREST AND STREAM legends, I see that snakes have the floor. I think I prefer to go back to the bear and will agree to enter no protest hereafter against bruin if you will let up on snakes. They are uncanny. By the way, the annual sea serpent stories are due. The season is "in," and the watering places must hustle and be getting the proverbial old reliable ship captain down to business. Let us hear from him.

I am greatly obliged to your correspondent "Pigarth" for the information he supplies as to the existence of that elysium, which I and doubtless many others have been seeking, and I am glad to know it does exist and is so easily reached, and I shall advocate that he share in the honors awarded to Columbus for the discovery.

I am equally under obligations for the bringing to my attention by your Port Jefferson correspondent of still another place where the blazer young man or the athletic young woman prevaileth not, and I have made a memorandum in the notebook of my memory of these two places. It is late for the Chincoteague locality, the bird season being over, but next fall will see me there. The other place, however, is nearer and in season and I shall make a desperate effort to avail myself of the joys that good fishing and sailing bring to a mind diseased and a brain that is weary with the din, dust and heat of the great city. To both of these gentlemen I give "much thanks."

The suggestion by your correspondent "Rogers," that the way the deer with the big antlers got through the forest was by pulling them in, is not a bad solution of the question and is accepted, and which suggests that the "pull" the politicians have in these days is no mere string after all, although the politician is not so much given to pulling in his horns as "taking" them in.

There seems to be a wide difference of opinion as to the relative merits, so far as danger of accidents is concerned, between the old style half-cock and rebounding lock question.

If all men were of one mind there would be no object in any deviation from one fixed rule once accepted; but it so happens that scarcely any two think alike, fortunately for mechanical genius and enterprise.

The real gist of the thing is that accidents will happen with the best regulated locks. It is not so much the fault of the locks as of the people who use them; and when we think of the great number of inexperienced men who never should own a gun and the proverbial man who "did not know it was loaded," and other multitudinous and multifarious careless gunners, the wonder is that there are not ten times the number of accidents. The locks are nearer right than the people who use them. The gun-lock or man is yet to be invented that won't now and then go off at half cock anyway you can fix it —or them.

"C. H. M." writes of fishing in a stream in Pennsylvania called Wopwallopen. Great Scott! what a name for a creek. How can any right-minded trout consent to live in a stream with such a name.

The names of some of the lakes and streams in Maine are bad enough—so bad that a man can hardly reconcile himself to fish in them, and the growing scarcity of fish in the waters with such jaw-breaking names is owing doubtless to the disgust of the fish themselves. The names did very well when the "noble red" inhabited the country. They could forgive it in him for giving out such names as he knew no better, but in these enlightened days the fish expect better things than Wopwallopen! Perhaps the trout bit so well in sheer desperation in their

desire to get away from such a name, preferring death to the mortification.

The advertising pages of the FOREST AND STREAM constitute almost as interesting reading as the other portions of the paper, with all due respect to editors and contributors. There is much to be learned from the advertising columns of a newspaper, especially those containing notices of sporting goods. One learns what is new—of new inventions and new things—and no man, however familiar with such goods, can glance over the advertising columns of the FOREST AND STREAM without finding something fresh and novel in the way of sporting tackle, and thereby keep pace with the age of improvements, and he generally makes a mental resolve to "have one of them" when he sees a good thing advertised. It may be an expensive luxury this reading the advertisements of the FOREST AND STREAM, for one is very likely to stop in at that store or shop and invest in the article.

Ladies will stop and gaze enraptured at a love of a bonnet in a millinery window, that is their weakness. Ours runs to flattening one's nose against the window of a sporting goods store and taking in all those beautiful reels, split bamboos and silk lines. No diamonds or jewelry exhibited in uptown windows have half the fascination for the sportsman that the display has along Broadway of lovely guns and sportsmen's jewelry. And how cheap all these fine goods are in these days, compared to old time prices. Take split-bamboo rods for instance, your humble servant despoiled his pocketbook of $25 for his first one, now the same thing can be had for $10. The business of the manufacture of sporting goods has become a large one, and with the aid of improved machinery these once expensive goods are cheapened to a degree to enable every farmer's boy to own a better outfit than our daddies ever dreamed of. It is the age of progress and what is most essential is to keep pace and "prog" along with it or find ones self badly left.

PODGERS.

CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

CHICAGO, Ill., June 4.—I remember that once, a couple of years ago, I quoted an expression from Rev. C. E. Gordon to the effect that he doubted if the canvasback duck ever nested on the North American continent. Last week some friends in Iowa told me that this spring there were several canvasback nests and a number of redhead nests on the big slough at the head of Lost Island Lake in Iowa. The birds did not appear to be cripples left behind in the flight, and every prospect existed that that they would really breed in some numbers. A local market shooter speaks of this as an unheard-of occurrence.

Apropos of late wolf-killing discussion, Mr. J. W. Schultz, of Montana, writes as below. I am presuming that by the term "wolf" he writes to convey the usual mountain meaning of gray or timber wolf, and does not mean the coyote:

"A ranchman near here has a dog which is a sure wolf killer. He is, I suppose, a mongrel; he is built much like a greyhound, excepting his shoulders and chest are wider and he is heavier muscled than the pure bred hound. His color is coal black. The dog is pretty old now and cannot catch a wolf, but the other dogs catch up with it and hold it until he comes up, and he kills it. In his young days he caught up with a wolf, bringing it to bay in a creek. He killed it there and dragged it to shore. The owner of this dog had quite a pack of the same breed, but this is the only survivor. Just one or two snaps of his powerful jaws are sufficient to lay out a coyote.

"It is my humble opinion that breeders are wasting time raising dogs in the East for Western work. I think it a sad mistake to confine them in kennels or yards. Our ranchmen out here have large packs which are born, and live, as they should, out doors, and never know what a chain is. In winter their kennel is the lee side of a hay stack. Such a life develops a dog for all there is in the breed. They will follow a horseman all day and every day, and run race after race. Most all the packs here will kill a wolf, but the old dog mentioned is the only single one I ever knew to do it.

"As with hounds, so it is with bird dogs. I was with an Eastern party last summer which brought along a number of setters. We had also two setters born and raised here. Well, the Montana dogs would hunt from morning until night and never flag, but the Eastern setters, even after two weeks' work, couldn't do half the work they could. The reason why is plain; the visiting dogs had been pampered all their lives; our dogs had always rustled, often went hungry, and were out door dogs."

Mr. Schultz "speaks in gold," as we say in French. I can not help thinking that our modern field trial cracks in setters and pointers are really inferior dogs for actual field work. They are dilletante, not practical. A landscape artist can paint a house, in one way, but as a practical house painter he may be no good. Nowadays you hear with wonder of the fine setter which actually hunted all day and didn't quit. Two days' steady work with the same result means a cross of honor. Three days' work would mean immortal fame. Now, when I was a boy, in the chicken country, we used to have a strong, heavy breed of setters, and some big pointers, and we never thought it out of the way for them to hunt right along in hot weather, day after day, often week in and week out. The worst thing for them was sore feet from going on the stubble. I would rather have any one of a half dozen setters we owned in those days than any of a whole show full of modern cracks, if I had to make it a question of having sport in the field. Yet the modern crack might have done nearly as well, had his actual rearing been the same. Our old dogs didn't get sick. They just worked, and when they got ready, they just died. There was no such department as "Kennel Queries" in those days. Nobody wanted to know what was the matter with his dog, because nothing was the matter with him. He got there. I like dogs that get there.

These remarks I am the more tempted to make from the fact that a recent purchase of a nice, pedigreed, registered, bang-up, sure-winner, proud-scion-of-a-noble-race dog has just resulted disastrously. The dog has—well, he has died, if such dogs do anything so common. Died, ætat two and a half years, of epilepsy. Epilepsy! who ever heard of that for a dog ten years ago? We didn't have it in our country, anyhow. This dog, bless his heart, was as affectionate a creature as ever tried to talk, and the fastest setter I ever saw go, but he was too nervous to live. He trembled all over, often in his desire to talk, or to go hunting for prairie chickens which now, alas, exist no more save in the lands of shadows, but small hunting he got. His bolt was soon shot. He—well, he died. When he comes to the happy hunting grounds where every dog gets his chance over again, let us hope, what will sturdy old Rex I. say to this subsequent possessor of his rights, this epileptic, frail, enthusiastic but ill-framed soul, Rex II.? He will say "Away, slight man!" I couldn't blame him. Dogs and men have degenerated, I do believe. Epilepsy for a dog, forsooth! Shade of Rex I, look down upon us.

E. HOUGH.

THE SAFETY OF GUNS.

REGARDING the recent discussion, it needs only to be said that, other things being equal, it can make no difference whether the hammers are brought to half-cock by the hand or by rebounding; but exposed hammers of any kind are so dangerous and the hammerless guns cost so little more that no one should think of buying a hammer gun. Remember when a muzzleloader was not considered dangerous to use and a gun did not look complete without a ramrod, but after using a breechloader for a few months the dangers of the muzzleloader became so apparent that shooting would have been given up altogether rather than use one. Then the first hammerless guns looked so incomplete and lacking that we didn't want them, but after thorough acquaintance with one the hammer guns looked so dangerous as the muzzleloader had looked, and now exposed hammers on any gun are considered by many sportsmen too dangerous to be tolerated. Ninety-five per cent. or more of the accidental discharges have been caused by the hammer coming in contact with something. The hammerless gun does away with all danger from this source. If the locks are well made the hammer cannot fall unless the trigger is pulled. The only dangerous thing about it is the safety slide that blocks the triggers. The man who relies on this naturally depends on it altogether and neglects all other precautions. He throws up his gun to shoot, but the bird got behind a bush too quick and he does not shoot, but in his eagerness to mark the bird he forgets to shove the slide to "safe." In getting over a fence or into a wagon a foot may slip and some part of his person push the slide, but until the change is discovered he still considers the gun entirely safe and acts accordingly. Somebody not familiar with hammerless guns wants to look at it, and because it is set at "safe" he hands it to his friend with the shells in it. The friend goes to monkeying with it and succeeds in firing it. The best thing to do with the safety slide is to take it off the gun. Then you will govern yourself accordingly, and be sure there are no shells in the gun except when you are expecting to shoot at something. Then if you get into the wagon, or lay the gun down in the presence of others, or hand it to some one to look at the shells will be taken out first. If these precautions are observed and the gun never allowed, empty or loaded, to point toward anything that would be damaged by shooting it, there would be fewer accidents to record. Of course all these points have been considered and settled in the minds of the older shooters, but there is always a new generation coming on, and the frequent accidents among the boys show this caution and instruction needs to be issued often.

O. H. HAMPTON.

WILLIAMSBURG, Ind.

Editor Forest and Stream:

I have been very much interested in the various articles which have appeared recently regarding the safety or danger of rebounding locks or hammerless guns.

As I do not know "Backwoodsman" he must not construe this as being a hit at him, when I say first that I think it a very dangerous thing to carry any kind of a gun at full cock, either in the woods or out. For instance: Some time last summer a friend and myself were out along the shore of a river looking for snipe; I had a hammerless gun and he a hammer gun with rebounding locks, which he, notwithstanding my protests, carried at full cock. I was leading by a few feet, when a snipe rose at which I shot and missed. My friend stepped forward to shoot, but in doing so slipped on a wet mossy stone and falling struck the butt of his gun on some stones. Did it go off? Well, for the rest of the afternoon I did not hear the report of my gun when I shot, for both barrels of the safe hammer gun went off and only about 2ft. from my head. They were jarred off, for my friend's trigger hand was wet while the locks of his gun were perfectly dry, showing that he had thrown out his hand to save himself and did not have his fingers on the trigger.

Any one should always consider a gun unsafe so long as there is a load in it, not even excepting a hammerless. In fact, the only reason I have in using a hammerless gun is that it is cocked much quicker and easier than a hammer gun.

Hammer gun, hammerless or rebounding locks, or any other device, none is safe when loaded.

SAFETY.

KITTANING, Pa.

Editor Forest and Stream:

I am very glad the subject of "rebounding locks" has brought out several articles from brother sportsmen regarding the handling of shotguns. I have used all kinds of guns, from the old flintlock to present improved hammerless, and I quite agree with "Broadbill" when he says that he does not think so many accidents are due to rebounding locks as to careless or ignorant handling of the gun and the practice that many have of fooling with hammers and triggers.

Too many men in handling guns seem to be obvious of the fact that it is generally "the other fellow" who bears the brunt of his carelessness. I never noticed this fact so forcibly as I did last winter while in West Virginia. After returning from a fruitless deer hunt three of our party were seated around an old-fashioned fireplace, while our host regaled us with hunting stories of the olden time. I was seated between our host and a gentleman who had brought his gun in to clean. As usual, he thought he had removed the shells. Several times the gun was pointed directly toward us. Finally he raised the gun over and just to the left of my head, having scarcely passed me when he rubbed the triggers, and the gun was discharged. The load of buckshot ploughed through the floor over head and lodged in the roof. Had this occurred a moment before some one doubtless would have been killed. This certainly was gross carelessness and not excusable in any sportsman.

This same gentleman had had a similar experience the day previous to this which should have taught him a lesson. While he was handling his revolver it was discharged and the ball passed through the clothing of a lady who was present, fortunately doing no damage other than perforating her clothing.

Certainly the education of such men was sadly neglected in boyhood, so far as handling firearms was concerned. Every father should teach his son to shoot, and, above all, to exercise the utmost care in the handling of guns.

I have known several deaths to result from just such carelessness as I have stated, but never one from rebounding locks. Too much cannot be written on this subject, if only those who need it most would read and profit by it.

INTRUDER.

SPRING IN THE NATIONAL PARK.

YELLOWSTONE NATIONAL PARK, May 24.—*Editor Forest and Stream:* We have had a very cold, stormy spring, snow falling almost every day for twenty days. On the 19th it turned warm, the sun broke through the clouds that had so long hidden it from sight, and since then it has been thawing in the mountains very fast, raising the Yellowstone River six feet and tributary streams in proportion. One can truly say our winter lasted until the 19th of May, as a late spring here is little better than a continued winter.

No great or unusual amount of snow has fallen in the Park, yet it has been a severe winter on the wild animals that depend on grass for food. The snow crusted very hard early, making it difficult for the game to paw down to the grass. Then the backward spring prolonged their fast until a great many elk starved to death in Hayden Valley and other sections of the Park, where they are in great numbers. In Hayden Valley alone three bands were seen with about two thousand head in all. Here they have been found dead in bunches of five to twelve in the warm country.

No dead buffalo have been seen. They forced their way through the snow from the Alum Creek country to Nez Perce Creek about April 25, where they could get very good feed in the warm country along the stream and about the hot basins. It is in this section that the cows drop their calves. The buffalo took several days to break their trail through the snow, each day getting a few hundred yards during the time the sun softened the crust until they got to the top of Mary's Mountain over the wagon road; from there they went down in a short time. This trail is one they follow every season going and coming from their winter and summer range.

I was out for twenty days in March and April on a buffalo hunt on snowshoes in the Alum Creek country. I was armed with a Kodak, a very good weapon for securing a large number of buffalo and other game—pictures. Private Dare was with me the whole trip, and rendered valuable assistance. I will try to give to FOREST AND STREAM an account of the hunt when I have leisure. The last few days we were among the buffalo we were joined by John Fossom, who has charge of the telephone lines. John was also armed with a camera. We both secured some very good pictures of buffalo and other animals, The last night we were camped out we found the camp of a man who came in from Henry's Lake, he said, to see the buffalo; he had no arms in sight, and claimed not to know the country. It is supposed that his object was to kill specimens, that he had a rifle and provisions cached not far from the buffalo range. He was obliged to leave the Park without securing a buffalo head. Lieut. Sands, to whom the man was reported, took such measures that he could not return without being captured. The soldiers stationed at the Lower Geyser Basin had one man with him while he was in the Park. It is now well known that he was not only well acquainted with the Park, but has been on the reservation after buffalo before.

A man came through from Jackson's Hole on snowshoes early in April. He reports very little snow in that section, that a great many elk are wintering there, that not less than 3,000 were in sight all winter. No skin hunting was indulged in by the people in the Hole, only a few elk were killed—enough to supply the sixty-three inhabitants with meat.

Last week the hotel at Norris Geyser Basin burned. This is the second hotel building that has been destroyed by fire there. It was a temporary structure used principally as a dinner station. The association will have replaced the building by the time the "tourist" season opens.

The snowshoe parties, whom I reported as out after the buffalo in the Pelican Creek country and east of the Yellowstone Lake, were not able to do much traveling on account of the very severe snow storm that prevailed at that time; they had to return without finding the bands they were looking for. Since then one band of twenty has been seen on Specimen Ridge.

H.

Ohio Game.

IRONTON, O., May 2.—I was out on my annual spring fishing trip, starting the first of May. Did not catch the usual number of fish, but all we could eat and that was enough. I never saw the like of squirrels—ten on a tree. We only killed a few to fry; could not eat many, and not being a game hog left them for use this fall. There are plenty of wild turkey; we heard the goblers every day and tried to get one, but failed for want of concert in action. The caller sent me from the West worked to perfection.

J. D.

Hunter Sellick Gets his Moose.

"HUNTER" SELLICK has arrived in Moncton after an absence of several months in the wilds of northern New Brunswick. Sellick for many years has been the possessor of two fine cow moose. Year after year he has endeavored to capture a male moose, but up to this winter failed. Some time ago he left Moncton for the forest country lying between the head waters of the Tobique and Miramichi rivers. For days his search was unavailing, until about thirty miles away from any settlement and in the heart of the forest, he sighted the object of his search. There it stood, a magnificent specimen, fully 6ft. high. At this season its antlers of course had been

shed, but the new ones were already jutting forth. The dogs were set to nip the moose in the rear, driving it toward a tree. Hunter Sellick creeping around, suddenly threw his lasso around the animal's head, twisted the rope around a tree and had his prize a prisoner. It is comparatively easy for the successful hunter to bring home a dead moose as the spoils of his sport, but not so easy a live one. The days of patience exercised before it was safe to attempt to proceed may be imagined. Traveling was at first slow. It took five weeks climbing over the bald hills, wading the morasses, or fording the rivers which marked the thirty miles distance between the scene of the capture and the first settlement. The plucky hunter at times had to employ a catamaran to cross the streams, with the moose swimming behind. Finally he reached the Intercolonial and took a box car, which was just high enough to permit the moose to be taken in.—*Moncton (N. B.) Transcript.*

Camp-Fire Flickerings.

"That reminds me."

[COPY.]

Dear Sir: In accordance with your instruction I secured yesterday a fine specimen of pond pickerel (*Pondus pickerillius americanus*). This fish must be of the species above named, for his habitat was in a pond located on the southwest side of Potter Creek. I took him with a lead sinker projected from old "Plumadore," .44cal. This fish was about 24in. in length and of a grayish color, resembling a milk-snake (*Lactus serpentinus begosh*), dark on the back. His antennæ were spirated and the dorsal fin truncated at the inner lobe of the cerebro spinal meningitis. The head and jaws are about the size of a stone, and the mouth was furnished with many teeth of a frightful nature. The northeast front fin was damaged somewhat on the left side, and on dissection I found that the lower cordum erysipelas was not attached, as claimed by German scientists, to the lumbago taxidermist vertebræ. This specimen was about ready to set, judging from the eggs contained therein. The meat is of a white color, firm and pleasing to the palate. I hope to secure specimens of the *Pickerillus grassycuss* soon and report on the different structure of the lex talionis and e pluribus unum aqua fortis.

Respectfully submitted.

ROD AND GUN AND CAMERA.

As a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

From time to time we shall reproduce by the half-tone process samples of the work submitted, and should the interest in FOREST AND STREAM'S Amateur Photography Collection prove to be what is anticipated, we may ask for an expression of opinion by a vote of all our readers after the manner of the successful and famous "Camp-Fire Flickering Vote." Such popular vote will be quite distinct from the award by the committee.

NEW YORK GAME LAW.

The full text of the new law has been put into type by the Forest and Stream Publishing Co., and is now ready. Price, 25 cents per copy. A special edition has been prepared for the use of clubs and associations, who may order in lots of 100 or more. These will be supplied at a nominal price. Write for terms, stating the number wanted.

The Publisher's Corner.

Pays Ten Times Over Any Other.

FULTON PLEASURE BOAT CO., Manufacturers of Row and Sail Boats, Canoes, Steam and Electric Launches, Yachts, etc., Light Weight Hunting Boats, Dealers in Oars, Paddles and Boat Trimmings, Fulton, N. Y., June 1, 1892.—*Forest and Stream Pub. Co.:* GENTLEMEN—We have to say in regard to the value of an ad. in the FOREST AND STREAM, our experience this year has been that for the money invested we have received ten times the benefit we have from any other source of advertising. Yours truly, FULTON PLEASURE BOAT COMPANY.

Every Sportsman Should Have a Roll.

A CHICAGO man recently saved his life by carrying a roll of one-hundred-dollar bills inside his vest when a bullet came that way. Yet there are people who neglect so simple a precaution.—*St. Paul Globe.*

Sportsmen Have to be Polite.

IT is a test of politeness for a man to listen with interest to things he knows all about, when they are being told by a person who knows nothing about them.—*Boston Bulletin.*

THE June 4 issue of the *Christian Union* is its annual summer "outing number," devoted largely to travel, and outdoor life and recreation; and a very attractive number it is.

Sea and River Fishing.

Trout and Bass Fishing.

WE have secured, for the private information of the readers of FOREST AND STREAM, knowledge of a number of streams and lakes easily accessible from this city, where we believe that good fishing for trout and black bass may be had. The information we shall be glad to furnish without charge to any reader of FOREST AND STREAM who will apply for it, either personally or by letter.

EARLY HISTORY OF THE FISHERIES ON THE GREAT LAKES.

[A paper read before the American Fisheries Society.]

STRETCHING away to the northward from the low Laurentian hills of New York to the trap-rock cliffs of Minnesota, for a distance of sixteen hundred miles, in a hydrographic basin embracing an area of one hundred and seventy-five thousand square miles, lie the Great Lakes of the Northwest, the largest bodies of fresh water upon the globe. Upon their bosoms float vast fleets which carry the rich products of prairie, forest and mine, while from their depths the fisherman gathers the rich bounties that nature has provided for the sustenance of man.

The vessels which constantly pass and repass are not freighted with ores from the mines of Golconda nor with spices from Far Cathay, but carry lumber from Saginaw, iron from Escanaba, copper from Hancock, grain from Duluth, provisions from Chicago, and cereals from the vast prairie lands of the Dakotas.

Since the early days of the French occupation of the Northwest, when the lilies of France waved over all the territory lying north of the St. Lawrence and Ohio and west of the Alleghanies, these lakes have been the great highway of intercommunication between the East and West. The Jesuit missionary filled with holy zeal departed from Montreal, the seat of French power in America, in his bark canoe, manned by his Indian converts, for the trackless wilds of the far West to raise the cross and establish his feeble mission among savage tribes.

Following him came the fur trader with his canoe and *courrier du bois*, who day after day traversed these lakes and their connecting rivers to reach some specially designated place where he might exchange his tawdry gewgaws, beads and cheap merchandise with the Indian for the valuable skins of beaver and otter.

The cavalier, explorer and adventurer traveled over their trackless wastes of water, enduring hardship and fatigue, living upon the bounties of nature, pushing his way to what he hoped would be a discovery of a path to the Indies, fortune and fame. Each of these in his own way has left testimony of the bountiful way in which nature had stocked these waters with desirable food, and the belief of all concurred that there was an unfailing supply for man for all time, to be had for the taking.

The habits of the tribes bordering these lakes whose main reliance for food was upon the fishes that inhabited them, had caused them to resort to certain favorable localities upon the lakes at the proper season of the year to take fish for present wants and for future use. In time these points became their chief dwelling places for the greater portion of the year, and with the advent of the fur trader they became the principal places of barter.

Such localities as the Straits of Mackinaw, Sault Ste. Marie, Green Bay, Chequamegon, Detroit and Chicago became thus early known, and the history of these places as told by the early traveler shows that nature seemed to have lavished her bounties upon aboriginal man in the stocking of her waters with the most edible of fishes to provide for his wants.

Let us call a few of the earlier voyagers to give their testimony upon the abundance of fish in these waters.

Hennepin says in his Travels in 1675: "There is a very abundant fishery of several kinds of fish at the mouth of the Niagara River, among which is the whitefish, admirably good, with which you might supply one of the best cities of Europe.

"At Mackinaw the Griffin lay in the harbor amid one hundred and twenty canoes coming and going from taking the whitefish, which the Indians catch in nets in from fifteen to twenty fathoms of water, and without which they could not subsist at all.

"At the Sault the Indians subsist by hunting stags, moose or elk and some beaver, and by the whitefish which is very good and is found in great abundance, but this fish is very difficult to take to all but these Indians, who are trained to it from childhood."

He says, on his return from his first voyage up the lakes, and after the loss of the Griffin: "On reaching Lake Conti (Lake Erie), near the mouth of the Detroit River, the soldiers who were in canoes killed with their swords and with their axes more than thirty sturgeons which came to spawn on the banks of the lake."

Charlevoix, in his voyage to North America, 1721, in speaking of Lake St. Clair, the smallest lake of the chain which lies between Lake Erie and Lake Huron: "The islands in the river seemed placed on purpose for the pleasure of the prospect, and the river and the lake abound in fish. Were it not for the Hurons at Detroit the other tribes of Indians would starve. This is in the flat lands thereabout which would furnish them sufficient subsistence though it were cultivated ever so little, but they can subsist upon the fish of the river which are plentiful. We entered the Lake Huron where we soon had the pleasure of fishing for sturgeon."

Speaking of Lake Superior, he said: "The Indians from gratitude for the plentiful fish with which this lake supplies them, and from the respect which its vast extent inspires, have made a sort of divinity of it." Speaking of Michillimackinas, he says: "The Indians live entirely by fishing, and there is perhaps no place in the world where they are in greater plenty. The most common sort of fish in the three lakes which discharge themselves into these straits are the herring, the carp, the goldfish, the pike, the sturgeon, the attikumaig or whitefish, and especially the trout. There are three sorts of these taken, among which is one of monstrous size, and in so great quantities that the Indian with his spear will strike to the number of fifty sometimes in the space of three hours, but the most famous of all is the whitefish, and nothing of the fish kind can exceed it."

In speaking of his trip from Mackinaw to Green Bay he says: "We coasted the north shore of the Straits of Mackinaw and finally came to the Manistique River, which is a beautiful stream abounding in fish, especially the sturgeon."

Capt. John Carver, of the Provincial troops of America, in his three years' travels throughout the interior parts of North America says: "Lake Superior abounds with a variety of fish. The principal and best are the trout and sturgeon, which may be caught at all times in the season in the greatest abundance. The trout in general weigh about 12lbs., but some are caught that exceed 50. Besides this a species of whitefish is taken in great quantities here that resemble a shad in their shape, but they are rather thicker and less bony. They are about 4lbs. each in weight and are of a delicious taste. The best way of catching this fish is with a net, but the trout might be taken at all times with the hook. There are likewise many sorts of smaller fish in great plenty here, and which may be taken with ease. Among these is a sort resembling the herring that are generally made use of as a bait for the trout."

Speaking of the falls of Ste. Marie, he says: "Nature has formed a most commodious station for catching the fish which are to be found here in immense quantities. Persons standing on the rocks that are adjacent to it may take with dipping nets about the months of September and October, the whitefish before mentioned at that season, together with several other species. They crowd up to this spot in such amazing shoals that enough may be taken to supply, when properly cured, those inhabitants throughout the year. The fish of Lake Huron are much the same as those in Lake Superior."

Carver arrived at Mackinaw at the beginning of November, 1767, after having been to the Mississippi River and up that stream as far as the Falls of St. Anthony. He says: "We passed the winter very pleasantly at the Straits of Mackinaw. One of their amusements at this time was to fish through the ice for trout. Though the Straits were covered with ice we found means to make holes through it, and letting down a strong line fifteen yards in length to which we fixed three or four hooks baited with the small fish before described, we frequently caught two at a time of forty pounds weight each, but the common size is from ten to twenty pounds. The method of preserving them during the three months the winter generally lasts, is by hanging them up in the air, and in one night they will be frozen so hard that they will keep as well as though they were cured by salt."

This may properly be considered as the first authentic notice of preserving fish by the freezing process, and while it is crude it still was as effective as the work now done by the immense freezers found in almost every important town on the lakes.

George Heriot, Deputy Postmaster General of British North America, in his book of travels published in 1807, says of Mackinaw that the Indians of that locality "catch herring, whitefish and trout, the trout being from four to five feet in length, some of which are seventy pounds in weight. This fish is bred in Lake Michigan and is known by the name of Mackinaw trout, and affords a most delicious food." Of Green Bay he says: "There is a village composed of natives at the mouth of this river who employ themselves in fishing."

At the Sault Ste. Marie, "At the bottom of the rapids and among their billows which foam with ceaseless impetuosity innumerable quantities of excellent fish may be taken from the spring until winter. The species which is found in great abundance is denominated by the savages attikumaig or whitefish. The Mackinaw trout and pickerel are likewise caught here. These afford a principal means of subsistence to a number of the native tribes."

He also speaks of the method of taking the whitefish at this place in the rapids at the foot of the falls, which singularly enough is followed by the Indians to this day, and from its peculiarity deserves special mention. I give his own words:

"No small degree of address as well as strength is employed by these savages in catching these fish. They stand in an erect attitude in a birch canoe, and even amid the billows they push with force to the bottom of the waters a long pole, at the end of which is fixed a hoop with a net in the form of a bag, into which the fish is constrained to enter. They watch it with the eye when it glides among the rocks, quickly ensnaring it and dragging it into the canoe. In conducting this fishing much practice is required, as an inexperienced person may, by the efforts which he is obliged to make, overset the canoe and inevitably perish. The convenience of having fish in such abundance attracts to this situation during the summer several neighboring tribes, who are all of an erratic disposition and too indolent for the toils of husbandry. They therefore support themselves by the chase in winter and by fishing in the summer.

"The Otter Nation inhabit the rocky caverns on Lake Huron, where they are sheltered by a labyrinth of islands and capes. They subsist on Indian corn and fish and the proceeds of the chase. While the women and children collect berries the men are occupied in darting sturgeon."

Mr. Henry R. Schoolcraft from the time of the establishment of the military post at Sault Ste. Marie was the United States Indian Agent at this point. He was a man of culture and literary ability, and one of the most prolific contributors to the literature concerning the habits, characteristics and language of the North American Indians. He says of the whitefishing at the Sault in 1820:

"No place in America has been so justly celebrated as a locality for taking this really fine and delicate fish as St. Marie's Falls. This fish resorts here in great numbers, and is in season after the autumnal equinox, and continues so until the ice begins to run. It is worthy the attention of ichthyologists. It is a remarkable but not singular fact in its natural history, that it is perpetually found in the attitude of ascending at these falls. It is taken only in the swift water at the foot of the last leap or descent. Into this swift water the Indians push their canoes. It requires great skill and dexterity for this. The fishing canoe is of small size and is steered by the man in the stern. The fisherman takes his stand in the bow, sometimes bestriding the vessel, having a scap net in his hand. This net is made of strong twine, open at the top like an entomologist's. When the canoe has been run into the uppermost rapids and a school of fish is seen below or alongside, he dextrously puts down his net and having swooped upon a number of fish instantly reverses it in the water, whips it up and discharges its contents into the

canoe. This he repeats until the canoe is loaded, when he shoots out of the tail of the rapids and makes for the shore. The fish will average 3lbs., but individuals are sometimes taken two or three times that weight. It is a great resource of the Indians and of the French, and of the poor generally at these falls who eat it with never ceasing appetite. It is also a standing dish with all."

Listen to his tribute to the edible character of the whitefish.

All friends to good living by tureen or dish,
Concur in exalting this prince of a fish,
So fine in a platter, so tempting a fry,
So rich on a gridiron, so sweet in a pie,
That even before it the salmon must fail,
And that luscious *bonne bouche* of the land beaver's tail.

* * * * *

'Tis a morsel alike for the gourmand or faster,
While white as a tablet of pure alabaster,
Its beauty or flavor no person can doubt
When seen in the water or tasted without,
And all the dispute that opinion ere makes,
Of this king of lake fishes, this "deer of the lakes,"
Regard not its choiceness to ponder or sup,
But the best mode of dressing and serving it up.

Sheldon, Disturnell, Strickland, Kohl, Hubbard and others all unite in saying that nature here seems to have lavished her bounties with no niggardly hand, so profusely are these lakes stocked with fish.

From the time of the discovery of the lakes down to the time of the establishment of the Hudson Bay Fur Company, these inexhaustible supplies were drawn upon only for the subsistence of the Indian tribes and the voyagers, but gradually they became, to a small extent, an article of commerce, the surplus being salted and sold in somewhat inconsiderable quantities. During all this time the northwestern territory was looked upon as a source from which valuable furs could be obtained, and but little attention was paid to the fisheries of the Great Lakes beyond what the immediate wants of those who lived upon them or near them demanded.

Little is known at the early time of which I speak with reference to the fisheries of Lake Erie, because of its situation it was but little frequented by the early explorers and fur-traders. Good reason existed for this condition of affairs. The blood-thirsty and cruel Iroquois, the most adventurous and warlike Indian tribe which ever inhabited the continent, held undisputed possession of all that wilderness lying about Lakes Ontario and Erie and adjacent to the Niagara River, which was a key of approach to the latter lake.

The rivalry between the Dutch fur-traders of New York and those of the French was exceedingly intense in their attempts to control the fur trade of the Northwest. The Iroquois were incited by the Dutch to throw every obstacle possible in the way of encroaching advances by the French traders and colonists. For many years the Iroquois, who by reason of their situation acted as intermediaries between the further western tribes of Indians, controlling in their own interests the fur trade between the Dutch and these tribes, fiercely resented all attempts at interference in this trade by the French. As a result of their attitude, the great waterway communication between Montreal, the seat of the French fur trade, and the Great Northwestern lakes was closed by the Iroquois, and communication with the upper lakes was made by way of the Ottawa and the French Rivers into Georgian Bay and from thence into lakes Huron, Michigan and Superior.

Meagre, however, as the information is that we have concerning the condition of the fisheries on Lake Erie at this early period, such information as we have shows beyond question that fish were exceedingly plentiful, especially at the Put-in-Bay Islands and Sandusky Bay. Dr. McCallum, of Dunville, Ontario, at a meeting of the International Fish Conference, held at Hamilton last winter, exhibited to the meeting two crude shellfish hooks which were found on Point au Pelee, in the Province of Ontario on the North Shore of Lake Erie. These hooks were presumably made from the shell of the freshwater mussel. In appearance they resemble the rude hooks employed for taking fish by the Esquimaux and other aboriginal types. The shank and the point were in two separate pieces, having holes drilled through them by which they could be attached to each other with thongs, the hook itself being barbless. Their form and construction indicated plainly that if the aboriginal man was compelled to sustain life by means of fish taken with such an implement, the fish must have been exceedingly plentiful in this lake. Facts at hand would seem to indicate that Lake Erie was in these early days bountifully stocked with fish, and although it has been fished constantly for a very long period, it still yields immense quantities of valuable commercial fish.

Blois, speaking of the condition of the fisheries as early as 1835, in his "Gazetteer of Michigan," says, "Their quantities are surprising, and apparently so inexhaustible as to warrant the belief that were a population of millions to inhabit the lake shores they would furnish ample supplies of this article of food without any sensible diminution."

Looking at the matter from that period of time the writer was unquestionably warranted in his assumption. But Blois could not have apprehended at that time that the census of 1890 would show that in the six States surrounding the Great Lakes there was a population constituting more than one-sixth of the entire population of the country. Neither could he anticipate that the methods of preserving fish would, within thirty years from the date of his writing, make it not only possible but profitable for fishermen to follow their calling almost continuously during the entire year.

Michigan statistics show that in 1830 the quantity of fish marketed in the State amounted to eight thousand barrels valued at $40,000.

In 1836 the whole number of barrels taken amounted to 11,400.

In 1837, to 13,500 barrels of the value of $125 800. Of this quantity one-fourth was consumed in the State and the rest was shipped to Ohio, New York and Pennsylvania.

It will be observed that the reports of the catch and value of the commercial fish upon the Great Lakes are somewhat meagre and desultory. The report of the Detroit Board of Trade for 1857 shows that there were between 80,000 and 100,000 barrels of fish taken in that year, valued at $640,000.

In 1885 the reports gathered by the Michigan State Board of Fish Commissioners show that the value of the commercial fish taken in the State was in value about $1,500,000 at wholesale price.

In considering such statistics as we have, we must take into account the uncertainty and unreliability that must necessarily prevail in their collection because of the want of thoroughness and completeness with which the work was done in the earlier years. So, too, we must consider in comparing one year with another the varying conditions of seasons, which is a potent factor. Severe storms may prevail one year, while the next year may be an exceedingly favorable one, and, therefore, their reliability is much impaired and the basis upon which we must make comparisons is at best unsatisfactory.

Causes of Decay.

Until about the year 1852 the fishing industry on the lakes was prosecuted almost entirely with gill-nets. Since then the gill-net fishing has continually increased until now the length of gill-nets fished in Michigan waters alone, according to the last reliable statistics within our reach, amounts to 1,725 miles.

About the year 1850 the pound or trap-net was introduced into the Great Lakes. Its use conclusively shows that it has been one of the most destructive of fishing devices, and is responsible for the great decay of the fisheries which has been observable during the last twenty years.

Concerning the introduction of the pound-net into the Great Lakes, I am indebted to Mr. L. Anthony, of Sandusky, O , for the following facts:

Pound-net fishing was first introduced by Messrs. Spencer and Courtland, two Connecticut men, at Sandusky, O., in the year 1850. The fishing with these nets was at first done in shoal water in the bays and rivers in a depth of about 10 or 12ft.

In 1852 Mr. L. Anthony, of Sandusky, in the fall of that year began fishing with small bay nets, which was the first attempt. This fishing was done at Locust Point, between Toledo, O., and Port Clinton, Ottawa county, in the same State, in a depth of 9ft. of water. The fish were plentiful and the catch was remarkably large. He salted fifteen hundred half barrels of whitefish during this season, besides selling large quantities to the farmers, who came to the fishery from long distances.

In the fall of 1854, Mr. Spencer, the gentleman formerly alluded to, together with other parties, including Mr. Anthony, conceived the idea that this plan of fishing could be successfully done in the deeper waters of the lakes. The first attempt was made by Mr. Anthony of deep water pound-net fishing, in the spring of 1855, at Kelly's Island and Put-in-Bay, in Lake Erie, Ohio, with marked success.

In the year 1854 he did his first pound-net fishing in Lake Huron at North Thunder Bay, fishing in 33ft. of water; fish were caught here in large quantities. There has also been some small fishing done near Lexington, Mich., which was not successful.

In the year 1856 Charles Ruggles and Capt. James Bennett fished with deep water pound-nets in Hammond's Bay, on the south shore of Lake Huron, and also on the north shore of Lake Michigan. At that time this was the largest and most successful fishery in the whole country. At the Thunder Bay fishery, on Lake Huron, Mr. Anthony caught in one net in twenty-four hours, four hundred half barrels of whitefish. There were not 100 pounds of other varieties caught on this occasion.

In 1865 he commenced fishing with deep water pound-nets at the Apostle Island, Madeline Island, Presque Isle and Sand Island in Ashland Bay, off Bayfield Point, in Lake Superior, and these fisheries resulted in a profitable investment.

From this date on the pound-net fishing increased beyond all conception. It is not infrequently the case that pound-nets are set in gangs reaching out from the shore a distance of three or four and more miles, and the destruction of fish by this method of fishing is immense. Unquestionably the fish so taken are superior to fish taken by the gill-nets because they are preserved alive until the nets are raised, but it takes everything, great and small.

No fishculturist should condemn the taking of fish if the fishing were done with judgment and with a due regard for the future.

The iniquitous feature of the business is that the cupidity of the fisherman overcomes his better judgment, and he takes from the water large numbers of small and immature fish that are of little or no value as merchantable fish. The result of this system of fishing is most destructive, tons upon tons of fish being thus taken which have never spawned, whereas if they were permitted to remain in the water to reproduce their kind, artificial methods would be greatly aided.

About the year 1868, Mr. William Davis, of Detroit, patented a freezing apparatus for the preservation of fish. In that year about sixty tons were frozen in Detroit, and seventy-five tons in Toledo. This method of preserving fish was not very kindly received at first, but gradually grew in favor. Previous to this time, during favorable seasons, large quantities of fish were taken over and above the needs of present consumption, and the only means of preserving them was by the salting process, which considerably reduced their value. Gradually the freezing process grew in favor, and it was found by experience that fish might be frozen and held in that condition for any length of time. The result has been that in almost every important town upon the lakes which is the seat of a fishing industry there are to-day one or more freezers with varying capacities, most of which are exceedingly large. Their erection has given a great impetus to the fishing industry. While formerly the lake fishing was prosecuted mainly in the spawning season, the methods of fishing have so changed by reason of the opportunity afforded by the freezer system of holding the fish for any length of time that now and for a number of years past fishing has been carried on in nearly every month of the year, and is only interfered with by the rigor of the season when nature closes the waters for perhaps a month or so.

Reliable statistics furnished show that the following quantities of fish were frozen from 1869 to 1884: In 1869, 400 tons; 1871, 600 tons; in 1872, 600 tons; in 1873, 700 tons; in 1874, 600 tons; in 1875, 800 tons; in 1876, 1,100 tons; in 1877, 1,200 tons; in 1878, 900 tons; in 1879, 1,100 tons; in 1880, 700 tons; in 1881, 1,100 tons; in 1882, 1,300 tons; in 1883, 1,450 tons; in 1884, 1,600 tons.

No information is at hand for the seven years from 1884 to 1892, during which years it is fair to be presumed from the general knowledge we have on the subject these amounts were very largely increased.

The average number of tons per year for the fifteen years amounts to 1,000 tons. Averaging these fish at 2½lbs. weight apiece, the number of fish caught on an average for each year and frozen would be 800,000, and for the entire period of fifteen years it would amount to 12 000,000 fish. This takes into consideration only the fish that were frozen, and my opinion is, that if there is any error in the above figures, they are much below the actual amount. But by far the greater quantity of fish taken are sent to market, iced, fresh, but not frozen. I believe it is within reason to say that the frozen fish will not represent more than one-fifth of the total quantity taken.

When we consider this large number of fish which are being constantly taken from these lakes, we can better appreciate the serious inroads which are being made upon the supply; and when we add to this the wanton destruction of millions of small and immature fish taken that are never given an opportunity to spawn, and when we further consider the large number of gravid females, the roe of which is lost by this capture, we can begin to appreciate the problem that is set before fishculturists to restore this great loss.

Means of Arrest of Waste and Restoration.

If the wealth of the waters of the Great Lakes is to be maintained, nothing can be clearer than that this great waste, which has been going on for more than a hundred years and is increasing, must be arrested. There are two methods by which this may be effected:

1. By a liberal and lavish stocking of the waters.
2. By the enforcement of just protective laws preventing the taking and marketing of unmerchantable, young and immature fish

As to the first point each State must act for itself in protecting its own interests in the fisheries. Weak and erratic efforts made now and then to make good the loss by the planting of a few million fish will not do. With the means at hand and with the information we now have as to fishculture, and with the small outlay of money necessary to carry on the work of artificial propagation, each State should see for itself that every female fish taken during the spawning season in its waters shall have her eggs taken from her, fecundated and after being hatched, properly planted; there is no good reason why this should not be done, and if the States whose interests are involved will take immediate steps to carry out this line of policy, they will have taken a step in the proper direction for the maintenance of their fisheries.

As to protective laws, let me say this: No laws should be passed which should rob the fishermen of the right to follow his calling within legitimate limits. If our work means anything it means that we are engaged in an undertaking which, if properly conducted, will result in a direct benefit to the fishermen and incidentally in great benefit to the people at large in the maintenance of a cheap and wholesome food. With this understanding of the conditions, fishermen should be willing to submit to such just and necessary laws as may be required to prevent destruction of young fish which are of no special value for their purposes, and the destruction of which means the ultimate decadence and extinction of their means of livelihood. So far as uniformity in laws can be secured regulating the fishing in the different States, they should be made uniform, but experience seems to indicate that the fault lies not in the number or effectiveness of statutes, but in the inadequacy of the means which have been used to enforce them.

Most of these laws are inherently defective because of the attempt to build up a warden system by counties, allowing the compensation of wardens to be fixed by the boards of supervisors, who, as a rule, will grant no compensation, or one which is grossly inadequate, which results in making the warden system of no effect. New York has without doubt the best warden law of any State in the Union, because the pay of her wardens is sure and fixed.

The ideal law would be one giving authority to the Board of Commissioners of each State to appoint a chief warden with such deputies as he might require for a proper enforcement of the laws, whose compensation should be sufficient to secure the services of good men who should be paid by the State. The State might be districted, but in that event each warden could exercise the functions of his office in some district other than the one in which he resides, thereby removing from local influence in the administration of his duty.

The States should make and enforce their own laws. No other power can do it so effectually and well. Their legislatures are familiar with the necessities of their States, are quick to respond to the wants of different localities, and by frequent contact with their constituencies know their wants.

If a general awakening of the lake States can be had as to the necessity of proper action to maintain their fisheries as above suggested, there is no reason why the great food supply furnished by these waters may not be maintained at least in their present value, with a hope of future increase.

HERSCHEL WHITAKER.

TROUT OF THE NEVERSINK.

WOODBOURNE, N. Y., May 23.—The Neversink is one of the best trout streams in Sullivan county, and the fishermen are having good luck and come in with well-filled baskets. And we also have lakes and ponds near where good black bass and pickerel fishing may be had in the season. The sportsmen say there is a plenty of trout in the Neversink this season. The weather and condition of the streams have been rather unfavorable so far this spring. We will have better weather soon. Good guides can be had at reasonable rates, and there is a good hotel with every accommodation.

A young lad about ten years old, Eddie Turner, quite a good fisherman, caught last Saturday, the 21st, in the Neversink a short distance from here, a trout that weighed 4lbs. good weight, and measured 22in. long and 5in. deep; it was a hybrid. The small fry were put in the Neversink six years ago. Of course the boy could not land the fish. He called for help after hooking it, and soon three men came to his rescue and the boy raised the trout nearly to the surface. Then Harry Winant scooped it up with his landing net. The trout was on exhibition at the Woodbourne Hotel Sunday morning, and it was a beauty.

B. V.

FISHES OF NICARAGUA.

MR. CHARLES W. RICHMOND, who is making extensive natural history collections in Nicaragua, writes as follows from Greytown about some of the fish of the region:

"Some small fish were found inclosed in crevices of a log floating in a salt-water pond in company with hermit crabs. I have made a trip up the Rio Frio, emptying into Lake Nicaragua, about fifty miles into Costa Rica, and found sharks almost all the way. The man I had with me was catching some fish one morning, and as he was pulling in a fine large specimen there was a loud splash, and a shark grabbed the fish after it was partly out of water, taking hook and all. The 'tarpon,' as they call a large fish here, is also found way up the Rio Frio; it makes a loud splashing frequently, and is very abundant in the lake and the San Juan. There is a 'catfish,' according to the Americans here, that is common on the San Juan. It hangs about the steamboats in large numbers—I have seen nearly 100 at a time—and they are ravenous, jumping almost out of water to get at anything thrown overboard. Of course this takes place when the boat is at rest. They see a cracker long before it reaches the water and all rush for it; the cracker is often knocked out of the water several times before they finally get it. A small mottled fish, common around Greytown, blows up like a balloon on being taken out of the water; I exploded one by squeezing it too hard."

SALE OF ARTIFICIALLY REARED TROUT

[A paper read before the American Fisheries Society.]

I HAVE always been greatly interested in the fish and game interests of the country, and also in the passage and enforcement of all reasonable laws for the protection of the same.

I presume my father did more than any other man in Plymouth, and at his own expense, in stocking the public waters of that town with black bass and white perch. I have on several occasions restocked the only public trout stream in Plymouth with trout fry whenever I had a surplus after stocking my own ponds.

As only a small portion of the people are interested in the fish and game laws, it is always well in framing them to guard against the possible danger of having them so arbitrary as to interfere with the private rights of the people or with their industrial pursuits. We had an example of this nature in Massachusetts. Under the law the Fish Commissioners had power to lease the fishing rights in any great pond of over twenty acres to private parties, and they did so with a large number, thus taking away from the people at large the right to fish in any leased pond, under a penalty of $20 to $50 for every offense. The people stood it for a few years, and in 1884 they appeared at the State House in force and demanded and obtained the repeal of the law, and now the Commissioners have not the power to lease any pond in the State.

The policy of Massachusetts, and also of other States, has been to encourage the cultivation of trout and other useful fishes as a food product, and it was for this purpose that the several States and also the United States organized the Fish Commissions, and Massachusetts passed the law of 1869, the title of which is "An act to encourage the cultivation of useful fishes," by which act the people, for this purpose, surrendered to private parties, being riparian owners, all their fishing rights in every pond of less area than twenty acres, also in every unnavigable stream in the State. It also made fishes artificially cultivated or maintained the absolute property of the person cultivating or maintaining them. It also made it a penalty of $20 to $50 to fish in any waters in the State in which fishes are lawfully artificially cultivated or maintained.

The Commissioners called the attention of the people to this law in their report for the year ending Jan. 1, 1870, in the following words: "The need of such a law as this is the same as the need of a law to protect any industry. While on the one hand we recognize the fact that a supply of good fresh-water fishes, among which we class the salmon, shad, trout, black bass and smelt, are essential as food for our people, we are still compelled to admit that the supply is constantly diminishing, and that several of these fishes are in many localities exterminated. For this deplorable state of things there was but one remedy and that was to make fishes under certain conditions property, and thus give the same stimulus to the cultivation of fish that is given to the raising of any other live stock. Under the knowledge we now have such cultivation is as easy as that of poultry."

The successful cultivation of trout is no longer a matter of doubt. It has passed through the experimental stages and now stands out as destined to become one of the great industries of the people, and it will if the several States will only realize the importance of encouraging the industry by repealing or modifying the restrictive laws in relation to the sale of artificially reared trout. Some of the States have already done this. Connecticut, Rhode Island and Maryland have modified their laws in relation to the sale of trout artificially raised, and a bill to that effect has already passed the Massachusetts Senate, and is now pending in the House of Representatives, and we trust New York and other States will follow suit in the near future. Our trout are all artificially reared from the egg, in artificially made ponds and on artificial food which we buy, and we pay a tax not only on our plant but also on our trout as stock in trade, and the law declares them to be our absolute property.

Under these conditions we feel that we are entitled to the same property rights in trout at all seasons of the year that every class of property that is useful to man as a food product has, namely, the right to sell it at any and at all times when it is desirable to do so, and that our customers and ourselves shall be the judge of when that time is and not the State. Remove the restrictions from the sale of cultivated trout from Jan. 15 to April 1 and people now in the business will enlarge their establishments to their utmost extent to meet the largely increased demand, and others will be induced to enter into the industry to such an extent that ten years hence 50lbs. will be raised annually where one is now, thus giving employment and wealth to the people engaged in the industry, taxation to the towns and State, and the advantage of having this additional amount of food fishes added to the food product of the country during the latter part of the winter, when nearly every kind of fish is scarce and often in poor condition, while cultivated trout are in fine order. It is an old adage that he who makes two blades of grass grow where one grew before is a public benefactor, and it must be admitted that he who makes 10,000 to 20,000lbs. of trout grow annually where none grew before is also a public benefactor, and if restrictions against the sale are removed or modified, large tracts of now waste land and water will become valuable for the cultivation of trout, and the expectations of Dr. Garlick, Dr. Ackley, Ainsworth, Seth Green, Livingston Stone, Theodore Lyman and other early disciples of fish-culture will be realized, much valuable property created annually, many persons benefited, and no one in the least injured. I trust this Society will give this subject careful consideration, and that the laws of the several States will soon be changed so as to give full justice to fishculturists.

W. L. GILBERT.

Governor Russell Vetoes the Bill.

THE bill to permit in close season the sale of artificially reared trout having passed the Legislature, Governor Russell last week vetoed it, setting forth the following reasons of his action:

The Honorable House of Representatives:

I return herewith, with my objections, a bill entitled "An act to permit the taking and sale of trout artificially raised in this commonwealth between the 15th day of January and the 1st day of April in each year," which originated in your body. This bill, introduced upon the petition of individuals largely interested in the artificial propagation and maintenance of trout, permits the sale of such trout at a season when the sale of other trout is forbidden by law.

The commonwealth, by many and careful regulations and restrictions, has rigorously undertaken the preservation of her useful fish. In furtherance of this well established and wise policy, she has created important and expensive offices, made large appropriations of money, imposed restrictions and obligations upon private ownership of land and water used or useful for fisheries, carefully limited the time, manner and place of fishing, and, as a regulation, the most stringent and efficient short of entire prohibition, forbidden the purchase, sale or possession of any fish out of the lawful season.

All of this State supervision and interference with personal liberty and private property have been only upon the conceded fact of the common interest of all the people in the preservation of useful fish in the commonwealth, and the necessity of united and so of State action to this end. Such action, year by year increasing, has been with the approval and upon the demand of the people. Among the fish most needing and constantly receiving such legal protection, have been trout. For their preservation and increase not only has the commonwealth greatly restricted their catch, but she has also established hatcheries, appropriated money for the propagation and distribution of trout, and encouraged individual assistance by granting rights of flowage and other privileges.

The sole object of this policy has been to make a valuable food and game fish, now scarce and dear, again plenty and cheap.

The catching of trout, if unrestricted, either as to time or manner of fishing, would soon exterminate them. The restrictions already established are necessarily difficult of enforcement, and in my judgment would become impossible of enforcement and practically useless if it is made for one's pecuniary interest to violate them by opening to him a valuable market out of season. This bill, I believe, will work just this evil. It permits the sale of a trout which differs from other trout only in being artificially fed. It opens a market for such sale to a special interest, while it is closed to all others. The restrictions of the bill, intended to prevent the sale of other trout, can be easily evaded and I believe would be practically useless. Once permit the possession, sale and purchase of artificially-raised trout during the close season and all trout may soon be made to meet the required condition or escape destruction if they do not. The most potent influence for the preservation and increase of this fish—namely, the prohibition of a market—will then be lost.

If this bill becomes a law I do not see how its principle can fail to be extended whenever any other individual, taking a special pecuniary interest in the artificial raising of other fish or game, demands for the protection and development of his industry special privileges at the public expense and obnoxious to the public interests.

I am not ready to give my approval to legislation of this character, nor to aid in establishing an artificial trout industry by special favors from government, to the injury of the public, because at the expense of the wise and well-established policy of this commonwealth, which seeks to preserve her fish and game for the benefit of all her people.

The industry already existing was established with full knowledge of this policy, and has prospered without the aid of special legislation in its interest. I object to this bill therefore,

First—Because it permits an act which I believe will remove the most efficient restraint upon the illegal catching of trout and will lead to their extermination.

Second—Because it establishes a precedent which if followed, will go far to destroy the usefulness of the fish and game laws of the commonwealth.

Third—Because in effect, if not in form, it is legislation for a special interest against the public interest, and to the public injury.

WILLIAM E. RUSSELL.

Channel Bass at Cape Cod.

WOODS HOLL, Mass., May 26.—*Editor Forest and Stream:* A red bass (*Sciæna ocellata*) weighing 12lbs. was caught in Capt. Spindel's pond May 25. It is the first ever taken here. Fish are very scarce now. All the menhaden taken are full of spawn, which is not ripe and looks as if it would not be ripe until one month later. Last week hundreds of red phalaropes were in Vineyard Sound and Buzzard's Bay, but they have all gone now.—V. N. EDWARDS.

North Carolina Black Bass.

MR. CHAS. HALLOCK sends us this note received by him from Dr. W. R. Capehart, Avoca, N. C., under date of May 27: Black bass fishing was never better here. Everett caught 22lbs. in a few minutes Wednesday the 6th inst. Webb caught a nice lot this A. M. Everett is looking for a party of anglers next week. We will have a daily mail after July 1, which will help us.

THE NON-EXPORT LAW SOUND.

LAST October the Supreme Court of Connecticut held a statute of that State which prohibited the exportation of certain game from the State to be constitutional. A statute of Arkansas prohibits the exportation of game or fish (except fish in private ponds) from the State. Recently Mr. C. H. Organ, master of a steamboat plying the Mississippi River between Memphis, Tenn., and West Memphis, Ark., was convicted of a violation of the statute in transporting a barrel of fish from the latter to the former place. It was conceded that the fish were taken from a lake on public land. Organ appealed the case to the Supreme Court of the State. On May 28, 1892, the case was affirmed, the court, Mr. Judge Hemingway, delivering the following opinion, for a transcript of which we are indebted to the courtesy of Mr. J. D. Crawford, of Little Rock:

"The ownership of fish is in the State for the benefit of its people in common, and the Legislature has the right to permit individuals to catch them upon such terms and conditions as it may impose, and to restrict the property acquired in them, when caught, to such extent as it deems proper. (McCready vs. Virginia, 94 U. S. 391. American Express Co. vs. People, 31 Cent. L. Jour. 271. Magner vs. People, 97 Ill. 333.)

"It may prohibit catching them entirely or for a specified season, or it may permit them to be caught for the use of the person who makes the catch, and withhold the right to sell them or ship them for sale. When preserved for the common benefit of the people of the State they are not articles of commerce in any sense, and we cannot see that they become such simply because the Legislature permits them to be caught by individuals for use within the State only.

"One who catches them has originally no separate property in them, and no right to acquire it except as the Legislature might provide; as all right of property in them is derived from the State, it is subject to such terms as the Legislature imposes. It saw fit, in the act assailed, to confer a right of property, but to so limit it that the article should not be shipped from the State, the purpose being to restrict the use to those who originally owned it in common. The restriction was imposed by right of ownership, and not in the exercise of any assumed power to regulate the commercial uses of private property.

"Under this limitation fish never pass from the dominion of the State as proprietor or become articles of commerce in the sense contended for by the defendant, because the qualified property right is conferred upon condition that the use shall be restricted and shipment from the State not allowed. It follows that the act does not violate the commerce clause of the Federal Constitution, and it could not be seriously contended that it violated any other constitutional provision.

"We are aware that a different conclusion has been reached by the courts of Kansas and Idaho (Sanders vs. State, 19 Kas., 127, and Territory vs. Evans, 23 Pac. Rep. (Idaho) 115), but that announced seems to us the better one, and is sustained by the Supreme Court of Connecticut, in an opinion to which we refer for a more extended discussion of the subject.—State vs. Geer, 22 N. E. Rep. (Conn.) 1012."

FLY-CASTING AT SYRACUSE.

THERE will be a fly-casting tournament held in connection with the annual meeting of the New York State Association for the Protection of Fish and Game, on Thursday, June 16, beginning at 9 o'clock in the morning, at Maple Bay, on Onondaga Lake, under the auspices of the Anglers' Association of Onondaga.

The classes are as follows, single-handed fly-casting:

First—Expert class, entrance fee $5: Open to the world. Judges to be appointed on the grounds.

Second—Class A (amateur), entrance fee $5: Open to those who have never won any prize in a fly-casting tournament contest, or been engaged in the manufacture or sale of fishing tackle.

Third—Class B, entrance fee $5: Open to amateurs and those who have never won a first prize in any casting contest.

Numerous prizes have been provided, running from $2.50 to $30, and these are the rules:

RULES FOR ALL CONTESTS IN FLY-CASTING.

1. No rod shall be allowed over 11ft. 6in., and shall be used with a single hand. A practical line and reel shall be attached to the rod.

2. Three flies, one stretcher, and two droppers with gut not less than 3in. in length attached must be used, and a casting line or leader of single gut of not less than 8ft. in length.

No attached weight of any kind on line or fly shall be allowed.

3. Each contestant shall be allowed not more than ten minutes for distance, nor more than ten minutes for accuracy; and in case of accident, such as parting or fouling of the fly or line, the referee may allow additional time in his discretion.

Switch or water casting not permitted.

4. The contest shall be, as to distance, the number of points according to the number of feet obtained, and 25 points for accuracy, as follows:

5. LANE CAST—The line to reach a distance of not less than 50ft. When the contestant announces ready, 5 casts in succession shall be made inside the 24in. space, the lane to be bounded by the two buoy lines, each cast counting one point. Should half the line be outside and half inside, the count will be registered as one-half.

6. BUOY CAST—Five casts in succession shall be made as soon as the contestant announces ready, at a 12in. buoy at a distance of 50ft.; the leader or any part thereof, crossing or striking any part of said buoy, shall count as one.

7. SPACE CAST—Five casts in succession shall be made in a space of 4ft., between two objects or bushes, at a distance of 50ft.; each cast shall count as one. The stretcher fly must pass at least 2ft. beyond the said line, between the bushes.

8. LEFT BUSH CAST—Five casts in succession shall be made at a row of bushes or construction representing same on the left at a distance of 40ft. Any part of the leader passing underneath the outside line of the bush shall count as one, as in the other contest.

9. RIGHT BUSH CAST—Five casts in succession shall be made in like manner, the counts to be as in left hand bush contest.

10. JUDGES AND REFEREE—Two judges and a referee shall be appointed by the president of the association. The referee's decision shall be final.

The Trout was Bound to Get There.

NEW YORK, May 31.—I have just returned from Babylon, where I spent yesterday and had a morning's fishing in True's Brook. As the result of my morning's sport I had twelve handsome trout, nine of them weighing 1lb. each, and one of them turning the scales at 1¼lbs. With this heavy one I had a most unusual experience, the first of the kind that has ever come to my personal observation. I had a heavy strike, and in striking my leader parted and away went my trout. Within five minutes that trout was in my creel, and as he came out of the brook I saw my hook and leaker hanging from his lip.—W. B. B. I.

ANGLING NOTES.

THERE are times when the ways of fishes, or some particular fishes, are past finding out. During the past year or two pike (*E. lucius*), commonly and by statute in New York called pickerel, originally introduced maliciously into some of the trout waters of the Adirondack Wilderness, have found their way through natural channels into other trout waters of the region where they have previously been unknown. As yet there has been no systematic effort made to rid these waters of the pike, after the manner that is successfully practiced in trout waters in Great Britain, where this predaceous fish is found in greater numbers than in the Adirondacks, and for a very good reason, namely, that the law would not permit such an effort to be made. The new law has remedied this by providing that deleterious fish may be removed from the waters of the State under the supervision of the Fish Commission; at the same time it provides a rebate amendment to the clause which has hitherto made it impossible to plant any species of fish not of the salmon family in Adirondack waters, by giving the Commissioners power to introduce fish of any kind, if it is done under a resolution of the board. It is generally understood that this amendment was inserted in order that black bass might be introduced to prey upon and destroy the so-called pickerel in waters where they are not welcome. This has seemed to me like jumping from a moderately warm frying-pan into an exceedingly hot fire. Now comes the paradox, and one may well say, "Are things what they seem, or is visions about?"

My friend, Herr von dem Borne, writes me from Germany: "I can assure you that I have never found that my black bass have done injury to other fishes. The pike is here the master, and I am in doubt if it will be possible to make the black bass plentiful in our rivers and lakes where pike are abundant. Prince Schwarzenberg, of Bohemia, where there are some 12,000 acres of carp ponds which can be drained and are changed for a time into arable land, writes me that the pike has made terrible havoc among his black bass," This is a new indictment, and doubtless comes from planting small bass in waters with big pike, for Herr von dem Borne, who introduced the black bass into Germany, has reared thousands of young bass from a few parent fish. Four miles from where I am writing is a spring pond, and when I first knew it as a boy it contained pike in abundance, sunfish and yellow perch. Adult black bass were introduced and the pike disappeared utterly; then trout were planted and they disappeared, and now the black bass, perch and sunfish are in possession.

A writer in *Land and Water* relates an experience in salmon fishing where his flies and the flies of a friend fishing with him proved so unattractive that altogether they killed but a few beggarly fish in two weeks, while amateur fishermen on the same water at the same time killed two or three fish per day. The latter as he was about to leave gave the others two flies of a new pattern with which he had killed his fish, and thereafter for two weeks of that season and many weeks of other seasons this fly killed fish on that water when all other patterns were refused, and he concludes thus: "Why such should be the case is a question that has baffled me ever since." He is not the only man who has been baffled in this manner. Twenty-five years ago I was fishing in an Adirondack lake when the trout rose to one fly in a cast of three with such avidity that they tumbled over each other in their eagerness to get it to the exclusion of the others. The favored fly resembled nothing under the sun that I have seen. Where I got the six flies of the pattern that were that day in my fly book I do not know, nor have I seen their counterpart since, except as I have had them tied; but the strangest thing about it all is that from that day to this, although repeatedly tried on many waters, I never have found the same fly even moderately successful.

There are few, if any, trout streams in the Eastern States that I have fished on which the coachman is not a good fly. In fishing new streams I have generally put on a coachman, either with white or lead-colored wings, as one fly of the cast at some part of the day, and found it killing. In fact, of all the flies called general flies, the coachman in my estimation holds first place. On a stream in Vermont that for nine successive years I have fished each June (the very word brings up visions of trout, and Lowell's lines,

> "And what is so rare as a day in June?
> Then, if ever, come perfect days,"

describe the days on which they were caught, for to the fly-fisherman there are no other days to compare with June days). I once would have thought of leaving my reel off the butt of my rod as quickly as of leaving a coachman off my leader, but one day I put on a Marston's fancy with a coachman, and to my surprise the new fly at once established itself as first favorite with the fish. Mr. Marston had just sent me a couple of dozen of the flies from England, and the trout never had seen it, but they took it like an old acquaintance indigenous to the water, and they continued to do so succeeding years and in other waters.

The season of the year and Mr. Marston's name reminds me of another matter. A few years ago he told me in a letter how he enjoyed fishing in England with dear old Reuben Wood. He said Uncle Reuben "was charmed with the sweet old English village of Hungerford, and told me he felt as if he had lived there way back in May-flower time. Our hawthorn was in full bloom. 'May,' we call it 'a spray of May,' and spring was beautiful. Spring is beautiful everywhere, but I cannot imagine it so beautiful anywhere as is rural England."

Last year Mr. Marston sent me two dozen hawthorns that I might feel the spirit of Chaucer, Spenser and Shakespeare in the air. I feared that every one of them would die, but this spring, when all nature was putting on a garb of tender green, the English "May" was robed with the best, and later, when they put out their blossoms of white and scarlet, I shall have a small bit of rural England as a daily reminder of my friend over the water.

It is but a step from hawthorns back to fly-fishing. I presume that every fly-fisher has at some time or another found a likely-looking trout pool and worked it carefully with his flies from one end to the other, and perhaps changed his flies and rested the pool and again worked over it without getting a rise from a trout of decent size, and then proceeded down stream or up stream, just as it happens that he is a down stream or up stream fisher, feeling that in the pool a big trout is lurking, that he must be there because everything indicates it, but unfortunately the fly-book does not contain the particular fly that will bring his troutship from his lair. If this should happen to a fly-fisher during this charming blossom season, and he has fished the pool artistically and well, instead of proceeding on his way, haunted by the thought of a big trout left behind, let him fill his pipe, if he is a smoker, and retire from the pool until the soothing weed is consumed, and smoker and pool are both rested. Then approach and cast the flies below or at one side of the particular spot which appears to hold the fish, and when the flies sink below the surface draw them past the spot with force enough to make the water curl as it is divided by the flies drawn so swiftly that neither trout nor man can distinguish the particular flies of the cast.

A. N. CHENEY.

CHICAGO AND THE WEST.

[By a Staff Correspondent.]

CHICAGO, Ill., June 4.—The cisco are running on Lake Geneva, Wis. Two men caught 400 June 1. Lovers of this brief but lively little fishing season will do well to hasten, as it lasts but a few days.

The large party mentioned earlier as located for this week on the Little Oconto have sent down two reluctant emissaries who state that five men have caught 384 trout the day before they left. Mr. Fred Taylor has sent word also that the sport was good.

Mr. Chas. Norris took 53 trout last week on one of his buried streams of the north peninsula, but his largest only weighed 2lbs., the average being near ¾lbs.

Billy Farmer caught 15 bass and some good pike in Lake Marie two days last week. The bass were taken trolling on spoon and phantom minnow rather than on frog.

Messrs. J. M. Clark, Geo. Morell and Chas. Porter spent three days last week floating down the chain of the Fox Lake system. They started from Camp Lake and passed thence through Lake Marie, Grass Lake, Fox Lake, Lake Nippersink, and so on down the Fox River to Carey. They camped out, and used one of Mr. Clark's new nesting boats. They report a pleasant time, their catch being 40 bass. The best fishing was in Lake Catherine. Nothing in the river. The lakes were high but clear, the river full of mud. The bass were taken in the shallows of the meadows or overflows.

Mr. Homer Bevier, of Niles, Mich., writes as follows concerning the angling outlook at that point:

"I have just returned from an afternoon's fishing spree after trout. Three of us went. Followed the creek for about three miles and not a trout in the party to show for our labor. Not even a bite, except by chubs, and those we got a little too frequently for comfort or pleasure. Worms are too scarce and hard to dig to afford to feed to chubs.

"Three years ago quite a number of trout were caught near here in a creek. Two years ago there were not so many, only a few taken out, ten fishermen for each trout. Last year fishing for the beauties became very monotonous, for we could not catch any. They were not there to catch. This year, so far, three or four have been out after them, but no fish have showed up, and I think what little trout fishing we did have here has run out. No one attended to stocking the streams, as should have been done, and as a natural result fish have become very scarce.

"When I want any good trout fishing I get on train and go down to Kalamazoo and fish on Silver Brook, or go north to Cadillac or Traverse City. The best place I know of is up north on Chicago & Northwestern R. R., at a place called Watersmeet, a junction of two roads. I was there on business two weeks ago, and while waiting for the train (½ hour) I saw three parties pass by with a fine lot of trout. I understand one party caught fifty-two there the day before. That country is full of small streams and all have trout in. I met C. E. Hollenbeck, of Chicago, at Iron Mountain; he was on his way out to Watersmeet to spend two or three days with the landlord there (who by the way is a very pleasant gentlemen to meet and has a complete fishing outfit always ready for the boys) and go for the trout. He says he has been there every spring for the past four years and never failed to catch all the trout he wanted.

"Our trout fishing here I consider no good. But we have got some very fine bass fishing within 5 miles of us, at Barren Lake. Myself and a friend were out there on Monday afternoon, did not get on the lake until 3:30 P. M., returned home in the evening with twelve blackies; rather a surprise to me, as I supposed it was early yet for them."

Mr. Bevier's comment on the fishing of his vicinity is not encouraging. We have had the impression here that the Watersmeet country has been pretty well skinned out of good trout, though in the center of a great country for all sorts of lake and stream fishing. I am glad to hear so good report of the trout fishing there.

Secretary Davis, of the Grand Calumet Heights Club, has the following in regard to the Decoration Day celebration at this pleasant and convenient assembly point on the lake shore:

"Our May festival was a grand success, thanks to the efforts of some of the members, the attendance being nearly fifty. The river fishing is now at its best, one member of the club caught seven pickerel and two black bass in less than two hours on Decoration Day. The woods are one mass of brilliant colors, as wild flowers of all kinds are in great profusion. As for sailing on the lake 'we are right in it,' is the expression of some of the members who indulged in that delightful pastime on that day.

"Let us continue the good work begun last week; run down to the club often, invite your friends, bring in new members, and above all, don't forget that the last Wednesday of this month is the time your extra membership certificates expire. It is also the time of the annual meeting.'

The secretary's little joke about being "in it" refers to two gentlemen who capsized on Lake Michigan a half mile out, and were saved by Mr. L. J. Marks only by a very prompt, trying and highly manful effort. These two gentlemen were sailing in a small boat. They had the sheet made fast. One would think there was no one left on earth who would make fast the sheet in these days, especially on so dangerous a water as Lake Michigan, but these two unfortunates did. It took three minutes to untie the knot. It took three seconds to turn the boat bottom side up. After all, it is not strictly necessary to hasten to save people who lash the sheet fast. They ought to be left to soak a good long while anyhow and get a good, fair taste of drowning. Mr. Marks, however, did not know they had done this until after he had fished them out at the end of his long and desperate pull to save them. Mr. Marks is justly the hero of that club. He acted when others wailed and waited.

The Chicago Fly-Casting Club held its first practice meet at Washington Park, May 26, eighteen members being in attendance at the rather moist festivities, rain falling most of the time. The park board assigned the gentlemen to a small pumped-out lake with a high bank rising back of the shore, but in spite of this unfavorable feature a very pleasant time was had and the lines were stretched for the first time this spring for many of the anglers. There is some comfort in pitching a fly, even in make-believe.

Mr. Cole, the energetic president of the Illinois State Fish League, issues the following letter:

"I did not call our directors together as the flood would prevent our meeting on the Illinois River. I now propose that we meet some time in June at Springfield. Please let me know what you think of this, and what date or dates will be best for you. I am writing as above to each director, as I wish to consult the convenience of all as nearly as possible. The Fox River Fish and Game Association have voted to join the League. I have also begun a canvass of individuals for life and annual memberships. Am meeting with good success, and expect to come to our next meeting with several hundred dollars pledged. I hope that your people are taking an interest in the organization, and that we can start our work with good backing. I have made no move to appoint the standing committees, as I wish that to be done by the directors. Will you kindly appoint a good man for each of the legislation and protection committees, and get their consent to serve. We want men who will act. I have received very many encouraging letters and feel confident that with the proper amount of work and energy we can make our League a marked success."

Mr. Jas. St. John Greenough, the president of the Whiteside County Club, writes as follows from Sterling, this State:

"The Whiteside County Field Club did have a membership of 60, but we have had no regular meeting for eighteen months, but we convicted 14 netters that year. Last year they were quiet, but did some seining nights, but were not organized. This year it is about the same. Our fish warden, Mr. John Dickson, is a very effective man, but has to work for a living and cannot devote enough time to this business as he or myself would like; still his close watch makes seining difficult and very expensive. I would like to have you write to Dr. Law, Dixon, Ill., president of their fish club, and get him interested, and I also will write him. Rock River is the home of the black bass. It is the only rock bottom stream between the Alleghenies and the Rockies, and until the last eight years black bass were so thick fall and spring that they were snagged in large quantities with gang hooks. But a man named Sampson started three fish wagons through the country and got his stock from the fishermen on Rock River, making a market for them, and so they have depleted the river of all game fish.

"I am going to get about thirty of us together for the new club and join the Illinois Fish League, soon as I can get around to it. Am obliged at present to walk on crutches, which hinders me from doing active work."

To sum up the angling situation for this section: The rivers offer no bass fishing; the lake fishing for bass is coming on, though the bass are by no means done spawning. Trout fishing is now good, though the streams in the lower part of Wisconsin and Michigan are much swollen, and all trout trips should be laid far north.

Floods cost 500 lives in the West this spring, $35,000,000 damage outside of that done to crops, and a damage to the spring season of sport of unknown and unspeakable extent.

E. HOUGH.

WEST COAST FLY-FISHING.

Editor Forest and Stream:

The comments of Mr. R. L. Ogden ("Podgers") in last FOREST AND STREAM, on my recent assertions regarding fly-fishing for salmon and salmon trout on the West coast are indeed gratifying to me. I had approached the subject with considerable hesitancy, for I expected every body to "jump" me instanter; but with such backing as experienced and practical "Podgers" I feel pretty safe from attack. In fact his experience on the Navara will probably set the matter at rest, as it should. By the way, "Podgers's" Commentaries are highly entertaining and instructive and fairly bristle with good, practical hints all the way through; and as practical suggestions from men of such extended and varied experience as Mr. Ogden are just what most of us want I for one hope he will continue this attractive feature of our beloved old FOREST AND STREAM.

It will be impossible for me to accept Mr. Ogden's invitation, although I appreciate his compliment in extending it, to join him on the Navara next October, as I have already arranged to spend most of that month in the Coast Range; but there are two or three men in this world whom I hope to meet some day in friendly rivalry with the fly-rod on the banks of some of our beautiful Western streams, and one of these is "Podgers."

S. H. GREENE.

PORTLAND, Oregon, June 1.

Lake Champlain Bass.

LAKE VIEW HOUSE, Vt., June 3.—Fishing season opened June 1 at Samson's Lake View House, St. Albans, Vt., upon the Great Back Bay of Lake Champlain, with many anglers from New York city. Average catch of small-mouthed bass from seven to twenty-one. Mr. A. F. Proescher, of the Brunswick-Balke-Collender Co., 860 Broadway, made the catch of twenty-one bass and one larg northern pike, 8lbs. Bass average in weight from 1½ to 3¾lbs. Prospects good. Fly and bait.—H. L. SAMSON.

Lamoille River.

Editor Forest and Stream:

In my article of May 26 on "Champlain Fish" you make me say Lamville River; it should be Lamoille.—DEXTER.

NEW HAMPSHIRE FISHING.

LANCASTER, N. H., May 28.—This week I have a little more comforting news in the fishing line. It is a fact that some trout have been caught this week, but it has rained persistently and every day in the week, and some nights, too. G. E. Lane, of this place, has been to Richardson Lake, Middle Dam; he went with the Littleton party—Geo. Bellows, Arthur Dow and Geo. Whittaker, Littleton; Forrest Collins, of Woodsville, and "Gib" Lane of this place, comprising the party. Mr. Lane came home to-day, bringing a nice lot of trout, one of them weighing just 7lbs. and measuring 26in. "Gib" says he was "high-muck-a-muck" as regards size of fish taken at that place this season.

I had a line from Bumford yesterday from First Lake which says "there has been no fishing until to day; two landlocked salmon were taken here, one of 3½lbs. and the other 4lbs."

The hotel at First Lake is now open, and the new houses at Second Lake will be open June 1. ROB.

LANCASTER, N. H., June 4.—This week has been the most productive of fish of any this season. We had three decidedly warm days, in which our old fishing companion, the mosquito, has made his presence felt. Some good catches are reported and doubtless the fishing will remain good during the month, as is usually the case.

The 10th of June used to be the time for a party of three or four Boston anglers to appear at the mouth of Diamond River, Wentworth's Location, to try for some of the big trout that came up out of the Magalloway. There is the best of fishing there at such a time, trout ranging in size from 1lb. to 3 or 3½.

Ex-Gov. C. H. Sawyer, of Dover, Hon. E. H. Gilman and G. W. Weston, of Exter, passed through here last week on their way to Connecticut lakes for a few days. They are likely to have some sport with the landlocked salmon at First Lake as there are more and larger ones being taken this spring than ever before.

I think your correspondent, "Von W.," introduced the first salmon to those waters some twelve or fifteen years ago. For the first few years nothing was heard of them and the effort was thought to be a failure, but they are now beginning to bear fruit and this year Commissioner Hodge has put in 20,000 and I think some were put in last year; at all events there is fair salmon fishing at Connecticut Lake this spring, with a prospect of better in the future.

Quite a party from Manchester are in at Camp Diamond, Diamond Ponds, and judging from past experiences the fishing ought to be fine there the past two days, though I have heard nothing since the first of last week.

The article in last issue of "our paper" signed by E. W. Whitcomb, Farmington, Maine, is a mighty sensible piece, and hits the nail right square on the head. I have more than once been thoroughly provoked by the writings or sayings of people who occasionally spend a week in the woods, and usually not very "far in" either in regard to the growing scarcity of the large game of northern New Hampshire and Maine, while it is a well known fact to those who spend months in the woods and make a careful study of such matters, that such game is more plenty than ten or twelve years ago. The man who goes into the woods expecting game to come into camp or hotel office to be shot is about the only one who can reasonably growl about the "scarcity of game." ROB.

WOODSVILLE, N. H., June 3.—It has been so cold that no strings of trout of any account have been taken anywhere in the vicinity nor in the mountain region. Parties just back from Middle Dam report fair luck and some large ones, notably one of 7lbs. which was shown me. Snow showed on Moosilauke last Sunday, so we have no luck here. C. S. G.

GRAND SPORT IN CANADA.

THE Canadian angling season is now at its height. Not only has it opened this spring some days earlier than usual, but there has been much greater success on all the streams and lakes than there was last season. I am scrawling these rough notes sitting on a 30x20in. box of ouananiche and surrounded by equally large original cases of fresh caught trout in a baggage car of the train for Quebec on the Northern & Lake St. John Railway. I helped in an humble way to fill the box I am sitting on, with that right good fellow and genial traveling companion R. M. Stocking, of the general railway and steamship office opposite the St. Louis Hotel, Quebec, so well known to all American anglers visiting Canada, as principal seductor of Lake St. John's famous fresh-water salmon. At the risk of appearing egotistical, and since it may interest some of your readers to learn what kind of sport there is now to be had among the ouananiche, I may say that in two hours and a half of fishing yesterday afternoon friend Stocking and your humble servant killed a baker's dozen of fish over which I am now sitting, weighing in all slightly over 40lbs. Over half a dozen fish were taken and returned to the water uninjured.

This is a fish story of course, but it is one the correctness of which can be vouched for by two well-known admirers of FOREST AND STREAM—Mr. Chase, banker, of Waterbury, and president of the Waterbury Watch Company, and Mr. Wallace, of Ansonia, Conn., both members of the Metabetchouan Fishing Club, who were fishing in the same pool during the execution with much the same results. That pool is a dandy. Nothing more picturesque can possibly be imagined. If you will let me locate it for your readers, it is the Ouellet Pool at the Ouiatchouan River, a mile below the falls of that name, about 100yds. from Mr. Ouellet's residence and immediately above the iron railway bridge of the railway. In the distance are the falls, close at hand is the lake, above the pool are foaming rapids, and disturbing the surface of the water are the game ouananiche jumping in pursuit of their favorite flies, which yesterday were the Jock-Scot, the professor and the silver-doctor, in pretty much the same order as herein mentioned.

Almost equally good sport has been had during the past week at both the mouth of the Metabetchouan and along the westerly or Roberval shore of Lake St. John. When the waters of the lake falls, this fishing in the lake itself and in the mouths of tributary streams will cease until the autumn, and the fish will in the interim hold high carnival among the seething waters of the Grande Discharge. As it is now raining heavily and the tributary streams of this inland sea are pouring in large volumes of water, I am of opinion that this sport will continue as at present for at least from fifteen to twenty days. But should anybody want to know definitely about this before starting out for it, I am permitted to say that Mr. B. A. Scott, of the Roberval Hotel, will promptly reply to any and all telegrams of inquiry. It was a wire from him, received at 3 o'clock last Tuesday morning after prematurely sneaking away from a press dinner at the St. Louis, that sent me three hours later up to Lake St. John, and I do not khow how sufficiently to express my gratitude to him either for his thoughfulness on this occasion or for kind consideration manifested by him during our stay in the land of the ouananiche.

I have scarcely time to tell you a quarter of what I should about the marvellous results of this week's trout fishing all along the line of the railway. All the way down to-day our train has been picking up scattered parties of anglers from the various lakes and club houses, until boxes of *fontinalis* lie around me piled up in tiers half a dozen and more deep. Messrs. Chase and Wallace have gone back to their lakes at Kiskisink, where they had splendid sport last week, as also did Mayor W. B. Hincks and F. W. Benham of Bridgeport, Conn. and U. S. Consul Ryder before them. Ten more members of the club are expected here to-morrow. A large party of the Springfield Club are also reported on their way here. Several Quebec members of the Laurentides and Stadacona Lakes are on board with tremendous quantities of fish running from ¾lb. to 3lbs. The largest and reddest trout shown up on the car are however a half dozen of 4lbs. taken in Lake Edward by the Quebec Press Club, a few miles north of the club house of the Paradise Fin and Feather Club. E. T. D. CHAMBERS.

AMONG THE BAGGAGE, May 27.

FOR MAINE TROUT.

THE Zinder party is one of the well-known Boston mercantile parties to visit Moosehead every year. These gentlemen go for fly-fishing altogether; in fact, they never fish with bait. The favorite cast of Mr. Zinder, the leader of the party, is Parmachene-belle for tail fly, Duncan for dropper and Parmachene-beau for middle fly. With this cast they are very successful at Moosehead. The party charters a steamer for the trip. They left Boston Friday. The names of the gentlemen are George Zinder, commission merchant; C. H. Maynard, in the same office as Mr. Zinder; B. Hurd, of the wholesale grocery firm of Savill & Lomes, and Mr. Allen, junior member of the well-known leather house of Allen, Field & Lawrence.

One of the happiest fishing parties of the season left Boston for the home of the Inglewood Club Friday evening. This party is really under the guidance of Mr. Leroy S. Brown, of Blaney, Brown & Co., a gentleman who has taken a great deal of interest in the Inglewood. He, with Mr. Fred Whiting, one of the junior proprietors of the Boston *Herald*, is very active as member of the house committee of the club. They have extended an invitation to the Harry Moore party to visit the Inglewoods in New Brunswick this year, and hence the party of the following gentlemen: Andrew S. March, president of the Inglewood Club; Harry B. Moore, of the grain trade Chamber of Commerce; Samuel Snow, of the Murdoch Parlor Grate Co.; Henry P. Brigham, New England agent of P. Lorillard; George C. Moore, manufacturer, of North Chelmsford, Mass.; E. Noyes Whitcomb, of B. & D. Whitcomb, builders; H. T. Sparrow, of the Medford Chemical Co.; Henry E. Cobb, of Brewster, Cobb & Estebrook; George B. Ford, cashier of the Commercial National Bank; Harry O. Cutter and others. They left Boston Friday evening and were to reach the Inglewood the following afternoon at about 4 o'clock. The Inglewood restocking committee have ready to put in this year 100,000 sea salmon fry. There were also put in last year 100,000 landlocked salmon, brook trout and English brown trout.

A very jolly party from the Boston leather trade started for The Birches, formerly Student Island, Friday. This party was composed of Mr. R. E. Foster, of the Smith-Foster Shoe Co., manufacturer and the mentor of the party, so far as trout (in stories) are concerned; A. H. Proctor, of Thomas Proctor & Co.; A. Frank Breed, Jr., of the well-known shoe manufacturing concern of that name; and E. D. Ropes, a gentleman who has been buying hides on the east coast of Africa for Thomas Proctor. Mr. Foster has visited the Rangeleys for many seasons. Mr. Breed has been there before, but to Mr. Proctor and Mr. Ropes the trip is new. Mr. Foster's stories—he tells true ones—have led to great expectations.

Mr. N. G. Monson, of Bellows & Monson, is at his handsome camp, Camp Leatherstocking, on Mollechunkamunk. Mr. Wightman, New England agent of Carnegie, Phipps & Co., has been into camp with Mr. Monson for a few days. The fishing he found extremely poor and the weather very cold. He was there during the snow storm of May 20 and 21, when 3 or 4in. fell.

The Camp Stewart party left Boston Friday. W. T. Farley, of Farley, Harvey & Co., dry goods jobbers, is a guest of the party. The old-time members are Mr. Geo. T. Freeman, of Harrington & Freeman, and Mr. and Mrs. W. K. Moody. Mrs. F. H. Mudge expected to be with the company, as usual, but was unavoidably detained.

The Reding company of anglers was to start for Moosehead Sunday evening. The gentlemen charter a steamer, as many of the Moosehead trouting parties do; the distances are too great for rowboats on this inland sea. The company is composed of J. Reding, of Moore, Smith & Co., hat jobbers; a brother of Mr. Reding; Mr. C. H. Denney, of New York and Methuen, Mass.; Mr. J. S. Hunt, of New York; Mr. H. B. Warring, of Yonkers, N. Y.; and others.

Mr. E. C. Fitch, president of the American Watch Co., is a most enthusiastic salmon angler. He owns one of the best salmon rivers in the Dominion, the Romayne, South Shore, Bay of St. Lawrence. He goes to his river this week. Last year he killed 65 salmon, and the preceding year 108. He sails from Montreal on his own schooner yacht. SPECIAL.

A Big Shad from the Hudson.

RONDOUT, N. Y., June 2.—A shad 26in. long, 3½in. thick and weighing 9lb. 3½oz., was caught in the Hudson at Esopus recently. It is considered here to be the biggest shad ever taken from the river.—*New York Times.*

SCUP IN OIL FACTORIES.

Editor Forest and Stream:

The following, in explanation of the recent utilization of scup in the menhaden factories of Rhode Island, mention of which has been made in FOREST AND STREAM, is extracted from a letter from Captain N. B. Church under date of May 31:

"In regard to the article in FOREST AND STREAM, by Mr. Reed, the facts are these: All of the traps from Brenton's Reef to Seaconett, had, on the morning of the 13th of [May] all the scup they could handle. The custom is, when fish are plenty and the price very low, to tow these fish from the traps, which are stationed outside, to the pounds that are used entirely for keeping the fish alive until the market improves, and which are placed inside out of danger from ordinary gales of wind and seas. But on this occasion, when these pounds were all full, there came in a very heavy sea; most of the pounds were torn open and the fish in them escaped. But in Daniel's case [the case of Captain D. T. Church, of Tiverton] his net was strong enough to stand the storm, but the fish in it were so badly chafed that many of them died and [as they were unfit for market] he took them to his factory and ground them up. Of course, it would have been easier to have turned them out and allowed them to drift out to sea or on to the shores. But [Captain Church] did what any man ought to do the best he could do under the circumstances."

This is evidently one of those cases where "it is easier to find fault than it is to do better." Any one at all familiar with the fisheries cannot fail to know that gales or heavy seas are liable to rise along our Atlantic coast very suddenly, and that the best efforts of the fishermen may prove entirely futile in controlling circumstances such as those which confronted the trap and pound-net fishermen of Rhode Island on the occasion referred to. It is also well understood by all those having any knowledge of fishing, that fish which are chafed, injured or killed by the action of the waves while they are confined in pound-nets are not only unfit for market but it is reasonably certain that those which are not dead would die if turned out in the ocean. Under such circumstances it would be manifestly unwise, if not absolutely criminal, when anything else could be done for the utilization of the catch, to turn adrift large masses of dead or dying fish, which, in a few hours, would strew the beaches about Newport and soon become putrid, thus polluting the air to such an extent as to make the adjacent shores practically uninhabitable. Any one, taking a fair, unbiased view of the action of Captain Church must concede that he was not only justified in what he did, but that his action was, in the highest degree, commendatory, inasmuch as he made a good use of material that otherwise might have been wasted, and also prevented the infliction of a disagreeable nuisance upon the citizens of Newport and vicinity. W.

ST. LAWRENCE RIVER BASS.

THE close season for fishing expired Monday, May 30. Following are some of the catches brought in thus far this week and which were all taken in the vicinity of Clayton, within a radius of two miles:

J. W. McCombs, with Steven Leyare as oarsman, caught 21 black bass and one ten pound pickerel, Tuesday. Bass would average 1½lbs.

Dr. F. M. Vebber, Charles E. Cole, with Samuel Denny oarsmen, in two hours, Tuesday afternoon, captured 11 black bass, averaging in weight 1½lbs.

C. M. Skinner, John Foley and Henry Webber, Jr., in a remarkable short time Tuesday, succeeded in bringing in 21 black bass, averaging 1½lbs. in weight, and one pickerel 10lbs. On Wednesday the above party took 51 bass and one pickerel.

J. W. Holberton and wife, of New York, guests of the Walton House, with John Lalonde as oarsman, captured 28 fine black bass on Tuesday, and 20 on Wednesday.

Bay Lilley, of Canton, Pa., guest of the Hayes House, with Henry Webber, Sr., oarsman, caught 20 black bass and 3 pickerel Tuesday, and 20 bass Wednesday.

E. R. Smith and wife, of Sioux City, Iowa, guests of the Walton House, with Frank Levery as guide, captured 40 good-sized black bass Tuesday and Wednesday.

It is said "that a good fisherman can catch fish anywhere." However this may be, G. M. Skinner and John Foley generally bring home fish when they go after them. It was not an exceptional case with them on Wednesday when they started out with Henry Webber, Jr., as oarsman, and after five hours' fishing, within two miles of Clayton, returned with 51 black bass and a 10lb. pickerel, the bass weighing 89lbs., an average of 1¾lbs. each, the largest of which weighed 2¼lbs. This case proves false the old saying of the fisherman's luck. The catch was displayed in front of the New Windsor.—*On the St. Lawrence, Clayton, N. Y., June 3.*

Ontario Fishing Seasons.

PITTSBURGH, Pa.—*Editor Forest and Stream:* In your issue of May 26, under the head of "Toledo Notes," "Jay Beebe" says that, "Under Canadian regulations the bass fishing at Pelee and the other islands just north of the international boundary has for many years opened on the 15th of May. * * * But this year the season was changed so as to open on the 10th." Now, the territory referred to belongs in the Province of Ontario, and the laws of Ontario are said to forbid the taking of black bass prior to June 15. If there are any Canadian regulations which except the Pelee and adjacent waters from the operation of the law, there are a good many United States fishermen who would be glad to know what they are. I have made numerous inquiries among Canadian sportsmen and Canadian legal authorities, and have not found anybody who knows of any such 'regulations'."—GEORE H. CHRISTY.

[The Ontario close season for bass is April 15 to June 15, both inclusive.]

A Crystal Lake Pickerel-Bass.

THE Nunda (Ill.) *Herald* correspondence from Crystal Lake records: "Mr. Miller, of Chicago, who is stopping at the Ashton House, caught a pickerel that weighed 11lbs., Monday, and when cut open a bass 11in. long was found inside;" and the man who sends us the paper corrects the report to say that the bass was 13in. long.

What a Tarpon Can Do.

VELASCO, Tex., May 31.—*Editor Forest and Stream:* This account from the Houston *Post* of the antics of Brazos tarpon is quite correct and trustworthy. It all happened on May 28: "As the steam tug Mollie Mohr was coming up the river from the jetties this morning she ran through a school of tarpon about half a mile below the city. Three of these huge fish leaped clear across the tug's forward deck, one of them narrowly missing Tom Ross's head, the second struck the cabin near where Captain Marshall and a fireman were standing and made a dent as large as a man's fist in the hard wood. The third struck and bent an iron drift bolt half an inch in diameter, and glancing off hit Wm. Schunfield between the shoulders, knocking him senseless; in fact, it was thought for a time he had been killed, and it will be some time before he will be able to resume work. Captain Marshall says the river for a considerable distance was alive with these silver kings, leaping around as if all the tarpon family had concluded to celebrate 19ft. of water on the Brazos bar."—M. P. M.

Pike County Trout.

DINGMAN'S FERRY, Pike County, Pa., June 3.—I have some good fishing news to give you. Mr. Hale Jones, of Easton, Pa., who has been here since May 12, has been fishing almost every day and has been very successful. But on Decoration Day he surpassed all others and "took the cake," catching 181 trout, all very nice fish. They were caught in Dingman Creek, above Beaver Dam. Mr. Ward, of Newark, N. J., on Decoration Day caught 33 in Adams Brook, all very nice fish. Mr. S. Cole on the same day caught 31 in Trout Run, 9 of which weighed 11lbs. Our streams are all doing splendidly, better than ever before, showing plainly the good benefit of continued stocking of the waters.—PHILIP F. FULMER.

Rangeley Trout.

LITTLETON, N. H., June 1.—Messrs. George Whittaker, George Bellows, G. E. Lane, F. A. Russell, J. P. Prescott, L. E. Collins and A. F. Dow, who left Littleton May 20 for the Rangeley Lakes returned the 31st inst., bringing with them 100lbs. of dressed trout. During the stay at the lakes they remained at the Anglers' Retreat, at the Middle Dam. It rained nearly every day and on the 23d there was a fall of 3in of snow. The largest trout taken weighed 7lbs., the lucky fisherman being G. E. Lane. All were well pleased with the trip and expect to repeat it again next year.—W. S. H.

A Cast-Net Record.

IT may be remembered that "Podgers" visited St. Vincent's Island near Apalachicola last fall and wrote up his trip and gave an account of the plentitude of fish and fowl on the island. A letter just received from that fisherman's and sportsman's paradise says: "Dick and myself went up the creek (lagoon) the other day, and with one cast of the hand net caught 95 bream and perch and 5 mullet, making 100 in all, the largest catch we ever made at one cast." Has this ever been exceeded?

A Rhode Island Salmon.

WESTERLY, R. I., June 3.—A salmon, 32in. long, weighing 9½lbs., was taken in Pawcatuck River here to-day by a small lad while trolling for pickerel. The fish was evidently one from the plant made by the State Fish Commission a few years ago.—L.

The Davis Rod Tip.

IT is one of those things of which one says on first sight, "Of course; why didn't I think of that?" When he saw it "Podgers" said, "That's an idea I've been carrying around with me for years." The familiar principle that a rope or line or thread will run with less resistance through a pully block than over or through anything else without a wheel has been adapted by Dr. Davis to rod tips. The device is illustrated in our advertising pages. Practically, we have demonstrated that it does facilitate the running of the line, and the advantage of its use increases in compound rate with the size of the fish on the line. The Davis tip is a new notion and which promises to take, and practical test is likely to lead to permanent use.

THE Yankee fish hook is an invention intended to catch fish. As the repeating rifle has superceded the muzzleloader on account of its greater efficiency, so this fish hook is destined to supercede the old fish hook. The manufacturers claim that it is an impossibility for a fish to bite without being hooked. Alas for the fish! But this age recognizes success alone, and the hook that catches the fish is bound to be popular.—*Adv.*

SALMON fishers headed for the Nipissiguit, Mirimichi, Restigouche and other rivers will be benefited by taking with them a copy of Hallock's "Salmon Fisher." Don't you forget it.—*Adv.*

Fishculture.

PIKE-PERCH PLANTED IN KENTUCKY.

IN our issue of May 12 we mentioned the important addition of pike-perch to streams in Kentucky. We are now in receipt of the following letter from Mr. Charles A. Dailey, secretary of the Kentucky Fish and Game Club, who accompanied the car during the distribution of the fish:

Editor Forest and Stream:

Your letter of the 23d inst. to Mr. Forsman has been handed me for reply as I accompanied the fish car on the trip. About ten million fry were hatched. These were deposited in Salt River near Shepherdsville, at Bowling Green, in a spring-fed lake at Lexington, at Paris, at Winchester, in Roundstone Creek near Langford, and at its confluence with Rockcastle River, at Pineville, in the Cumberland, at Danville and Lebanon Junction. The bulk of the fish were planted at Pineville, which is the headwaters of the Cumberland. I inclose a clipping from the *Courier-Journal* which will give you the full information. The Government work at the Ohio Falls in deepening the channel and harbor has driven away fish. However, cats, jack-salmon and chubs are caught in large numbers. CHAS. A. DAILEY.

LOUISVILLE, Ky., May 28.

Ohio Fish Commission.

MR. JOHN D. LAW has succeeded Dr. James A. Henshall on the Ohio Fish Commission.

THE JOS. DIXON CRUCIBLE CO., of Jersey City, N. J., are manufacturers of the finer grades of graphite productions, from lead pencils to lubricants and stove polish. This company owns and operates the only successful graphite mine in America at Ticonderoga, N. Y., and has always been celebrated for the high quality of its productions. The company wishes to call especial attention to its Silica Graphite Paints for roofs, etc., the principal component of which, graphite, is impervious to heat, cold, acids, alkalies or any known chemicals.—*Adv.*

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 6 to 9.—Second Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Canada. A. D. Stewart, Sec'y.
Sept. 6 to 9.—Rochester Kennel Club, at Rochester, N. Y. Dr. O. S. Bamber, Sec'y.
Sept. 12 to 16.—Fourth Annual Dog Show of the Toronto Industrial Exhibition Association, at Toronto, Canada. C. A. Stone, Sec'y.
Sept. 20 to 23.—Western Michigan Kennel Club, at Grand Rapids, Mich. H. Dale Adams, Galesburg, Mich., Superintendent.
Sept. 27 to 30.—Dog Show at Ottawa, Can. Alfred Geddes, Sec'y.
Oct. 25 to 28.—Omaha Kennel Club, at Omaha, Neb. E. L. Marston, Sec'y.

FIELD TRIALS.

Sept. 5.—Manitoba Field Trials, at Morris, Man. A. Holloway, Winnipeg, Man., Sec'y.
Nov. 7.—International Field Trials Club, third annual trials, at Chatham, Ont. Amateur Stake, Nov. 7. Open Stakes, Nov. 8. W. B. Wells, Sec'y.
Nov. 7.—United States Field Trials, at Elizabethtown, Ky. P. T. Madison, Indianapolis, Ind., Sec'y.
Nov. 8.—New England Field Trials, at Assonet, Mass. Geo. E. Stickney, Newburyport, Mass., Sec'y.
Nov. 14.—Fourth Annual Trials of the Brunswick Fur Club, at Princeton, Mass. J. H. Baird. Sec'y.
Nov. 15.—American Field Trials, at Columbus, Ind. W. J. Beck, Sec'y.
Nov. 21.—Eastern Field Trial Club Trials, at High Point, N. C. W. A. Coster, Sec'y.
Nov. 28.—Philadelphia Kennel Club Trials, at High Point, N. C. F. G. Taylor, Sec'y.
Dec. 5.—Central Field Trials, at Lexington, N. C. Col. Odell, Sec'y.

THE BEAGLE STANDARD.

Editor Forest and Stream:

One gentleman of some note as a dealer in dogs, in his article in your issue of the 19th, seems to fear that the harmony which prevails in the ranks of the National Beagle Club will be marred if any attempt is made to change the standard of the large class of beagles from 15 to 16in. When I read the article I could only say, "Another advocate of the diminutive beagle," who looks only in a prejudiced way upon the subject and forgets that the standard has already been tampered with, and an added inch given to his favored class. Now, as there are two classes of dogs, the 13in. class and the 15in. class, would it not be a good idea to let the decision of this matter rest in the hands of the larger class members of the club?

Like many others, this gentleman seems to jump at conclusions and wants to bring one class up to defend itself in a matter already acted upon in its favor, and most decidedly to its advantage. I mean the diminutive beagle which is not a subject of discussion, and no change is proposed as that class has already had its turn, and received what it so sadly needed. It includes now quite a number of excellent dogs that viewed from a 12in. standpoint would have been merely "weeds" and "culls." Then such owners and breeders should glorify the inch, inasmuch as it makes so many winning dogs out of "culls" and "weeds".

Yet I may be wrong in this opinion. I forgot for the time being that such dogs as exceeded 12in. could be shown in the 15in. class, and I presume the same rule applies to the "big end weeds" of the 13in. class. It is at least not generous to take an inch off the larger class standard and not compensate such class for the appropriation of such inch.

I do not understand from the nature of the letter presented by Mr. Phoebus to the National Beagle Club that he alone desired the change, inasmuch as his introductory states that the subject of discussing such point was one he understood to be under consideration, and he could do no other than write because he was not able to attend.

The National Beagle Club certainly have thought there was some merit in his letter else they would not have ordered it printed.

I want to tell Mr. Krueger that men's opinions undergo changes. While I have gone from the little fellows in beagles to the larger class, he has dropped from the upper to lower class, and I doubt if among his little ones he can find one that equals his Racer, by Rally ex Lill. I esteemed him the superior to his Cameron's Racket in everything, aside from head. These were both sizable dogs, and if I am not mistaken Racer was slightly over the present standard, yet he was a dog of great substance, being muscular and competent to drive all day; but to-day Mr. Krueger would have to call him a "weed." I sent a man once to offer a long price for this dog, but I could not get him. Now I see by some paper he offers "Beautiful beagle puppies at $5 and some rabbit dogs (trained beagles I suppose) at $5 to $8." I can only conclude they must be "weeds." I know that 15in. dogs properly mated to like bitches produce like themselves, but 12 and 13in. pairs often produce much larger than their kind.

When a youngster I used the small dogs in company with the gun, and they are quite good that way, but even with all their good qualities I could find and kill more rabbits with an aggregation consisting of curs, shepherds and an old cocker, which belonged to the neighborhood. We had to resort to this kind when the little fellows "played out" Afterward I got the larger kind. Those dogs made a sportsman of me. I could go out with them, like older men with their foxhounds, without a gun. I had the sport of many chases and much game, while the riders came home with the fox's pelt and sometimes they did not. I can watch these work up a cold foot and enjoy the rush when cottontail is afoot, and I usually get the game, through the efforts of the dogs alone. Sometimes the rabbit goes to earth, but in that event I can have equally as much sport some other time. Another thing I notice, my dogs don't run to the boom of the gun as the little ones did, and thus leave me to hunt the rabbit if I killed it or lose time in getting them started again, if I missed it. Now, if some hunter shoots the rabbit they are after, these dogs never leave the trail, but go right on until they find the game. But all this is foreign to the subject. Should the standard be raised an inch? Yes. Why? Because there seems to be and is a certain height to which these dogs grow, and the very best of them, both for looks and work, are from 14½ to 15½in. with the preference for quality in favor of the larger ones. Then if such is the case why should the club keep these dogs out of events when they are competent to do better work, and more of it, than such as are admitted to these events on account of the present fixed measurement?

You cannot obliterate the type by any rule of measurement, a beagle differs from a harrier as much as a foxhound differs from a bloodhound, and size has nothing to do with it. Why are neither of the others required to be so high or so low? Some dogs are classed by weight, why not these? There has been a great improvement in those breeds in the past years, and that improvement in the main is solely on account of their being bred large, strong and vigorous, competent to do such work in the field as will make sportsmen in the truest and fullest sense of the word, of those who follow them. I have often thought it would be necessary to try and breed sportsmen to truly appreciate these excellent sporting dogs.

I am sure much could be added to the appreciation of beagles if they were bred truly in accordance with natural laws, and not "pinched" and starved to have a pretty head and no substance. My dogs are all 15 and 15½in.; bitches 14½ to 15in., and I know they are good ones, and can sicken the field trial and bench show winners in a five days hunt. These dogs are not registered, but they trace their ancestral lines back to the old Rowetts. If this proposition goes through I shall show them, if not, I shall not change them for smaller. They are full-blooded beagles, bred for work in the field, nourished and pushed when young for bone and muscle, as all young stock should be to assure proper development and strength when matured. There is but one thing that surprises me in this discussion, and I have followed it closely, and that is, that a man of Mr. Krueger's former standing and prestige as a beagle man should disapprove of the efforts for the advancement and improvement of this breed of dogs, to say nothing of offering rabbit dogs for from $5 to $8, when it is well known that a beagle cannot be raised to be a qualified hunter for less than $20.

WM. EDWARDS.

EAST MORICHES, Long Island, N. Y.

Editor Forest and Stream:

I take great pleasure in expressing my opinion in regard to changing the standard height of the beagle. I say emphatically no; leave it alone.

No adequate reason has been advanced why it should be increased, and very naturally too, for there is none, while on the other hand there is every reason to oppose such a change. It is due in a large measure to the rigid standard that has, up to the present time, been held sacred by beagle fanciers, that our favorite breed has attained such a high rank in the canine world, and to my mind nothing will so check the steady advance as tampering with the old standard, especially as regards size. If the typical beagle of the future be 16in. high, then other parts of the standard will in all probability gradually be altered, and in a few years the beagle of to-day will not be able to recognize his progeny.

As Dr. Wesley Mills says in his recent book on the dog, "Quality is different from character, though it may enter into the latter. It is a certain refinement arising from perfection in details of form and character. A dog of quality may be compared to a 'gentleman' among human beings." Now, the beagle of to-day has this "quality" in a marked degree. Alter his height but an inch and you lower the quality accordingly, for you destroy this "perfection in details of form and character." In other words, raise the standard to 16in. and you must go back, say, to where the breed was twenty-five years ago, and begin over again in order to reach the present perfection of Frank Forest and Topsy S. in a 16in. class.

I am glad to see that practically everybody opposes this innovation, not because it is an innovation, but because all recognize that it will injure the beagle; and as a member of the National Beagle Club I shall do my part to see that it is not adopted. H. GARDNER NICHOLS.

CAMBRIDGE, Mass., June 1.

Editor Forest and Stream:

In regard to the beagle standard I must say that I am in favor of the large dog, and give you my reasons: I believe breeders would get better results from breeding to a well-built dog from 15 to 16in. high, and that in a short time we would see less light-boned, weedy-looking specimens on the show bench. I believe also that a dog 15 to 16in. high will do better work in the field and give a better day's sport than the smaller dog.

Now, it seems to me the best way to settle this would be at the N. B. C. field trials next October. Let all that are interested come and bring their dogs and see for themselves which does the better work, the large or small ones. I am sorry to see that the different breeders that have already given their ideas on this matter seem to be of the opinion that Mr. Phoebus wants to have the standard raised just for his own dogs, which I am positive is not the case. At the Boston show I am almost sure the majority of the beagle men present spoke favorably of the large dog as a fielder, and I am surprised that they have kept quiet so long. I cannot see really what Mr. Phoebus has to gain supposing the standard is raised to 16in. He has dogs that can and do win under the present standard in the best of company. I believe his ideas are that much better work can be done by a large dog than a small one, and I fully believe he had the interest of the breed at heart when he spoke of raising the standard. I would like to see this matter well discussed, omitting all personalities, simply saying just what in the writer's opinion is the better dog, and it will come out all right, and one of the grandest breed of little dogs on the face of the earth will be benefited by it.

W. S. CLARK.

THE PEARL OF PEKIN INCIDENT.

Editor Forest and Stream:

THERE is a phase of this case which out of justice to Mr. John Grace must be brought to the attention of kennel editors and others. It seems to have been assumed that the decision of the course in favor of Chicopee Lass by Mr. Grace was wrong, and that Mr. Grace's only excuse for so deciding the course was that he did not witness the collision. You and others speak of the decision of Mr. Grace being "reversed." Mr. Greene of Colorado wrote a letter last fall to *Turf, Field and Farm* in which he asserted that the judge should have at once given his decision in favor of Pearl of Pekin.

The kennel writers have perhaps been misled by Mr. Greene, knowing that he judged the meeting at Great Bend some years since and should be well informed as to rules of coursing, but for Mr. Greene himself there is no excuse, and he owes to Mr. John Grace an apology. Mr. Greene's assertion that the decision of the judge should have been given to Pearl of Pekin is contrary to the rule and would give to the judge powers that are expressly granted to the committee. The duty of the judge is to decide the course according to points, and there his duty ends. Mr. Grace decided that Chicopee Lass won the course simply because she had outscored Pearl of Pekin.

Rule 30 very plainly required that the protest of Mr. Bartels should be sustained by the committee, but with that part of the subject Mr. Grace had nothing to do. The statement that the decision of Mr. Grace has been "reversed" is likely to place Mr. Grace in a false light.

J. HERBERT WATSON.

BROOKLYN, N. Y.

["Rule 30, Riding Over a Greyhound.—If any subscriber or his servant shall ride over his opponent's greyhound while running a course, the owner of the dog so ridden over shall, although the course be given against him, be deemed the winner of it, or shall have the option of allowing the dog to remain and run out the stake, and in such case shall be entitled to half its winning."]

From far-off Kansas Mr. E. B. Bishop writes us his dogs are all doing well. Ruby Glenmore is in whelp to Finglas and Coleraine to Beau Brummel, and both of the O'Callaghan dogs have improved very much. Mr. Bishop has also purchased from the reverend gentleman a sister to Elphin II., that was to start in the late trials in England, but came in season; she is said to be a handsomer bitch than Coleraine; also a dog and bitch puppy out of Aveline by Fingal III. There seems to be a run on this blood now. Mr. Bishop speaks enthusiastically of the shooting out there, saying: "One day we killed thirteen hawks and seventy-two snipe and plover, no potting."

TORONTO DOG SHOW.

Editor Forest and Stream:

The judges appointed this year for the Industrial Exhibition Association's bench show of dogs, to be held at the city of Toronto, Can., Sept. 12 to 15, are Mr. James Mortimer, of New York city, who will take the following classes: Mastiffs, bloodhounds, St. Bernards, Newfoundlands, great Danes, deerhounds, bulldogs, Boston terriers, Scotch terriers, Dandie Dinmont terriers, Skye terriers, black and tan terriers, Yorkshire terriers, toy terriers, poodles, pugs and the miscellaneous classes.

Mr. C. H. Mason, New York city, Irish water spaniels, Clumbers, field and cocker spaniels, King Charles, Blenheim, Prince Charles, ruby and Japanese spaniels, greyhounds and wolfhounds.

Mr. John Davidson, Monroe, Mich., pointers, English, Irish and Gordon setters, collies, foxhounds, beagles, harriers, whippets, dachshunds and retrievers.

Mr. F. C. Wheeler, Cincinnati, O. (late of London, Ont.), fox-terriers, bull-terriers, Irish terriers, Bedlington terriers and Italian greyhounds.

The judges selected for this year's show are without doubt the strongest combination ever brought together at any show in America, and comprises an Englishman, an Irishman, Scotchman and a Canadian. Mr. Mortimer, who makes his first appearance in Toronto, is considered one of the best all-round judges on this continent. This year he has judged at Boston, Chicago, Los Angeles, San Francisco and Lewiston. He has superintended the Westminster Kennel Club's shows, of New York city (the largest in America) for a number of years, and has lately formed a co-partnership with the Hempstead Farm, one of the largest organizations in the United States for the breeding of thoroughbred stock of all kinds, and has just left for England to purchase additional stock for the farm. Mr. C. H. Mason, who has often officiated as judge in previous years, is well known and is also considered a thorough all-round judge and one that gives his decisions regardless of friend or foe. His book entitled "Our Prize Dogs" is without doubt one of the best books of its kind ever written. Mr. John Davidson, of Monroe, Mich. (or "Honest John" as he is more generally known), is a thorough Scotchman. Every one knows him and all speak well of him. He has been judging for the last twenty years at bench shows and field trials, and has judged from the Atlantic to the Pacific. His work speaks for itself and few judges have the reputation that "John" has. Mr. F. C. Wheeler (a Canadian), last but not least, the youngest of the party, although not the first time he dons the ermine, should draw one of the largest collections of terriers ever brought together in Toronto, being a thorough judge of that breed and having the confidence of all the large breeders.

We must congratulate the bench show committee upon being able to secure such competent and well known judges, and the show of 1892 should be the best upon record.

C. A. STONE, Sec'y and Sup't of Bench Show.

TORONTO, June 4.

POINTS AND FLUSHES.

CHICAGO, Ill., May 28.—In a personal letter from a friend, whose ideas are sound and practical, I noted some remarks which are so apropos concerning certain phases of field trial matters that I cannot forbear quoting them.

He says: "The abuse of judges, both field trial and bench show, is getting too frequent. Almost any disappointed exhibitor uses the press to vilify the judges, and to present his opinion, which cannot be other than biased. Reporters have a right to call judges to order. This of course has its correcting influence and stimulus. But judges should be taken for what they are, honorable men. With the reporters' criticisms, exhibitors should be satisfied. The judge and reporter know no dog, own no dog, and they see them all, and they are impartial. Not so with the exhibitor. The judge may err, the reporter may err, the exhibitor may err, but the greatest error of the latter is in placing his opinions before the public by means of the press."

Field trials and bench shows have now reached such a stage of development that they are far beyond the unsettled stage of experiment and the multitude of crude opinions which formed the basis on which rules were made and the trials were run in the early days of their history.

The field trial judges of to-day have had, in nearly every instance, practical experience in field trial matters from having acted as judge or from studying field trials closely as spectators. In judging such large numbers of dogs as run in the different stakes of the large field trial associations, it is remarkable that the judges select the best dogs with so much accuracy as they do. Considering the complex nature of a field trial competition and the vast amount of detail to be considered, I think that field trials are decided with a very fair degree of accuracy.

* * *

With regard to the spotting system, it has proved to be the most satisfactory one yet tried in field trial competition. The objection has been made against it that dogs, running under this system at different trials, were placed differently each time. As a matter of fact, the records of last year will show that the same dogs won at nearly every trial in which they started.

Every sportsman knows that a dog's hunting performances vary a great deal from day to day, some days being excellent, other days ordinary or even poor. With this irregularity the spotting system has nothing to do, nor would any other system. If the spotting system is not a good one, what one is better? The sportsmen of America are progressive men, and would readily adopt any improvement on the prevailing system.

The spotting system is not fully understood by many who do not attend field trials, and therefore do not see the practical application of it. They seem to think that it affords the judges an opportunity to spot a dog on a very brief trial and that many dogs do not have a proper opportunity to show their merits. Nothing could be more erroneous. The great merit of the spotting system is in that it gives the judges a full opportunity to give each dog a most thorough trial, which they invariably do.

Under the heat system, the most absurd cast-iron procedure prevailed, the theory and rules being of such a nature that a very poor dog could win and the best dog be beaten, the judges being utterly powerless to prevent it, although they might know the true merits of the dogs. This seems to be a remarkable statement, but all field trial men know it to be true.

Under the heat system each heat was considered a separate race by itself, it having no relation to any other heat. If a dog ran magnificently in every heat and in his last one he ran poorly or made a bad showing from errors and few opportunities, he was beaten in that heat, and not only was he beaten, but all the dogs which he had previously beaten in the stake were beaten. The judges by the rules were precluded from recognizing any work which a dog did in any previous heat, thus the work which a dog did in his last heat was always considered as determining his merit.

It has happened many times that a good dog has gone into the final heat utterly wearied and incapable of working well from long, severe, prior heats, while his competitor, through a bye and short heats, was almost perfectly fresh; yet notwithstanding the absurdity of running a competition under such conditions, it was often so done. The dogs of ordinary or poor ability would often meet and beat dogs of like kind, thus going up high in the series, while good dogs which had been beaten by good ones were left in the first series.

The spotting system is run under rules which cover every necessary detail. It affords the judges every opportunity to try the dogs under all conditions of field work. The heat system did not. Even in a case where a dog is balked by a noisy opposing handler or ill-broken dog, the judges can give the dog an opportunity to work alone and thus show his merits without hindrance.

The dogs are always given a full trial before being retired from the competition. A great deal of sentiment is wasted on giving poor dogs a long, thorough trial. When a dog is clearly incapable of winning, it is absurd to keep running him for the sake of pleasing his owner. The difference between the best and poorest dogs in the stake is commonly so great that but a very few minutes are required to test the poorest ones. However, the judges are most painstaking and careful in every instance, and give every dog a most complete trial.

With the names of the judges selected so far, as matter on which to make a prediction, I believe that the trials this year will be most skilfully managed and judged.

B. WATERS.

FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—Dr. John Spencer, V. S., Bowmanville, is getting out from England a fox-terrier bitch in whelp.

Mr. W. B. Palmer, Woodstock, has disposed of all his cockers except one or two bitches to Mr. A. Laidlaw. The deal includes Red Roland, the well-known winner, the price given for which was a long one.

A line from Dr. W. H. Drummond, Montreal, advises me of the safe arrival of the brace of Irish setters I wrote he was getting out, Commissariat and Cora. They came in excellent shape and their new owner is fully satisfied with them. A Newfoundland and a retriever were on the same boat but I have been unable to find out their names or destination.

A kennel club is being organized in Montreal, several enthusiastic breeders having taken the affair in hand.

Mr. C. H. Smith, St. Stephen, N. B., has bought another Skye terrier bitch from Mr. W. J. Nichol, in whelp to Port. She is to be despatched at once.

The Hamilton committee are bound to make sure of their show dates for 1893, the little trouble with Rochester, which I hope to see amicably arranged, having stirred them up, and have claimed the week preceding the Toronto show as their dates. Nothing like being in time.

A line from Mr. Stewart says the proposed Fox-Terrier Club for Canada is meeting with unqualified approval. This, if it goes through, will not be the first specialty club we have had here as you supposed in "Dog Chat." The Ontario Collie Club was in existence for some years, and owned a register devoted to this breed alone, which was recently taken up by the C. K. C.

This club did good work for Canadian breeders, even going so far as to hold collie bench shows and field trials, the first of which was held in Toronto in connection with the Semi-Centennial Exhibition, 1884, and was fully reported in FOREST AND STREAM of Sept. 25, 1884. Mr. John Davidson, whom the report describes as "an old favorite in Toronto," acted as judge, and Capt. Greville Harston had charge of the arrangements. The classes then were divided into "rough" and "smooth or medium-coated," and such names as Mr. Rothera's champion Lorne, Mrs. Harston's Miss Timmins, R. Gibson's Lassie, two or three of "Bob" McEwen's dogs and others were among the winners. Fifty dogs were benched and the entries were made for the trials.

From an advance copy of the Ottawa list I am able to give the classification for next show. Two open classes of $7 and $3 are provided in mastiffs, St. Bernards, foxhounds, bull-terriers, Skye terriers and toy spaniels; one open class of same money for Newfoundlands, deerhounds, harriers, Irish water spaniels, bulldogs, Bedlington terriers, poodles, spitz and dachshunds; one challenge class of $5 and two open classes of $7 and $3 in greyhounds, great Danes, pointers, English setters, Irish setters, Gordon setters, Clumber spaniels, field spaniels, collies, Irish terriers, black and tan terriers, Yorkshire terriers and pugs. Cocker spaniels have one challenge class of $5, two open classes for black, two open classes for other than black, and two novice classes. Fox-terriers have one challenge of $5, two open and one novice classes of $7 and $3. The entry fee is $1.50, and entries close Sept. 17. The judges have not yet been announced.

Toronto expects a much larger entry of toy dogs this fall than they have ever had before, and the committee have considerably extended the classification, the latest addition being an open class for Italian greyhounds with prizes of $7 and $3, which will be divided by sex if over six entries are received.

The London committee having been unable to make arrangements, have given up the idea of holding a bench show this year, and presumably Montreal will now claim the same dates, which they were anxious to do, though nothing definite on the subject has reached me.

H. B. DONOVAN.

DOG CHAT.

THE stealing of pet dogs by a band of professional thieves in this city has, according to the *Herald*, become a very profitable undertaking to these gentry, but a source of great worry and anxiety to the unfortunate owners. According to the files of that paper since May 1, over 100 dogs have been advertised as lost, and rewards ranging from $25 to $50 offered for their recovery. In many cases the same dog was stolen again immediately after the reward was paid. It is difficult to break up this sort of thing, as directly the police move in the matter the dog is sent out of the city and recovery or detection becomes almost impossible. The best way to recover a dog is to seek the itinerant street dog venders, who in many cases act as "fences," and ask to see their stock with a view to purchasing; then possibly the stolen dog may be found among the stock brought out. The present mode of capturing the street "curs" affords a premium on outrage and dishonesty, as the men employed are totally irresponsible and are only in the business for the money there is to be made out of it. The only way out of the difficulty would be to put the dog catching business into the hands of the S. P. C. A., who would send a uniformed special officer with every dog wagon, and these men would be responsible for every dog captured and the manner in which it was taken.

The appeal of the committee appointed by the American Kennel Club for a reduction of the express charges on dogs, etc., to the express conference to be held in Chicago this month, has been forwarded to Mr. W. J. Bryson, who will present it personally to the chairman of the Conference. Included in the appeal is a schedule of prices charged by the railroads in England, which, in comparison with American rates, seem ridiculously small.

As exclusively stated recently in these columns, a movement is on foot to establish another kennel club for New Jersey, and we now hear that after two very successful meetings at the Continental Hotel, Newark, N. J., the New Jersey Kennel League was formed. Those present at the last meeting were Mr. Kruser, a member of Governor Abbett's staff; G. H. Muirhead, representing the Inter-State Fair Association, of Trenton; ex-Alderman M. A. Hanchett, of Orange, N. J.; Edward H. Radel, of Newark; Edward R. Christopher, J. N. Sinnock, Edwin H. Morris, E. H. Johnson, Ruben Collings, T. Farrar Rackham, E. A. Dillhoff, H. Wardell, Wm. Wild, Cyrus P. Wilcox, Frank Link, Thos. Leuthauer, and a deputation from the whippet coursing interest. A constitution and by-laws were adopted and the officers are to be elected at the next meeting of the League, to be held at the Continental Hotel, Newark, N. J., on Friday evening next at 8 P. M. Those interested are invited to attend, and there is every evidence of the new organization taking very active measures to insure better regulations throughout the State in connection with dogs and shows at the State Fairs. Whippet races, field trials, and sheepdog trials are also in debate.

Mr. C. C. M. Hunt called on us on his way from Florida, where he has been spending the winter. He reports game in abundance around Tallahasse, Fla., and has had good sport over his pointer Grouse and Gordon Bendigo, both field trial dogs. Mr. Ewing, owner of Rowdy Rod and Harry C., and Mr. Upson, who owned the pointer Promotion, were also shooting at the same place this winter.

Mr. Frank Windholz is having one of those turns of luck every dog breeder encounters some time or other. Last Friday his noted bitch Princess Beatrice whelped eleven pups to his champion Rockingham, but only three are living at present.

The Bulldog Club's nineteenth annual show took place in London, May 24 to 26, and though it showed a falling off in entries the exhibition as a whole was successful, more especially the financial part of it. In all 137 entries were benched. Mr. Pybus-Sellon being in Montreal, Can., at the time, Mr. A. M. Hodgson, who withdrew his entries, judged in his place. Nothing of any special merit was brought out. Bedgebury Lion is still cock of the walk. His Lordship beat the old-time champion British Monarch, a decision not generally indorsed. The American class had no entries. This seems an off year for our traveling fanciers.

Spratts Patent (England) shipped per S. S. Helvetia, May 21, the Clumber spaniel Friar Bob, which goes to Mr. J. L. Little's kennel, Brookline, Mass. Also the pug bitch Bradford Nellie to Mr. Ballantine, Peoria, Ill., who purchased it from W. Holdsworth, of Bradford, Eng.

During the English Kennel Club show this week a cricket match will be played between exhibitors of the north and south of England. The south is said to have a strong team, but we hope, for the honor of Yorkshire and Lancashire, that the northerners will "swipe" them hip and thigh.

Mr. Klocke, of Pittsburgh, Pa., dropped into our sanctum Tuesday, on his way to Boston. He is one of the oldest breeders and exhibitors of dachshunds in this country, and naturally we showed him the Manice Dachshund Cup, and after duly taking in its handsome proportions he exclaimed, "You bet! if I win that cup something will bubble over." He expects to have a try for it next year with one of the litter his noted Lina K. has just had by Mr. Manice's Superbus II.

The A. K. C. has received from the World's Fair managers copies of the entry blank for the World's Fair show next year. With each application for entry the exhibitor must furnish a certificate from the secretary of the A. K. C. or C. K. C. showing that the dog has been registered in the proper stud book. The stud number must be given in the certificate. Exhibitors of dogs outside of America must furnish satisfactory proof that such dogs are recorded or are eligible to record in some recognized stud book. The entry fee is $1.50 for each dog, to cover cost of feed and benching of the dog. If the dog offered for entry is not exhibited this money will be refunded. Entries close May 20 and the show is to be held June 12 to 17, 1893. Spratts Co. will, we understand, bench and feed. It was at first intended that no entry fee should be charged and every dog forage for itself, as it were, but on Secretary Vredenburgh representing the hardships on the dogs and the confusion such an arrangement would entail, Mr. Buchanan wisely determined to charge a fee for maintenance, etc. From what we gather it is not at all probable that Mr. Goodrich will be the superintendent, as announced some time since. The general choice seems to be Mr. Mortimer and certainly he is about the only man properly qualified for the position, but he fears the red tape that would bind his efforts and wisely objects, unless he could be given full power, and that would be the only way the show could be successfully run.

From Mr. W. J. Beck, the secretary, we hear that the date of the holding of the trials of the American Field Trial Club has been changed to Nov. 21. This, unfortunately, will clash with the Eastern Field Trial meeting.

An executive committee meeting of the Spaniel Club was held Tuesday, June 7, at 874 Broadway, New York. The following gentlemen received votes and were elected as recognized judges by the club in the order named: A. C. Wilmerding, E. M. Oldham, C. H. Mason, J. Otis Fellows, J. F. Kirk, J. Watson, A. Laidlaw, Geo. Bell, J. Mortimer and J. Luckwell. The choice of judges in whom the club has confidence is not restricted to members of the club and therefore is entitled to recognition by committees of dog shows.

We have received entry forms for the Northwestern Field Trials, to be held at Morris, Manitoba, Sept. 5. The fees are $5 to enter and $5 to start for members of the club, and $5 to enter and $10 to start for non-members. The whole of the fees will be divided in a purse as follows: Sixty per cent. to first, 25 per cent. to second and 15 per cent. to third. Other particulars we have already given in our issue of May 26.

Among the new kennel advertisements we notice this week, H. M. Howes has bull-terrier puppies for sale; Dr. J. A. Hartman, choice-bred pointer and setter puppies; National Beagle Kennels, beagle puppies; Eau Claire Kennels, Gath's Mark puppies; John Bittars, Irish setter bitch and puppies; Dr. Blackburn, collie puppies; Chas. H. Collier, pointer puppies; C. T. Brownell, first-class Gordon setter puppies; W. H. Hyland, choice pointer puppies. In the stud, National Beagle Kennels' Diamond Forest. Wants: Lock Box 24, St. Bernard dog puppy. Boarding Kennels, etc., Donald McVicar and Dr. Blackburn, the latter also offers a vermifuge.

Just as we go to press a letter from Mr. L. Gardner informs us of the death of his celebrated English setter Roger after an illness of two days. When the dog was first taken sick Dr. Foote was telegraphed for, but owing to unforeseen circumstances did not arrive till just after the dog's death. He expressed the opinion that the dog died of inflammation of the liver. Roger was whelped Dec. 13, 1885, and was by Count Noble out of Queen Mag. He had won numerous prizes on the bench, but his field record was one to be proud of, his principal winning being first in the Free-For-All Stake at the Central field trials, 1889, when he defeated Chance, Rowdy Rod, a subsequent winner of this stake, and the pointers Roger Williams and Lebanon. Mr. Gardner

has, however, several of Roger's get that are likely to do well. Among them are Roger's Spark, now being trained by John N. Lewis for the Philadelphia and Central Derbies. Also Blue Boy and Rapture. Lucy Gloster and Dora Deane were also served by Roger and are due to whelp shortly. Mr. Gardner has our sympathy in his loss.

The committee appointed last February by the A. K. C. to arrange for a social club in connection with the A. K. C., have issued a circular embodying their report made to the meeting of delegates, May 19, a brief notice of which we gave in our report of that meeting. The committee was composed of Messrs. Jas. L. Anthony, H. B. Cromwell and C. D. Bernheimer. After careful inquiry this committee found that a suitable club house could be rented for $3,000 per annum. The A. K. C. would pay $500 for its business offices, leaving $2,500 for the rent of the club proper, and in addition they would probably rent certain portions of the house for offices for other organizations, which would further reduce the rental to $1,500 or $2,000. To start this social department a sum of money will have to be raised for rent, furniture, house fixtures, etc. The committee not wishing to incur any debt on account of the A. K. C., or use any of the A. K. C. money, have devised the following plan:

"The social department of the American Kennel Club shall consist of such a number of members, not exceeding, however, 2,500, as the club may, through its duly appointed and elected officers, from time to time prescribe—of these only 500 shall be eligible to election without the payment of an initiation fee. Of the 500 there shall be 100 life members who shall become such on election and payment of $100 each in advance; 200 shall be resident members, who shall be elected and become such on payment of $20 each annually in advance; 200 shall be non-resident members, who shall be elected and become such on the payment of $12 each annually in advance. The balance, viz., 2,000 members, shall be elected only, and become such, and in such additional numbers from time to time, and be divided in such proportions between resident and non-resident members as the club may hereafter determine, but no additional life membership shall be permitted, nor shall any additional members beyond the first 500 be elected hereafter without the payment of an initiation fee in addition to the annual dues.

"Each duly qualified and elected member shall be entitled to all the privileges of the club house, and receive in addition all the publications of the club as long as he remains a member.

"The committee have not thought it expedient to enter into any further details, such as drawing up rules or regulations, believing that their duty ends with the presenting of a general, feasible and definite plan, which, when adopted by the Association, can, and will be, further developed.

"They, however, give it as their opinion that the life memberships will be readily taken, a large number being already guaranteed, and the same may be said of the resident and non-resident memberships, and they feel warranted in the statement that if the club approves of the suggestions and general scope and plan as herein outlined, the committee will charge itself with obtaining, within a reasonable time, the pledge of a sufficient sum of money to defray, not only all cost of rent, fitting up of club, library, billiard room, reading room, etc., for at least two years, but have on hand thereafter a considerable surplus beside, without trenching on any of the funds of the present Association.

"The committee beg to offer for the consideration, not only of the Association, but for the public who are interested in dogs, dog shows or field trials, the advantages of having a reputable, quiet and orderly place of meeting on terms of social intimacy and acquaintance, thus advancing the interests of the doggy public and the development of the various breeds of dogs now owned in America and elsewhere."

The idea is a good one, as we have repeatedly stated in these columns, and will no doubt be of great benefit both as a means of bringing dog men closer together and also consequently enlarging the kennel interests in New York and other parts of this country. The present quarters of the A. K. C. are totally inadequate as a meeting place for dog men, and from the numerous expressions of approval of this scheme that we have heard there should be little difficulty in securing the requisite number of members. The committee is already sure of twenty-five life members, which guarantees a sum of $2,500, and have promises from a large number of resident and non-resident members. The idea of the committee is to have this charter list of 500 members filled up before club quarters are secured. The dues will be held in trust and not used until then. It is expected to inaugurate this club by fall, so that the membership can begin at that time. The A. K. C. approved of this plan at their May meeting, and instructed the committee to go ahead with their arrangements. The secretary of the A. K. C. has forwarded us a copy of the application form for membership. These can be obtained from the secretary of the A. K. C. or at this office. The fees, whether for life, resident or non-resident membership must accompany the application, and we advise all those who wish to get in on the "ground floor" to send in their names and fees as early as possible to the secretary of the American Kennel Club, 44 Broadway, New York City.

From what we hear there is a field for action by the A. K. C. in the late show held by the California Kennel Club through Rule III., about exhibitors being *bona fide* owners of the dogs they exhibit. It seems several dogs were exhibited at the San Francisco show by persons who did not own them. Several puppies were also shown and won prizes, although under the stipulated age of six months.

Dr. Hartman, of Latrobe, Pa., has issued a price list of dogs which are choicely bred, but quoted at prices within the reach of any one willing to pay a proper price for proper goods.

The Blue Grass Kennel Club are compelled to cancel their dates, Aug. 31 to Sept. 3, claimed for their show at Lexington, Ky., as Tattersalls, of London, having purchased the building where the show was to be held, intend to pull it down and rebuild. There is no other suitable building available at that time, but our informant, Mr. Roger Williams, thinks that the show will be held after the Canadian circuit, the latter part of October. We see no reason for regret in this, as by that time the weather would probably be much cooler and therefore more pleasant both for man and dog than it was last year. The relinquishing of these dates should solve the difficulty between Rochester and Hamilton, for unless Rochester is compelled to have the Sept. 6 date, the previous week should answer their purpose just as well, and then the dogs could go on to Hamilton.

The dissensions among the San Franciscan members of the kennel world seem to grow in bitterness, and it is probable that the A. K. C. will have to take cognizance of the trouble. In the *Breeder and Sportsman* we find this: "It would seem that the ruling forces of the wrecked California Kennel Club are determined to do all in their power to gratify personal spite and give vent to their malevolence. We understand that they have put in a claim for dates for a show next year, conflicting with the dates claimed by the Pacific Kennel Club." From the same paper we learn that Mr. Henry Huber, who is known to Eastern pointer men through his purchase of Duke of Vernon and Sally Brass II., has incurred the ill-will of the C. K. C., and a motion was made at a meeting of the C. K. C., May 23, to expel that gentleman from the club because he had become a member of the Pacific Kennel Club. Of course we are not altogether familiar with the bearings in this factional fight, but whatever they are, dogmen cannot but deplore the results that such dissensions will cause just at a time when kennel interests on the Pacific coast are looking so rosy.

Mr. Fred Hoey's fox-terrier Valet, at one time the best dog in the country, or at least considered so by his winnings, has passed over to the majority. This dog was never quite the terrier, though when one came to pick him to pieces his many good points could not be passed over. He was, we believe, imported jointly by Messrs. Ed. Kelly and Fred Hoey, Mr. Hoey afterward buying out the former's interest in the dog. Our only "German" carries a pleasing memento of Valet's memorable victory at New York, 1889, in the shape of a handsome silver pencil, presented to him by the delighted owner. Speaking of Mr. Hopkins reminds us that he has just purchased a small place at Hempstead, where he will run a few dogs for other people and also try and breed a few fox-terrier winners for himself.

It is very probable that Mr. L. C. Whiton's greyhound bitch Spinaway will again cross the Atlantic to visit the great Fullerton, or in the event of Mr. Mortimer fulfilling his commission to buy a good bitch over there for Mr Whiton and have her bred to the Waterloo winner, Spinaway may be sent over to run in some of the fall meetings under Mr. Dent's pilotage. At the same time we think that greyhound men in the East would be better pleased to see Mr. Whiton send his bitch to Great Bend or Merced, where honors, far more pleasing to an American breeder, await a speedy and clever greyhound.

Mr. Chas. Fischer, of Brooklyn, is in trouble. Recently he paid $400 for a harlequin Great Dane puppy to a German breeder, and the dog has escaped or was stolen last Thursday. Great Danes are rather conspicuous animals, and if any of our readers should drop across such a dog they would confer a benefit on the owner by communicating with this office.

An executive meeting of the National Beagle Club will be held at 266 Washington street, Boston, Mass., on June 10, at 7 P. M.

The English Setter Club will hold a special meeting at the rooms of the A. K. C., 44 Broadway, New York city, June 15, at 4 P. M.

Mr. Stone, in his letter to FOREST AND STREAM giving the list of judges at the forthcoming show in Toronto, says that an Englishman, an Irishman, a Scotchman and a Canadian will don the ermine. While we agree with the Englishman, Scotchman and probably the Canadian part of it, we fail to see where the bid for the Irish vote comes in. Mr. Mason we know is a Yorkshireman, and that is very much English. Mr. Mortimer is a Cornish man if we remember rightly, and although Cornwall claims the Land's End, Ireland is still some distance further away. If the truth was known Mr. Wheeler also claims England for his native country.

NATIONAL BEAGLE CLUB MEETING.

Editor Forest and Stream:

The roll call showed only five members present, so the special meeting called to act on amendments was adjourned *sine die*.

An executive meeting was called to order at 9:05 P. M. President Chapman, Vice-Presidents B. S. Turpin and W. S. Clark, W. A. Power and H. V. Jamieson were present.

Communications read and filed.

Voted that the communication from West Michigan Kennel Club be laid on the table.

Voted that the secretary send out printed copies of the amended constitution and by-laws within five days to all members in good standing, together with notice of meeting to be held July 1, 1892.

Re the title of Frank Forest:

Whereas, The field trial record of the beagle Frank Forest has been the source of considerable discussion, and

Whereas, Frank Forest fairly won the special for best beagle in the trials of 1890, and

Whereas, We believe the difference between "the best dog in the trials" and the absolute winner to be technical variation only, and

Whereas, We believe it to be the duty of the National Beagle Club to protect its members as far as possible. Therefore be it

Resolved, That Frank Forest be and hereby is declared the "absolute winner" of field trials of the National Beagle Club, and be entered as such on the records of the club.

(Signed) W. A. POWER.

Voted that the secretary be instructed to send the following letter to the secretary of A. K. C. in connection with the above resolution. W. A. Power, B. S. Turpin, W. S. Clark in the affirmative, H. V. Jamieson negative.

[COPY.]

"*Secretary of A. K. C.*: We would like to pass the accompanying resolution. Has the A. K. C. any objection to same? We ask advice as we wish to act in harmony with the spirit as well as the letter of the A. K. C. rules."

Meeting adjourned. H. V. JAMIESON, Sec'y N. B. C.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

BRED.

☞ **Prepared Blanks sent free on application.**

Nora—Duke of Dexter. G. A. Abbott's (Bangor, Me.) pointer bitch Nora (Sensation—Sally) to C. D. Roberts's Duke of Dexter (Duke of Vernon—Boski), May 16.

Sophia Hill—Manitoba Frisk. C. M. Rounds's (San Antonio, Tex.) English setter bitch Sophia Hill to his Manitoba Frisk.

Miss Lightfoot—Manitoba Frisk. Concho Kennels' English setter bitch Miss Lightfoot to C. M. Rounds's Manitoba Frisk.

Fan—Manitoba Frisk. W. J. Pryor's English setter bitch Fan to C. M. Rounds's Manitoba Frisk.

Hillside Spinster—Brockenhurst Tyke. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Spinster to their Brockenhurst Tyke, May 10.

Rosa Canina—Raby Mixer. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Rosa Canina to their champion Raby Mixer, May 10.

Suffolk Riot—Brockenhurst Tyke. A. D. Stewart's (Hamilton, Ont.) fox-terrier bitch Suffolk Riot to Hillside Kennels' Brockenhurst Tyke, May 8.

Hillside Brilliant—Reckoner. Mr. Cushman's (St. Louis, Mo.) fox-terrier bitch Hillside Brilliant to Hillside Kennels' Reckoner, May 8.

Brazen—Robber Chieftain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Brazen to their champion Robber Chieftain, May 3.

Warren Lady—Raby Mixer. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Warren Lady to their champion Raby Mixer, May 3.

Shame—Raby Mixer. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Shame to their champion Raby Mixer, April 30.

Hillside Vivid—Raby Mixer. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Vivid to their champion Raby Mixer, April 27.

Hillside Freda—Starden's King. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Freda to their Starden's King, April 26.

Lady Blackburn—Starden's King. Mr. Robbins's (Philadelphia, Pa.) fox-terrier bitch Lady Blackburn to Hillside Kennels' Starden's King, March 30.

——*—Starden's King.* D. W. Thompson's (Philadelphia, Pa.) fox-terrier bitch —— to Hillside Kennels' Starden's King, March 31.

Hillside Bounty—Starden's King. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Bounty to their Starden's King, April 1.

Wanda—Hillside Warrior. Hillside Kennels' (Lancaster, Mass.) deerhound bitch champion Wanda to their champion Hillside Warrior, April 2.

Hillside Syren—Brockenhurst Tyke. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Syren to their Brockenhurst Tyke, April 4.

——*—Starden's King.* Jas. Mortimer's (New York city) fox-terrier bitch —— to Hillside Kennels' Starden's King, April 5.

——*—Brockenhurst Tyke.* Mr. Fletcher's (Bolton, Mass.) wire-haired fox-terrier bitch —— to Hillside Kennels' Brockenhurst Tyke, April 12.

——*—Hillside Warrior.* J. B. Barnard, Jr.'s (Boston, Mass.) deerhound bitch —— to Hillside Kennels' champion Hillside Warrior, April 13.

Hillside Leda—Starden's King. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Leda to their Starden's King, April 15.

Hillside Lottery—Raby Mixer. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Lottery to their champion Raby Mixer, April 16.

Incognita—Starden's King. C. W. Tinling's (Hamilton, Can.) fox-terrier bitch Incognita to Hillside Kennels' Starden's King, April 17.

Hillside Maid—Starden's King. H. P. Schenck's (Ridgefield, Conn.) fox-terrier bitch Hillside Maid to Hillside Kennels' Starden's King, April 19.

Freya—Brockenhurst Tyke. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Freya to their Brockenhurst Tyke, April 23.

Jessie Underhill—Spot Sting. Fountain City Kennels' (Augusta, Ga.) pointer bitch Jessie Underhill (champion Graphic—Underhill's Jane to their champion Spot Sting (Charlie—Cora), May 3.

Rosa May—Spot Sting. Fountain City Kennels' (Augusta, Ga. pointer bitch champion Rosa May (champion Fritz—Virginia) to their champion Spot Sting (Charlie—Cora), May 7.

Rosa—Spot Sting. Fountain City Kennel' (Augusta, Ga.) pointer bitch champion Rosa (Poyneer's Rena—Poyneer's Boon) to their champion Spot Sting (Charlie—Cora), May 11.

Dell—Dud. M. Kronauer's (Rochester, N. Y.) smooth St. Bernard bitch Dell (Nasco—Daisy May) to his Dud (Hector—Tromba), May 16.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Hillside Ruth. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Ruth, May 10, four (one dog), by their Starden's King.

Dudley Toiler. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Dudley Toiler, April 30, three (two dogs), by their Reckoner.

Hillside Sapphire. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Sapphire, April 27, four (one dog), by their Brockenhurst Tyke.

Princess. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Princess, April 23, six (three dogs), by their Pitcher.

Duchess of Kent. C. M. Rounds's (San Antonio, Tex.) pointer bitch Duchess of Kent (champion King of Kent—Lonnie Bijou), April 27, six (five dogs), by Trinket's Chief, Jr.

Pansy of Tuxedo Park. Dr. Whitaker's (St. Louis, Mo.) Gordon setter bitch Pansy of Tuxedo Park (Stubble—Countess of Devonshire), May 3, eight (four dogs), by his Don (Othello—Grouse); two dogs since dead.

SALES.

☞ **Prepared Blanks sent free on application.**

Dell. Orange and white smooth St. Bernard bitch, whelped April 8 1890, by Nasco out of Daisy May, by A. Van Blaricom, Rochester, N. Y., to M. Kronauer, same place.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

B. A. S., North Attleboro, Mass.—Answered by mail.

J. F. O., Allegheny, Pa.—1. An Irish setter can be of very dark mahogany color, which may approach the color you mention, and still be pure bred. 2. Yes. Cannot find any mention of Gay in either stud book.

C. S. McC., Troy, N. Y.—Have you or can you furnish a publication called the "Great Dane Monograph?" Ans. You can procure the book from Mr. W. E. Hagans, 505 Stock Exchange Building, Chicago, Ill. We do not know the price.

M. L. W., Harrison, N. J.—Please send me a prescription for hastening the heating period in bitches. I had one of you some years ago and it got lost. It was very effectual. Ans. Give two grains of manganese di-oxide (made in a pill) three times a day after food.

R. A. R., N. Y. City.—Will you kindly let me know how the pointer dog Rusty is bred, three or four generations? As far as I can learn he was shown in New York in 1888 or 1889 and at one of these shows was bought by a Mr. P. W. Lynch for shooting purposes. Ans. We can find no dog of that name in the catalogues of those shows nor any mention of it in the stud books. There was a lemon and white dog pup called Rustic shown at New York in 1887 by D. C. Gregory, of New York. Sire, Brackett; dam, Lucia. If this is the right one, can give you extended pedigree.

A. C. U., Marblehead, Mass.—I noticed you did not criticise my collie in last week's paper. I wish if you saw her at Lewiston Me., and remember her weak points you would publish them. I like to have my dogs criticised as I am only a beginner and can learn a great deal from fair criticism. Ans. It was an oversight probably on our part not to criticise your bitch, but as she is in the challenge class it was hardly necessary, having been reported on before. Our notes however on this bitch are: Short snipy head, coat soft and open, light loin, hocks turn in, otherwise fairly good. We can scarcely advise you on the other subject as we only know the dogs by hearsay; they are well spoken of however, should think Lord Neverstill, Balkis or Gem of the Season quite their equal.

J. C. W., Houston, Texas.—I have a young greyhound 12mos. old, that I prize very highly; for the past 6mos. he has been afflicted with a disease something like chorea, only on the right side. A twitching of the limbs first in one leg and again in the other, changes about from one leg to the other; this occurs standing or lying down. It is not violent, but as it seems to hang on I write to know if anything can be done toward effecting a permanent cure. The dog was never worked hard nor abused in any way nor are his ancestors on either side troubled with it. Ans. First treat for worms. Then give the following mixture:

Liq. arsenicalis pot.	3 ii
Aq. ad	3 vi

Mist. First give one dessertspoonful twice a day, then three times a day; then gradually increase to one and a half teaspoonfuls three times a day. Give the mixture each time after a little food. Continue it for a month.

Canoeing.

CANOEISTS, some of them experienced men, and members of the A. C. A., lost their life by drowning within the past twenty years, but the sad accident which resulted in the death of the commodore of the Brooklyn C. C. on May 30, is the first in which a well known and prominent canoeist has been the victim. The innumerable capsizes and mishaps of a dozen large meets and hundreds of minor camps and regattas, attended largely by young and inexperienced canoeists, have been marked by no serious consequences.

The present case must be set down as an accident such as might occur in any outdoor sport, like the recent death of a noted and skilful amateur rider in Boston through the fall of his horse. Com. Weeks had run the same falls successfully in previous years, and was familiar with the ordinary difficulties to be expected. He was not aware, however, of some material changes recently made in the woodwork of the dam, by which the nature of the currents was changed. Another of the party passed through safely at the same time, but an unexpected cross current upset his canoe and left him to struggle for life in the broken water at the foot of the dam, with the sad result that is told of elsewhere.

BROOKLYN C. C.

THE Delaware cruise of the Brooklyn C. C. met with a sad termination on May 30, Com. Weekes, the leader, being capsized from his canoe and drowned in running Lackawaxen Dam.

At a special meeting of the Brooklyn C. C. last Tuesday evening, Vice-Commodore Davis presiding, the following was entered upon the minutes:

"Seldom if ever before had a more delightful and pleasurable trip been planned and carried through to the threshold of a happy termination than was the last cruise of the members of the Brooklyn C. C. The idea had originated in the mind of, the most complete arrangements had been made by, and the congratulations were being poured in upon our dear friend, when in all the happiness of his own and his comrades' enjoyment, and in the excitement and hopes realized and pleasures attained, our commodore and companion, Charles Parker Weekes, was called to his last sleep with an appalling suddenness by being capsized from his canoe and drowned while going down the shute at the Lackawaxen Dam. Mr. Weeks had been on our roll of membership six years. When first his application was received he was unknown to any of our members, but hardly had the favorable action of an election been recorded before the warmth of his personality began to be felt by his companions.

"His advice was soon sought and every honor that the club could bestow was offered to him, but on each occasion was it declined with so kind a word that it still the more endeared him to us. At last, while he was in the West visiting his brother, an election was held and unanimously he was selected to fill the chief office in our gift. His term of service has been short, but it has been rich in accomplishments. His thought, knowledge and action gave us a summer club house at Bay Ridge with most complete arrangements, his enthusiasm for cruising gave us our most beautiful "Pagan Trophy," and his judicious conduct of our club affairs cemented our organization to a closer fellowship. With a manner as gentle as a girl, a bearing as manly as a hero, a faith in his creator as firm as a mountain, a mind as thoughtful of all that surrounded him as a relative, and a heart as tender as it was true, in Commodore Weekes we had a friend who challenged our fullest confidence and claimed our greatest affection. The love and honor that was his from us, his friends in his favorite pastime, was but a natural recognition of his peculiar and rare qualities; we can therefore appreciate in but a small way the blow that has fallen upon his crushed widow and his heart-broken parents and sorrowing relatives to whom, in this their darkest hour, we tender our most sincere sympathy and unfeigned compassion."

NEW YORK C. C.

THE annual sailing race and trial races from the result of which a defender of the international challenge cup will be selected are to be sailed off the club house at the Bensonhurst pier, Gravesend Bay, Saturday, June 11. These races are open to all canoemen. Entries received up to time of starting. A first and a second prize in the regular sailing race will be awarded. First race will be called at 11 A. M. Second race at 2:30 P. M. A third race will be sailed if the weather permits. Wm. Whitlock, J. R. Lake, C. Bowyer Vaux, regatta committee.

The New York C. C. was invited by the Bensonhurst Club to the concert and dancing with which the latter celebrated Decoration Day.

CANOE NEWS NOTES.

THE races of the Jersey City C. C. on May 30 resulted as follows:

Paddling, open canoes, ½ mile—Won by Fred B. Collins, of the Bayonne C. C.

Paddling, decked canoes, ½ mile—Won by Richard H. Kretzmer, Hoboken C. C.

Paddling, tandem, ½ mile—Won by E. W. Edinger and Mr. Sterns, Jersey City C. C.

Sailing senior, 4½ miles—Won by E. W. Edinger, of the Jersey City C. C.

Sailing junior, 3 miles—Won by L. C. Kretzmer, of the Hoboken C. C.

The entries for the Marine and Field Club regatta, on June 20, include the leading racing men, including Mr. Ford Jones. The Yonkers and Crescent war canoes are entered.

A. C. A. Membership.—Atlantic Division: Leo Shire, New York City.

OCTOBER.

1. Corinthian, Atlantic City.
15. Buffalo, Closing Cruise.

THOUGH nothing has passed between the two clubs, there has been some general comment outside on the clashing of dates of the New Rochelle Y. C. and the Seawanhaka C. Y. C. At the May meeting of the S. C. Y. C. the matter of changing the date was discussed, the sentiment being in favor of a change if it were still possible. We publish elsewhere a letter from the S. C. Y. C. in relation to the matter. Although there is no formal agreement among clubs in regard to dates of fixtures, a very strong precedent has been established of late years, according to which the New Rochelle Y. C., as the first to make a public announcement, is entitled to the date in question.

THE trials of the new 40-raters abroad in the early races have brought the two Watson boats—Varuna, keel, and Queen Mab, centerboard—to the front. In the first race, on May 17, at Southampton the order was Varuna, Queen Mab, Thalia, White Slave; Corsair and Reverie disabled. In the second, Royal Thames, May 21, it was Queen Mab, Corsair, Thalia, Varuna, Reverie, Creole and White Slave. In the New Thames match, May 23, it was Queen Mab, Corsair, Varuna, Creole, Thalia, Reverie. In the Royal London, on May 24, the order was Thalia, Queen Mab, Varuna, the others not finishing owing to the light air. Corsair is a new Payne boat, and the Fife Thalia was the winner last year, as the Watson Creole was in 1890.

THE fool navigator has opened the season already, and Captains Andrews and Lawlor this week start again to cross the Atlantic in still smaller craft than ever before. One uses a 12ft. canvas boat named after a well advertised brand of shoes. This sort of navigation opens up a wide range of possibilities, and there may be money yet for the foolhardy sailor who will first cross the ocean on a bar of soap or in an enlarged model of the bottle containing the certain remedy for "that tired feeling." Such ventures as the last two or three are not only worse than useless, but ocean wanderers in dories and canoes have become a nuisance that should be suppressed.

THE victory of the fin-keel Handsel at Marblehead was repeated on Saturday by her smaller sister, El Chico, at Larchmont under similar conditions; while from the meagre accounts, the other fin-keel sent from Bristol to the Clyde seems to have distinguished herself in the first race.

THE photos of the new Watson forties, Queen Mab and Varuna, though quite small, show the yachts to have considerable beam, with bows especially full on the waterline and above, though the stemhead is not carried out to the extravagant length of Gloriana.

THE annual agony of steam yacht racing has broken out again to the disgust of all yachtsmen. There is very little prospect of the race announced for June 18 being run, but the advertising business is being worked in the same energetic manner as characterized the notable failures of last fall.

S. C. Y. C. ROUSE AND WETMORE PRIZES.

FOUR prizes of the value of $75 each, presented by Mr. Henry C. Rouse and Mr. Charles W. Wetmore of the Seawanhaka Corinthian Y. C., are offered for contest in special races to be held, weather permitting, on the second Saturday of the months of June, July, August and September, under the racing rules and time allowances of the club. Unless otherwise directed by the race committee these races shall be sailed from a one gun start, and over the cat-boat outside course. Entries will be received from yachts under 32ft. waterline length, all sailing in one class. Measurement will be under the "Seawanhaka Rule," extended to meet the requirements of the several rigs carried, and time allowances for the first race shall be determined upon the following: For yachts over 25ft. waterline, their racing length; for yachts over 20ft. and not over 25, 97 per cent. of their racing length; for yachts over 20ft. and under waterline, 95 per cent. of their racing length. For the second and subsequent races such other method of allowance, classification or handicap may be adopted as the race committee shall determine. Helmsmen shall be Corinthian; otherwise there shall be no restrictions except that crews shall be limited to one man for each 5ft. of waterline, or fraction thereof, exclusive of the helmsman. When a yacht shall have won two prizes, she shall be barred from further entry.

MEMORIAL DAY, MAY 30.

FALL RIVER Y. C.

THE open regatta of the Fall River Y. C. was quite a success, with thirty-two starters in the six classes. The prizes were: First class—First prize, King Philip cup, valued at $175, held by sloop Shark, of Providence. The winning sloop to hold this cup during the year and deliver it to the judges on the morning of the next annual contest. When won three times by any one sloop it shall be held permanently by that sloop. The second prize in the first class will be a barometer valued at $25. Second, third, and fourth classes—First prize, $20; second prize, $10. Fifth class—First prize, $15; second prize, $8. Sixth class—First prize, $10; second prize, $5.

The courses were: Classes 1, 2 and 3, around Hog Island Lightship, 16½ miles; class 4, around Mount Hope buoy, 10½ miles; classes 5 and 6, around Common Fence Point buoy, 10½ miles.

The wind was S.W., with squalls, calms and some rain, but the run home was made before a steady breeze.

The holder of the cup, Shark, has been sold to France, and on the day of the race she was on Wintringham's ways, at Bay Ridge, her lead keel and deadwoods being removed so that she might be more conveniently shipped by steamer. This left in the class the old sloop Mignon, of local fame; the Burgess keel cutter Tom Boy, and a new racer, the Hanley sloop cat, Chapaquoit, Mr. C. H. Jones, of Boston. She is in model a Cape cat similar to Harbinger, Mucilage and other Hanley boats, but larger, longer on deck, with outside lead, and the mortydite sloop-cat rig. Her dimensions are 41ft. over all, 32ft. l.w.l., 14ft. beam, 2ft. 6in. draft, fore overhang about 5ft., boom 45ft., gaff 29ft., hoist 28ft., jib on foot 25ft. She has three tons of lead inside and one ton on keel. After a late start she led the fleet on the windward work, gaining still more off the wind. The times were:

FIRST CLASS—SLOOPS 30FT. AND OVER.

	Elapsed.	Corrected.
Chapaquoit, C. H. Jones	2 33 00	2 31 05
Mignon, C. G. Bloomer	2 35 45	2 35 45

Sachem, Frothingham & Gardiner	16.10	Withdrew.	
Peerless, Alex Holmes	16.04	Withdrew.	

A special cup for best corrected time was won by Nancy Hanks, sailed by Capt. Nat. Watson, of Pappoose and Sayonara.

SOUTH BOSTON Y. C.

The opening race of the South Boston Y. C., the first trial of the new 21ft. class, was sailed in a reefing breeze from S. W. The Herreshoff centerboard, Alpha, the Borden-McIntyre bulb keel R. D., and the Small centerboard Exile were the only new boats, and they were not classed together, R. D. being in a class with larger keel boats.

The courses were: First class, all yachts measuring 25 and up to 35ft.—Leaving Red Spar Buoy 2 and Thompson's Island on starboard, Spectacle and Long Islands on port, Rainsford's Island and Wilson's Rock Buoy and Toddy's Rock Buoy on starboard, Point Allerton Bar Buoy on port, returning through the Narrows, leaving George's and Galloupe's Islands and Nix's Mate Black Buoy 9 on port, Lovell's Island and Rod Buoy 8 on starboard, Long and Spectacle Islands and buoy 7 on port; 13 miles.

Second class, yachts 20 to 25ft.—To Wilson's Rock Buoy, thence to Wreck Buoy off Nut Island on starboard; returning, leaving Hangman's Island, Moon Head, Thompson's Island and Red Spar Buoy 2 on port; 10 miles.

Third and jib and mainsail classes.—To Cow Pasture Buoy 6, leaving it on port, to Buoy 7, off Fort Independence, leaving it on starboard, to Sculpin Ledge Buoy, leaving it on port; returning, to Buoy 7, leaving it on port; 7 miles.

Fourth class—Leaving Black Spar Buoy 3 off west side of Thompson's Island on port; to Red Spar Buoy 2, northeast end of Thompson's Island, leaving it on port; to flag boat off Marine Pier on the port, and repeat, passing between judges' boat and stakeboat at finish; 4 miles.

Alpha sailed well all day, easily leading the old boats in the various classes. R. D. made a poorer showing, but under unfavorable conditions. The times were:

The regatta committee included M. F. Kelly, chairman, H. W. Cherrington, John F. Berrigan, C. M. Dolbeare, E. W. Haskell, N. B. Stone, J. B. McDonough. The judges were Hubert Pope, W. H. Godfrey, C. McKenna, J. P. Bullard, Thos. Christian.

AMERICAN MODEL Y. C.

The opening races of the A. M. Y. C. at Prospect Park proved very exciting, resulting in some very close finishes in the four heats of the first class yachts, 48in. to 53in. l.w.l., Ohyiesa, formerly the schooner Normandie, winning the final over the ¼-mile course in 10m. 18¾s., corrected time, beating May by 26¾s. This race being to windward only four yachts started. The second class yachts, 42in. to 48in., sailed over a triangular course of one mile, six yachts showing up at the line, and after the regatta committee had named the winner the second yacht protested, finally resulting in the referee deciding no race. In this race Mary S. proved her speed by racing away from her owner, footing so fast both on and off the wind that at times he was unable to catch her to tack or alter her trim. But for this and hugging the shore too close she would have surprised some of the knowing ones. Her rival, the 46in. owned by Mr. Fishes, did not take the chances of racing with her, he sailing Marjorie, who has been altered to fit the second class and to obtain a big time allowance. The sheer plans of Mary S. and the Fishes 46in. were published in FOREST AND STREAM of April 7. The third class, 35 to 42in., brought out four yachts, Electra still showing she is hard to beat, sailing over the mile in 31m. 10s., beating Dora H. and Anna by 11m. 20s.

CAPE COD Y. C.

The regatta of May 30 was postponed and sailed on June 4, off Yarmouth, the times being:

Nobscusset, Hall	1 36 16	City of Chicago, Crosby	1 32 17
Ariel, Sears	1 37 35	Madge, Cummings	1 35 04

LARCHMONT Y. C. SPRING REGATTA, JUNE 4.

SATURDAY was not a pleasant day on Long Island Sound, very cold for June weather, with a fresh easterly breeze that kicked up a sea when the tide began to ebb in the afternoon. The conditions were good however for yacht racing and it is due only to the yachtsmen that the race was not more of a success. Twenty-five yachts were entered, but only seventeen were at the line, and of these three made no race through an unfortunate blunder at the start. The schooner fleet included the rebuilt Atlantic, Shamrock, just altered from the cutter rig, Fleur de Lis and Phantom, in the larger class, and Viator and Peerless in the smaller. Shamrock had no competitor, so went up into the next class. The most interesting class was that of the 46-footers in which the new Wasp was to make her *debut* against Clara, Oriva and the sloop Gulnare. In addition to the regular class prize a handicap prize was offered, Wasp allowing Clara 15m., Oriva 23m. and Gulnare 25m. Tigress and (Saona) were together in the next class, while in the 25ft. class were only Pyxie and El Chico, the two Clapham boats not being present. In the cat class were Nellie and Oriva, old boats, and the new Gielow boat Oconee.

The schooners sailed a special course of 31 miles, past a markboat off Stamford, around a markboat off Eaton's Neck and home. The larger single-stickers were to sail the usual Captain's Island course; the 25-footers the Matinnicock course, and the cats the Scotch Caps—Hempstead course.

The sailing directions called for a start in two divisions, the schooners first and the others 15m. later. Although there was 10 minutes in which to cross the line after the first signal, all but Peerless and Phantom were late. Oriva made a wrong start and went over with the schooners, seeing which, Clara followed her a couple of minutes later. Wasp, sailed by Rear-Com. W. Butler Duncan, held off for the right signal, but did not start, the others being well away. Gulnare crossed the line at the proper time, and was really in the race. Wasp started across and picked up Clara as she was on the way from Hempstead to Captain's Island, the two having a bout to windward, which resulted in Wasp's favor, after which she withdrew. The schooners beat down along the Connecticut shore. Shamrock soon taking the lead. They were timed at Stamford as follows:

Shamrock	1 44 42	Atlantic	1 55 23
Fleur de Lis	1 47 49	Phantom	2 00 05
Viator	1 52 15		

At the outer mark, Eaton's Neck, the times were:

Shamrock	3 02 36	Viator	3 18 50
Fleur de Lis	3 06 35	Atlantic	3 23 10

El Chico, the Herreshoff fin-keel, started a few seconds ahead of Pyxie, and at Hempstead had gained something, but when the two came on the wind for Matinnicock the fin-keel readily left her opponent. Oconee with her large rig had no show with Aura and Nellie, and was beaten by both. The times were:

SCHOONERS—90FT. CLASS.

	Finish.	Elapsed.
Atlantic, Seeley & Marshall	5 20 47	5 35 47
Fleur de Lis, George Trotter	6 06 12	5 21 12
Phantom, H. S. Parmalee	5 57 26	6 12 44
Shamrock, J. Rogers Maxwell	5 00 46	5 15 46

SCHOONERS—62FT. CLASS.

Viator, W. Gould Brokaw	5 24 09	5 39 09
Peerless, J. M. Mitchell	Not timed.	

SLOOPS—SPECIAL CLASS.

Clara, R. O. Osborn	Did not finish.	
Oriva, Herman Clark	Did not finish.	
Wasp, A. Rogers	Withdrew.	
Gulnare, John E. Dwight	3 01 51	2 58 50

SLOOPS—35FT. CLASS.

Tigress, James Wier, Jr.	3 14 45	3 18 29
Saona, A. P. Ketchum	3 35 51	3 34 21

25-RATING CLASS.

Pyxie, Oswald Sanderson	2 18 23	2 21 50
El Chico, Maitland Kersey	2 05 20	2 09 16

CABIN CAT CLASS.

Nellie, M. F. Plant	2 41 55	2 45 59
Oconee, George Pierce	2 51 57	3 00 23
Aura, Wm. H. Simonson	2 35 32	2 31 14

The judges were Messrs. John F. Lovejoy, Otto Savony, and Clarence L. Burges.

BADGER.

MR L. J. BOURY's new boat Badger, to which we alluded last week, was designed for him by Mr. J. H. Cornwall, of Port Washington, and is intended mainly as an experiment in the direction of light draft and displacement and long overhang.

The dimensions are as follows:

Length, l.w.l.	15ft. 6in.
deck	26ft.
fore overhang	6ft. 3in.
after overhang	4ft. 3in.
Beam, extreme	9ft. 6in.
l.w.l	8ft.
Breadth across stern	6ft.
Draft extreme	1ft. 3in.
Least freeboard	1ft. 8in.
Board length	7ft.

The midship section is peculiar, there being a high bilge and quite a hollow floor, not unlike the old sloop Shadow, allowing for the difference in proportions. The keel has a little drag, but is straight from the plumb sternport to the forefoot, but above water the stem runs out into a Gloriana bow. The floor is very long and flat, and the buttock and diagonal lines are naturally very easy.

The yacht is quite stiff, and on Decoration Day sailed very fast in the light airs with a small part of her ballast in. Though she was not in the race, and started a long time after the fleet, she covered the whole course and came in between the winner and second boat. She is rigged with jib and mainsail only.

Mr. Cornwall, who is known as the builder of the fast open boats Expert, Tattler, Phyllis, Vanadis, Gretchen, Puckashee, Josephine and Tippycanoe, nearly all of which are now in Western waters, is at work on a similar boat to Badger for Mr. N. K. Fairbanks, of Chicago.

The open regatta of the Cedar Point Y. C., of Saugatuck, Conn., to be sailed on June 15, will be open to the yachts of all yacht clubs or boating associations on Long Island Sound. The classes are: Jib and mainsail, 26 to 30ft. l.w.l., and under 26ft. Catboats, 20 to 23ft. l.w.l., and under 20ft. l.w.l. The first prize will be $35, and second prize $15, in all classes. The race will start at 11 A. M., and entries will close on Monday, June 13. They may be sent to W. M. Thomas, Box 13, Saugatuck, Conn. The regatta committee includes Messrs. O. J. Allen, Edwin Thorne and A. deF. Sanford.

MASSACHUSETTS Y. C.

THE annual regatta of the Massachusetts Y. C. on June 17 will be open to yachts of all recognized yacht clubs, the prizes being: First class sloops and cutters between 40 and 46ft. l.w.l., prize $60; third class sloops and cutters between 25 and 30ft. l.w.l., prizes $35 and $20; special class, jib and mainsail boats under 21ft. l.w.l., prizes $30, $20 and $10; fourth class, yachts between 21 and 25ft. l.w.l., prizes $25, $20 and $15. No prizes will be given to a yacht which has no competitor, nor second prizes in any class unless three or more start. The courses will be off Nahant.

Entries must be made in writing, giving name of yacht, owner, rig, centerboard or keel, length waterline, and must be sent to G. F. Clark (Boston Yacht Agency), 43 Milk street, Boston, where numbers can be obtained, on or before 12 M. Thursday, June 16.

The regatta committee includes Wm. O. Gay, chairman; S. P. Perrin, H. B. Torrey, Harry Hutchinson, E. P. Boynton.

THE "COUPE DE FRANCE."

THE illustration, for which we are indebted to *Le Yacht*, shows the new international cup recently established by the "Union des Yachts Français," the conditions governing which we published on March 24. No challenge for the cup has been received this year.

THE CRUISING YAWL ARGO.

MR. DAVID HALL RICE, of Boston, is well known to the readers of FOREST AND STREAM through his advocacy of the yawl rig and through his old yawl White Cap, long since described in our pages. As a successor to the White Cap, Mr. Rice has lately designed a new cruising yawl which is now building at Moses Adams' yard, Essex, Mass.

Argo, the new boat, will be 75ft. over all, 55ft. l.w.l., 16ft. 6in. beam and 9ft. draft. The overhangs are quite long and the counter is immersed so that the sternpost is some 8ft. forward of the after end of the waterline, as in the big yawl Jullanar. The yacht is very strongly built, but at the same time the scantling has been so arranged as to avoid useless weight. The outside keel is a steel trough 35ft. long, 2ft. 6in. deep, 16in. wide at fore end, 20in. amidships and 10in. aft. It is secured to the wood keel by bolts, but is further strengthened by straps over the floors which transmit the strain to the floors. There is space in the keel box for 20 tons of lead. The keel and frames, with the garboards, are of oak, the planking of yellow pine. The main cabin will be 13×11ft., the owner's room will be aft, a large room with two berths, and there will be three smaller staterooms.

The sail plan is quite different from the conventional English yawl rig and more like the ketch. The mainmast is 25ft. from the gammon iron, the mizen is 35ft. 9in. abaft the mainmast and 14ft. 9in. inboard from the taffrail. The dimensions of the spars are as follows:

Mainmast, deck to hounds	49ft.
Masthead	10ft.
Topmast	41ft.
Boom	35ft.
Gaff	33ft. 6in.
Mizenmast	32ft.
Masthead	7ft.
Topmast	37ft.
Boom	27ft. 6in.
Gaff	25ft.
Bowsprit, outside gammon iron	23ft.

The mizen topmast is a steel tube 3in. at heel. There is a spring stay from fore to mizen topmast head, and backstays on both topmasts. The yacht will carry a staysail and jib. The work is now well advanced, and the Argo will be in commission early next month.

HANDSEL.

THE race of Monday week, off Marblehead, in which the new fin-keel defeated so decisively two good boats of the older type, is similar in many points to the very sensational race of the Eastern Y. C., sailed over nearly the same course on July 15, 1889. The winner in each case was of a new type, radically different from the moderate cutters recognized as the head of the class; though the winners themselves differ most materially, they have certain points in common as distinguished from ordinary craft; curiously enough, one of the two owners of the Cape Cod catboat Harbinger, which defeated Saracen and Kathleen in 1889, is the owner of the fin-keel Handsel, which has just beaten so handsomely two of Saracen's younger sisters, Fancy and Hawk. Different as they are, Harbinger and Handsel were built nominally for much the same purpose, general racing, day sailing and making occasional short cruises; the term racing machine being indignantly repudiated by both. How far the characteristic extremes of the two, the unwieldy rig of the Cape cat and the great draft of the fin-keel, are compatible with good all-round qualities, is a matter on which opinions differ.

The Cape cat is better known to yachtsmen to-day than she was three years since, and while her many good points are much more generally appreciated than then, there is no danger of the extinction of all other types, both for racing and cruising, such as some enthusiasts once predicted. Harbinger's performance with the two cutters in a wind and sea still stands as a record, but not only has it never been repeated but there have been a great many occasions since on which the normal type of modern keel or centerboard boat has beaten the Cape cat under perfectly fair conditions. The recent action of her owner in abandoning Harbinger for such a different type of boat is pretty good evidence that she, one of the best of her type, did not fulfill all requirements.

The status of the Cape cat, as a most excellent type of boat for certain purposes, fast enough for the average racing, very convenient from her shoal draft and at the same time offering a reasonable amount of room, has been established in the interval since the race at Marblehead, and men now understand that while not a mere racing machine, she is by no means a perfect cruiser or an ideal all-around yacht. The fin-keel is this year before the yachting public for trial in much the same way as the Cape cat has been, and opinion is much divided over the future of the type. Its builders, the Herreshoffs, are strong advocates of it as a fast and handy yacht for general purposes, their claim being that, while in the matter of draft the fin is no more advantageous than the same draft in the ordinary cutter, the fin-keel is faster with a much smaller and simpler rig, dry and easy in a sea, very easily handled by a small crew, comfortable to sail, and possessing, with the addition of a low trunk, a fair amount of room. Besides this, they claim that the yachts may be shipped readily on a car or steamer, the fin being removed.

Of all the fin-keels yet built, Handsel is the best to test these claims by; the Morgan 35-footer Drusilla was intended for racing, and her flush deck gives little room below, while El Chico and the Boston 21-footers are too small to give any test of the possible accommodations save from the standpoint of a canoeist. The Hooper boat, however, is of a size that should give very fair room below, and further, she is fitted with that view, having a cabin trunk.

In model Handsel is much like Drusilla save that she is 5ft. shorter, the beam and depth being the same. Her dimensions are: Length over all, 41ft.; l.w.l., 29ft. 9in.; beam, 9ft. 5in.; draft, 7ft. 9in. The sheer plan is similar to El Chico and the Boston boats, but with a little more sheer, the midship section is much like a canoe, flat floor, round hard bilge, and straight side. The cabin trunk and cockpit are enclosed by one elliptical coaming, the forward part for about 8ft. forming the cabin, while abaft it is a large cockpit about 6ft. long, with a small steering well abaft it. The headroom is 5ft., and the cabin is fitted with folding berths on each side, with lockers, etc., giving very good cruising accommodations. The fin is of steel plate with a lead cylinder on its lower edge. The frames are all bent, the planking is double-skin, steel straps crossing the frames near the mast and amidships. The topsides are painted white.

The boat was launched on May 25, and at 5 P. M. on Friday, May 27, she left Bristol, making Newport at 8 o'clock. At 6 A. M. on Saturday she was under way from Newport, making Race Point at 10:30 P. M., and reaching Hull at 11 A. M. on Sunday, after some hours of drifting. At 4 P. M. she sailed for Marblehead for Monday's race.

Though the name has a strange and unfamiliar sound, it is English and may be found in the standard dictionaries, one of its several meanings being an experiment, or more properly an earnest of something to come. The word was the choice of Mrs. Hooper, and possesses the merit of being original, appropriate and distinctive, unlike most yachts' names. The yacht will race again in the regatta of the Massachusetts Y. C. on Friday of next week.

EASTERN Y. C. SPECIAL RACE, MAY 30.

THE opening race of the Eastern Y. C. on Monday proved a notable one, the new Herreshoff fin keel 30 footer meeting two representative boats of the class under conditions which gave a most thorough test of the merits of the three types—keel, centerboard and fin-keel. Though but three yachts started, the race was most interesting, and the result was as conclusive as could be desired. The race was for yachts of 30ft. and under, the start being made off the Eastern Y. C. house in Marblehead Harbor, the course being out of the harbor and around the whistling buoy off the Graves, 8 miles distant. The wind was fresh and steady from S.W. all day, the yachts carrying clubtopsails.

The keel representative was Fancy, the last of the Burgess thirties, built last year for Mr. C. F. Lyman, a cutter similar to Saracen, Saladin, Rosalind, but somewhat narrower, 9ft. beam, cutter rigged. She has done little racing, but from all appearances is quite as fast as any of the older boats in the 30ft. class. The centerboard boat, Hawk, is well-known; she and her sister, Shark, having sailed many races within the last three years. She is 11ft. 6in. wide, cutter rigged, and this year has been fitted with a plate iron centerboard filled with lead, in place of her old wooden board. Both she and Fancy are in good form and both are well handled.

The new fin-keel Handsel is the mysterious 30-footer announced a couple of months since and known to be for Mr. James R. Hooper, one of the owners of the fast Cape cat Harbinger. She was launched on May 25, and reached Marblehead after a voyage from Bristol on Sunday afternoon, her sails and gear of course being new, while there had been little time for trial and working up. She is rigged as a pole-masted cutter, but has no topsail, her sail plan including but three lower sails and a spinaker. She was sailed by Mr. N. G. Herreshoff and her owner.

The start was from one gun at 10:45, Hawk crossing but 15s. after. Handsel was not headed for the line, but she twisted quickly about and was off within 20s., while Fancy was 58s. after the gun. The two old boats carried large clubtopsails, but Handsel of course was under but the three lower sails. They reached out with booms to port until clear of the point, then hauled up for the beat to the Graves. There was some sea, and all three felt it as they held along on star board tack, but the fin-keel did not mind it, and at once began to climb out to windward. In a very short time she had weathered and passed Hawk and had the lead. Fancy was also beating Hawk, and crossed her bows soon after Hawk tacked in shore at about 11 o'clock. Fancy tacked on Hawk's weather, and then Handsel followed to windward of both. After about ten minutes Fancy tacked offshore, Handsel tacking with her, while Hawk continued on starboard tack.

At the end of the first hour Handsel was a long way ahead, while Fancy had decidedly the better of Hawk, though the two were not far apart. The old boats were already beaten, but the race between Fancy and Hawk was in itself quite interesting; however, at 12:30 it was brought to a sudden conclusion by the parting of Hawk's bobstay shackle, compeling her to withdraw. At 12:43:45 Handsel tacked around the Graves buoy, jibed over, and set spinaker to starboard. Fancy rounded at 12:59:30, setting her spinaker to port and being obliged to shift it later. Handsel's gain in the eight mile beat was 15m. 45s.

The run home was made without special incident, the positions being unchanged, Fancy just holding the fin-keel off the wind. When Handsel entered the harbor she was obliged to make a short tack for the line, but Fancy managed to finish without the tack. The full times were:

	Sailing Length.	Elapsed.	Corrected.
Handsel, J. R. Hooper	32.22	3 22 58	3 16 30
Fancy, C. F. Lyman	30.67	3 38 08	3 38 08
Hawk, Gordon Dexter	30.85	disabled,	withdrew.

Handsel beats Fancy 15m. 10s. even time, in addition to 6m. 28s. allowance. From the above figures Handsel's sail area is about 1200 sq. ft., while the other two must carry about 1900sq. ft. The race was in the hands of Messrs. W. S. Eaton, Jr., P. T. Jackson and H. H. Buck of the E. Y. C. regatta committee.

DATES OF FIXTURES.

THE following letter from the Seawanhaka C. Y. C. to the New Rochelle Y. C. concerning the choice of the same day explains itself: *Secretary New Rochelle Y. C., New Rochelle, N. Y.*:

DEAR SIR—As it is always to be regretted when clubs sailing the same waters choose coincident dates for fixtures, we desire that you should know the circumstances leading to our choice of July 2 for the Seawanhaka annual.

In transferring our race to Long Island Sound we chose July 2 after especially considering at a meeting held Feb. 9 the prerogatives of neighboring clubs, that we might not interfere with the dates on which their races have heretofore been held, they having followed the Larchmont annual of July 4. In addition to this July 2 was a fixture date with us last year.

It was not until some time subsequent to our meeting that we learned you had departed from your custom of appointing a date following Larchmont, and had chosen July 2.

In the desire to recognize that courtesy which should exist between yacht clubs in the matter of fixtures, we have thoroughly canvassed the possibility of adopting some other day, and having found this impracticable it became necessary for us to adhere to the date first determined.

We make this explanation to indicate that our date was chosen without knowledge of yours; in fact with special reference to avoiding the customs of your club and others, and to express our regret that circumstances have rendered it impossible to make other arrangements. Very respectfully, WALTER C. KERR,

MAY 31. Chairman Race Committee S. C. Y. C.

GRAMPUS.

THE model fishing schooner Grampus, designed by Capt. J. W. Collins, whose lines were published in the FOREST AND STREAM of Jan. 13-20, 1887, has lately received an entire new rig, the new sail plan having been prepared by Mr. W. E. Waterhouse, under the direction of Captain Collins. With new Oregon pine spars, new steel wire rigging and new canvas, the topsides painted white, with a gold stripe, the Grampus looks as handsome as a yacht, and trials recently made with crack fishermen show that she has improved in speed as well as in appearance.

Shark, centerboard cutter, designed by Mr. Burgess and built by Lawley in 1889 for Mr. C. A. Prince, and recently owned in Providence, has been bought by Mr. H. J. Barbey, of New York, who will sail her on Lake Geneva, Switzerland. Her keel was removed at Wintringham's last week and on June 4 she was shipped on the steamer Alesia for Marsailles, France, where she will sail for a time.

VEDETTE, A FIFE CENTERBOARD YACHT.

At about noon yesterday, the second of the pair of "Fife" flyers that have been built during the winter under cover of the big shed at the foot of Lorne street was slid into the water. The launch of Vedette was accomplished without a slip or hitch of any kind, and as well without any of the tantalizing delay attendant on the baptism of her larger sister, Zelma. As she came to rest after the plunge down the ways, Vedette presented such a picture of grace and beauty of form, in combination with so striking an impression of great power, as must have inspired the veriest landsman with the idea that here was a type of what a yacht should be, and that must have brought to her owners the liveliest feelings of pride and satisfaction in the possession of so lovely a craft.

Out of water and afloat, Vedette conveys to the eye and to the mind two very different impressions. As she stood on the ways, her peculiar contour and extreme unsupported overhang aft could hardly fail to convey to anyone a sense of incompleteness and lack of symmetry of proportion. But once afloat this impression vanishes. The abnormally long counter, which before looked ungainly and strongly suggestive of drag, is now seen to be an integral element of the design, and as much a part of the boat proper as the keel itself.

Vedette, even more than Zelma, is an exemplification of the modern tendency toward the removal of every inch of unnecessary underwater surface and every pound of superfluous weight below the waterline. Her forebody is cut away to the utmost point of practicability, while aft the greater part of her submerged section is but little more than a fin. Her most noticeable peculiarity, however, is in the entire cutting away of the usual deadwood at the stern, the stern-post being concave, and the rudder, a steel blade attached to the boat only at the extreme ends, and terminating at the top in a round steel bar working through a pipe to the deck.

The keel is a solid casting of lead weighing five tons, and is finished with great nicety. A small steel centerboard, weighing 1,000lbs., works through the keel, and will undoubtedly be of great service in working to windward. When housed it will not reach above the floor of the cabin, and so will not be at all in the way.

Raising the eye from the lower or under-water portion of Vedette's hull, one sees at a glance how completely Fife, along with other modern designers, has abandoned the old hollow line idea. The upper body of this boat is not merely full, the lines are all actually convex, even the sheer of the stern is a convexity, very slight, it is true, and scarcely noticeable, if taken in only a small area, but considerable if looked at as a whole. Buoyancy and lifting power is evidently the point aimed at in every inch of the upper structure. It is undoubtedly this feature that gives Vedette, along with Yama, Zelma, Minerva and all of Fife's latest productions so striking an appearance of great power and ability to carry canvas.

That this is not a mere appearance has been made manifest by the performances of Minerva and Yama, and will without doubt be still more strongly exemplified when Zelma and Vedette have been put to the test. In construction Vedette is a type of strength combined with lightness. Her frames are spaced 20in. center to center, steamed frames between steel angle irons, tying the whole securely together. The keel, stern, sternpost and sawn frames were got out and set up by Fife himself, then taken apart and shipped here ready to be put together again. Her decks are flush, with the least possible obstruction in the way of hatches, combings, etc., and hatches and sky-light will be removable for racing, being replaced by flat covers. Below the construction and fittings are of the lightest, as befits a craft designed primarily for racing. In cruising trim, however, Vedette will have ample accommodation and berths for a crew of half a dozen men, besides having two hammock cots forward for the foremast hands. Her rig will, to unaccustomed eyes, seem a very peculiar one, being what is known as a double head-sail lugger, the mainsail (loose footed) hoisting on a pole mast with a yard in place of a gaff, and being practically a mainsail and club topsail in one.

The design and effect of this rig is to do away with the sub-division of the canvas abaft the mast, giving greater driving power to the sails and lessening very greatly the labor of handling canvas. Forward, the stay foresail and jib will be of the usual cutter pattern, but no jib topsail will be used, there being no topmast or stay to set it on.

Vedette's canvas is from Ratseys & Lapthorne, and all her rigging, metal fittings, blocks and gear have been imported from England and, it is needless to say, are perfect in every detail. Throughout Vedette is constructed of the best material procurable, and having been built under the superintendence of "Hank" Staunton, whose name has now become almost a synonym for good workmanship and thorough finish, she may be counted on to rate A1 in the matter of construction. Vedette is owned by Messrs. Frank M. Gray and J. Carl Reed, formerly owner of Wona. Her racing skipper will be Mr. Æmilius Jarvis, which amounts to the saying that all the speed she has in her will be got out of her. It can hardly be doubted that the close of the racing season will see Vedette in proud possession of the honors in her class, and the *Empire* extends heartiest wishes to her owners that she may long retain the supremacy that their enterprise in placing so splendid a craft on the waters of Lake Ontario entitles them to.

Below will be found a table giving Vedette's principal dimensions:

Length over all	44ft. 7½in.
Length l. w. l.	30ft. 10½in.
Extreme beam	9ft. 6in.
Beam at l. w. l.	8ft. 10in.
Draught without board	6ft. 1in.
Draught with board down	8ft. 10in.
Mast, deck to truck	34ft. 3in.
Hoist of mainsail	26ft. 0in.
Length of yard	30ft. 0in.
Length of boom	35ft. 4in.
Length of bowsprit, out board	8ft. 9in.
Luff of mainsail	14ft. 0in.
Leach of mainsail	46ft. 6in.

—*Toronto Empire, May* 24.

ELECTRIC LAUNCHES.

A successful trial run was made on the Passaic River at Newark N. J., yesterday afternoon by the electric launch Electra, the guests being representatives of the electrical press of this city.

The Electra was built by the Electric Launch and Navigation Company of this city, one of the bidders for the concession for passenger transportation upon the inclosed waters at the World's Columbian Exposition at Chicago. According to the arrangement suggested by the exposition authorities, it is intended as a sample boat of the fleet which the company will build if the bid is accepted. The launch is to be shipped to Chicago at once, and will be at the service of the exposition committee having the bids in charge during the month of June.

The Electra is a handsome launch built of Spanish cedar, in natural finish, on an oak frame. She was designed by William Gardner and C. D. Mosher, the latter famous from his association with the fleet launch Norwood, and in model the Electra somewhat resembles this noted craft. She is intended to seat twenty-five to thirty persons and her lines are for the realization of the best speed with a full load.

The launch was built at Bay Ridge, was launched May 14, and finished and fitted with batteries, motor, and screw at Harrison, N. J. Her length over all is 34ft.; load water line, 31ft. 6in.; beam, 6ft. and maximum draught, 26in. The motive power is seventy-eight cells of storage battery of the Consolidated Electric Storage Company's type 17-s, and a four-horse-power electric motor of special and compact design, which is capable of developing twelve-horse power if forced.

Frederick Reckenzaun, the electrician of the company, is a brother of Anthony Reckenzaun, who has been prominent in developing the electric launch service on the Thames and in other parts of the United Kingdom, and he has for two years maintained for his private use the electric launch Magnet upon the waters about New York City.

The interior of the Electra is unobstructed by engine or motor. The batteries are ranged along the sides of the hull under the seats and concealed by mahogany panels. A jelly electrolyte is used in the batteries, so that there is no danger from spilling.

The motor is under a platform amidships, one step above the floor of the boat. The platform is utilized as a gangway, passengers boarding the launch at the center, where the gaily-striped awning is arched to allow of entrance without stooping. Forward the controlling switch and the steering wheel are placed, the power being directly under the control of the helmsman.

The batteries are connected in parallel; both slow and normal speeds are provided for, and the propeller is reversed by reversing the direction of the current through the armature. The current used has a potential of seventy-five volts and thirty amperes are used at normal speed. The propeller shaft is of Tobin bronze and the two-bladed propeller is 18in. in diameter and 12in. pitch.

The launch was maneuvered on the river at about the speed of the ordinary steam launch. It is wonderfully quick in turning owing to its rocker keel, which permits a tactical diameter of about one and a half times its own length.

Fully-charged batteries will provide power for ten hours' ordinary running.

If the company's bid is accepted, fifty or more launches like the Electra will be built. Gen C. H. Barney, General Manager of the company, and Mr. Frederick Reckenzaun explained the equipment of the boat to the interested electricians.—*New York Times, June* 4.

INDIAN HARBOR Y. C.

THE special sweepstakes race of the Indian Harbor Y. C. off Greenwich, Conn., on June 25, promises to bring out a fine list of starters including the leading cracks of the open boat fleet. The conditions are as follows:

Classes: Open jib and mainsail boats, over 25ft. racing length. Open jib and mainsail boats, over 22ft. and not over 25ft. racing length. Open jib and mainsail boats, 22ft. and under racing length. Open catboats, over 22ft. and not over 25ft. racing length. Open catboats, over 20ft. and not over 22ft. racing length. Open catboats, 20ft. and under racing length. Cabin catboats.

The stakes will be twenty-five ($25) dollars per boat. This amount may be increased at the option of the owners of competing boat in any class. The total amount of the sweepstakes in each class will be paid to the owner of the winning boat, except in the event of four or more boats starting in any class, when the second boat will save the amount of its stake.

The racing length of open boats is the L. W. L. length, plus ½ the overhang. The Racing Length of cabin cat boats is load waterline plus square root of sail area, divided by two.

The course for all classes will be five nautical miles to windward or leeward and return, from the black buoy off the eastern end of Little Captain's Island.

Shifting and throwing out of ballast will be allowed only in the open classes. The crews for open boats will be limited to one man for every three feet of racing length or fraction thereof, not including the helmsman. There will be no restriction as to crews in the cabin class.

A deposit of $10 as a forfeit must accompany each entry. Entries must be made to the Chairman of the Regatta Committee on or before Monday, June 20th. The balance of the stake must be paid by 10 o'clock on the morning of the race, or the deposit will be forfeited and the entry considered void

The course must be sailed in six hours by at least one of the competing boats or the race will be declared off.

The race will be governed by the rules of the Indian Harbor Y. C. Sailing directions and numbers may be had at the club house on the morning of the race. A special prize will be awarded by the club to the boat making the best corrected time over the course. The regatta committee steamer will leave the club house, Finch Island, at 10:30 A. M., on the day of the race. A limited number of tickets will be issued, and may be obtained from the chairman of the regatta committee. Regatta Committee: F. S. Doremus, chairman, 20 Nassau street, N. Y., E. D. Cowman and D. M. Winné.

YACHT NEWS NOTES.

At Wintringham's yard the sloop Ariadne, built by John Mumm in 1885, has been out for a new and longer stern....Vindex, cutter, was hauled out for scraping and painting last week....Ola, the Gardner catboat, built last year for Mr. H. C. Rouse, is being converted to a sloop, and will be used at Oyster Bay....There is now under the shed ready for launching a new cruising catboat designed by Mr. Charles Olmstead, for Mr. John D. Cutter, for use about Greenport, L. I. She is a compromise model, deep and of good displacement, with lead keel of two tons, through which the centerboard works. Her dimensions are: Over all, 31ft. 6in.; l.w.l., 24ft.; beam, 10ft.; draft, without board, 4ft. The stem rounds outward above water, projecting about 18in., and the after overhang is well formed. The yacht has a very large cockpit and quite a cabin, the centerboard trunk coming only to the top of the lockers, save a narrow extension at the after end.....The 21ft. cruising compromise Waunita, for Mr. F. A. Perret, was launched on June 1 and will soon be completed. She has the modern Gloriana ends. Her centerboard is of steel plate, weighing 200lbs., and is fitted with a spring counterbalance....At Wood's yard, City Island, a new fin keel is now building from a design by Gardner, for H. DeForest Weeks, of Oyster Bay....Wasp was out this week at Piepgrass's yard for painting prior to the regattas. Her bottom was in very good condition, the wood and seams being very smooth.

At noon on June 5 the sloop Dreadnaught, of New York, with her owner, J. R. Furlong, Henry Furlong, Edward Munson, Thomas Pugh, George Jones and the sailing master Charles Carson, was anchored off the Romer Shoal in the Lower Bay, when a violent squall parted both cables and drove the yacht on the shoal near the Beacon. She filled and sunk to the deck, her crew being taken off by the little fishing sloop Fishhawk, owned by Henry Duhrkoop of Staten Island, which was bound in from the Hook. The squall was too severe to permit of any attempt to save the yacht, and by night she had disappeared, though the pilot of an inward bound steamer reported a yacht's masthead with gilt truck ball visible above water off the Romer.

The classes in the 144th race of the Massachusetts Y. C. off Dorchester on June 15 are as follows: Special, jib and mainsail boats measuring 21ft. waterline and under, prizes $15 and $10. Sixth class, catboats measuring 18ft. and less than 21ft. waterline, prizes $10 and $5. No second prizes will be awarded in either class unless three or more boats start. The courses will be the usual 7½ mile ones around Farm Bar and old Harbor buoys and Half-tide rock. The start will be at 2 o'clock. The new fin-keels and splashers will be well represented in the special class.

The special catboat race of the Atlantic Y. C. for prizes offered by Messrs. David Banks, Jr. and L. B. Banks, will be sailed on June 18 over a triangular course off the club house at Bay Ridge. The race will be open to catboats of the Seawanhaka Cor., Larchmont, New Haven, New Rochelle, Cedar Point, Riverside and Marine and Field clubs. The prize for cabin cats will be a gold watch and for open cats a set of silk colors. All entries must be in writing and filed with Mr. G. Benedict Frisbie, No. 115 Nassau street, before 3 P. M., Friday, June 17.

The New York Y. C. Book for 1892 is now in the hands of the members, a neat and compact volume that grows in size each year. The membership of the club is now 853, including 31 honorary, 48 life and 774 active members. The oldest member, No. 1 on the roll, was Mr. Louis M. Rutherford, elected May 30, 1846, who died last week. The club fleet includes 79 schooners, 89 singlestickers, 111 steam yachts and 9 steam launches.

The Smith schooner Lasca, Mr. J. E. Brooks, will be launched on Saturday at City Island. The interior fittings and decoration are most elaborate, and a large force of carvers is at work in Piepgrass's joiner shop on the red and white mahogany of the cabin furniture and joiner work. From the style of finish it is apparent that the yacht is intended rather for comfortable, or more properly luxurious cruising than for racing in the 90ft. class.

The new club house of the Canarsie Y. C., at Sand's Point, Jamaica Bay, was opened on June 4 with a review and squadron sail. The building cost $6,000 and is very conveniently arranged. The officers of the club are: Com., Israel F. Fischer; Vice-Com., C. B. Fitzmorris; Treas., A. H. Ackermann; Sec'y, C. E. L. Hinrinchs; Fin. Sec'y, Walter Smith; Meas. H. T. Rigby. The membership is nearly 100.

Mr. H. M. Faxon, of the Quincy Y. C., owner of Marvel and Rocket, will soon have afloat a new cat to race with Com. Shaw's fast Hersheoff Mab. Midget, as she will be called, will be 19ft. over all, 15ft. 6in. l.w.l., and 7ft. 8in. beam. Her overhang forward is 6in. and aft 3ft. Ambrose Lelois, of Quincy, is building the yacht, and her weight of construction will be kept as low as possible.

The Indian Harbor Y. C. has completed all arrangements for the establishment of a club station at Finch's Island, Greenwich, Conn., and the new club house will be opened on June 25, a sweepstakes regatta being sailed. The annual regatta will be held on July 30. Seventeen members have just been elected.

Florida, sloop, the curious failure that was built in New Haven in 1886, was sold last week at auction, being purchased for $2,500 by Admiral A. J. Prime, of the New York Y. R. A. Florida is the only second class sloop in the New York Y. C., being 72ft. l.w.l.

Com. Soley has appointed Mr. Legh Osborn Garrett as fleet captain and Dr. John A. Tanner as fleet surgeon of the Massachusetts Y. C. The summer quarters at Rowe's wharf, Boston, opened on Monday, the winter quarters having closed on May 31.

Rear Commodore Chas. A. Longfellow, cutter Alga, of the Eastern Y. C., has resigned his office in consequence of severe illness, and Mr. Chas. F. Adams, 2d, one of the new owners of Harpoon, has been elected to fill the vacancy.

Minerva, cutter, W. P. Ward, has finished her fitting out at Beverly under the care of Capt. John Barr, and sailed on June 1 for Newport. She was obliged to return to repair a leak about the rudder post, but started again next day.

The programme of the Dorchester Y. C., of Dorchester, Mass., includes three championship races, on June 18, July 16 and Aug. 15. July 30 will be Ladies' Day, and on Aug. 27 an open regatta for prize cups will be sailed.

Wenonah, the fin-keel 2½-rater built by the Herreshoffs for Mr. J. Allan of Glasgow, sailed her first race as one of a fleet of eight on June 4. After a late start she led the fleet at one time, finally finishing second.

Katrina, 70-footer, owned by the late Mr. E. S. Auchincloss and his brother, was sold last week to George Work, owner of Mischief, another Cary Smith yacht formerly owned by Messrs. Auchincloss.

Mignon, 30-footer, designed by her owner, Horatio Bobson, of Gloucester, one of the 30ft. class in the East, has just been sold to a New York yachtsman.

Freak, Mr. John B. Paine's fin keel, weighs 1,500lbs. on the scales, that is, the empty hull, without fin or rudder. She is now at Lawley's for her fin-keel.

Sachem, schr., after being laid up for two seasons, is now fitting out, and may be used by Mrs. Arnold, wife of the late owner, Wm. L. Arnold.

Viking, steam yacht, R. H. White, of Boston, has been sold to W. H. Starbuck, former owner of Tillie No. 1 and Tillie No. 2 (Polynia).

On May 30 the Fox Lake (Wis.) Y. C. sailed a regatta, the winner being the Eugenie. Another will be sailed on June 18.

Catspaw, the new splasher designed by Stewart & Binney, was launched at Lawley's on June 3.

Asp, fin keel, the new Hunt boat, is at Lawley's for new spars, her original rig proving too small.

Neaira, steam yacht, has been sold by Frederick Lovejoy to S. S. Austin, of Philadelphia.

The date of the Corinthian Navy regatta has been changed from June 11 to June 18.

Fleetwing, schooner, has been sold to J. R. De Lamar.

Rifle Range and Gallery.

THE REVOLVER CHAMPIONSHIP.

Dr. Louis Bell, of New York, Champion, with a Score of 17.52 In. in 18 Shots.

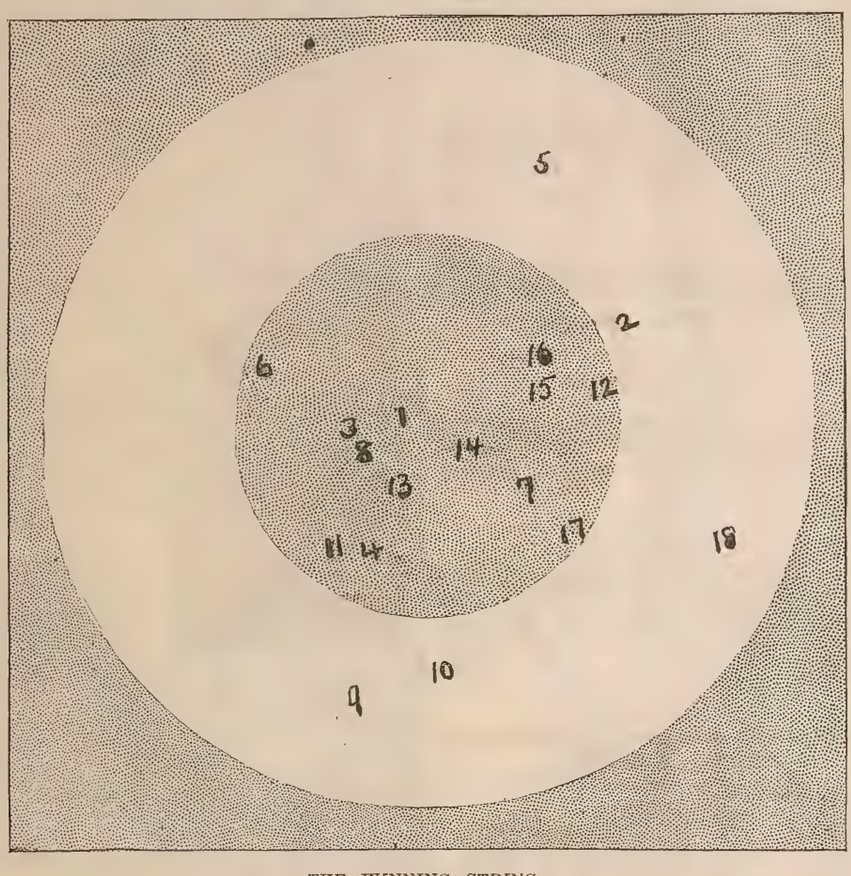
THE record of the opening contest for the Winans Trophy, emblematic of the Amateur Championship of America in Revolver Shooting, is presented in part below. The scores made by all who completed their records in the match are given in detail, and by these scores it appears that Dr. Louis Bell, who shot in the St. Marks place gallery as a member of the New York Pistol Club, is the winner of the match and the first holder of the trophy on a total score of 17.52in. on his three counting scores of six shots each. Dr. Bell is a typical amateur. An electrical engineer by profession, he came from Baltimore to New York to assume the editorship of the *Electrical World*, and this position he has held for several years. In Baltimore he found pleasure and relaxation as an off-hand rifle shot, and was a member of the Maryland Rifle Club, and also shot frequently with the Johns Hopkins University men. In New York he did not find it so convenient to keep up his rifle practice, so his favorite Maynard remained dismounted and in its stead the Doctor purchased a Smith & Wesson revolver, and has found in its use a source of much pleasure. Each Saturday evening at the gathering of the New York Pistol Club he was present, and in the quiet, easy way in which these shooters carried on their contests found pleasant company and a change from the professional duties of the week. When the time came for making a score at the Winans Trophy disks, his practice stood him in good stead, though he with others found it no easy task to carry through the strain of firing 30 closely placed shots with the chance that one stray one might spoil an otherwise good string.

DR. LOUIS BELL.

Second place in the tourney falls to a Western man, with another New Yorker as a third place man, and Boston closing up the quartette of prize winners. It will be seen that but eight contestants managed to put up three counting strings. This does not mean that the shots not recorded were wild; in fact, they were all accounted for very close to the 5-inch disk, but they were off the disk, and, therefore, not measurable by the device used for spotting the distance from the center of the shot hole to the center of the circular disk. Throughout the entire table of records where a shot is not accounted for it simply means that it was off the disk. Taken on an ordinary target the scores from end to end would have figured up well; but the Winans Trophy demanded a target out of the ordinary, and where a shooter cannot bunch his shots on a 5-inch disk he is manifestly out of condition or not of the championship class.

To those who shoot the revolver and know what can be done with it the records as a whole will prove disappointing. There is more in the arm than those records show, and not a man on the list but has shown better scoring at various times and frequently than appears to his credit in the match records. On this point Walter Winans, the donor of the prize, said at the time of offering it that "a string of 14in. for the 18 shots and 3in. for 6 shots would be about the winning score of the revolver championship I would like. I have been measuring over targets made by myself, and I find that in the autumn of 1889 [targets published in FOREST AND STREAM of Nov. 14, 1889] the three best 6-shot scores I made at the South London Rifle Club in competition at 20yds. (made with a Colt .45cal., 4½lb. trigger pull and English Government ammunition, shot in the open air, a combination not calculated to make accurate shooting, you will allow), I made strings of 4in., 4in. and 3¾in., making a total for the 18 shots of 11¾in. These measurements are roughly made. Now, if I could do this in the open air under all these disadvantages of heavy factory ammunition and heavy trigger pull, etc., your competitors ought to greatly improve on it, say 9in. for the 18 shots and 2in. for the best 6-shot string."

Last month again alluding to the question of string measurement Mr. Winans says: "In all the competitions shot for in this country up to now we are restricted to the English 4lb. trigger pull and army ammunition. Using that my three best string measurements for 20yds. at six shots are 3½, 3½, 3, total 10in. for three selected six-shot scores, shot outdoors. I suppose this has been beaten by several of the contestants for the trophy with gallery ammunition and lighter trigger pull."



Champion Bell himself before his score was announced said that he thought a 14in. string would be a winning one, and while glad to be the winner says he expects to have closer work than the 17½in. to do before he becomes the final holder of the trophy.

The stories of the several shoots held for the making of trophy scores have been told in FOREST AND STREAM from start to finish; every shoot has been held under the formal supervision of a representative direct from FOREST AND STREAM. Boston, Philadelphia, Chicago, Cincinnati and St. Louis have all been visited and covered in this way. The plan from the start has been to extend the utmost facilities to whoever wished to try for a record in the

match. The conditions could not have been drawn with a more liberal hand, and those who pooh-poohed the distance and the number of shots as being too small may make a trial of firing thirty consecutive shots with the close holding necessary for any sort of a standing in such a match to be convinced that the match is not a child's play affair by any means.

The record as we present it is made up of notes taken at the time of the shoot as to weight, style, etc., of arm. Two cartridges of each shooter were taken from his cartridge box, and in the FOREST AND STREAM laboratory the charges were drawn and weights taken of powder and ball. The shots were fired one shot at a disk and these were sent without any name, but with a simple indicative numeral, to the Zettler Bros. for measurement. The exact machine which for so long has decided to the hundredth of an inch the scores of countless bullseye matches at the Schutzenfest hereabouts made its record on each disk. This part of the work was done with the utmost exactitude, and from such hand it goes on record without doubt or question.

It is an interesting study to go over the story of the arms used and the loads put in them. There was a general desire to get that exactness of holding which comes with the avoidance of the heavy regulation charge. It was a test for accuracy of men and

THE WINNING STRING.

Showing Dr. Bell's shots as they would have appeared if one target had been used. Exact size.

weapons, not of the extreme endurance of either one or the other. The 6½in. barrel generally used by the shooters is capable of very fine work at 50yds., but where the use of this small arm is likely to be called for at 50yds. it is in the hands of professional soldiers, and their attainments as shooters the present match did not attempt to deal with.

With the determination of the first holder of the trophy comes the really interesting period of its existence. Its ownership will now mean a set of man to man encounters, and the record ought to be lowered until the very extreme in this style of marksmanship has been reached. Perhaps before the trophy shall rest secure in the permanent custody of some proud shooter the 9-inch expectation for the 18 shots will have been reached.

Just what the conditions say about challenges now in order may be seen in this extract:

Any winner of the trophy shall hold it subject to challenge for a term of two years, after which it shall become his personal property. Upon receiving a challenge the holder shall agree with the challenger upon a place and date for their meeting not later than six weeks from the receipt of the challenge, of which meeting at least two weeks' notice shall be given through FOREST AND STREAM, and the shooting at said meeting shall be under the same conditions as the original competitions for the championship trophy. In case of a failure to agree upon a time and place of meeting they shall be fixed by FOREST AND STREAM.

The trophy shall be deposited in the custody of FOREST AND STREAM at least one day prior to any challenge meet, and if required, holders must give bonds to FOREST AND STREAM for its safe return.

The holder shall not be required to accept a challenge pending the determining of a challenge shoot already under date. In case of any dispute about the right of priority in shooting challenges, FOREST AND STREAM shall decide the order.

Dr. Louis Bell, New York.—Smith & Wesson revolver, .44cal., 6½in. barrel, 2lbs. 7oz., 2½in. bullseye. Load—118 grain round bullet, 6 grains hard packed fine powder, slightly lubricated; shell "U. M. C. .44 S. & W. R."; weight, two loaded cartridges, 193 and 195 grains.

St. Louis Sharpshooters.

ST. LOUIS, May 29.—The second tournament given by the St. Louis Club was held at Creve Cœur Lake to-day. The weather was perfect and the crowd was a large one. Several local clubs were well represented at the shoot, namely, the South St. Louis Turners, the South St. Louis and the Bellville (Ill.) Sharpshooters. The South St. Louis Club did not hold their shoot two weeks ago on account of dampness. The water was 11ft. deep on their range. The Bellville (Ill.) Club will hold their opening shoot July 3.

NAMROD.

Heidenreich Rifle Club.

NEW YORK, May 31.—The scores shot by the members of the Heidenreich Rifle Club this week at our range, 425 West Fifty-third street, distance 100ft., open air, are as follows:

Aigeldinger	243	Napier	217
Horn	235	Kaufman	217
Hicks	232	Müller	214
Winter	227		

Eberhardt	207
Glao	209
Goodman	212

John Aigeldinger has made the highest score that has ever been made by anyone on our 100ft. range, and at our 75ft. range made a score of 247 points on the same day.

June 6.—The following scores were made at our weekly shoot, 100ft., open air: Aigeldinger 239, Horn 237, Hicks 237, Hippold 234, Busch 224, Goodman 219, Kaufman 211, Reinhold 210.—SEC.

New Jersey Rifle Shooting.

[*Specially Reported for Forest and Stream.*]

THE Miller Rifle Club, of Hoboken, Captain Richard W. Dewey, held its sixth annual spring shoot and festival at the Union Hill Schuetzen Park, Decoration Day. The affair drew an unusual lot of shooters, more attending this affair than any previous one. What acted as a damper, however, was the poor light, which fairly made shooting an agony. Among the prominent shots present were H. J. Mehard, Wm. Wurfflein, E. Gardiner, E. Kolb, J. J. Mountjoy, of the Wurfflein Club, of Philadelphia; William Hayes, G. D. Wiegman and F. C. Watts, of Newark; "Barney" Walther, L. Flach, Fred C. Ross and M. Dorrler, of the Zettler Club; W. Hutch, of the Harlem Rifle Club; Albig, of the Albig Club, N. Y.; L. P. Hansen and J. Speicher, of the Excelsior Club, Jersey City; John Rebhan. Chas. E. Bird, Henry L. Hansen and A. Malz, of the Hudson Rifle Club, Jersey City, and Wm. Dilger and others of the Hoboken Rifle Club. On the ring target "Billy" Hayes, of Newark, led with 73 and 70 until ten minutes before the close of the shoot, when he was passed by Michael Dorrler, who already had 73, by making 71. The former then started in, but although he did some tall shooting he could not pass the Greenville man. Hayes's last ticket was a 70. As it was Dorrler took the first prize, $50, with a total of 144; W. Hayes, second, $40, with a total of 143; Ross and Hutch tied for third and fourth prizes, with 69 and 70, total 139; they received $25 each. Barney Walther took fifth prize, $15, with scores of 69 and 69, total 138; H. J. Mehard and F. C., alias "Obadiah," Watts, tied for sixth and seventh prizes with scores of 66 and 70, total 136; each received $9. Wm. Forkel and Geo. Schlicht, Miller Rifle Club, tied for eighth and ninth prizes with scores of 67 and 67, total 134; each received $6.50. L. Vogel and L. Flach tied for tenth and eleventh prizes with scores of 66 and 66, total 132, $4; J. J. Mountjoy took twelfth prize with scores of 64 and 68, total 132, $4. Chas. Judson took thirteenth prize, with scores of 64 and 67, total 131, $3; fourteenth prize, $3, was secured by Dave Miller, with scores of 61 and 67, total 128; J. Speicher, Excelsior Rifle Club, took fifteenth prize, $2, with scores of 61 and 65, total 126; the sixteenth and last prize was secured by Ernest Fisher, with scores of 58 and 65, total 123, $2.

On the bullseye target the winners were: 1st prize $25, L. P. Hansen, whose bullseye measured .58; 2d prize $20, Charles E. Bird, .39; 3d prize $15, John Meyer, Miller R. C., .41; 4th prize $10 and 5th prize $8 were divided by W. Hayes and F. Ross, .43; 6th prize $7, George D. Wiegman, .44; 7th prize to Peters, .47; 8th prize $5, B. Walther, .47½; 9th prize $4, H. D. Henken, .49; 10th prize $3, L. Schmidt, .50; 11th prize $3, F. C. Watts, .51; 12th prize $2, E. Fischer, .52½. Barney Walther took the first premium for the most bullseyes, $10 with 31, F. Ross the second $7 with 27 and Wm. Hayes the third $3 with 25. The prizes of $1 offered to the shooter making the first and last flag well captured by "Barney." In the games, the mile run was won by G. Darke, the mile walk by H. Williams, the sack race by Max Hoth and the ladies' spoon race by Miss G. Franklin. All received gold medals. The interest of the members centered in the race between Captain Dick Dewey and H. Fred Meyer, for the first and second medals offered to the members selling the most tickets. Captain Dewey secured first, he having disposed of 325 and Fred Meyer the second, he having sold 220. An unfortunate accident at the dancing platform proved a rather serious loss to the club. A handsome silk banner was placed at the platform and coming in contact with a gas jet was in less time than it takes to write it in flames. The American flag in close proximity was barely saved. The ladies' prize shoot brought forth many shooters of the gentle sex. Mrs. John Vogel took first prize, a handsome gold medal with a score of 73. On the judges' target the medal was captured by H. Wendler who scored 59 points. The shooting committee was composed of Chairman D. Miller, L. Vogel, Louis Flach, Charles Judson, J. H. Kruse, Frederick Brandt and August Meyns. Dancing was the feature during the evening, but on account of the many couples present, it was very uncomfortable. An unusually large display of fireworks was given at 9 o'clock under the careful management of August Meyns.

Hail to the champions! The Miller Rifle Club of Hoboken have won the trophy offered by FOREST AND STREAM, for competition among the New Jersey Rifle clubs. A photo of the victorious team, with their shooting records will be given in a short time. The club had a hard fight, but were victorious after all.

Freischutz Company No. 53, Germania Schuetzen Bund, Washington Rifles, New Jersey, Captain Joseph Schauer, held their first annual prize shoot and bowling tournament at headquarters, Third and Adams streets, Hoboken, Sunday, May 29. Quite a number of expert shots and handlers of the wooden sphere were in attendance. The shooting, however, created the most interest among those present. Dave Miller, of the Miller Rifle Club, took first prize with scores of 75 and 74, total 149. F. L. Brandt, of the same club, and Hutch, of the Harlem Rifle Club, divided second and third, with scores of 74 and 73, total 147 each. Lambert Schmidt, Freischutz Company, took fourth with 73 and 72, total 145. William Weber, Excelsior Rifle Club, Jersey City, took fifth with scores of 73 and 71, total 144. L. Blume secured sixth prize with 71 and 71, total 142. C. E. Bird, Hudson Rifle Club, took seventh and last prize with scores of 69 and 69, total 138. An unusually efficient committee had charge of the shooting, consisting of F. Mahle, Captain Schauer, G. Erne, Wm. Schauer, H. Birkenhagen and Joseph Schauer, Jr. Shooting for medals was also a feature, every shooter making 30 points being entitled to one. Thirty were presented. L. Schmidt secured 3, F. Blume 3. Others were taken by H. Stiehl, J. Schauer, F. Brandt, L. Setters 3, O. Schmidt 2, L. Mahle 2, C. E. Bird, H. P. Thomas, L. Sagen, H. Birkenhagen, F. Schadel 3, S. Wahlers, N. Salch 2, C. Schirmer 2, D. Schirmer 2, C. Schmidt 2, F. Wahlers, H. L. Thomas and C. Clark 2. Lambert Schmidt secured a handsome gold medal for being the holder of the ten best tickets. For the bowling Herman Wisch secured first prize, Hutch and Bergh divide second and third, J. Schauer fourth, J. Yeck fifth and J. Strahm sixth. E. Wangersheim secured the medal offered the holder of the best ten tickets. A reception followed in the evening. A feature was the presentation to the company of two handsome flags. Bund President Peter Trieber made the presentation speech, Captain Schauer receiving the flags and replying in a few well-chosen words. The affair was a success all the way through, and shows the work of a well-appointed committee of arrangements.

Palisade Rifle Club, Jersey City Heights, Captain John C. Reinhardt, Thursday, May 27.—The scores made to-night in the several classes are appended below. The conditions were 10 shots off-hand, 25-ring target, possible 250:

First Class.

C E Bird	239	H Boddey	234
G W Graf	235	T Reynolds	232
Capt Reinhardt	230	A Malz	230

Second Class.

H Rosenthal	220	A Rossy	212
Chas Burk	217	J Kerwait	210
H Fischer	202	G Russ	200

Henry E. Boddey appeared again at the weekly shoot, he returning two weeks ago from a trip to England. He still leads the first class men in the medal shoot.

Hansa Rifle Club, Hoboken, N. J., May 25.—Scores made to-night are appended below:

L Schmidt	236	F Thalacka	224
F Schmidt	233	S Schwatz	220
G Wangersheim	225	A Seimer	214
E Wangersheim	225		

F Wilhelms	211
C Thorak	205
C Wilhelms	205

The above club, elated over the success of their late shoot in a financial and social form, are arranging for another, and are confident that it will eclipse all former events. With hustlers like George and Edward Wangersheim at the helm it is bound to be a success.

The handicap shoot of the Greenville Rifle Club continues at headquarters, Metropolitan Hall, Jersey City. The scores made at the last shoot were:

	Points added.	Score.	Tl.		Points added.	Score.	Tl.
G W Plaisted	0	233	233	H Gotthardt	4	221	225
C Boag	1	238	239	H Spohn	5	225	230
C Scheelein	2	232	234	F Boag	6	225	231
Capt Robidoux	2	242	244	Jas Dodds	7	224	231
H Chavant	3	229	232	W C Collins	7	239	246
Geo Parkess	3	230	233	J Hill	12	225	237

The shoot is only to members of the club, who are heartily interested in a shoot of this kind. The winners will receive handsome prizes.

Hoboken Rifle Club, Hoboken, N. J., Captain John Yeck, headquarters Third and Adams streets, Friday, May 27. The scores made to-night are appended below. The conditions were 10 shots, off-hand, 25-ring target, possible 250:

J H Kruse	230	F W Kroeger	206
Wm Dilger	223	H Wirth	206
Capt Yeck	213	F Raediger	205
F Stein	204	W Kennedy	202
J Schauer	192		

The club holds its regular monthly meeting at headquarters tomorrow evening. The shooting and meeting night will probably be changed from Friday to Monday evening. Arrangements are being made for a prize shoot.

Lady Miller Rifle Club, Hoboken, N. J., Thursday, May 26. The scores made at their regular weekly shoot are appended below. The conditions were ten shots rest, 25-ring target, possible 250:

Mrs F Vogel.....243	Mrs A Cordts.....237	Mrs M Wendle...233
Mrs H Meyer.....240	Miss K Born 237	Mrs D Miller.....226
Mrs H Stadler....240	Miss K Rowe.... .236	Miss A Clausen...225
Mrs F Meyer.....239	Miss M Miller....234	Miss L Prien.....216
Mrs Katenkamp..239	Miss L Pinckney..233	

That the ladies are becoming expert can be seen by a glance at the above scores. It is in a measure largely due to the kindly tuition of genial "Dave" Miller.

Miller Rifle Club, Hoboken, N. J., Wednesday, June 1.—The scores made to-night in the respective classes are appended below. The conditions were 10 shots off-hand, 25-ring target, possible 250:

First Class.

D Miller.....245	G W Plaisted.....238	J M Bach.....236
F Liell.....240	J Meyer.....238	A Meyns.....235
J H Kruse.....238	H D Hencken....237	Capt Dewey.....233
L Vogel.....238	L Sohl.....237	

Second Class.

W Rogers. 235	C Prien... 234	F Drewes.....233
F Kloepping.....235	F Laudolt..... ...233	H Seltenreich....220
A Thurk.....235		

Third Class.

H F Meyer.....234	F Dunstead.....212	F Kammel.....206
H Vanderheyden.222		

The regular monthly meeting of the club followed, after which the prizes won by the members on the honor target were distributed. All secured a prize.

Excelsior Rifle Club, Jersey City, N. J., Tuesday, May 31. The scores made to-night in the several classes are appended below. The conditions were 10 shots, off-hand, 25-ring target, possible 250:

W J Hennessy....247	W J Channing....239	R J Duff 224
J Hughes 240	L P Hansen.....231	J Speicher 210
C Bauchle.... ...241	C L Pinney.....228	

The members are elated over the fine work of L. P. Hansen, who secured first prize on the bullseye target at the Miller Rifle Club's big tourney at the Union Hill Schuetzen Park last Decoration Day.

Chris Bauchle is showing up great lately, for an old fellow. His last score demonstrates that he is still in form. This he attributes to being the owner of a good shooting rifle, which is necessary. When the writer first took hold of rifle shooting the arm he had was a badly leaded Winchester repeating rifle, which would put the bullets in the target sidewise.

A 10-men team match has been arranged between the Hudson Rifle Club, of Jersey City, and the Wurffein Club, of Philadelphia. The first match will take place at the headquarters of the latter in a week or ten days. Previous to this, however, a match will take place, each club to shoot on its own range. The scores just so soon as made will be telegraphed to one another.

Hoboken Rifle Club, Hoboken, N. J., Friday, June 3. The scores made to-night are below. The conditions were 10 shots, off-hand, 25-ring target, possible 250:

J H Kruse 230	H Wirth.. 206	D Paasch..... 196
Capt J Yeck.....224	O Keller.....200	J Schauer. 196
W Dilger.....220	J Stein.....196	W Kennedy.....195
F W Kroeger.....220		

The club's meeting and shooting nights were changed from every Friday to every Monday. A committee is also arranging for a shoot.

Excelsior Rifle Club, Greenville Schuetzen Park, Jersey City, Friday, June 3.—Ten shots, off-hand, 25-ring target, possible 250, distance 200yds.:

L P Hansen.....219	L Speicher.....208	T Hughes.. 201

A match is being arranged between the Excelsior and Greenville Rifle Clubs, each team to consist of five men.

The Greenville Rifle Club continued its handicap tournament (open to members only) at headquarters, Metropolitan Hall ranges, Greenville, Friday evening June 3.—The scores made were:

	Actual.	Added.	Total.		Actual.	Added.	Total.
C Boag.....243	1		244	G Purkess....231	3		234
G Plaisted...238	scratch.		238	J Hill.....208	12		220
J Boag. 230	5		235	W C Collins..211	7		218

At its close, first, second and third prizes will be awarded.

The Union Athletic Club of Hoboken, ever on the lookout for amusements for its members, have completed arrangements for a shoot open to members only, commencing June 19 at the club house on Washington street. The holder of the highest score will receive a handsome and costly gold goblet, the second highest will be the recipient of a handsome silver watch and the third highest becomes the winner of a fine gold locket.

A match has been arranged between "Christy" Kennedy and D. Paasch of the Hoboken Rifle Club, each man to fire fifty shots. They are both beginners in shooting so it would be impossible to pick the winner. If the winner scores a thousand points, he is putting up his regular score.

William Dilger and J. H. Kruse, of the Hoboken Rifle Club, shot the first of a series of twenty 50 shots a man matches at the headquarters of the club, Third and Adams street, Hoboken, the 5th inst. The scores made were:

J H Kruse 233	238	287	235	236—1180	
Wm Dilger.....226	232	229	233	222—1142	

A hundred shot match was also decided between Jos. Schauer, Jr., "The Prairie Lily," and Henry Wirth. The latter won by these scores:

Schauer.....202	201	214	206	205	209	205	205	214	202—2040	
Wirth..... 202	203	205	209	209	206	212	206	212	210—2069	

Rifle Contests at the State Shoot.

THE Syracuse Rifle Club has arranged an excellent programme for its prize shoot, to be held in conjunction with the State shoot, and a big crowd of experts are expected. The events will be shot off on Tuesday, Wednesday and Thursday, on the 200yds. range adjoining the grounds of the Onondaga County Sporting Club. The programme is as follows:

Off-hand Ring Target.—German 25-ring target bullseye, 12in. rings, ¾in. apart, possible 75, 3 shots, entrance $1, re-entries, unlimited. 50 cents. Prizes, $40, $30, $25, $20, $15, $12, $10, $10, $8, $7; $6, $5, $5, $5, $4, $3, $2.50, $2, $1.50. Special premiums for first and last 25 each day of $1. The best three tickets to count for first three prizes. Best two thickets for all other prizes. All ties to be divided.

Rest Match.—Standard American rest target, 11in. bullseye, 5 shots, possible 60, entrance $1, re-entries $1. Prizes, 15, 10, 8, 6, 5, 5, 4, 3, 2, 2 per cent. of entrance. Prizes to be won same as in off-hand contest.

Cincinnati Rifle Scores.

THE following scores were made to-day by members of the Cincinnati Rifle Association, 200yds., off-hand, at the standard target:

Gindele.....82	79	77	Stegner 74	66	61	
Best.....73	70	69	Copeland.....78	81	73	
Louis.....76	75	73	Drube... 78	77	75	
Weinheimer.....82	77	85	Topf.....57	53	62	
Payne 77	76	74	Speth.....74	72	69	
Zelger.....62	72	67	Hasenzahl.....62	58	73	
Hauch.....55	54	61				

Garden City Rifle Team.

THE Garden City Rifle Team met for their weekly contest Tuesday evening, May 31, at Geo. McCune's shooting gallery, 146 South Halstead street, Chicago. Conditions were 25yds., 25 shots each, open sights, free off-hand position, Massachusetts paper target. Scores as follows:

C A Hankle.....270	A McBean.....262	R McBean 260
W J Gibbs.....265	Geo McCune.....261	Jas Hosie..... 258
H S Burley 263		

Empire Rifle Club.

NEW YORK, June 1.—The following scores were made by members of the Empire Rifle Club, May 24, distance 100ft., 25-ring target: B. Zahn 233, A. Rosenstraus 231, C. Zettler, Jr., 226, N. Miller 226, W. Meisenholder 224, H. Zettler 223, J Diehl 205, W. Rosenbaum ret. The following scores were shot on May 31: B. Zahn 241, C. Zettler 233, A. Rosenstraus 232, W. Meisenholder 227, H. Zettler 225, J. Diehl 202.

Rensselaerwyck.

ALBANY, N. Y., June 4.—The following scores were made at Rensselaerwyck Range to-day, shooting at 200yds. off-hand:

Major Chas H Gaus.....	8	9	10	8	7	8	6	8	8	6	9—79					
Wm C Gomph..... 10	9	8	10	10	8	10	8	6	6—85							
Chas P Frey..... 6	7	9	6	6	10	6	8	6	6—70							

Rest.

Major Chas H Gaus 11	11	10	11	9	12	12	12	10	11—109	
Chas P Frey..... 10	7	12	9	12	9	8	11	12	8—100	

Breech against Muzzle for $2,000.

Editor Forest and Stream:

Inasmuch as there has been considerable discussion from time to time, and diversity of opinion expressed upon the relative merits of breech and muzzleloading rifles, regarding accuracy alone, the Syracuse Rifle Club, of Syracuse, N. Y., has decided to offer an opportunity for a full and fair test of this oft-recurring question. Now, therefore, be it

Resolved, That the said Syracuse Rifle Club will give the free use of its range at Maple Bay for such purpose, and afford all the facilities needed on their grounds for carrying out the preliminaries incident to such a contest under the following conditions:

There shall be at least five contestants who will use muzzleloading rifles, and five others who will use breechloaders (loaded at the breech).

The entrance fee for each contestant shall be $200. To be paid in full to the treasurer of said club; who shall deposit it in the Merchants' National Bank, of Syracuse, subject to the order of the president and treasurer of said club, and the kind of rifle he will use, named before his application as a contestant will be accepted. When the full complement of five men on each side shall have been secured as above, the secretary of the club shall appoint the time for contest, and duly notify each contestant at least four weeks in advance of the time designated. The secretary may, from time to time, report in the sporting papers the number of entries secured and the number of each kind of rifles represented, but not the names of the contestants.

Should the match not be consummated before Sept. 1, 1892, each contestant shall be entitled to withdraw his entrance fee, which shall be returned to him in full.

The conditions of the contest shall be 100 shots in three days—20 shots first day, and 40 shots each on second and third day. Distance 200yds., string measure, center to center, to be shot in 10-shot strings, under time rules. All contestants to be ready at the start, and after time is called, each shall have five minutes in which to make his shot. At the expiration of five minutes firing to cease and time taken to paste the holes in each target, after which time will be called for another round.

Weight of rifles not to exceed 12lbs., exclusive of telescope sight. Sight, any. Rest, any. Flags, any which do not interfere with other contestants. The whole 100 shots by each contestant shall constitute his string.

The entire amount of entrance fees shall be divided into equal prizes, equaling in number one-half the number of contestants, and those contestants having the shortest aggregate strings of 100 shots shall be entitled to one of the prizes until all the prizes have been awarded.

Three persons may be selected by the contestants before entering into the contest, one of whom shall have charge at the firing point, one other at the butts to see that all conditions are complied with. These two will also measure the strings, and the third one will have the casting vote in all disputed points. The decision of the three shall be final as to all matters given them in charge.

A. A. STILLMAN, President.
F. A. M. BALL, Sec'y and Treas.

SYRACUSE, N. Y., June.

Beideman Rifle Club.

BEIDEMAN, N. J.—Weekly scores, open sight, 20yds., ¼in. 25-ring target, possible 250, strictly off-hand:

You can't afford to miss it.
Rich purses and great sport
At the New York State shoot.
Commences Monday and lasts
Until Saturday night.
Separate events for non-residents.
Extraordinary attractions each day.

* * *

The following are excerpts from a letter from C. F. Nelson, president of the Winchester (Va.) Gun Club: "The dates for our shoot have been fixed for June 21, 22 and 23, and the indications are that given good weather we will have a big shoot. * * * We will be glad to see you at our shoot and will do all in our power to make it pleasant for you. * * * We are centrally located for a shoot and expect to draw many amateurs from the small towns in Virginia, West Virginia, Pennsylvania and Maryland, to whom a big tournament will be a novelty. We have in our club a team of three—Henry McVicar, Geo. W. Haddox and J. P. Haddox—who will gladly accept a challenge from any team of three in the State of Virginia to shoot for 'glory,' expenses and a reasonable sum on the side."

* * *

"CHICAGO, Ill., June 8.—Illinois Association adopted amended shooting rules, putting tens, twelves and all smaller gauges alike at 30yds. This makes the Association the laughing stock of the country and 100 years behind the times.—E. HOUGH."

The above telegram, received as we go to press, explains itself. But, oh! what a lot of fun there will be when the cracks adopt 10-bore guns and shoot from the same rise as the average shooter. If Illinois wishes to maintain its position as a progressive State it will reconsider the above action, and do it quickly.

* * *

During the Harrisburg tournament the contestants were deeply interested in studying the points of the new hammerless shotgun about to be placed on the market by the Wilkesbarre Gun Company. The gun was shot and its workings explained by E. H. Kniskern, the firm's traveling representative. The action considered perfect, working smoothly and easily and has no delicate parts that are likely to get out of order. The barrels are treble-bolted and are bored true to gauge. The 12-bore, for nitro powders, will be a specialty. The company will make two grades of hammer guns and four grades of hammerless guns for the market, but will build any special grades desired.

* * *

The West End Gun and Rod Club held a well-attended shoot on the Grove street grounds, in Newark, N. J., on Decoration Day. In a sweep at 5 live birds per man, with 19 entries, L. Spaun, J. C. Young and C. Gemeinder killed straight; C. Neigert, J. C. Sweet, L. Hemhauser and J. Hollenschlag 4 each; J. Augustin, T. Betschick, T. Freund, G. Burkhardt, J. Lamb and W. F. Betschick 3 each; A. Wagner, E. Astfalk, A. Freund, T. Schieme and E. Womeisdorf 2 each; J. Reibold 1. There were also nine events at 5 bluerocks each, in which some good shooting was done.

* * *

Saturday will be a gala day on the grounds of the South Side Gun, in Newark, when will be held the fifth monthly team contest for the championship of New Jersey Trap-Shooters' League. This organization is very strong and ten teams are expected to enter. The open sweepstakes will have fifty or more entries. Two sets of five traps each will be used, so that while the teams are using one set the other set may be utilized for sweepstake shooting. A solid dinner will be served between 12 and 2.

* * *

Charley Smith, the irrepressible "Dutchy," of Plainfield, N. J., informs us that he will be chief hustler at an all-day's shoot of the Independent Gun Club to be held at Plainfield, on Thursday, June 23, beginning at 9:30 A. M. Both live pigeons and bluerock targets will be used. The targets will be shot under the five-trap, rapid-firing system and there will be no handicaps. All guns will be shot from 16yds. Everybody will be welcomed.

* * *

Samuel Castle, the veteran field and trap shot of Newark, N. J., shot a twenty-four bird match against his fifteen-year-old son Irving on John Erb's grounds. Although the veteran won, it was only by killing 22 to his son's 21. In a four-bird sweep, $3 entry, which followed, S. Castle, Sr., won first money by a clean score; Clark, S. Castle, Jr., Hollis and Loomis tied for second money on three kills each, Loomis winning on the third round of the shoot off.

* * *

The Massachusetts Rifle Association will hold a grand trap-shooting tournament on June 29 and 30 at Walnut Hill. The programme, which is a mixed one, comprises fifteen events each day, at 25 singles, unknown angles, $50 is guaranteed. A purse of $30 is guaranteed the first day in event No. 12, and the second day a like guarantee is given in event No. 11, each at 20 singles. The events are open to all and there are no handicaps.

* * *

The return match between teams representing the Park City Gun Club, of Bridgeport, and the South Side Gun Club, of South Norwalk, will take place on Saturday at South Norwalk. The shooting will begin at 12 o'clock; open sweepstakes will precede and follow the main event.

* * *

Sportsmen will regret to hear that John Parker, the popular shooter of Detroit, Mich., has met with a sad bereavement in the loss of a young son, who died on May 26. Mr. Parker has the heartfelt sympathy of a host of friends.

* * *

E. D. Miller went to Woodland Park last Saturday to pitch the tents for the Inter-State Association, but as the tents did not reach the grounds until 5 P. M. he was compelled to postpone the work until Monday.

* * *

Hereafter any person sending to this office a criticism of any article must consent to have said criticism appear over their own name, provided the article criticised did not appear over a *nom de plume*.

* * *

The trap editor regrets his inability to visit the Island Gun Club at Wheeling, W. Va., next Thursday and Friday. A previous promise compels his attendance at the Syracuse shoot.

* * *

Connecticut shooters should not forget the sixth contest for the Keystone trophy, to be held at the grounds of the Ansonia Gun Club on June 15.

* * *

Wherever the North handicap system has been tried it has been a success. Make the events uniform and the "playing" for places will not amount to much.

* * *

Guaranteed purses have seen their best days. Added money and special premiums for averages are what will draw the crowds in the future.

* * *

M. F. Lindsley and W. Fred Quimby are at the Illinois State shoot. From there they will go to Syracuse to attend the New York State shoot.

* * *

Kingbird targets will be thrown during the New York State tournament at Syracuse. Cruttenden & Card generously donate the targets.

* * *

The great tournament of the Northwest Sportsmen's Association will be held at Seattle, Wash., next Thursday, Friday and Saturday.

* * *

The Tennessee people say FOREST AND STREAM has run away from all competitors. Yes, and we intend to keep on running, brethren.

* * *

There will be a big tournament at Minneapolis, Minn., on Tuesday of next week under the auspices of the North Star Gun Club.

* * *

What's the matter with Hough's story of the "Fifteenth Iowa Annual?" "That's all right!"

* * *

Waverly, Ia., will have a big shoot on next Wednesday, Thursday and Friday.

* * *

Non-residents are expected to be present in force during the Syracuse shoot.

* * *

The Knoxville pictures in last week's FOREST AND STREAM "took the cake."

* * *

There will be 2,000 live birds at the New York State shoot on the 18th inst.

* * *

At the South Dakota shoot, in Bresford, professionals will be barred.

* * *

Saratoga expects to have over 100 entries at the July tournament.

The South Side Tournament.

MILWAUKEE, Wis., June 2.—The tournament of the South Side Gun Club commenced this morning. The weather was damp and foggy making the targets difficult to see and straight scores hard to make. Among the shooters in attendance outside of Milwaukee sportsmen were S. A. Tucker of Parker gun fame, E. D. Bingham and Chas. Richards of Chicago, E. Heller of Sheboygan, G. W. Sperbeck and R. Godfrey of Whitewater, J. C. Land of Waukesha, H. H. McKinney of Janesville, I. H. Davis of Dixon, Ill. The management did all that could be expected to make visiting sportsmen comfortable, and although the weather was very disagreeable every one seemed to enjoy themselves, and when the last shoot for the day was completed and the boys done figuring up their winnings a start was made for hotels to enjoy a good square meal. No losers to-day. The scores:

Twenty bluerocks, entrance $2:

Bingham	11111111101110111111—18	Sperbeck	01111110111111111011—17

Friese	8	Godfry	8
Malcolm	6	P Lewis	9
Seefeld	12	Lynds	9
Sperbeck	11	Budd	12

The Second Day.

The weather to-day was very disagreeable. It commenced raining early in the morning and continued all day, but the shoot went on just the same. Every one seemed to think the rain was needed and went to the score without a murmur. Rubber coats were in good demand and those who did not own one borrowed from their friends. Tucker went to Oskosh this morning but will return to-night and the boys all hope he may bring some more weather with him. The F. P. Stannard Gun Co. had a nice tent put up on the ground, and Mr. Stannard, assisted by genial Dick Merrill, was kept busy entertaining their many friends by offering them easy chairs and fine cigars. Budd is the only expert that has shown up so far and the amateurs are making it very interesting for him.

On returning to the hotel we found a gentleman by the name of Quimby, from New York, wanting to shoot somebody a match, and it seems strange to your correspondent that he has never been able to make a match to his own satisfaction—one that he could win. In justice to Mr. Quimby I will say as an entertainer he has but few equals; genial, broad views and kind-hearted, but at the finish one generally finds he has paid well for all he has received.

Ten live birds, entrance $5:

Budd	1221221211—10	Duis	2200211201— 7
Burnham	0222002210— 6	Godfrey	1112120210— 8
Bingham	1110212101— 8	Lewis	2122222112—10

Meixner	1110101101101111111111010—19
Brown	0000001000111111010010111—13
Lewis	1111111111101111111111111—24
Schmidt	1111111111011111111111111—23
Friese	0111001011111010111011011—17

Merrill won gun on a straight score. Budd and Lewis tied for duck, Budd buying Lewis out and taking duck.

The Third Day.

The weather to-day was quite pleasant and the scores were somewhat better than yesterday. Rolla Heikes and John Ruble, of Chicago, were on hand this morning, and Rolla, as usual, commenced to make some straights, with Ruble a close follower. Ed Bingham returned to Chicago this morning to load shells and arrange his affairs to put in a good week at the Illinois State shoot. Ed is a brother of the noted duck shot Ira Bingham, of Koshkonong Lake, Wis. This lake has been for many years especially noted for its good canvasback shooting, and is the hunting ground of "Gloan," a name that many of the readers of the FOREST AND STREAM will recognize. I understand the different gun clubs of Milwaukee will combine and give a grand live-bird shoot some time during the month of October. A guarantee of $1,000 is to be given as an inducement for shooters to attend. This large guarantee of money will have a tendency to bring together the representative shots of the country, and the Milwaukee sportsmen will use every effort to make the shoot a great success. To-night the boys are all leaving for home, and are well pleased at the treatment received from the South Side Gun Club and will be on hand at their next annual tournament.

Ten live birds, entrance $6:

Budd	2021111101— 8	Okershauser	1020022002— 5
Heikes	2111211012— 9	Lewis	0122110222— 8
Merrill	2022112201— 3	Schmidt	1010120222— 7
Burnham	0202002110— 5	Clelland	0122212022— 8

Stannard	7	White	6
Budd	8		

C. W. BUDD.

You Must Go to Syracuse.

THE State shoot has never attracted more attention than during the present year, and the outlook seems to be that next week's contests at Syracuse will be the most hotly contested and will draw the heaviest list of entries of any like affair on record. The programme, a draft of which is given below, is an eminently attractive one, and shows careful thought on the part of the committee.

Good judgment has been shown in the provision made for non-residents, who are justly barred from taking part in the State events. The chances are that the "non-resident" traps will be kept in constant use, it being understood of course that the events on these are open to the world.

The Onondaga Sporting Club is possessed of facilities for catering to an immense throng of shooters, and the chances are that the events will all fill to overflowing. The club house, an excellent picture of which recently appeared in FOREST AND STREAM, is one of the largest and most attractive in the State, and the grounds, situated as they are near the waters of Onondaga Lake, will well repay a visit, even from a non-contestant. Boating, bathing and fine fishing may be enjoyed by those who do not care to put in full time at the traps.

Maple Bay is only fifteen minutes' ride from Syracuse via the D. L. & W. road, and special trains will be run for the accommodation of the shooters. Those who wish to enjoy a drive from the city to the grounds may do so, there being a fine road leading along the lake shore.

All the roads leading into Syracuse have made a reduction in rates equal to a fare and one-third for the round trip. Event No. 1, at 20 kingbirds, $5 entry, to take place on Tuesday, will be a big one, there being no less than 88 prizes. In event No. 2, under the same conditions and on the same day, there will be 95 prizes. On Wednesday there will be two regular events at 20 singles each, $3 entry, beside a number of extra sweeps. Thursday's events will be two at 20 singles each, $3 entry, on the regular programme and a long list of extra sweeps. The opening event on Friday will be New York State championship team race, four men per team, 20 singles per man, $10 entry per team, ties to be shot off at 12 singles per man. There will be five money prizes beside a silver pitcher and tray, these to go to the winning team. Clubs may enter as many teams as they choose. Shoot No. 2 on this day will be at 20 singles and 5 pairs for the Lefever Arms Company's diamond medal, entrance $2.

Then will come the big event of the meeting, the team contest for the famous Dean Richmond trophy, valued at $1,150. The conditions are 3 men to a team, 15 live birds per man, entry $20 per team. The winning team will hold the trophy for one year and will also receive 60 per cent. of the entrance money, the remaining 40 per cent. to go to the second best team.

Saturday will be devoted to live bird shooting, the events to be as follows: No. 1, 5 birds, $5; No. 2, 7 birds, $7; No. 3, 10 birds, $7.50 (gun below the elbow until bird is on the wing in this event); No. 4, 7 birds, $7; No. 5, 5 birds, $5 (position of gun same as in No. 3). There will be ten prizes for the best averages in the regular kingbird target events. In event No. 2 on Tuesday, first prize will be $100 in gold, donated by the proprietor of the Vanderbilt House.

All live bird events on Saturday, June 18, will be open to the world.

The annual convention will be held on Monday evening in Y. M. C. A. Hall, 345 South Warren street, at 8 o'clock, when the new constitution and by-laws will be acted upon. All delegates and members are requested to wear their club badges.

Lynchburg on its New Grounds.

LYNCHBURG, Va.—*Editor Forest and Stream:* The Lynchburg Gun Club held a formal opening of their grounds on the 17th. This club was organized June 7, 1887, and commenced shooting on the old baseball grounds. The property changing hands, the club went to the fair grounds, and were driven from there by the ruthless hand of the destroying and devastating land agent. Being out of house and home, but having lots of ammunition, they last year reorganized and bought and inclosed fourteen acres of ground adjoining Rivermount Park. Finding some more Schultz powder left in the can, the first of the present year saw improvements going on. A large and handsome club house, steel trap screens, granite score plates and new-fangled pulls make theirs the best equipped, as well as the best located, gun club grounds in the State. Back of the club house the bowling alley, billiard hall and ladies pavillion will soon be under construction. The opening was quite an enjoyable affair, a great many ladies being present, who seemed to enjoy the shooting equally as much as they did the refreshments; everybody had a good time. On the Fourth of July a great time is expected. Many invitations will be issued and quite a gathering of shooting cranks from all over the State is looked for. A right royal welcome will be extended the visitors.

The club shoot every Tuesday and shoot only inanimate targets, and shoot all the known rules, angles, traps and targets. I send you the only regular scores shot during the afternoon of the opening day. The shooting is away below their average, caused, I suppose, by the general surroundings, lemonade, etc. The club numbers 37 members. The officers for the ensuing year are: President, R. S. Terry: Vice-President, W. L. Moorman; First Captain, W. W. Dornin; Secretary, H. L. Cheatham; Treasurer, F. F. Nelson; Second Captain, J. M. Cleland.

Here we have the scores. Team shoot, 15 bluerocks each man, 5 traps:

Dornin	10	Langhorne	2
Cleland	12	D Christian	9
Nelson	15	Stearns	7
Moorman	8	Claytor	7
Terry	12	Hamner	10
Taylor	12—69	Owen	4—39
Withers	10		
Strother	4		
Smith	9		
Clark	9		
F Christian	5		
Averett	2—89		

For Silverthorn medal, 9 singles and 3 pairs:

Cleland	12	Strother	9
Owen	7	Smith	8
Nelson	12	F Christian	6
Dornin	12	Withers	6
Moorman	8	Miller	8
Terry	9	Claytor	11
D Christian	7		
Clark	10		
Hamner	9		
Taylor	9		
Averett	3		

Ties on 12 won by Dornin.

The club had its weekly shoot May 24. The attendance was not large and three events only were shot as follows, 9 singles and 3 pairs bluerocks: Dornin 10, Terry 12, Nelson 10, Cleland 9, Lile 5, Moorman 12, Durphey 6, Smith 4, Stearns 11.

Match at 10 bluerocks, 5 traps, rapid-fire: Terry 5, Taylor 8, Nelson 9, Moorman 9, Hamner 5, Cleland 6, Lile 4, Durphey 4, Hamlet 9, Stearns 7, Smith 8, Griffin 2.

Match at 10 bluerocks, 5 traps, unknown angles: Taylor 4, Cleland 6, Moorman 6, Griffin 2, Ford 2, Dorwin 8, Terry 4, Nelson Hamlet 4. D.

Rochester vs. Honeoye Falls.

HONEOYE FALLS, N. Y., May 27.—Inclosed find scores of the first match of a series of three between the Rochester Rod and Gun Club and the Honeoye Falls Gun Club, shot on the grounds of the Honeoye Club, on May 26, 25 kingbirds per man, 12 men per team, 5 traps, rapid firing, American Association rules:

Honeoye Falls Team.		Rochester Team.	
Tenny	23	St John	24
Lockington	21	Richmond	25
Hyde	24	Hadley	24
Bailey	22	McVean	22
McKenzie	22	J Ressinger	23
Starr	19	Norton	23
Martin	22	Meyers	25
Hannon	21	Walzer	24
Gregg	21	C Smith	23
Wilkinson	24	Stewart	25
Weller	22	Newton	24
Benham	23—265	Hicks	24—285

The Statement was Correct.

CHICAGO, May 29.—*Editor Forest and Stream:* Under the head of "Sport at the National Capital," in your issue of the 20th inst., your correspondent, C. H. Townsend, for whom I have the highest regard, in giving a very elaborate and well-written account of contests at the trap in a late tournament at Washington, D. C., held under the auspices of the Capital City Gun Club, of that city, generously acknowledges the "royal" way guests were entertained, presents the scores made, extols the excellent shooting of several contestants and commends everything save the ruling out of a New Jersey team, which is elaborately but delicately unfavorably criticised, and you illustrate his report by presenting to your readers half-tone portraits of two estimable-looking, clean-faced, genial and gentlemanly-looking sportsmen, the shooting of one of whom, I infer from the similarity of the names given, was "very highly commended" in the report, and would have received a "blue ribbon as a shooter," but for the reason, to use the words of the reporter, "Young Harry Happers * * * showed himself to be a master hand in the use of the gun, and had he not intentionally lost several birds in order to get into money divisions, his average would have been close to ninety-four per cent."

Your correspondent neglects to condemn one of the most offensive of all offenses that can occur, and which he says did occur, in a contest at the trap among gentlemen sportsmen—that of "intentionally" losing several birds "in order to get into money divisions." The management ruled out a New Jersey team for reasons perhaps sufficient, but failed to immediately discipline the son of the captain of the club for an offense committed where guests were being entertained in "royal" style!

For reason largely that a few of the many professional shooters have been guilty of like offenses, the whole have been penalized, or, rather, unfavorably classified, and their presence on many shooting grounds is not courted; a severe and unreasonable penalty to such professionals as are not in sympathy with either bunco or three-card-Monte games, methods for obtaining money akin to that of intentionally losing birds for money-making purposes, and not a whit less offensive to gentlemen sportsmen who visit shooting tournaments for pleasure, either as members of friendly clubs or as guests to be "royally" treated. Perhaps the rules of the entertaining club do not provide a special penalty for such gross disrespect of sportsmen's etiquette; but if they do not, if the facts were as stated, the self respect of the members of the club should prompt them to discipline their offending member, if a member, under that unwritten rule among true sportsmen, that ungentlemanly conduct is not to be tolerated. If your correspondent was misinformed, and consequently his statement was incorrect, that fact should appear in your paper. I hope he was misinformed, as the features of the offending sportsmen, in "half-tone" certainly would indicate better introduction to sportsmen.

CHAS. E. FELTON.

[If Mr. Felton will point out a plan to stop "dropping" for places, FOREST AND STREAM will do its share toward "squaring" the sport.

Closter Defeats Hackensack.

The Team Match at Washington.

IN your issue of May 26 and in the account of the third day of the Washington, D. C., tournament is mention made of a conversation between Mr. Gulick, president of the Capital City Gun Club, and Mr. C. H. Townsend regarding the Union Gun Club, of New Jersey, and the propriety of handicapping them in the team race.

Mr. Gulick is quoted as saying: "The Baltimore people have promised to enter three or four teams provided we make the Jerseymen shoot under expert rules and the promise has been given."

Now Mr. Editor there are "Baltimore people" and then there are some more Baltimore people, and as Mr. Townsend casts a slur at the Baltimore Gun Club later on in his report I ask for space to say that the contingent of the Baltimore Gun Club utterly and entirely deny ever having asked Mr. Gulick or any other member of the Capital City Gun Club to handicap or by another method bar any team from shooting in a race where the Baltimore Gun Club was entered. We have as a club met and vanquished teams equally as good as that of the Union Gun Club, and have been beaten too once in a while, but it is our boast that no rival team can say we did not give them a square race and asked no odds. One team went over to Washington with a full understanding that the handicap had nothing to do with the team race and entered the race with that understanding. If any promise was made by the Baltimore Gun Club to enter more than one team, which is highly improbable, it must have been made with the proviso that the entries would be made if the men were present. That week was a very busy week for many of our best shots who were unable to attend the tournament at all.

I beg to suggest to Mr. Townsend that there was another team present from a Baltimore club, known as the Standard Gun Club, which has absolutely no connection with the Baltimore Gun Club, and as the manager of this team did a lot of kicking and then backed out from shooting at the last, he may have been responsible for Mr. Gulick's statement.

Hoping that the above statement will in a measure do away with the idea that the Baltimore Gun Club are "kickers" or "squealers" and also hoping that Mr. Townsend will be present at our tournament in July at Tolchester. PICUS.

[Anent the above, "Picus" makes an error. We did not cast any slur at the Baltimore or any other club, as we had no occasion to do so. In the first place we merely quoted the conversation between Mr. Gulick and myself, and then in paragraph two of the final day's summary we said, "* * * note how nobly the Baltimore's alleged promise was kept." The word "alleged" takes away all slurring. We do not know to whom Mr. Gulick referred in his conversation with us, as he did not mention any names of individuals or clubs.]

Miantonomie Gun Club.

NEWPORT, R. I., June 6.—A baseball match and a circus proved too much for our members to resist on Saturday, and only five reported for practice. Keystone targets were used for the first time, and as the traps were set to throw as far as possible, the poor scores were thus accounted for. The events were at four targets each and the totals were:

Brown	1 1 2 0 3 2 1 1 3 1 2	Steele	0 1 2 1 2 1 2 1 1 . .
Glynn	2 3 4 3 3 2 3 3 2 0 4 2	Rose	1 1 2 2 3 3 3 1 1 4 3 2

Match at 10 targets for $25.

Brown	0 1 0 1 0 0 0 1 0— 4	Glynn	1 1 0 1 1 0 1 0 1 0— 6

Same as above:

Rose	1 1 0 0 0 0 0 1 1— 5	Openshaw	0 0 0 0 1 1 1 1 0 0— 4

On the Banks of the Susquehanna.

THE third annual spring tournament of the Harrisburg Shooting Association was held on the club grounds on May 26, 27 and 28, the attendance being rather light. Among the shooters were W. Fred Quimby and W. R. Hobart, of New York; Daniel Lefever and George Mosher, of Syracuse, N. Y.; N. A. Hughes and S. J. Abercrombie, of Williamsport, Pa.; Henry Matz, of Reading, Pa.; J. P. and G. W. Haddock and R. S. McVicar, of Winchester, Va.; E. H. Kniskern, of Wilkesbarre, Pa., and Harry Thurman, of Philadelphia, Pa.

The grounds of this club are very prettily situated near the banks of the Susquehanna River, about 2½ miles from the city of Harrisburg, being supplied with a finely equipped and commodious club house. Some magnificent views are obtainable from the club house. "Commodore" Nutt was on hand during the shoot serving refreshments from under the shades of a big marquee.

The events, ten in number each day, were at 15 targets each, $1.50 each, being shot under the North handicap system. The moneys were divided on the "Jack Rabbit" plan.

Three average premiums were paid on each the first and second day, one to the best average, one to the average nearest 85 per cent., one to the one nearest 75 per cent., and one to the maker of the lowest average. On the first day first premium was won by W. R. Hobart on 91 1-10, second by C. E. H. Brelsford on 85 1-10, third by R. Dinger on 74 1-10, and fourth by E. H. Kniskern on 71 1-10. On the second day Hobart was again ahead on 91 1-10, Fuller Worden won second on 85 9-10, R. Dinger won third on 76 3 10, and fourth went to J. S. David on 70.

No. 1, 15 singles: Kinzer 13, E. H. K. 10, Fuller 15, Brelsford 12, Dinger 11, Matz 12, Smeck 11, Hobart 13, Dustin 13, Sullivan 15, David 9, Dill 9, Hughes 14.

No. 2, 15 singles: Dustin 14, Hobart 15, David 12, Dill 10, Brelsford 14, J. Dinger 11, Sullivan 11, Fuller 12, Hughes 12, E. H. K. 10, Kinzer 8, Smeck 15, Matz 13.

No. 3, 15 singles: Dustin 12, Hobart 12, Brelsford 13, Smeck 10, Fuller 11, E. H. K. 9, Hughes 12, David 12, Sullivan 12, Dill 12, Kinzer 10, Matz 3, Dinger 12.

No. 4, 15 singles, expert: Brelsford 11, Dustin 15, Hobart 15, David 10, Sullivan 12, Dill 10, Dinger 11, Hughes 11. Amateurs: Matz 11 11, Schneck 14, Kinser 13, Fuller 13, E. H. K. 10.

No. 5, 15 singles, experts: Dustin 12, Hobart 13, Schneck 12. Amateurs: David 9, Sullivan 14, Brelsford 14, Kinzer 12, Dill 11, Dinger 12, Matz 00, E. H. K. 13, Hughes 12, Fuller 15, Nutt 12.

No. 6, 20 singles: Matz 12 Schneck 18, Dinger 19, Dill 18, Hobart 20, Dustin 17, Brelsford 19, Kinzer 19, Hughes 18, Fuller 12.

No. 7, 15 singles, experts: Fuller 12, Sullivan 15, Brelsford 11. Amateurs: David 9, E. H. K. 12, Hobart 13 Hughes 14, Quick 14, Dodd 14, Kinser 8, Nutt 12, Dill 15, Dusten 14, McVicar 13, Dinger 12, Matz 10, Haddox 14.

No. 8 15 singles, experts: Hughes 12, Sullivan 14, Schmeck 13, G. W. Haddox 12, Duston 10. Amateurs: David 13, E. H. K. 12, Kinzer 13, Zeigler 6, Brelsford 12, McVicar 15, Hobart 13, J. O. Haddox 14, Dinger 13, Matz 11, Fuller 12, Nutt 12

No. 9. 15 singles: McVicar 11, Sullivan 15, J. P. Haddox 12, Dustin 14, Dill 13, Schmeck 14, David 12, Kinser 10, G. W. Haddox 15, Hobart 14, Fuller 11, Brelsford 15, Hughes 13, Matz 13, Dinger 12, E. H. K. 12.

No. 10, 15 singles, experts: Sullivan 13, Dustin 9, Schmeck 13, G. W. Haddox 9, Hobart 15, Brelsford 13. Amateurs: David 12, McVicar 13, Dill 12, Kinzer 13, J. P. Haddox 12, Fuller 13, E. Post 11, Hughes 12, Matz 10, Grouse 6, Hoffman 4, Day 12.

The Second Day.

No. 1, 15 singles. Experts: Brelsford 13, David 12, E. H. K. 9, Hobart 14, Worder 13, G. W. Haddox 13, Hobart 12, Hughes 12, J. P. Haddox 10, Dinger 13, Lefever 9. Amateurs: Grouse 10 Mosher 13, Dinger 14 David 15, Quimby 9, Dustin 11, Day 10, Hughes 14, Diel 9, McVicar 12, J. P. Haddox.

No. 2, 15 singles: Worden 14, David 11, Brelsford 12, G. W. Haddox 15, Dill 11, Mosher 9, Grouse 14, E. H. K. 11, Day 6, Dustin 12, McVicar 13, Quimby 13.

No. 3, 15 singles, experts: Worden 13, G. W. Haddox 11, Grouse 15, Dinger 10, McVicar 13, Quimby 7. Amateurs: Hughes 12, J. P. Haddox 13, Lefever 13, Brelsford 11, Dill 12, David 7, E. H. K. 11, Hobart 14, Dusten 12, Mosher 13.

No. 4, 15 singles, experts: Grouse 13, Hobart 15. Amateurs: Worden 15, G. W. Maddox 13 McVicar 12, Dill 14, Dustin 12, J. P. Haddox 12, Hughes 11, Quimby 12, Mosher 14, E. H. K. 8, Dustin 12, Thurman 8, Lefevre 14, Brelsford 10, Young 8, Dinger 11.

No. 5, 15 singles: Experts: Hobart 11, Worden 14. Dill 10, Mosher 11, Lefever 11. Amateurs: David 8, Grouse 11, McVicar 7, Brelsford 12, J. P. Haddox 9, Dustin 11, Hughes 10, Burnham 10, Smith 14, Thurman 13. Dinger 12, G. N. Haddox 13.

No. 6, 10 singles: Dinger 8, Duston 8, Hughes 7, Smith 6, Worden 9, Brelsford 10, Grouse 9, Hobart 10, Mosher 10, Lefever 10.

No. 7, team race, 20 singles: Worden 16, Brelsford 18, Dill 15, Thurman 17, Hughes 16, Smith 15.

No. 8, 15 singles, experts: Worden 8, Thurman 12. Smith 12. Amateurs: E. H. K. 11, David 9, Thurman 8. Mosher 13, Lefever 15, Grouse 15, Hobart 15, Burnham 8, Dill 12, Quimby 12, Brelsford 14, Hughes 13, Dustin 12, Dinzer 11, Day 12.

No. 9. 15 singles, experts: Lefever 11, Grouse 13, Hobart 15, Brelsford 11. Amateurs: Worden 14. E. H. K. 12, David 7, Mosher 13. Thurman 15, Hughes 12, Keller 7, A. B. Dunkle 11, Smith 12, Dill 14, Grouse 14, Burnham 7, Thurman 7, Dustin 13, Dinger 10.

No. 9, 15 singles. Experts: Hobart 14, Worden 10. Thurman 11. Dill 12. Amateurs: E. H. K. 9, Mosher 11, David 5, Hughes 10, Smith 9, Quimby 15, Lefever 13, Brelsford 14, Dinger 10, Dustin 10, Rutherford 6, Grouse 15.

No. 10, 15 singles. Experts: Hobart 13, Brelsford 7, Grouse 14. Amateurs: Thurman 12, Dill 11, Dustin 13, Mosher 12, Hughes 13, Smith 10, E. H. K. 11, Coleman 11, Quimby 12, Lefever 12, Dinger 12, Worden 15, Keller 5, Dunkle 7.

The Third Day.

No. 1, 15 singles: Thurman 8, Hobart 15, Fuller 11, Kinzer 15, Lefevre 11, Dinger 13, Brelsford 14, Brelsford, 11, Hobart 14, Kinzer 15.

No. 2, 15 singles: Thurman 14, Dinger 12, Lefevre 10, Fuller 13, Quimby 14.

No. 3, 15 singles: Hobart 15 Kinzer 13, Thurman 11, Quimby 9, Lefevre 11, Fuller 13, Dinger 12, Brelsford 14.

No. 4, 15 singles: Hobart 14, Brelsford 10, Fuller 9, Kinzer 13, Thurman 14, Lefevre 10, Quimby 11, Nutt 12, Dinger 13.

No. 5. 25 singles: Kinzer 24, Thurman 23, Dinger 16, Miller 17, Hobart 24, Brelsford 24, Nutt 18, Sullivan 22.

No. 6. 25 singles: Kinzer 23, Thurman 21, Dinger 21, Miller 17, Hobart 24, Sullivan 20, Brelsford 23.

No. 7, 25 singles: Shearer 19, Kinzer 21, Thurman 24, Hobart 23, Brelsford 22.

No. 8. 25 singles: Brelsford 24, Shearer 22, Thurman 23, Kinzer 22, Dinger 21, Hobart 22.

The Sunflower Tournament.

IN the matter of State shoots, the State of Kansas has had its ups and downs similar to the progress of the State. There have been many good tournaments held in the State, notably when wild birds were procurable. There are many good shots all over the State, and yet I fancy that where game is so plentiful and but few months of the year not affording the gunner an opportunity of shooting, that smashing mud pies has not the same fascination that it has in the East, where it is more of a recreation. Still there may be found a small club in almost every town.

It may seem strange also that the smaller towns of the State have been represented at this shoot. The cities of Leavenworth, Topeka, Wichita, Kansas City, Kan., Fort Scott, Ottawa and many others were not represented. It was, however, a veritable love f ast for those who were present, even if the very disagreeable weather did cause all to make low scores. The Missouri State shoot had bad weather, but this week was far worse, cold and heavy rains were succeeded by heavy winds that caused the oldest man to get away off the "black saucers."

The double programme as mapped out by the committee failed to draw the gun men, traveling men and those from other States; even Kansas City failed in sending a delegation, save one man, so this part of the meeting was abandoned and a few sweeps added to fill up the gap. The officers and members of the Council Grove Club deserve the thanks of all the State Association members for the way the tournament was conducted throughout. Much was done by the secretary to bring order where disorder stared him in the face, and as McPherson has been chosen for the next meeting it remains to be seen what the officers for the next year may do to get out some shooters from all parts of the State.

I must not pass without calling the attention of the Association to what I consider a mistake they may make in locating their tournaments. Granting that McPherson is near the center of the State, still most of the shooters who attend tournaments and can afford it live in the eastern part of the State, and I am quite sure that the best results could be obtained by holding the tournament for '94 in Kansas City, Kan. Try it once, gentlemen, most of you would like some excuse to get to Kansas City once a year.

The management requested me to thank the many sporting journals for their kind words of encouragement during the past year and say, "Keep an eye on Kansas."

The results of the various events are here shown:

Tuesday, May 17.

Shoot No. 1, 10 single bluerocks, $2 entrance: L. Eberhart 9, E. H. Young 9, R. Mathews 9, G. N. Barber 9, J. N. Barber 9, A. L. Elwell 9, M. DeTar 9, L. O. S. Carv 8, W. H. Elcholtz 8, C. E. Andis 8, Wm. Allen 8, P. Whitehair 8, W. R. Fisher 8, R. S. Dinsmore 8, F. M. Chandler 8, G. W. Jenkins 8, Wm. Eldred 7, H. A. Knight 7, R. L. Raney 7, L. H. Hedges 6, A. L. Bennett 6, J. C. McCully 6, T. J. Close 4.

Medal shoot, 10 live birds, entrance $8: Dinsmore 10, Andis 10, Edwards 10, Gray 10, Mathews 10, Spears 10, Louge 9, Barber 9, Hershey 9, Elwell 9, Young 8, Eberhardt 8, Eicholtz 8, Clary 8, Fisher 8, Raney 8, Allen 8, Hendrick 7, Eckley 7, Jenkins 6, De Tar 6, Eldred 6, Close 6, Fulton 6, Sigerson 6, Bennett 3, Wilcox 0. Money div. Medal remains in association.

No. 3. 10 singles and 5 pairs, entrance $6 a team, 2 men same club: Everhardt and Spears 32, Elwell and Chandler 32, Clary and Jenkins 31, De Tar and Andis 31, Dinsmore and Barber 31, Fisher and McCully 28, Edwards and Gray 28, Mathews and Bennett 27, Young and Allen 25, Eldred and Wetzel 24, Wilcox and Hedges 21.

No. 4. 15 singles, entrance $2: Erhardt 15, Knight 15, Grey 15, Allen 14, Renfro 14, Elwell 14, Mathews 13, Edwards 12, Raney 12, Barber 12, Andis 12, Jenkins 12, Eldred 11, Eckley 11, Dunmeyer 11, Hedges 11, Young 11, Bennett 10, Clary 10, Chandley 10, Dinsmore 10, A. L. Bennett 9, Spears 9, McCully 9, Fulton 7, Wilcox 3.

Wednesday, May 18.

No. 1, 10 singles, entrance $2: Spears 9, Young 9, Stevens 9, Elwell 8, Jenkins 8, Dinsmore 8, Barber 8, Eldred 7, De Tar 7, Allen 7, Edmonds 7, Chandler 6, Mathews 6, Erhardt 6, Fulton 6, Dunmeyer 6, Bennett 6, Raney 6, Knight 6, Wilcox 6, Eicholtz 5, Whitehair 5, Clary 5, Andis 5, Hendrick 5, McCulby 4, Eckley 4, Fisher 4, Bear 4, Hedges 4, Humberger 4, Close 4, Humbarger 4, Whitzell 4, Rogers 3, Grey 3, Renfro 2, Stevenson 2, Piety 1.

No. 2, medal, 25 singles, entrance $5: Dinsmore 23, Allen 21, Young 20, Barber 20, Elwell 19, Chandler 19, Erhardt 18, Jenkins 18, Stevens 17, Mathews 17, Clary 16, McCully 15

No. 3, 5 pairs bluerocks, entrance $2: Elwell 8, McCully 7, Hedges 7, Grey 6, Spears 5, Clary 5, DePar 5, Stevens 4, Baer 4, Erhardt 3, Bennett 3, Jenkins 3, Dinsmore 3, Eicholtz 2, Fulton 2.

No. 4. 10 singles, entrance $2: Elwell 9, Edwards 7, Clary 7, Fisher 7, DeTar 6, Dinsmore 6, Baer 6, Tailor 6, Jenkins 6, Eberhart 6, Stevens 6, McCully 5, Hughes 5, Whitehair 5, Allen 4, Fulton 4, Barber 4, Sears 4.

No. 5. 10 live birds, entrance $8: Dinsmore 10, Edwards 9, Dunmeyer 9, Young 9, Hendricks 8, Eicholtz 8, Eldred 8, Barber 8, Spears 8, Hershey 8, Elwell 7, Bennett 7, Raney 7, Gray 7, Close 6, Logue 5.

No. 6, 5 pairs live birds, entrance $7.50: Dinsmore 9, Grey 8, Raney 7, Eldred 7. Barber 7, Elwell 7, Bennett 7, Clary 7, Spears 7, Hershey 6, Eckley 6, Young 5, Wilcox 5, Edwards 5, Jenkins 3.

Thursday, May 19.

No. 1, 12 singles, entry $2.50: Andis 12, Grey 12, Young 12, Erhardt 11, Fisher 11, De Tar 11, Eldred 11, Jenkins 11, Dinsmore 10, Jack 10, Elwell 10, Wilcox 10, Allen 10, Edwards 10, Dunmeyer 9, Chandler 9, Clary 9, Rollins 9, Mathews 9, Fulton 8, Humberger 8, Wetzel 8, Cleek 8. Stevenson 5.

No. 2, 25 singles, entry $5, $50 in gold donated by the Council Grove Gun Club: Jenkins 25, Dinsmore 24, Eldred 24, Grey 23, Mathews 22. Elwell 22, Fisher 21, Barber 21 Young 21, Andis 21, De Tar 20, Allen 20, Hill 20, Piety 19, McCully 19, Wilcox 18, Dunmeyer 18, Clary 18, Abercromby 18, Edwards 18, Bennett 16, Whetzel 16, Jack 13.

No. 3, 4 pair live birds, entrance $5: Abercromby 8, Elwell 8, Raney 7, Bennett 7, Dinsmore 7, Hershey 7, Dunmeyer 6, Barber 6, Edwards 5, Piety 5, Eldred 5, Grey 5, Everhardt 5, Rollins 5, Wilcox 5, Fisher 4, Young 4, Jenkins 3. Deibert 4.

No. 4, 5 pairs bluerocks, entrance $2: Dinsmore 8, De Tar 7, Young 7, Everhardt 7, Jenkins 7, Elwell 6, Wilcox 6, Jack 4.

No. 5. 10 singles, entrance $2: Elwell 10, De Tar 9, Jenkins 8, Hill 8, Grey 7, Barker 7, Fulton 7, Wilcox 7, Smith 5, Piety 5, Jack 4.

No. 6, 20 singles, $4 entrance: Jenkins 18, De Tar 17, Grey 17, Everhart 16, Barber 16, Elwell 15, Young 13, Eldred 12, Wilcox 10, Higgins 9.

No. 1, 5 live birds, one barrel, entrance $3.50: Young and Andis 5 each, De Tar, Raney, Stevenson, McCully, Bennett, Dennison and Abercomble 4 each, Clary, Piety, Eldred, Dunmeyer, Mathews, Barber and Hendricks 3 each; Diebert, Eckley, Close, Dinsmore, Edwards, Grey, Everhart and Wilcox 2 each; Hershey and Elwell 1 each.

Friday, May 20.

No. 1, 25 singles, team shoot, two men of same club, entrance $6: Dinsmore and Everhardt 45. Allen and Young 42, De Tar and Andes 35, Elwell and Chandler 36, Jenkins and Barber 32.

The weather being very disagreeable the State programme was closed with this shoot.

Council Grove vs. McPherson.—The supply of birds not being exhausted and some of the boys being on their mettle, Messrs. Raney, Hershey, Elwell and Dennison, as the Council Grove boys, made a match with Messrs. Young, Eldred, Abercombie and Mathewson, as McPhersonites, and putting up $10 a side proceeded to shoot at 25 birds per man, resulting in a win for McPherson. RUSTIC

Novices at the Trap.

KANSAS CITY, June 4.—The Kansas City Stockyards Gun Club held its regular weekly shoot on Monday. The club was only recently organized and is composed largely of novices at the trap. They are game, however, and have changed their medal shoot from 15 single bluerocks to 25, and will soon commence shooting live birds. T. J. Gilliam won the trophy on 18. The score was as follows:

T J Gilliam	1101100110011001111111111—18
Col Gillett	1101001100010101000000001— 9

Eastern New York League.

BELOW will be found the story told by Horace B. Darby, in the Albany *Argus*, of the Decoration Day shoot of the Eastern New York League, held at Canajoharie:

The popularity of the Canajoharie Gun Club among the sportsmen of eastern New York was never better demonstrated than it was on Memorial Day, when the greatest gathering of gunners ever seen at an Eastern New York League tournament assembled in the early hours of the day at the shooting grounds on the immense stretch of river flat below the village. And what a dismal morning that was. Pouring rain, the ground so soaked that the footsteps of the men poached the sod into a fibrous mass of mud, and even the shelter of a big canvas tent failed to keep things dry under foot, and every movement brought a responsive "slop" from the spongy, water-soaked ground. Nothing daunted, however, by these depressing conditions the Canajoharie boys went on busily with the work of preparation, following implicitly the directions of the master spirit of the tournament field, Will H. Cruttenden, of Cazenovia.

Our Albany delegation was represented by. C. A. Stone, John B. Sanders, J. B. Hall, George E Knowles, George Langley and the *Argus* reporter, all of the West End Gun Club. At Fonda the Johnstown gunners boarded the train, the giants turning out well with Frank Northrup, Will F. Chapman, James D. Pierson, Col. James A. Banta, Alvin Walrath, Fred W. Partiss, Louis Bierbauer and William Potter. Arriving at Palatine Bridge we found covered conveyances in waiting to take to take us to the shooting grouud across the Mohawk. The Canajoharie leaders, Charlie Weeks, Dr. S. A. Wessels, T. C. Pegnim and C. W. Scharff were all on hand to extend the usual welcome; the veteran, Joseph L. Mosher, was in charge of the pulling levers, and Harry Bancroft was bustling about in a pair of wading boots. George Blowers was there in charge of the score book of the club and a pleasant companion is he at the scorer's table. Oscar Curtiss, of Flat Creek, was on deck, as usual, and ready to lend a helping hand wherever it was needed. The representatives of the Oneida County Sportsmen's Association attracted special attention with their fine armament and generally professional appearance. There were Henry L. Gates, Dr. J. G. Kilbourn, A. S. Hunter and Gustavus Decker. More of the Oneidas appeared later, when the third contest was called in the person of C. M. Felton and A. L. Fraser, of Waterville. Frankford presensed a good trio in W. H. Short, C. M. Rich and H. Steele. It was not until the beginning of the second contest that the Saratoga "Big 4" appeared, and the well-known H. M. Levengston, Jr., J. Nelson Ramsdill, W. A. Coster and W. H. Peters were accompanied by W. H. Gibbs and Will H. Pike. Still later Messrs. Armstrong and Nipe came down from Ilion, and E. J. Tressell, a one-armed marksman from Little Falls, brought all eyes upon him when he faced the firing points. Charles Fykes came from Fort Plain in time to take his place on the Canajoharie team, of which club he is a member.

The rain fell heavily when the shooting commenced, and continued to drench the earth for several hours, when the clouds broke away and the sun shone upon the steaming earth where the smoke of the guns hung so heavily that it gave the grass the appearance of being on fire.

Team match, open to teams of 4 men from any club, entrance $8 per team, the purse divided 50, 30 and 20 per cent. Conditions, 20 singles and 6 pairs of kingbirds. In this contest the special award of the four gold medals, presented by Cruttenden & Card, of Cazenovia, N. Y., was open only to teams from the Eastern New York League clubs. The scores are:

Oneida County Sportsmen's Association.

The Oneidas are not members of the Eastern New York League and they were not entered for the medals, so these superb trophies were awarded to the men making the best individual scores in the other four teams.

A purse of $20, divided $6, $5, $4. $3 and $2, was awarded to the contestants making the highest aggregate scores in all the programmed events, except the first 10-bird sweep and the team match. In the events to qualify for the special purse, a contestant had to shoot at 120 kingbirds. Of this number Levengston, Saratoga, scored 118 and won first money; Weeks, Canajoharie, and Gates, Utica, 112, divided second; Piersons, Johnstown, 111, won third; Hunter, Utica, and Peters, Saratoga, 110, divided fourth; Coster, Saratoga, 109, won fifth.

The following totals were made by the other contestants, who shot at 120 kingbirds for the awards of the special purse: Dr. Wessels, Canajoharie, 106; Walrath, Johnstown, Pike, Saratoga, and Bancroft, Canajoharie, 107; Sanders, Albany, 104, Stone and Hall, Albany, each 103; "McGinty," Saratoga, 102; Ramsdill, Saratoga, 101; Kilbourn, Utica, 97; Bierbauer and Chapman, Johnstown, each 96; Northrup, Johnstown, 95; Cruttenden, Cazenovia, 92; Pegnim, Canajoharie, 86; "Gee Kay," Albany, 84.

The Wilkesbarre Gun Club.

WILKESBARRE, Pa., June 5.—The following scores were made on the club grounds near the factory of the Wilkesbarre Gun Company yesterday. Blue rock targets were used and thrown from U. S. traps; the shooting was made as difficult as possible, the targets being thrown very fast.

First match, 25 single bluerocks, known angles:

Tom Eley	1000111101101101111111—18
Dr Beck	1110100100100001101100000—11
W K Park	0101110101111011111111111—20
Tom Podmore	0100011010110011001010000—11
W D Loomis	1010010100000001100000101— 9

Second match, 25 single bluerocks, expert rules:

Tom Eley	1111111111111010111220011—21
Dr Beck	1101100001111101101011110—16
W K Park	0111101111111011101001110—18
T Podmore	1100000001001010001001100— 8
W D Loomis	0101000011100101010000—10

Third match, 10 single bluerocks, known angles. The contestants being employees of the gun factory:

Snyder	7	Card	2
H Ferris	1	Reed	6
Woodhull	6	Tillman	7
		Arnold	7
		Cyclone	5
		Kid	5

In the first and second matches Eley and Park used Wilkesbarre guns, the others L. C. Smith and Ithacas hammerless.

W. BARRE.

A Close Team Shoot.

KANSAS CITY, Kan., June 4.—The match team shoot for the local championship between the Wyandotte Gun Club and the West Side Gun Club, Decoration Day, was one of the most exciting mud pie races ever shot at Chelsea Park. At the conclusion of the first squad's shoot the Wyandotte team was two birds behind. The second squad of the Wyandotte team succeeded in making a lead of four birds and won the shoot by a score of 189 to 187 out of a possible 250. James Rooney acted as referee and W. E. Stevens as scorer. Will Grueninger of the Wyandotte team made a clean score of twenty-five. Following are the individual scores:

Wyandotte.		West Side.	
J Grueninger	21	E Martin	14
W Arends	18	H Tincher	22
D McKenzie	18	Christenham	15
W Estep	17	T Joyce	20
D Portis	21	A Holquist	21
D W Mount	21	G Holquist	17
W Grueninger	25	J Coffee	21
C W Kerr	17	H Brown	16
D Mount	13	H Hanna	11
W Daish	18—189	J Bartlett	19—187

A return match will be made for an early date. WHITFIELD.

The Yale—Princeton Score.

Editor Forest and Stream:

We would like to ask your opinion on a question arising at a clay-pigeon match, shot at New Haven, Conn., May 21, between teams representing Yale, Harvard and Princeton.

The condttions were 5 men on a team and 30 birds per man. When the teams had completed their scores of 150 birds the scorer announced Yale and Princeton a tie on 104 and Harvard 98. To verify this statement a representative from both Yale and Princeton examined the score and confirmed it.

It was agreed to shoot off the tie by letting each man shoot at 3 birds. They did so, and Princeton won by a bird and was declared winner of the match by the umpire.

This decision was unquestioned and satisfactory to everybody. But on returning in the 'bus a Yale man who was examining the score, claimed a mistake, saying that he should have been credited with 23 breaks instead of 22. The Yale team immediately took this up, claimed that they had won the match by the score of 105 to 104, and that the shoot-off counted for nothing.

Princeton refused to accede this point and was maintained by Harvard. (Princeton does not admit that there was a mistake in the score.

Will you kindly give your opinion on this matter and oblige

PRINCETON COLLEGE GUN CLUB

[The agreed facts in this issue make it plain that the existence of a tie was acknowledged by both contestants after free access to the scores and that the decision of the umpire that a tie existed was not appealed from nor protested against at the time of its announcement. This makes the tie shoot the deciding sequel of the match and the decision of the tie was the decision of the match in its entirety. This makes Princeton the winner and so FOREST AND STREAM decides. The case is an exceptional one in many respects. Shooters generally keep close tally of what they are doing and umpires are supposed to verify scores; a miscall of a total would meet with a prompt contradiction. When no such protesting correction is heard the inference is that the announcement as made is correct, and when the event has passed on into its next stage, and particularly when a conclusion has been reached in that next stage, as in this instance, where the error claim was made in the homeward bound 'bus, the record has been completed and it is too late for readjustment. The rules on protests in games generally, and particularly in pigeon trap events, are emphatic in calling for protests to be made at once. When no protest is heard the general rule that silence gives consent is regarded as holding.

Had there been any fraud in the matter, any endeavor on the part of Princeton knowingly to impose a false total on their opponents, the record would have been vitiated by fraud and thereby rendered void. No such suggestion is understood as made in this case. It was a blunder on the part of both teams, a blunder for which Yale suffers, and for which she can place the blame nowhere but on her own shoulders. Assuming that the error actually and innocently existed, the victory of Princeton can only be regarded as a technical one, a victory under an interpretation of well-established and wise rules. It would be a gracious act on the part of the winners of such a match to waive their rights as victors by rule and re-enter the field as contestants in a re-shoot of the entire match from the start. The shadow of doubt as to the scores clouds the victory, and without waiving their present right in the matter a proper and sportsmanlike offer on the part of Princeton would be to shoot the match entirely over.]

THE CLOISTER, New Haven, Conn.—*Editor Forest and Stream:* Inclosed you will find a slip cut from the New Haven *Register*, Sunday morning, which has an *exact* account of the shoot between Yale, Harvard and Princeton on Saturday. You will see through a slight mistake made by the scorer, in counting up the dead birds of Farwell on our team he declared a tie. In the shoot-off Princeton won by one bird; but before leaving the grounds the mistake in the first score was discovered, and we claim the victory, having made a total of 105 birds to Princeton's 104. Will you please pass judgment on the shoot?

PHELPS B. HOYT, Captain Y. U. S. C.

The *Register* report inclosed by Capt. Hoyt is as follows respecting the point in question: "At the conclusion of the match the solitary scorer attempted to foot up accounts. He announced the result as Yale 105, Princeton 104 and Harvard 98. Yale proposed that each member of the two teams shoot at 3 pigeons to decide the tie. Princeton assented and the shooting began again. The second match was as close as the first, and at the close Princeton was found to have broken 12 birds to Yale's 11. The New Jersey marksmen were jubilant, and all hands clambered into the barge to return to the city. On the way some of the Yale team examined the official score and discovered that the final record of Farwell, of the Yale team, had been incorrectly added up, and that he was entitled to 23 instead of 22 pigeons. This made Yale's total in the first match 105 and gave her a lead over both the other clubs. Capt. Hoyt, of Yale, claimed the match, but Capt. Clay, of Princeton, refused to listen to the proposition for an instant, asserting that because Yale had abandoned all claim to the championship on a basis of the first record by competing a second time. Yale proposed to refer the matter to the FOREST AND STREAM to arbitrate, but Princeton said the match belonged to her unconditionally and unquestionably. Yale drew up a telegram to FOREST AND STREAM and submitted it to the Harvard man for approval. They unanimously agreed that the wording was equitable to both Yale and Princeton, but Princeton refused to be a party to any further attempt to settle the affair. The Yale men felt that as they were acting the part of the host to the Harvard and Princeton visiting clubs, they could press the matter no further with propriety. They will, however, consult the leading sporting authorities on the subject later on, and in case a favorable decision is rendered will claim the Intercollegiate Gun Club championship, which has been won for the past two years by the crack teams captained by R. K. Farwell, Yale, '92. Like the contestants, the scorer labored under the disadvantage of a blinding rain, and his little inaccuracy is therefore excusable. No trophy was at stake or Yale would order an investigation by an intercollegiate committee. As the case stands she feels that the unanimous popular sentiment will accord her a moral as well as a numerical victory. That the Harvard men sympathize with Yale is shown by the fact that several of them voluntarily paid bets which they had made against Yale on the result and which, in the advent of a tie, they were in no wise bound to settle."

The Advantages of Five Traps.

CLEVELAND, O., June 3.—*Editor Forest and Stream:* In the last year there has been a growing tendency on the part of some clubs in giving tournaments to use one set of ten traps and shoot in squads of eleven men instead of five traps and squad of six men, using the rapid-fire system of shooting.

The only possible idea for adopting this system is the erroneous one that more targets can be thrown in a day than from a set of five traps, as it is more cumbersome to handle and much more expensive on account of having to have ten traps and trappers and requiring a great deal more expense and work in fitting up the grounds. In hot or rainy weather it is very disagreeable to stand in line while eleven men shoot their scores in a 20 or 25 bird race. It is a difficult matter to handle squads of elven men and get them to the score promptly and in their proper positions. A great many balks are caused by the shooters being at times so far from the puller that he does not hear them call "Pull," and every balk from any cause keeps the entire eleven men waiting.

With one set of five traps in use only five trappers are needed, and no extra expense need to be gone to in fitting up grounds, as the regular club traps can be used and the squads of six men can be easily handled, and squad can follow squad with hardly any delay between them by providing seats back of the score and having the "squad hustler" get the next squad in these seats, with guns and cartridges ready to step to the score as soon as the first squad has finished shooting.

By getting the squads promptly to the score from six to seven thousand bluerocks can be thrown a day from one set of five traps with but little confusion or trouble, even when the unknown-angle system of handicapping is used, which causes some little extra delay.

The one set of ten-traps system has been used at all the Manufacturers' and Dealers' Association tournaments, and Mr. John Parker, who has managed most of the tournaments, informs me that they have never thrown over 5,000 targets at any of these shoots in a day, while at the recent tournaments given by the Capital City Gun Club, of Washington, and the Knoxville Gun Club, of Knoxville, Tenn., over 6,000 bluerocks were thrown on some days from one set of five traps.

In fact I believe if clubs will confine themselves to one set of five traps and run that set properly they can throw as many targets as a crowd of fifty or sixty shooters care to shoot at, and it is seldom you will see that many shooters at a tournament, and have much less trouble and expense than when using one set of ten or two sets of five traps. At the Ohio State League Shoot two sets of five traps were used and the shoot was well managed and still they only threw about 18,000 bluerocks in three days, while at Knoxville over 17,000 were thrown from one set in three days with half of the expense and trouble. At Columbus, however, more targets would have been thrown had it not been the State Championship event was shot from three traps one man up but hardly enough more to pay for the extra bother of running the two sets.

Trusting the above may be the means of saving some club a great deal of expense I remain, yours respectfully.

PAUL NORTH.

The New U. M. C. Shells.

PHILADELPHIA.—*Editor Forest and Stream:* The Union Metallic Cartridge Co., of Bridgeport, Conn., with their usual enterprise in meeting the wants of the shooting fraternity, have placed on the market a new nitro powder shell, the "Smokeless," of moderate cost, in which is retained the good features of the New Club and the "Trap" shell. This new comer is pink in color in the concave base, subjected to a heavy pressure and is fitted with a separate cap pocket and No. 3 cap, or in other words the battery cap. That this principle of ignition adopted by European makers, and in use by them for many years, is superior to the flat or cone-shaped base is, I think, beyond dispute, and especially so if Schultze or E. C. powder is to be used. These shells are a grade between the new club and the trap quality and for the standard charge of 42 grains of Schultze, E. C. or "12 Trap" or 40 grains of "S. S." and 1⅛oz. shot they will be found to be quite equal to the Trap shell. If, however, excessive charges are to be used, such as gave Mr. Fulford a decided set back in his race with Mr. Budd, the metal-lined or reinforced trap shell is preferable. The fulminate powder in these No. 3 caps was the proper affinity for the ingredients of which nitro powders are made and is the result of long and intelligent experiment and is fully up to the best make in England or elsewhere.

Sportsmen must surely appreciate the efforts of the U. M. C. Co., or more properly speaking, of Mr. A. J. Hobbs, the general manager, to offer them a shell at reasonable cost that, with standard charges of nitro-powder, is quite the equal of the Eley or Kynoch, and if successive charges are to be used a metal re-inforced shell that will stand the racket.

The expense attached to a change of construction in a matter of this kind is very heavy, and is easier said than done. Business, however, is business, and this company will be found at the fore and can be relied upon to stay in the swim for all there is in it, and meeting the requirements of sportsmen from time to time as the circumstances of the case may demand. PINK EDGE.

The Ansonia Gun Club.

ANSONIA, Conn., June 3.—The monthly badge shoot of the Ansonia Gun Club took place to-day, the conditions being 25 targets per man, A. S. A. rules to govern. The scores follow:

Gardiner	1101000001000100000110001 — 9

Shooting at Maple Bay.

SYRACUSE, N. Y., May 31.—Maple Bay was the scene of some lively shooting yesterday, visitors being present from Auburn, Rochester, Lyons, Homer, Cortland, Canastota and Utica. All the events were impromptu ones and the scores were well up to the average. The opening contest was a 50-target match between Ayling and Kellogg, Ayling winning by a score of 44 to 38. The other events are summarized below, the conditions being as follows: Nos. 1, 2, 4, 6, 8, 10, 11 and 12 at 10 singles; Nos. 3, 5 and 9 at 15 singles; No. 7, at 20 singles. Nos. 2, 4, 6 and 8 were at known angles, all the others being shot at expert rules:

Sport at Blauveltville.

BLAUVELTVILLE, N. Y., May 31.—Some lively sport was enjoyed here yesterday, both artificial targets and live birds being used. The following is a summary of the scores in the target events at ten targets each:

Bogart	7	8	7	9	9	7	5	7	7	7	6	8	8	7	..
Moore	10	9	9	8	10	8	8	9	8	7	6	8	7	7	8
Schortmeier	7	10	8	10	7	9	9	9	8	9	6	5	6	6	10
Creighton	7	5	6	7	..	..	..	..	..	..	..	..	..	..	..
Simpson	6	7	8	9	8	7	7	7	10	9	8	8	8	10	7
Sandy	3	5	6	5	..	..	..	..	..	..	..	..	..	..	..
Allen	5	7	6	9	6	7	6	9	8	6	..	..	..	..	..
Potter	7	3	2	..	8	9	..	..	..	..	..	..	..	..	..
Churchill	5	..	..	..	..	..	..	..	..	..	..	..	..	..	..
Master John	..	5	2	..	..	..	..	..	..	..	..	..	..	..	..
Moeller	..	..	..	..	5	4	..	4	..	..	..	..	..	..	..
Duryea	..	..	..	..	4	4	1	6	..	..	..	..	..	..	..
Fogarty	..	..	..	..	..	7	5	5	8	4	..	..	..	..	..

In an event at 25 targets Schortmeier broke 22, Moore 19, Simpson 17, Bogart 17, Allen 16, Creighton 14, Fogarty 14, Moeller 11, Duryea 9.

At 8 live birds, $3 entry:

Schortmeier	211111—6	221221—6	Creighton ....222111—5 .....
Allen	120212—5	111111—6	Simpson ....1o1111—5 o21011—4
Sandy	011112—5	12oo2—4	Moore ....111202—5 002111—4
Moeller	..2o111—3	010010—2	

Then came a miss and out, the pot being won by Simpson on the fourth round. Schortmeier dropped out on the fourth round, Moeller on the third, Allen, Moore and Sandy on the fourth.

The Schuylkill County Tournament.

TAMAQUA, Pa., June 4.—The tournament of the Schuylkill County Shooting Association, which began on Wednesday and closed last night, was a very successful affair, considering that this is practically a new section for the sport. The rapid-firing system was a revelation to the natives and drew a big crowd of spectators, among whom were included many ladies. The first two days were devoted in the main to powdering bluerock targets. Live birds were the only things used yesterday.

A good number of visitors were present, including John F. Wieler, president of the association, of Allentown; J. H. Millspaugh, of Williamsport; H. W. Matz, president of the Reading Shooting Association; Wm. R. Hobart, M. F. Lindsley and Mrs. Lindsley, of New York; W. McMillan, Mahanoy City; Dr. Schwartz, of Lebanon; W. R. Fisher and Eddy Collins, of West Hoboken, N. J.; Harry Thurman, of Germantown, Pa., who looks after the trap interests of the Philadelphia *Item*, and who knows the record of every shooter on earth, and Wm. R. Fieles, of Christiana, Pa.

On the second day there was a contest at 8 live birds for a 300lb. bear, which was finally won by Billy Fieles, who will if he keeps on his present winning streak have curiosities enough to stock a show. The shooting from start to finish was fully up to the average. During the shoot the United States Hotel, kept by R. T. Clayton, secretary of the Shooting Association, was headquarters for the party. Below is given a summary of the scores made in the target events and the detailed scores of the live bird events. All the target events were shot under the rapid-firing system, the entries being $1 for 10 targets, $1.50 for 15 targets, 50 cents for 5 targets. Event No. 1 was at 7 targets, No. 2 at 10, No. 3 at 15, No. 4 at 5, No. 5 at 20 ($2 entry), No. 6 at 7, No. 7 at 10, No. 8 at 7, No. 9 at 15, and No. 10 at 10.

The First Day.

The Final Day's Sport.

This was the big day of the week, the live bird events drawing a fair-sized list of entries. The birds, about 1,200 of which were on hand, were a good lot, some being superior flyers.

The events were as follows: No. 1, 3 birds, $2 entry, 2 moneys. No. 2, 5 birds, $4 entry, 3 moneys. No. 3, 7 birds, $6 entry, 4 moneys. No. 4, 4 birds, $3 entry, 3 moneys. No. 5, 10 birds, $8 entry, 4 moneys. No. 6, 3 birds, $2 entry, 2 moneys.

Winchester Gun Association.

WINCHESTER, Va., May 25.—The dates for our club's second annual meeting has been fixed for June 21, 22, and 23. Ask members of the Capital City Gun Club, of Washington, D. C., what kind of a shoot we boys have. Last year with only ten days' notice we had over fifty shooters. C. F. NELSON, Pres. W. G. A.

The Trap at Fort Wayne.

FORT WAYNE, Ind., May 31.—The following scores were made in a match at 25 pigeons each, 30 and 32yds. rise, 80yds. boundary, shot here yesterday: Zeher 15, Miller 15, Brown 10, Tait 18, Eaker 17, Boher 11, Simons 19, Harry 17. Eaker and Boher used 10-bore guns at 32yds., the others 12-bores at 30yds.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. R. R., Slater, Mo.—We do not know where sparrows can be procured.

O. W. M., Manistee.—Yes, you may submit more than one photograph in the FOREST AND STREAM'S Amateur Photography Competition.

WOODCHUCK, Philadelphia, N. Y.—I killed a fish-hawk 5ft. 5in. across the wings. Was this an unusually large hawk or an ordinary-sized bird? Ans. A good-sized bird.

BRONX RIVER G. C.—The two men shoot-off were interested in the first prize only and the loser of the shoot-off is "in the cold." The second medal goes to the man who made second score in the regular contest.

J. D. B.—Woodcock open season in New Jersey is during month of July and between Sept. 30 and Dec. 16. The company has a special shell for nitro powders. The manufacturers furnish information as to the right loads with their powder.

M. C. L., Bethlehem, Pa.—Can you inform me where I can buy crappie spawn or fry? I would like the most Eastern point where they can be had. Ans. You can probably get young or adult fish through the aid of Mr. Geo. W. Littleton, Sandusky, Ohio. The Pennsylvania Fish Commission distributes them. Address Mr. W. L. Powell, Harrisburg, Pa.

C. M. F., Buffalo, N. Y.—A little bird caught in this city was about the size of a sparrow, but the bill and claws were a little longer. The wings were black and white, breast orange and belly white. You would kindly oblige me by telling me the name of this bird. Ans. Impossible to identify the bird from such a meagre description. The specimen should have been sent here.

R. T. M., New York.—How much lime will be required for killing the dace (red fins) in a stream one mile long and of an average depth of 6in., and an average width of 5ft.? The stream was a noted trout stream fifty years ago. There are now no trout left, but the stream swarms with red fins. I would like to kill them all and then in the following year stock the stream with trout. Ans. The quantity can only be ascertained by trial. If the red fins are scattered everywhere it must be introduced in many places. The effect can soon be observed and the amount determined accordingly.

C. S. R. AND C. L. E., Fairhaven, Wash.—In your May 2 number we notice your very favorable comment on deep net-fishing recently put in practice along the coast of North Carolina. Will you kindly inform us of how and by what means this is done and put us in communication with some one like Mr. Charles Hallock who may be able to detail to us the method. Our waters here seem especially favorable for such fishing. Ans. Mr. Hallock is at present in Manitoba, but if you will address J. J. Wolfenden, care of Watson & Daniells, Newbern. N. C., you will certainly get full information. Parties in San Diego, Cal., also engaged in deep sea fishing with incandescent electric lights. See FOREST AND STREAM, March 24, 1892.

J. A. H., New Haven, Conn.—We have about ten acres, with brook running through it, surrounded by woods, springy ground. The whole tract can be flooded. Would this be a good place for black bass? What other fish will live with them? What depth of water would it need for them to live in, and where can they be obtained, and the probable cost? Ans. If you can get sufficient depth in places, say of 10 or 12ft., small-mouthed bass should do well, provided the water is stocked with minnows for their food. Where it is possible to build ponds for rearing bass of different sizes this should be done. Crappie, rock bass and goggle-eyes will live in the same waters with bass. Address S. F. Denton, Wellesley, Mass., who may be able to supply the fish and at a reasonable price.

F. M. S., Potsdam, N. Y.—On May 10 I caught a fish in Rackett River, at a point about thirty miles from the St. Lawrence, that has the mouth and nose of a sturgeon, the head, body, scales, white tip on the under side of the tail like the wall-eyed pike. The back is a dark grayish brown; along the side of the fish is a band of red, about 1in. wide, from the eye to the tail; below and parallel to the band of red is a narrow band of dark gray running from the nose to the tail; the under parts and belly are silver white. The specimen that I have is the first and only one that was ever taken here; one was taken at Ogdensburg, about thirty miles from here, about the same time. Will you be so kind as to tell me the name and the class to which it belongs? Ans. From your description we think the fish is a sucker in breeding colors. If you will trace the outline on a piece of paper we can tell with greater certainty what you have. Let the outline show the number and position of the fins.

G. P. F., New Orleans.—1. Is the green trout of our southern waters the same as the large-mouthed black bass? 2. Are the movements of the bass affected by the nature of the streams he inhabits? Ans.—1. These are two names for the same fish. The large-mouthed bass is widely distributed and has many common names, among them the following: Oswego bass, jumper, moss bass, trout, chub and Welshman. Various other names are applied to one or both of the black basses, but we cannot tell with certainty to which one they may properly be referred. 2. The movements of the bass are seriously affected by the nature of the stream they inhabit. The large mouthed-species is especially noted for its migratory instincts. It swims in large schools and is often taken in great numbers by reason of this habit. Its movements are governed chiefly by the movements of the small fish and other animals upon which it feeds, and particularly by pollution of waters, on which account it has been known to leave certain parts of rivers altogether.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

Any person who cannot find the "Forest and Stream" for sale at any news stand in the country, is requested to report the fact, with location of stand and name of dealer, to the Forest and Stream Pub. Co., 318 Broadway, New York.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen The Editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

THE ART OF SHOOTING.

An Illustrated Treatise on the Art of Shooting, with extracts from the best authorities.

BY CHARLES LANCASTER.

London, 1891. Price $3.00.

AUTHOR'S PREFACE.

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz.: the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

Wants and Exchanges.

Advertisements under this head, strictly limited to WANTS AND EXCHANGES, will be inserted at the special rate of three cents a word each insertion. The money must accompany the order.

BEAUTIFUL BIRD PICTURES.

I have several plates of Audubon's Birds which I will sell cheap. These are the edition of 1856, on heavy paper, and give the birds the size of life and in their natural colors. Among the species represented are: White-headed eagle, price $12; duckhawk, $10; pine grosbeak, $7; kingbird, $4; wood wren, $4; black duck, $12; and some others. These when framed would make superb ornaments for a sportsman's dining room. Address J. J. A., FOREST AND STREAM office.

A FEW MORE MEMBERS WANTED IN the Lake Mount Basha Club Club house completely furnished. Dues $5 per year; no entrance fee. DR. MICHAELIS, 82 E. 4th st., N. Y.

PEDIGREE BLANKS, 6 GENERATIONS, 10 cents dozen. EBERHART PUG KENNELS, Cincinnati.

Scientific Education of Dogs FOR THE GUN.

A new work by an English writer, "H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

Price $2.50, postpaid, by the

THE NEW YORK ASSOCIATION.

IT WAS pointed out in these columns last week that the Syracuse convention of the New York State Association for the Protection of Fish and Game would afford to the members of that body a magnificent opportunity for effecting a more adequate organization for game and fish protection and for dedicating the Association anew to the purposes for which it was founded; and it is an occasion of sincere satisfaction now to record that the opportunity thus presented has been improved, and improved with a heartiness and earnestness which are full of promise for the future. No one, who was present in the convention hall last Monday night and witnessed the close attention with which the report of the committee was received and the sincerity of the indorsement with which the new constitution and plan of organization were adopted, could have mistaken the sentiment which animated the delegates. The event has demonstrated that the Association contains within itself the material for carrying into effect the purposes implied in its title; and the readiness with which the overtures of the committee were received has amply justified their faith in the inherent possibilities of the Association if only those possibilities should be given freedom of expression and development.

The problem with which the committee found themselves face to face was not slight nor easy of solution. Here was an organization, fish and game protective in name, but in empty name only; and given in practice year after year to sport at the trap only. The task was to convert this organization into a protective body once more, but without disrupting the Association, without alienating the support and co-operation of those now in its control, and without abridging in the smallest measure the interests and privileges of the trap-shooters. It was a problem which required careful thought and extended consideration for its successful solution. How adequately the plan finally submitted by the committee and adopted by the Association shall prove to have attained this desired end, time and the test of experience alone can determine. In their scheme the committee have the utmost confidence; and of the details of the plan as set forth in the report printed on another page, careful and critical consideration is invited.

The FOREST AND STREAM has not hesitated in years gone by to call the Association sharply to account for maintaining the empty professions of its name, while utterly neglecting any practical devotion to fish and game protection. The opinion here expressed has been sincere; and has echoed the conviction of most earnest sportsmen of the State. Not less sincere is the congratulation we now extend to the New York State Association for the Protection of Fish and Game on the action taken by it last Monday night; and not less sincere than their past censure, we feel assured, will be the approval, support and co-operation accorded to the Association by those who have hitherto held aloof from it.

The adoption of the new constitution is a public declaration that the Association will be henceforth an active, potent force in fish, game and forest protection in the State. That this declaration does not involve in any degree an encroachment upon the interests of those who participate in the annual "State shoot" gives all the more cause for satisfaction.

A NATIONAL SALMON PARK.

UNDER this title Mr. Livingston Stone has ably presented the need of taking prompt steps for the preservation of the Pacific salmon and trout by declaring a part of the Government reservation in Alaska closed against fishery and other occupations which involve the extermination of the fish of the salmon family. He sketches the rapid decline of the salmon streams of California through the destructive march of improvements and shows that the steadily increasing demand for canned salmon will surely lead to the capture of the last fish unless measures are at once taken to prevent this extermination.

The plan of setting apart Afognak for the purpose indicated seems to us entirely feasible, and especially so since the canneries located on the island, when in operation, depend for their supply upon the salmon in Karluk Bay. This bay is not, as Mr. Stone apparently believes, the collecting ground of salmon which ascend the Karluk only, but here the great schools of fish coming in from sea remain for a short time prior to their distribution in numerous rivers of the Peninsula and Cook's Inlet. The run into the Karluk is small compared with the masses of salmon that crowd into the bay near the mouth of the river.

The subject treated by Mr. Stone is a very important one, and its consideration cannot safely be deferred even for a few years, unless we are willing to assume the task of restoring depleted waters and meantime feed the natives whose very existence is threatened by cutting off their principal food supply.

OLD ACQUAINTANCES.—I.

CHANCING to pass a besmirched April snowbank on the border of a hollow, you see it marked with the footprints of an old acquaintance of whom you have not for months seen even so much as this.

It is not because he made an autumnal pilgrimage, slowly following the swift birds and the retreating sun, that you had no knowledge of him, but for his home-keeping, closer than a hermit's seclusion.

These few cautious steps, venturing but half way from his door to the tawny naked grass that is daily edging near to his threshold, are the first he has taken abroad since the last bright lingering leaf fluttered down in the Indian summer haze.

He had seen all the best of the year, the blooming of the first flowers, the springing of the grass and its growth, the gathering of the harvests and the ripening of fruits, the gorgeousness of autumn melting into sombre gray. He had heard all the glad songs of all the birds and their sad notes of farewell to their summer home, the first and last droning of the bumblebee among the earliest and latest of his own clover blossoms.

All the best the world had to give in the round of her seasons, luxuriant growth to feed upon, warm sunshine to bask in, he had enjoyed; of her worst he would have none.

So he bade farewell to the gathering desolation of the tawny fields and crept in to her warm heart to sleep through the long night of winter till the morning of spring. Then the wild scurry of wind-tossed leaves swept above him unheard and the pitiless beat of autumnal rain and the raging of winter storms that heaped the drifts deeper and deeper over his forsaken door.

The bitterness of cold that made the furred fox and the muffled owl shiver, never touched him, in his warm nest. So he shirked the hardships of winter without the toil of a journey in pursuit of summer, while the starved fox prowled in the desolate woods and barren fields and the squirrel delved in the snow for his meagre fare.

By and by the etherial but potent spirit of spring stole in where the frost-elves could not enter, and awakening the earth, awakened him. Not by a slow and often impeded invasion of the senses, but as by the sudden opening of a door, he sees the naked earth again warming herself in the sun, and hears running water and singing birds. No wonder that with such surprise the querulous tremolo of his whistle is sharply mingled with these softer voices.

Day by day as he sees the sun-loved banks blushing greener, he ventures further forth to visit neighbors or watch his clover or dig a new home in a more favored bank or fortify himself in some rocky stronghold, where boys and dogs may not enter. Now, the family may be seen moving with no burden of furniture or provision, but only the mother with her gray cubs, carried as a cat carries her kittens, one by one to the new home among the fresher clover.

On the mound of newly digged earth before it, is that erect, motionless, gray and russet form, a half decayed stump uprising where no tree has grown within your memory? You move a little nearer to inspect the strange anomaly, and lo it vanishes, and you know it was your old acquaintance, the woodchuck, standing guard at his door and overlooking his green and blossoming domain.

Are you not sorry, to-day at least, to hear the boys and the dog besieging him in his burrow or in the old stone wall wherein he has taken sanctuary? Surely, the first beautiful days of his open-air life should not be made so miserable that he would wish himself asleep again in the safety and darkness of winter. But you remember that you were once a boy and your sympathies are divided between the young savages and their intended prey, which after all is likelier than not to escape.

He will tangle the meadow grass and make free with the bean patch if he chances upon it, yet you are glad to see the woodchuck, rejoicing like yourself in the advent of spring.

THE PHOTOGRAPHIC COMPETITION.

THE great interest taken by the public in the FOREST AND STREAM'S photographic competition is very gratifying. Already a goodly number of pictures have been submitted, and many more are promised during the year. It may safely be predicted that the amateur photograph crop for 1892 will be the largest ever gathered, that the subjects chosen will be more interesting than ever, and the pictures taken will be better from an artistic as well as from a mechanical point of view than ever before.

The number and character of the views sent to this office since the competition was announced justifies this conclusion. Besides the photographs of strange and unusual scenes, of which there are a number, there are also bits of scenery which are familiar to every one who is much out of doors. Such a picture is one of an ornithologist, well known to all the readers of FOREST AND STREAM, who is examining the nest of a red-eyed vireo found during a winter's walk in the woods. The naked tree trunks rise from the expanse of white snow, the delicate tracery of the undergrowth shows against the white, and the central figure of the man is bent over examining the old nest. Four pictures taken while a man is quail shooting will quicken the sportsman's heart. They show the dog working ahead of the gun, the point, the moment when the shooter is passing the dog to start the birds, and the shot at one of the bevy. An equally happy picture is one showing the reedy margin of a river bank. A wild duck has just risen from the water and a fair Diana is in the act of bringing her gun to bear on it. At her feet stands a retriever watching with pricked ears the bird, alert if the shot is successful to bring the game.

There are many pictures of camp scenes, the tents standing amid the trees and horses feeding near, or boats lying on the shore. Other views show travelers among the mountains, pack trains on the march, boats and canoes under sail. Of pictures devoted entirely to scenery there are many, and some of them very beautiful. Ragged mountain peaks, deep, narrow gorges, pine-dotted hillsides, far-stretching prairies and wonderful glaciers, all have their place among the views already submitted. Of pictures of living game there are as yet not very many, but we are told of a number which are to come. A beautiful portrait of a mule deer fawn which has been received deserves especial mention.

The time is at hand when many of our readers are starting off on their summer trips, and it is worth their while to make especial efforts to bring back with them a series of photographs which shall be worthy a place in this competition. The little time and effort required for this will be amply repaid by the satisfaction which the pictures will give, and this satisfaction will be a permanent one, since for years the pictures will give pleasure, recalling delightful memories of happy days.

The Kentucky fish bill has passed the Senate and strong hopes are entertained that it will go through the House. The local club is giving it all possible support.

The Sportsman Tourist.

"SPORT" IN FRANCE.—I.

IF I were a Frenchman and were to write an article on sport in France as Frenchmen look at if, I fear that either you would not publish it, or else you would soon be in hot water with the Social-purity Society of New York.

As a matter of fact the Latin races are not endowed with the sporting instinct, it is the Teutonic blood that bears with it the love of field sports. I came across a curious illustration of this quite recently. The French authorities, becoming alarmed at the continued deterioration of the national physique, sent a committee of inquiry to England to look into the school and nursery systems. The committee reported that the fine physique of the English was due to the ardent devotion of the growing boys to field sports, especially football. A supply of footballs was thereupon distributed among the schools, and it was solemnly enacted that all the boys should be obliged to play football for one hour per day. Those who see it say it is a ludicrously sad spectacle when the unhappy boys are marshalled and "crawl snail-like unwillingly" *to play;* and play, truly for they must, but watch the clock and gladly escape the moment the hour is struck. There is nothing more significant than the fact that all sporting terms here are borrowed from the English, *e. g.*, "jockey," "club," "bulldog," "steeplechase," "cross-country," "tennis," "cricket," "trot," and the word "sport" itself.

The taste that in one phase of its development leads to a pursuit of sport and in another or natural science is so far exotic of this country that while the French are leaders in all mathematical, chemical, mechanical, engineering and philological sciences, they have to look to Germany, America, England, etc., for investigations in geology, zoology or kindred pursuits.

Nothing shows the state of popular taste more than the books it is supplied with. In America and England, first class text books, right up to date, are the fodder of the classes, for the most part, but the books one sometimes meets with here are so extraordinary that it is best to suppose they are not seriously meant.

On picking up a popular work of adventure that I saw on a book stall one day, I was regaled with something which very freely translated was about as follows: "But though mounted on his swift little steed, Jacques was not yet safe. Suddenly the horse was dashed to the ground and his rider was projected into the bushes. They had fallen on one of the cables of the gigantic tropic spider of Senegal. The horse's neck was broken, and Jacques hastened on afoot. Within ten minutes he heard a strange swelling sound behind him. What was it? Instantly he grasped the situation. There could be no mistaking that blood-curdling chorus of roars rapidly approaching. He was pursued by a pack of tigers. But Jacques was swift of foot as he was stout of heart, and setting off at full speed he soon left his terrible pursuers far behind. At length he saw a path, and on following it he came to a great fortress. Never doubting that he would be hospitably received he made for the door. But alas! it was filled with villainous treacherous Englishmen: cowards! dastards! Scarcely had he appeared, when a hundred muskets were leveled at his breast. Quickly he gathered about him the supple folds of his rhinoceros hide mantle, and none too soon, for a perfect hail of lead rattled upon its impervious folds, and fell broken and harmless at his feet. Turning with a yell of scorn he dashed again into the jungle, preferring to face the savage brutes to the yet more savage and brutal English. But soon in the tropical darkness which had set in he saw a large space illumined as by an electric light. What was it? It was the light from a panther's eyes. In another instant the ferocious monster was upon him. With all his force he brought down his heavy axe on the creature's skull. But the impervious bristling hair and the flinty hardness of the skin caused the keen weapon to glance aside as from a wall of adamant, and before he could recover himself the rapacious monster with one stroke of its immensely powerful tail laid him mangled and bleeding on the ground," etc.

Another book which I picked up at one of the innumerable book stalls on the Quai, is perhaps more fairly to be taken as a gauge of French sport. This work, now before me, is called the "Hunter's Note Book," and the first thing about it that strikes one is a blank game record, with columns for everything, from wild baar downward, for every day in the year. One column marked simply "Divers" is understood to be for thrushes, sparrows and warblers. There is a chapter devoted to the game laws, and the first notable thing about it is the last section. The book is dated 1886, and the laws given are supposed to be now in force, and yet this last section runs thus:

"The decree of the 4th May, 1812, and the law of the 30th April, 1790, are abrogated. . . . Given at the Palace of the Tuileries, the 3d day of May, 1841.—LOUIS PHILIPPE I."

There's a paralyzer for our game legislators—two alterations in a century. The French Legislature must surely have something else on which they put in their time tinkering, as perhaps they care nothing about game laws good or bad.

Another item of interest is that no shooting or hunting is allowed when the ground is covered with snow. Throughout the book itself one is impressed with the notion that Venus rather than Diana is the Goddess of the Chasseur Français. One of the first pictures in it is called "A Happy Meeting," and represents, not a fortunate chance at big game, but a lovely maiden taking an ankle bath in a brook, just as a gunner in all the toggery of the dude sportsman bursts on the scene. One cannot look at even the picture of "An Evening in Springtime," which represents a group of rabbits at play, without noticing that the real subject is a distant "spooning" couple, in black relief against the rising moon.

A large proportion of the illustrations of this sporting book bear such purely sporting titles as "Wolf! Wolf!" "A Lesson in Shooting," and represent episodes in love-making, without any connection with what we should call sport excepting that the hero wears leggins and carries a gun.

Talking about national victories, and before we leave the boulevards I wish you to conjure up in your mind the latter with all their thronging gaiety, and remember that these make Paris, indeed are Paris. I wish you to take in well this lively scene of life *al fresco,* and to realize that the whole thing would be impossible but for the trees, and finally that those species are all of an American species. The *Platanus occidentalis* is the father of the French boulevards. Its wonderful trick of casting its overcoat each spring when it is soiled and dirty gives it a power of withstanding the inevitable fumes of the city, while other trees are slowly poisoned or are simply choked by the dirt on their bark, and fade away. The European plane has the same habit, but in a less degree, it seems, for, as one of the professors of the Jardin des Plantes told me, the American tree is the one alone that thrives perfectly in the city, and it is the real father of the famous boulevards.

Again, kind reader, I wish you to stand where I stood last October on the margin of the famous Forest of Fontainebleau, and watch the loveliest autumn scene I ever saw. It was a gorgeously colored landscape—so beautiful that I was forced to admit that I had never seen finer autumnal tints in America. Not quite so loud, perhaps, as in the New World, but more exquisite in harmony, I thought, as indeed we always think about the last seen of such effects. Softly blended purples, grays and blues were shot with gold and shaded with green and brown in a manner of marvellous delicacy. But the focal point of the whole panorama was a blaze of scarlet and crimson that enveloped a little chateau and gave the final touch, the real force to the whole scene. At length I drew nearer to understand this burning bush that was not consumed—and lo and behold! the crowning glory of this European landscape was a great, straggling, imported American Virginia creeper.

One word in conclusion, as the preachers say. I was in an office while a Frenchman used the telephone. He rung, and his challenge word was—what do you suppose? It was "Hello!" much incrusted with French accent truly, but still unquestionably "hello." "Where did you get that word?" I exclaimed; "it is not French, is it?" "No!" he replied, "it came here with the telephone. I hear them say it is American." ERNEST E. THOMPSON.

PARIS, 1892.

MINNESOTA BASS WATERS.

PROMISING in my last communication to FOREST AND STREAM an account of a fishing excursion to the wilds of Minnesota, I had let the matter entirely escape my memory until I discovered a photograph of some bass taken on one of my "up country" trips, and was thus reminded of my promise.

Having told many stories to friends here about the boss fishing I had enjoyed in Aitkin county in past years and being accused just as often of being a fish liar of no mean ability, I determined to take a party with me on my next trip, and by announcing a date some weeks ahead, had no trouble to make up the party. We proceeded from here to Aitkin, and after sundry preparations in which we were ably seconded by the hospitable citizens, we were enabled to get away and fairly started upon the road for the lake, which is twenty miles north of that place.

Our party was quite large, consisting of W. S. and G. W. L., of Aitkin; G. J. M., W. W. B., R. C. B., E. and L. E., C. F. T. and the scribe, of Duluth, all of whom were packed into two lumber wagons, provided with spring seats, and as we had sent our boat and duffle on early in the morning we were not overly crowded, and thus disposed of, we started out on a ride which was anything but smooth. After proceeding along at a jog for several miles the boys in the rear wagon persuaded their driver that the head team was not setting a lively enough pace and a suitable piece of road being convenient, he needed no urging to attempt to pass. After a short race we succeeded in gaining the road ahead of the other team and were loud in our laughter and derision when the wagon, striking a bad "chuck hole" broke an axle and deposited us all in a heap at the side of the road, not damaged at all seriously but considerably broke up over the prospect of having to walk several miles to the next house.

Making up our minds to make the best of a bad bargain, we unhitched the team from the disabled wagon, and putting the driver on one of the horses, sent him on ahead to find a wagon and return for us, while we managed to crowd the entire party into the other rig and started on. Two miles further we met our driver with his team hitched to a heavy lumber wagon, and our old positions were once more resumed, but, alas, under what different conditions; off of a spring seat on to a board laid crosswise of the wagon box, and a drive of six or eight miles over very rough roads ahead of us was something we hadn't bargained for. But as there was nothing better to be had we braved our fate and drove on into the wilderness. We reached the river bank and the end of our journey by wagon at 7 o'clock and quickly unloading we put our boats into the water and ferried ourselves across, and as we still had two miles to go and the duffle to carry, advised a temporary camp for the night, but the party was crazy to proceed, so after making arrangements with a settler to haul our boats through that night with his cattle we loaded the various members of the party with packs, and W. S. and the scribe with a boat we pushed on for the lake. How the boys groaned and "cussed" their loads, what hard work they made of the carry and how heavy that boat got before W. S. and I finally abandoned it. But all things have an end, and so did that trail, and just at dusk we came out upon the shore of one of the finest little lakes in Minnesota. Too late to do anything but make camp, we soon had our force at work, tent pitched, supper cooked and disposed of, and after pipes had been smoked, stories told and songs sung we stretched ourselves out upon our mossy beds and were soon asleep.

A faint gray tinge covers everything as we arouse ourselves the next morning, heralding the approach of day. W. W. B. and G. W. L. depart with guns after duck, while C. F. T., L. E. and I rig our poles and lines and, after securing some frogs from the marsh, make our way out upon a rocky reef into the lake, were soon casting for bass. T. was the lucky man and was soon fast to a beauty, closely followed by E., while I brought up a good third. There we were, each playing a fish at one and the same time within 20ft. of each other, and each of us finally landing his bass without mishap. Good 3½-pounders each of them, and so near alike we could not see any difference. In a short time we had secured several, and hastening back to camp, dressed our fish and, as the boys had returned without duck, we seated ourselves down to our first fish breakfast. We were all hungry, and the way the fried fish disappeared was a caution.

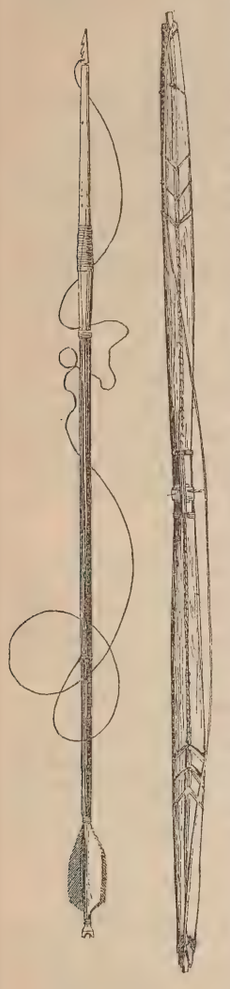
As the boats had not arrived, W. S. T. and I took the trail back to ascertain what was detaining them, but after going a short distance met the settler coming in, who informed us that the big horse flies were so bad that he had been obliged to abandon the boats about a mile from the lake and send his cattle out. Here was a pretty mess. Boats we must have, and the only way to get them was to carry them in, so fixing up a harness, in an hour had succeeded in taking the boat W. S. and I had abandoned the night before to the lake. Calling the others from the reef where they were fishing, we soon had the boats and duffle at the lake, and, after eating our dinner, we moved our camp to the north shore, where we set up housekeeping in a deserted lumber camp and soon had everything very snug.

After starting the boys out for the evening fishing W. S. and I took the small boat and paddled down to the edge of a small grass island, and after anchoring had hardly wet our lines when we were each fast to a fish and the battle was on. How gamy these bass were; what a rush and jump they would make, throwing themselves clear from the water and shaking their mouths in the futile effort to dislodge the hook, again making a bold, determined effort to reach the grass or burrowing straight down till one would despair of ever turning his fish; but soon the rush and struggle would become weaker, and carefully reeling in we would gently bring our fish alongside and slip a hand under him and by a dexterous flap land him in the boat. Time and again we enjoyed that electric thrill that communicates itself to a man when a fish takes the hook. All the tricks and wiles bass are prone to these fish were past masters of, and our sport was indeed royal. We were each using 12-foot split bamboo rods that had never before been tried and the first wild rush of our fish was a trying one for us, as we knew not how much dependence to place upon the rods; but our fears were short-lived, we had rods that were equal to any ordinary strain and our enjoyment of the fishing was enhanced by the feeling that we were properly equipped. After an hour of sport that I have never seen equalled we reluctantly paddled away from the enticing spot and made for camp. Our string was heavy with bass, and after placing them in the "lifebox" we visited the camp, and as we were the first in proceeded to start the supper, and by the time everything was ready the boys came straggling in and soon the click of knife and fork against tin plate was the only sound that broke the stillness. As the sharp edge of appetite wore away the boys found time to speak, and by the time supper was disposed of conversation was under full way and each was ready to tell of the sport he had had, and with pipe alight we streached ourselves out and enjoyed that full, self-satisfied feeling that comes to the successful sportsman after a hearty meal in the woods. Jest and story passed the time quickly away and by 10 o'clock we had all sought our blankets, and with a generous supply of spruce boughs under us were soon asleep.

At the first peep of dawn I awoke and upon looking around discovered M. immensely tickled over the antics of E., who, sound asleep, was doing some ground and lofty tumbling in his wild endeavors to get away from the mosquitoes. E. would raise up on his hands and knees, and after burrowing his face into the boughs roll over only to immediately repeat the maneuver again and again. As the mosquitoes were not at all bad it was very laughable. Thinking it time to turn out a lusty yell closed the performance and brought the boys up in quick order, when after a hasty lunch, we were soon into the boats and out into the lake.

What a glorious morning; how pure and sweet the air; not a sign of fog and the east just beginning to show a rosy blush, heralding the uprising of the sun, how we congratulated ourselves that we were alive, and thus favored by being here. One such morning as this is compensation for many months of work in the city. But to our fishing. This time I have for a companion T., and a good one he proves to be; an adept with the paddle, equally as good I find him with the rod and line; we soon have all we can attend to taking care of our fish and keeping them from mixing our tackle up. We take bass after bass, running in weight from 2¼ to 5lbs., and each and every one of them puts up as gamy a fight as was ever enjoyed. As day draws on the fishing gets slow and by 8:30 we are back at the landing with a goodly number of the black beauties which join their kin in the life box.

Day succeeds day of perfect weather, perfect bass fishing and perfect enjoyment, as can be had nowhere else on the eastern half of the United States, and I speak from experience. It would be only a repetition to detail each day's pleasure, and already I hear the reader say will he never stop.



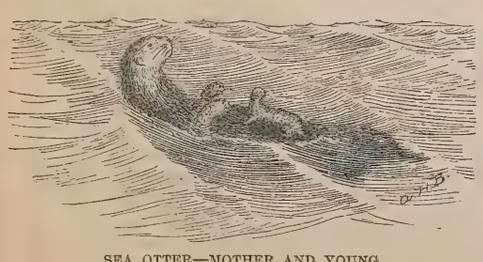
Just one more and then I am done. Between the hours of fishing it was customary for the cards to appear, and we amused ourselves and passed the time away by playing the great American game. Now the scribe, having been "cleaned out" of all ready cash, and the boys being tired "staking" him, was fired from the game; so for revenge (?) and to amuse himself he, out of a burnt cork and some straws, proceeded to manufacture an enormous spider. After completing the job to his satisfaction he carefully fastened the object to the end of a thread, the other end made fast to a long stick, and silently approaching B., who is horribly afraid of spiders and was intent upon the game, carefully lowered it in front of his face. What an explosion! How he yelled! B. turned over backward with feet elevated and hands wildly clawing the air, while the crowd hugged themselves and roared with laughter till they cried. Thus was I revenged and the time sped by until all too soon we had to leave, and after an uneventful passage we were back to Aitkin, and another summer's outing was numbered with the things of the past.

I have said nothing about the number we caught and so save myself a drubbing at the hands of "O. O. S.;" and as in a few weeks we shall probably try the same lake I would extend a hearty invitation for him to join us and try his luck among the "fish hogs" of upper Minnesota. To all Eastern anglers I would say if you ever have an opportunity wet your line in any of the small lakes in northern Minnesota and you will be amply repaid. You will always find ardent anglers to accompany you and the supply of bass inexhaustible. E. J. L.

DULUTH, MINN., June 3.

HUNTING THE SEA OTTER.

MANY years before the settlement of California by the Americans, Russian fur traders had trading and hunting posts along the coasts of upper and lower California, for the purpose of securing the pelts of these wonderful animals, whose fur is the most beautiful among all the fur-bearing creatures of the world.



The enormous beds of kelp found along these shores were especially adapted to the habits of the sea otter, which fed on the sea urchins and shellfish abounding in these sea meadows. In early times otter were plentiful on the coasts of California, Oregon, Queen Charlotte and Vancouver islands, the south coast of Alaska, and they were especially abundant throughout the Aleutian and Kurile islands. The natives of the Aleutians and Kuriles are very expert with the spear, which is thrown with a hand-board. In hunting the otter, a number of bidarkas, with two men in each, go in company, and when the animal is sighted the canoes form in a half circle behind the otter, and all the hunters who are near enough throw a spear. Then the otter dives, but as the movement of the animal is slow, the light skin boats of the hunters can easily overtake it. The otter often doubles and comes up behind the hunters, when the canoes again form, and the hunters throw their spears whenever the animal rises to the surface to breathe. Being kept under water so much, the otter becomes exhausted and stays longer and longer on the surface, and the hunters are able to approach nearer until the victim is struck by a dart, when its doom is sealed. The fur of a prime otter is so beautiful that no art of man can add to its lustre, and it is a matter of regret that the species is being so rapidly exterminated. The sole occupation of the natives of the Western Aleutian Islands has been the hunting of the sea otter, but owing to the decrease of the animal the government will soon have to provide for these people or transport them to some region with greater resources. The placing of reindeer on these islands is entirely feasible and would greatly benefit the inhabitants. These natives are intelligent enough to know that it is for their interest to let the animals multiply, while the northern Esquimaux would simply destroy them.

The habits of the sea otter are very peculiar and interesting; they seldom go to land—in fact never except during terrible storms, when they sometimes go upon outlying rocks and reefs in the ocean. Unlike the seal, they do not bear their young upon the land, but give birth to them at sea. The pup is taken on the breast of its mother, who floats lightly in the water, on her back as a favorite position, and is caressed and cared for and held in her forepaws like a child by its mother. As the young one grows older it runs around on the body of its mother as on a veritable island of fur.

When frightened, the mother takes the pup in her mouth and disappears, and, even when the offspring is only a few days old, she will remain with it below the surface fully fifteen minutes before rising again. It is very interesting to see an otter with her young on her breast as she swims through the rough water along the shore, taking it in her arms when a breaker comes to prevent it from being washed off, and so it journeys along, a strange boat with a strange crew.

In feeding, the otter brings to the surface several shellfish, takes its favorite position on its back, lays them on its breast and breaks and eats them one by one. The animal is very timid, and it has been hunted so much it is seldom found in the kelp during the day, but goes out to sea and returns at night. Its cry is a sharp whistle. The young have been kept on board of vessels for some time and become very tame and gentle, but owing to the lack of proper food they always died on the passage to San Francisco. As long as the vessels remain near

SEA OTTER—MOTHER AND YOUNG.

the shore where plentiful supplies of sea urchins and fresh fish can be obtained, the young ones do very well. At sea they become greatly attached to the sailors, often sleeping in the berths with them and fighting for the privilege of getting under the blankets.

There seems to be no regular pupping season, as I have seen young of various sizes from the length of a rat to half-grown individuals with their mothers at the same time.

E. P. HERENDEEN.

Sea Otter Hunting in 1873.

Mr. Robert King, late of Uiuliuk, Unalaska, in 1873 had charge of a hunting party of 101 bidarkas in the Kadiak district, off Tugidak Island, and to him we are indebted for the following account of the hunt: The party was collected from seven villages on Kadiak Island, and included some women and children. They had temporary

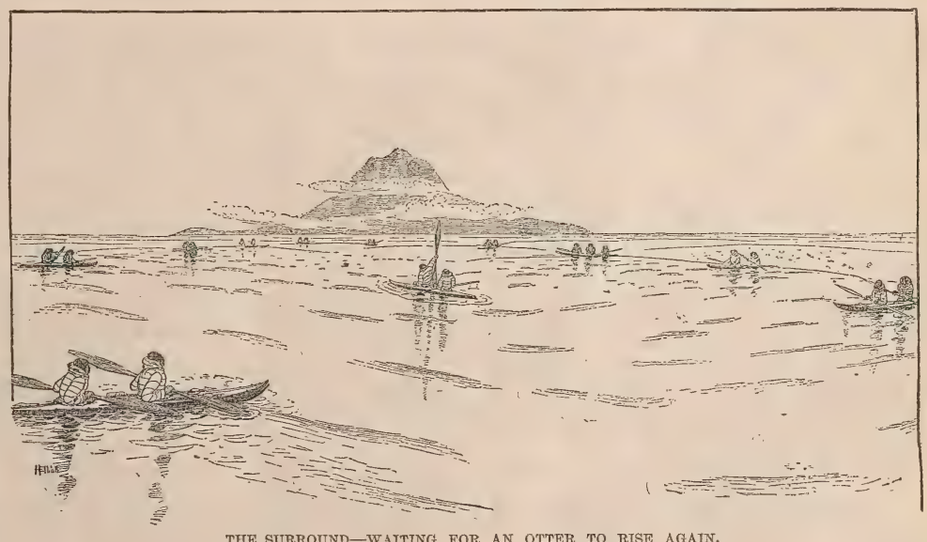
SEA OTTER HUNTER'S DERRICK.

barraboras on Tugidak Island, convenient to the hunting ground, and in a place where there was plenty of water and driftwood. In this year the season opened about the middle of June and continued until Aug. 1. During all this time there were only one whole day and two half days of actual hunting, but in this brief period of time 375 otter skins were obtained, the animals being killed with arrows and spears. Some idea of the endurance of these people may be had from the fact that the hunting period covered twenty-six hours, during which time no food or drink was partaken of, and the hunters kept a kneeling position, a posture characteristic of the Kadiak people and absolutely painful to one not accustomed to it even for a very short time. The feet being bent backward and inward the weight comes on the whole surface of the foreleg and there is a heavy strain upon the knees and ankles. The circulation of the blood is, of course, much interfered with. The training for the acquirement of this position is begun in early youth. The boy, usually in charge of his uncle, is made to practice two or three hours daily for a long time before he is allowed to handle a bidarka.

Before starting to fish or hunt the astronome, or old weather prophet, is called upon for the indications, which, if favorable, are followed by the assembling cry, "We go to fish." The cry, "We go to hunt" is not used, as the hunters say the spirits would hear it and tell the otter, which could not then be found. As soon as the cry is sounded the leaders of the villages enter their bidarkas and paddle out from shore a distance of 100yds., where they raise their paddles and utter the assembling cries of their respective villages. Then the people hurry out as quickly as possible and form in a line around their leaders. The bidarkas are arranged side by side, each man holding on to the hatch of his neighbor's bidarka. After the villagers comes the astronome, to see that all are afloat, and then in his own bidarka goes to join his village. Finally he gives the signal for the start, when they leave the beach the villages depart at different angles, and divide into groups as they approach the otter grounds, five being the usual number of bidarkas to the otter, but fewer when the game is abundant. A large hunting party may extend in this way over as much as twenty miles, the groups being out of sight of one another, but not beyond hearing distance, so that they can be brought together at any time by the assembling cry. In calm weather this cry can be heard at a considerable distance. When the homeward journey is begun the groups all unite and go home together. During the hunt no talking is done, but loud cries are uttered. The hunters claim that the otter can understand words and attribute to it most extraordinary powers. They consider the ach-an-ah, or sea woman, the most intelligent of all marine animals and the bear the wisest of land animals.

When an otter is sighted the discoverer makes a peculiar sound and the hunters all rush in the direction indicated. If the animal is still in sight a volley of arrows is sent after him, even at a distance of 100yds., but the chances are against his being hit at the first discharge. The hunters hurry to the spot where the otter dives and the one reaching the place last takes his position there and holds up his paddle to show where the animal disappeared. The remaining hunters then form a circle around the place, say at a distance of 50yds. from the uplifted paddle, and wait for a reappearance of the otter, which they know must soon come up to breathe. The shooting is repeatad until the animal is struck, and it is a point of honor among these people that no one claims to have struck an otter unless he is positive of the fact. The otter belongs to the first man who strikes him. When they are plentiful, he who first shoots one offers a premium of from $2 to $10, according to the size and vigor of the otter, for the second arrow, because the animal with two arrows in it is considered secure. So the otter is half-killed, half-worried to death. It must come to the surface to breathe, and if made to dive frequently and without sufficient time to properly respire, it soon becomes an easy prey to the hunters, who thrust into it a spear having an inflated bladder attached.

The arrows are ingeniously constructed; fastened to the shaft by a bridle is a detachable barbed point, called the *nosok*, which gives the arrow a latitudinal motion through the water, the better to arrest the otter.



After spearing the otter, he is dispatched with a club and the arrows are carefully removed, an operation sometimes made very difficult by the entanglement of the weapons. Two of the skin canoes are then brought close together to insure their stability, and the animal is placed in the lap of one of the hunters, who sits on the hatch to receive it. By putting the crotch of his club under its jaw he shoves the otter either into the front or back of the bidarka in such a way as to trim the craft properly. When two hunters strike an otter at the same time, the prize belongs to the one who struck nearest the tail;

BIDARKA AND CREW.

there is, however, considerable local variation in this respect. It is not essential that the arrows should be discharged at the same instant, but they must strike on the same breach of the otter, and they must stick, the presence of the point or *nosok* in the skin being necessary to substantiate the hunter's claim. The string may be bitten off by the otter, but the arrow point cannot readily be removed. When in use, the *nosok* is ground upon a whetstone until she edges are very sharp, but at other times it is made blunt, in order to avoid the danger of its cutting the canoe. As a matter of course, the *nosoks* are often highly prized and bring fancy prices. A sea otter skin has sometimes been exchanged for a *nosok* of a particular pattern. There are also lucky *nosoks*, and their purchase involves diplomacy and substantial returns.

The otters are taken ashore to be skinned. The fat is first removed and this involves great difficulty on account of the tough fibers by which it is interlaced. The skin is stretched, with the fur side in, by means of two pieces of wood which are placed at an angle. The tail is spread by means of wooden strips and the lower end of the skin is fastened to the frame with pegs. After drying thoroughly, which will require two favorable days, the skin is removed from the frame, reversed, and hung loosely on the stretcher to dry the fur. It is then turned again to protect the fur from sunlight, folded in three folds, marked for ready identification, and held for conveyance to the trading station.

THE SURROUND—WAITING FOR AN OTTER TO RISE AGAIN.

The Sea Otter Derrick.

On the coast of Washington, between Point Greenville and Gray's Harbor, there is a small bay in which the sea otter survives and furnishes the object of a unique and precarious mode of hunting. From the smooth beach the water is very shoal for a distance of several hundred

yards, and the hunter takes advantage of this feature by erecting a shooting-box on the top of three poles forming a rude derrick, as shown in the illustration. These structures are described by Elden M. Pollock as 40ft. high and 24ft. wide at the base. The poles are strongly braced together by cross pieces and on one of them a primitive ladder gives access to the box, which is open at the top and partly open on the seaward side. On the ends of the poles a board is nailed to serve as a seat for the hunter. This method of taking the otter demands the finest weapons and the most skillful marksmanship, as the game must be killed sometimes at a distance of 1,000yds.

When the otter is killed it seldom sinks and is usually washed upon the beach by the incoming tide, and is picked up by Indians who patrol the shore in behalf of the hunters.

On a massive outlying rock off Point Greenville a hunter's cabin has been constructed and this is reached by a rude ladder made of drift wood. Another enterprising marksman has built a lookout in the tops of two tall trees on the shore. In order to avoid mistakes as to the ownership of the otters secured each hunter marks his bullets, and false claims are unknown.

Although the derrick system is safer than the hunt with bidarkas, it involves intimate knowledge of the habits of the game and is not wanting in excitement. The patience of Job almost finds a parallel in the endurance of these hardy hunters, and nothing but consummate skill avails to secure the coveted fur.

[The illustration of the surround is from the "Fishery Industries."]

"PODGERS'S" COMMENTARIES.

I SEE FOREST AND STREAM felicitates itself on the fact of being so universally known that a letter addressed to it at Chicago was duly forwarded to its proper destination. Nothing so strange in that. A fellow drew a draft on your humble servant once and addressed it to "somewhere in New York." It found me away up in the wilds of Connecticut were I was fishing out on a lake miles from anywhere, and a boy came paddling out on three rails lashed together, and presented it. Let a man authorize a draft or owe a bill, and it will find him if he is sitting astride of the North Pole. So don't get conceited over the fact of a letter finding you even if it was addressed to the insignificant village of Chicago. Probably some clerk of the post office owed you for a year's subscription and considered that he canceled the obligation by forwarding the letter, so don't get "cockey" over this evidence of the world-wide reputation of the FOREST AND STREAM. Perhaps the letter contained a remittance for a year's subscription, in that case you are somewhat justified in feeling proud and inviting the staff out to see a man if you did it.

Does the rattlesnake expectorate is a question that seems to have the floor. As he is a native and to the manner born he probably does. Especially if he chews. So much discussion about snakes, and especially rattlers, has made me nervous, and probably the next time I go trout fishing I shall lose many a fish by keeping one eye out for the Eve tempter. I shall be glad when his peculiarities and his case are settled. No disrespect to the gentlemen who so ably write of the reptile, from which one learns that it is very dangerous to be fooling with him with a short stick. Hereafter when I go into the country I shall carry an eel spear and pin him at long range.

Judge Greene will please accept my thanks for his very complimentary remarks. "Approbation from Sir Hubert Stanley is praise indeed." I greatly regret that he will be unable to join me on a trip to the Narana next October, as I should take great pleasure in introducing him to the Pacific Coast salmon with the remark that Captain Scott is with you. "Come down" if you know what is good for yourselves, and they would doubtless see the wisdom of it.

Speaking of salmon, Mr. C. B. Burnham, of St. Louis, in the very pleasant letter he writes me, says that the information he has received by letters from the Pacific Coast suggests the possibility that the only salmon that takes the fly there is the "steelhead." Such can hardly be the case, as among the fish I caught were several generally termed hook and noses, or hook bills, and I was regarded with great contempt and afforded a theme for ridicule to some very young gentlemen on the river bank rejoicing in well-ventilated garments, one calling out to the other, "See there, Jim; see that city feller bringing ashore that old hook nose," a species which by many on the coast is considered not worth saving. For my own satisfaction I concluded to test the opinion, and that day had old hook nose served up at dinner, and was most agreeably disappointed. I never tasted a more delicious fish, fully equal to any salmon that ever swam. Of course hook nose stock went up with me.

I do not think that steelheads are exclusively the species that take the fly on the Pacific coast. The next expedition I make to Narana will be principally given up to scientific investigation, for I perceive I am drawing down upon me the severe and critical eyes of a class of fishermen that it won't do to trifle with who want to know, you know, and it has arrived at that point where it becomes me to bear testimony under oath. So I will fish scientifically, ask every fish what his antecedents are, and if a steelhead, make him own up. I will otherwise investigate his peculiarities and ask him why it is that some seasons he won't take the fly cheerfully and at others he will. The fishing community is asking the question and seem rather disposed to hold me responsible for his vagaries, hence a special expedition must be made to settle all these questions and reason with those notional fish and bring them to a realizing sense of the importance of taking the fly regularly every season, "that it may be fulfilled which has been spoken," for if I should beguile our friend Judge Greene or Mr. Burnham into a trip to the Narana and the fish should take a notion, just to be contrary, not to notice the fly, I would be in a nice fix and be looking for a squirrel hole to crawl into. Besides I think the Judge would set Mike on me. I have several other things on my mind, but must heed your warning to confine my remarks to a column or less and give other more worthy contributors a show.

Natural History.

DOES THE RATTLESNAKE SPIT?

Editor Forest and Stream:

Having noticed your queries with regard to snakes spitting or blowing, I will give you my experience with a good-sized black rattler, which species is very common in the mountains here. My sons are cultivating some land on the west side of river just opposite Ventura. On Friday of last week I took my gun and went over, thinking to kill a rabbit or two. I went into a pumpkin patch and sat down on a stone a moment or two, when I saw a snake gliding in the vines a few feet from me. I got up; he then saw me; raised his head and uttered a sharp hiss; then started toward a pile of stones a few feet away. I stepped in front to intercept him, when he stopped, arched his head and neck and hissed or blew quite a quantity of froth or spittle. At this time I shot, blowing his head all to pieces, and he lay perfectly still and never moved in the least until I touched him, when he moved his tail around, and I was greatly surprised to see that it was a rattler about 2½ or 3ft. in length and 4 to 6in. in circumference. What surprised me was that he did not attempt to coil, and there was not a sign of springing his rattles before or after I shot him. I send you the rattles just as took them from him. E. D. W. S.

VENTURA, Cal., June 1.

Editor Forest and Stream:

From childhood the rattlesnake has been a familiar object to me, and as they are still plenty, we have every advantage in testing and observing his true character. It is no uncommon thing for men in the woods to kill one or two per day. After having killed scores of them, I have yet the first to see that either opened its mouth before its head approached the object struck at, or threw poison at its enemy. While trouting on Otter Run in 1890, I threw a trout out on the bank close to a large bunch of ferns, and as the trout struck the ground something in the ferns caused them to move. Examining the spot after putting my trout into the creel, I found a large black rattlesnake. Save the ferns the ground was clear, and cutting a forked stick I began to tease the rattler. I had heard it said that they would bite themselves if pinned to the ground by the tail, and now was the chance to prove this. But I didn't prove it, for that snake had too much sense, or regard for his person to be teased into anything of the kind. When released it would make a break for liberty, or coil up into its fighting position. It would strike at the pole with which I held it but once when the pole was held out to it. But it struck at a large hemlock limb with the bark on it a half dozen times. I saw poison on the limb, but saw none flying out of its mouth or even dropping out. Its mouth was kept shut all the time, and so quick were the "strikes" made that it was difficult to see its mouth open even then. Of course, its tongue, after the manner of all snakes, was constantly exposed. Many times I have teased them but never saw anything of which Professor Cope speaks.

Mr. James Lose, of Montoursville, saw a large rattlesnake swimming across Loyalsock Creek, June 1. It was coming toward him and when it landed he killed it. He said it swam high in the water and looked twice as large as it really was. It swam fast and at right angles with the creek. M. E. J.

MUNCY, Pa.

Editor Forest and Stream:

Rattlesnakes may spit, but I, for one, doubt it. I am a close observer, and have killed probably a good many more rattlers than the general average. The rattlesnake den in Pike county, Pa., that twenty-five years ago was not known to the famous hunter, Ed. Quick, who has gone to happier hunting grounds, the Dewitt boys and myself, was not worth knowing. It was just fun for me to visit these dens in the early spring and poke them out. I have killed them from six inches to six feet, and have made them madder than hornets. I once threw a pine knot at a big one; it fastened his tail in the ground, and if you ever saw a mad snake he was one, but he never spit. Last October I killed near Rock Hill Pond as large and ugly rusty-looking a rattler as ever I came across, but even a pressure on his gums exposing the teeth did not show any fluid visible to the naked eye. Now, then, as the rattlesnakes have the floor, I will relate a little incident where I used them as a handle to get square with a thoughtless joker:

"There are just two things in this world that I am mortally afraid of and have no earthly use for," said my friend Johnny to me one day, "and they are a bull and a rattlesnake." This flashed through my mind when, after a hard day's trouting, I stepped up to the wagon to exchange my heavy rubbers for my light boots. Now one of these boots was loaded—loaded with a 5ft. blacksnake put in tail first, which one of the party had killed, and my foot fetched up before I got half way down that boot. Now I am not afraid of snakes, but I do not like them in my boots exactly, and especially not in the late dusk of the evening, when it is impossible to tell one snake from another. Well, I turned that boot over to see what the trouble was, the snake shot out head first as though alive, and I must have made a good-sized jump, for the hurrah of the boys would never end. They had scored a good one.

Now, I did not own any bulls to get square with, but rattlesnakes.

Five years had passed, when one fine October morning I dropped into his office. "Johnny, I am going up to old Pike; birds are plenty; don't you want to go?" He accepted.

It was a beautiful Indian summer day as after a successful hunt I headed for a first-class well stocked rattlesnake den. My plans were well laid. Several times during the day I asked him: "Johnny, do you know where we are?" and after a few minutes' thought he would locate himself very well indeed. The thought of snakes never entered his mind. Finally we reached the den; I kept him fully 50yds. to the right of it, while I traveled right through the rocky ledge, keeping a sharp lookout. It was uncomfortably warm, and I was sure some rattlesnakes would be out.

Ah, here they were, rattles all around me, and within 6ft. of me laid a large diamond-back coiled up and saucy looking. I called my companion up to me, "Johnny, do you know where you are?" "Well," he said, "let me see." "Oh," said I, "there is no see about it; you are right square in a rattlesnake den; shoot that big one there, quick! We are square." "I could feel my hair raise and my head commence to reel," were his words when he told of his experience.

I have never found any snakes in my boots since, and when friend Johnny leans back in his chair, lights his pipe and reads his favorite, the FOREST AND STREAM, he will know who is WHIPPOORWILL.

RED BANK, N. J., June 9.

Nest of Slider Terrapin.

ABOUT the first of April, while making preparations for the shad hatching season at the Bryan's Point station of the U. S. Fish Commission, Mr. L. G. Harron came into possession of a family of red-bellied or slider terrapin which the backward spring had detained in their subterranean home. One of his men was digging a hole about 20ft. above high water mark, for the capstan of the seine windlass, and struck close to the nest with his pick, but without injury to the terrapin. The excavation was roughly mortar-shaped and about 4in. wide by 3in. in depth; it was made in the clay, 6in. beneath the surface, 4in. of the covering being soil. Nine living terrapin were in the nest and one egg containing a dead one. The egg is oblong, about 1¼in. long and ¾in. in diameter. The young were about 1in. long and extremely active in their movements. They were kept a short time in a box at Mr. Worth's headquarters, but escaped one night when the lid of the box was by accident left off. The egg-laying season of this animal is in May and June, chiefly during June, so that from the time of their deposit until the young leave the nest nearly a year passes. Mr. Harron states that the slider feeds upon water plants; it is in season from October to the first of April. The largest individual he has seen from the Potomac was 14in. long. —T. H. B.

The Mongoose.

GREAT FALLS, Mont.—*Editor Forest and Stream:* In your edition of May 26 inquiry is made for possible objection to the mongoose. Your correspondent "Arefar" would do well to make direct inquiry to Jamaica regarding the grass-tick scourge that has followed the introduction of the mongoose. I have read recently a bitter article on this plague, complaining of the loss to the plantations, the destruction of birds and the injury to cattle. As familiar with the merits of the mongoose in the East Indies in the destruction of snakes and rats, I nevertheless consider the introduction of the tick, a loathsome, disgusting and most foul parasite, would be disastrous. It is unsafe to experiment with animals transplanted, and it would be better to encourage and protect wild birds, and especially that best and most maligned of birds, the owl, in order to keep vermin in check. It is possible the opinion I quote is an error; the objection is worth following up.—S.

Protonotary Warbler in Massachusetts.

HYDE PARK, Mass.—On May 21 I took a protonotary warbler. Is not that a very rare bird for this locality? It was cold and raining at the time. It was feeding on an apple tree. May 30 took a yellow-billed cuckoo. They are very rare, but black-billed cuckoos are plenty here.—C. E. B. [Certainly an unusual occurrence. Although Coues gives the range of *Protonotaria citrea* as north casually to Maine, it has been our impression that it is rare on the Atlantic coast north of South Carolina. Inland it occurs regularly in southern Illinois and Indiana.]

Game Bag and Gun.

New Editions: The Gun and its Development, $2.50. The Modern Shotgun, $1. For sale at this office.

THE SNIPE A WATERFOWL.

Editor Forest and Stream:

I noticed in the FOREST AND STREAM a week ago, a communication from Mr. E. S. Bond in regard to the game warden enforcing the game law against the sale of snipe.

Mr. Bond used to be known as a sportsman, and for many years was a prominent game dealer here. He has always led the fight against all restrictive game legislation in our State, and has always been ready to give encouragement and aid to those who have desired to contest the game laws, not only of our own State, but of other States.

He has said to myself and to scores of others, again and again, that "there was no use in trying to preserve the game of the country, that it could not be done," etc., etc. Now, in my judgment this is all wrong, and harms the cause of game protection!

In regard to his statements I shall reply, first, to his criticism of a judge's recent decision, here in Chicago, on antelope. For years past, the game dealers here have been soliciting and receiving these animals from the West (often in violation of the laws of places shipped from), and under the guise of selling antelope, have sold deer meat when it was unlawful to sell it. About Feb. 1 I notified these dealers that this business must cease, and that if antelope were offered for sale after Feb. 6, I should prosecute under the section of our statute which says, "It shall be unlawful to have in possession for sale or for the purpose of sale any wild buck, doe or fawn," etc., etc. Mr. Shively on South Water street did expose for sale after date named a part of one of these animals. I prosecuted him before Justice Randall H. White, a man whose integrity and ability is never questioned by persons who know him. Able counsel defended the accused. The game dealers were present in goodly numbers, among them Mr. Bond's partner. Proof was made that the male antelope is known as a buck and the female as a doe. The defense failed to furnish any proof to the contrary. The judge gave the case careful consideration and investigation and found the defendant guilty, and fined him $10 and costs. Mr. Bond and many others were disappointed. I suggested to the parties, that "if the decision was not in accordance with the law and evi-

dence, they had better appeal," but no appeal was taken, and this ended the sale of antelope.

Now let us see what our statute says about "waterfowl." Paragraph I. of Game Law says: "It shall be unlawful to hunt, kill, trap, ensnare, or otherwise destroy any wild goose, duck, brant, rail or other waterfowl," etc., etc.

I find that as early as 1555 Belon made a system of classification of birds, placing them in four groups, first, birds of prey; second, game and poultry birds; third, waders and swimmers; fourth, perching birds. This order seems to have been followed by nearly all writers on ornithology since. Ducks, geese, brant, rail, snipe, woodcocks and plover do not sit on trees. A few years ago Rev. W. Hincks, F.L.S., professor of natural history of University College, Toronto, Canada, published in *Western Journal of Canada*, No. 11, a catalogue of birds of America, in which he calls snipe waders, belonging to the Grallæ family.

According to all authors I have examined I find waders have always retained their place before and next to swimmers. I do not find a single authority to support the statements made by Mr. Bond, viz.: "Any bird that makes its home on land, though it frequents wet, marshy land in search of food, is not a waterfowl in any sense of the term. Hence, snipe are not waterfowl."

Let us look at an Illinois authority. Soon after the organization of the State Geological Society in Springfield years ago, the members of the corps were instructed to take notes of facts of natural history within the limits of the State for the information of the people. Mr. Henry Bretton, assistant geologist, furnished a list of the birds of our State and their classification, as follows: First, *Rapaces*, hawks, owls, etc., twenty kinds. Order 2, *Passeres Psittacidæ*, one hundred and twenty kinds, including the pigeon, dove, etc., etc. Order 3, *Gallinæ*, turkeys, quail, ruffed grouse and pinnated grouse. Order 4, *Grallatores*, waders, or stilted birds, cranes, storks, plover and snipe; in all five families. Order 5, *Natatores*, swimmers, ducks and geese. There were in all kinds one hundred and eighty-four in number. He gives Class No. IV., "water birds," "*Grallæ*," waders—forty-four families, including the genus *Scolapax*, snipe. Webster says: "Waterfowl—A bird that frequents the water or lives about rivers, lakes, or on or near the sea. An aquatic fowl. Of aquatic fowls some are waders or furnished with long legs, and others are swimmers and are furnished with web feet."

Worcester's Dictionary says: "Waterfowl—A fowl that lives on or frequents the water."

Century Dictionary of the English Language says: "Waterbird—An aquatic, as distinguished from a terrestrial or aerial bird; in the plural the grallatorial and natatorial or wading and swimming birds."

Mr. Bond says that a few years ago a friend of his was arrested and tried before a justice for killing snipe before Sept. 15, and was fined $30 (my recollection is that he sent him $20 as a gift to defend this suit, and that this man shipped his snipe to him). Believing his friend had been robbed without authority of law, he wrote to Hon. L. B. Crooker of Mendota, who drafted and secured the passage of our present law, as to his understanding of the law. Mr. Crooker replied that the migration of snipe was so irregular and uncertain that it was thought best not to give them any protection, and so they were omitted. Now, this is pretty severe on the poor snipe! Because he does not come here at a regular time and stay around to be banged at, or decides to take other routes north or south, all protection is withdrawn.

When Mr. Crooker wrote in the law, "Goose, duck, brant, rail and other waterfowl," he evidently did not know what "waterfowl" included. Well, he is not the first law-maker who has made laws which reached further than was intended. Laws must be interpreted as they read when they read plainly.

Mr. Bond also says that Col. C. E. Felton and Wolfred N. Low, ex-presidents of the State's Sportsmen's Association, were consulted, and they agreed that snipe were not waterfowl. Mr. Low told me the other day that he did think snipe were waterfowl, but he couldn't cite any authority for his opinion, and I don't suppose Col. Felton is any expert either on the subject. His other authority, Dr. Yorke, I do not know, and I cannot find any works on "Snipe or Waterfowl" written by him.

Mr. Bond's advice to dealers on South Water street to make a test case, I am sure does not meet with any favor. The dealers have agreed not to offer snipe until Oct. 1, and have shown a sincere desire to obey the laws. The principal ones and others have promised me their assistance in enforcing them.

It is a shame that at this time the cold storage-houses throughout the country contain tens of thousands of game birds which could not be disposed of during the open season. These birds should have been allowed to live and breed, and not have been destroyed and carried for months until they could be sold. The Supreme Court of Illinois has handed down two grand decisions which completely settled two "test" cases in regard to our game laws.

Now, if Mr. Bond wants a "test" case all by himself, he can be accommodated at any time by giving the game warden a short notice to that effect.

I find that honorable sportsmen and dealers want our game and birds preserved, and do not try to detect defects in the laws. M. R. BORTREE, Game Warden.

CHICAGO, June 9.

The Old Gun in the Cupboard.

I HAVE not had a gun to my face in a dozen years. My old-fashioned Parker stands in the cupboard and two buckshot cartridges on the dressing case for midnight emergencies, with the hope that I shall have no such use for it. I was a fair shot among the chickens and quail thirty and odd years ago back in Illinois, but I judge from Mr. Hough's writing that the good old time has departed. I think that next winter I shall go down on the Gulf for several months loafing, maybe I'll take the old gun along; we have had some pleasant days together, and yet I'm afraid it will make my head ache. Still a gun is companionable in the woods. I can however always do a great deal of fishing and hunting without the death dealing tools.—COLORADO.

A New Vermont League.

COL. EDWARD B. SAWYER writes from Hyde Park, V J 6, to Fish Commissioner John W. Titcomb:

league was formed here June 4, called the Lamoille County Fish and Game League, as a branch of the State league, with a membership of twenty, which will be rapidly increased. The officers elected were Col. Edward B. Sawyer, President; Capt. Jonas V. Stevens, of Eden, and Charles H. Sterns, of Johnson, Vice-Presidents; Capt. Smith B. Waite, Secretary, and Ned L. Noyes, Clerk and Treasurer, with an executive committee of one in each town in the county, together with the president and secretary. Recent outrages here have aroused a spirit of determination to enforce the laws. All the members are eager to study and learn the law.

WHEN MINEESOTA GAME WAS PLENTY

IN a recent number of FOREST AND STREAM there appeared an interesting letter written by Rev. Myron Cooley, of this village, says the Detroit (Minn.) *Record*, in which he recited his experiences with rod and reel in the lakes surrounding Detroit. Mr. Cooley has published many such letters, and as he is equally as handy with his pen as he is with his split bamboo with an elegant five pound bass at the end of his line, his letters have attracted the attention of anglers throughout the country, and in fact they have been no small factor in spreading the fame of Detroit as the fisherman's paradise. His last letter was read by Mr. Edmund Norton, one of the contractors who built the Northern Pacific Railroad from the Pelican River to the Red River Valley, and last week Mr. Cooley received the following, which is so full of pertinent points relative to the early days in the neighborhood of Detroit that he has kindly permitted us to publish it.

Mr. Norton's letter runs: "I have occasionally read your letters in the FOREST AND STREAM, and with pleasure, as you are located at a point that has many pleasant remembrances for me. Perhaps it may interest you to know something of your neighborhood 21 years ago. In 1871 my brother and myself had a contract on the N. P. R. R. and did all the grading from section 1723, which was the bridge over the inlet to Detroit Lake, westward to the Red River valley, or to a point about 15 miles east of the Red River. We took a large outfit into the country on wagons via Sauk Centre, Alexandria, Ottertail and Detroit Lake, and worked about 500 men and 100 teams from April 15th to about Nov. 1st of that year. We had several camps at various points on the work, our headquarters camp, shops, etc., being located at the big out five miles west of Detroit Lake—Oak Lake it was called then. * * *

As to game—it was a paradise. How I would enjoy a month of similar conditions now! In their seasons there was no limit to pigeons, ducks, partridges and sharptail grouse. The latter, especially, were so plenty in August that I could have filled a wagon with them driving over ten miles of the prairie road. And what splendid birds they were! No finer ever wore feathers. In July I counted 27 broods of young ducks on one small pond about 8 miles west of you, but there were no geese or chickens there then; they never went further than the stubble fields. On the Gager farm I shot 27 chickens one morning. I never saw or heard of a deer in the country, though foxes were plenty, and occasionally a bear. Elk were plenty along the valley of the Jim River and some buffalo remained this side of the Missouri.

"In your last letter to FOREST AND STREAM you speak of catching bass in Floyd Lake. I did some pretty tall fishing there myself, and think I pulled the first spoon ever thrown in the lake. An old Frenchman with an Indian wife lived near by and I borrowed his birch bark one day and after about filling it with 3 to 6lb. bass, I succeeded in capsizing it in about 20ft. of water and like 'Abner Dean of Angel' the subsequent proceedings interested me no more. I have seen a dozen of our men pitching all kinds of fish with shovels and pitchforks out of the stream near the bridge that crosses the inlet at your place. This was during the running season, the latter part of April. In the tamarack swamp about half a mile west of Detroit I shot over fifty pigeons and nine partridges inside of an hour, and no doubt could have kept up the gait all day, but I was too busy that summer to waste much time in pleasure."

GAME WARDEN DARLING.

LOWELL, Me., June 9.—*Editor Forest and Stream:* There has been much newspaper talk about the notorious outlaw and poacher's accepting the office of State fish and game warden; and it was a surprise to many that our Fish and Game Commissioners ever should have offered me the office. But there was one thing that they knew; and that was that if I would fight as hard for them as I had for myself I would be valuable to the State.

Since I have been appointed I have been experimenting. I have talked with many of the hunters, guides, lumbermen, poachers, etc., and have tried to persuade them not to kill our fish and game in close time. I have assured them that I did not accept the office for the money that I expected to get from them, but to try and preserve the game and have the State pay me. But I would tell them that I meant to watch them as close as I could, and to have spotters on the lookout, and if I caught them I should not let them pass without trouble. I occasionally found parties violating the law in a small way, who were ignorant of what they were doing, and would tell them of it and let them go; and some of the country I went over the third time, and found that just my talk and traveling through the hunting regions had had a good effect. I took my snowshoes and struck through the woods, and parties did not know that I was in the country many times until I would open their camp doors. I was treated kindly, and was not afraid to go there the second time.

I once seized a cow moose hide that had the hair shaved off, and was tied up in a bag and snugly rolled up in a tent and tied on to a hunter's sled, marked and sent out of the woods on tote teams, and then forty miles on stage. I was at the stage stopping-place, and had just got there. The moment I saw the hunter's sled I smelled a mouse, overhauled the tent and found the hide. The driver seemed much surprised, for he did not know that he was transporting a moose hide. I told him that it was all right on his part, but I wanted to know where it came from; he told me. The party were some one hundred miles away on a winter's hunt. I wrote them a letter and sent back to them, telling them what I had found, and that I should see them after they returned home and perhaps before, and that it depended on what they were or did do the rest of the winter how I should settle with them when I found them. This letter was to give them to understand that if they did not kill any more moose I would be easy with them. I afterward went to the headwaters of the Arroostook River, and visited a logging camp where those same hunters had stopped part of the time; but they were not there then. They had a long line of traps and it took them a week or ten days to go the rounds. I could not learn of their killing any more moose. I shall see them as soon as I can leave my other business; and I have other cases to settle in their locality.

My intention was to be as easy with the violators at first as the law would allow, and after that to load with a full charge. I found that the poachers were more shy of me than they were of the rest of the wardens; they said that I had been an old hand at the business, and knew their tricks; and that they did not know from which direction to look out for me. As soon as my appointment was in the papers I received a letter from an old guide at Moosehead Lake, asking me what I meant by accepting the office and if I meant business, "for," he wrote, "we well know that if you do, you will get some of us."

I can see that a warden to do business right wants to put his whole time to the work; then he can lay his plans and more effectually carry them out. There is one thing certain: so far as I know there never was a winter when game was as plenty as now, but what more game was killed than last winter? One reason was that the snow in many localities was too shallow to catch the game, but in localities where it was deep there was very little hunting. The lumbermen are more shy, and would rather buy beef than run the risk. But now the time has arrived when the summer hunters should be looked after. I have just come down from Nicatowis Lake with a party, and we saw there several deer feeding about the shores, and the tracks were plenty everywhere we went.

No guide-books and maps of our eastern country have ever been published; and one is much needed, for we have as good a locality for deer-hunting and fishing and other small game as there is in Maine, and as good localities for club preserves, and they could be had if applied for by the right or good, reliable parties.

J. DARLING.

THE CALIFORNIA BEAR SUPPLY.

Editor Forest and Stream:

In your issue of the 12th inst., I notice that Mr. "Podgers" is pining for a "bear story," and out of respect for the modesty of his desires, in his seeming preference for game that was "not caught," and as that is just the kind of bear story material that I happen to have on hand, I long to send him consolation. It may relieve the aching void in his soul to know that Mr. Bruin still lives among the California foot-hills, and like a Wyoming "rustler," gains a subsistence by foraging upon the honest stock-raisers of the adjacent valleys.

Bear killers, too, are thick; a fact that was satisfactorily demonstrated one day last week by the lively stampede of the citizens of this locality, when it was reported that a bear had invaded one of the sheep ranches and carried off a poisoned sheep that had been prepared for thieving coyotes. A lively scrimmage was anticipated, and nearly every man in the township shouldered his trusty rifle and struck for the trail. They followed it, too, close on the heels of the retreating intruder, until the tracks vanished in a thicket of manzanita, when not a bear killer could be prevailed upon to advance a step further. Could it have been done *en masse*, it might have been accomplished; but this was impossible, and the undertaking looked a little too personal. No one coveted a single-handed encounter. Then they took the back track, examined the footprints, dwelt long upon the patches of torn up earth where bruin had paused in his flight to commune with the internal commotion which the poisoned carcass of the stolen sheep had aroused within him; and all agreed that he must be a monster which no ordinary bear slayer would be safe in tackling.

At this juncture, some one proposed sending for the California champion, Billy Hamilton, of Sacramento, and a message was accordingly sent forthwith. And the answer came, "Billy not at home. Hunting bear in the tules." The disappointment to the assembled forces was intense, and they beat a hasty retreat. Thus ended the chase, for the present; but if bruin remains at large, and your bear stories get low, please notify me and I'll try to keep your correspondent, MR. P., informed.

Under the circumstances, I can safely contract to furnish weekly bear stories, of this kind, just as long as our present force of bear-slayers holds out, and Mr. Hamilton remains in the tules.

Quail are quite numerous at present, and are remarkably tame. Nearly every day we see a pair strutting about our grounds and helping themselves to wheat where the chickens have been fed. The turtle-doves are with us once more, and their soft, sweet cooing can be heard at any hour of the day.

This morning a beautiful golden oriole came to our back porch and breakfasted off the scattered crumbs, and the robins, linnets and canaries, nesting in the trees about the house, keep up a continual melody.

A number of deer have been seen in our neighborhood recently, but they are perfectly safe at $500 per head. A large coon was shot within our inclosure the other day.

I have just returned from a trip through Nevada, Utah, and Wyoming, and although I kept a close lookout for game of all kinds, I failed to spy anything shootable, save a thousand or two wild ducks along the northern shore of Salt Lake; unless, perhaps, the captured cattlemen confined at Fort Russell. They, no doubt, would be considered game by the Johnson county "rustlers," were they to get in range.

At Cheyenne I was informed that prairie chickens are plentiful a few miles in the country. MARION.

NEW YORK STATE ASSOCIATION.

FOR many years it has been the rule that the deliberations relative to game protection (if there were any such deliberations at all) were minor and meaningless incidents of the annual conventions of the New York State Association for the Protection of Fish and Game. This may not be said of the convention of 1892, for last Monday evening the delegates considered a scheme of reorganization; and took action which marks the beginning of a new era in the history of the Association as a game and fish protective body.

In a convention of sportsmen of the State, last February in Syracuse, a committee of five were named to present to the State Association in its June meeting, suggestions for increasing the efficiency of the organization. The members of the committee were: Messrs. F. J. Amsden of Rochester, D. H. Bruce of Syracuse, Robt. B. Lawrence of New York, Chas. B. Reynolds of FOREST AND STREAM and J. S. Van Cleef of Poughkeepsie. Their report which had been very carefully prepared after consideration of the problem by each member of the committee and after frequent consultations, embodied nothing less than the recommended adoption of a new constitution. The report was most cordially received last Monday night, and just what such a reception meant can be fully appreciated only by those who were there and sweltered in the hot, crowded and altogether uncomfortable hall. The spokesman of the committee was Gen. D. H. Bruce, who was presented by Chairman Gates as "the apostle and high priest of game protection in this State." This characterization was not only just but most felicitous on this occasion, for it was wholly due to the impulse first given by the pen of Gen. Bruce, through his letters in FOREST AND STREAM, that the February meeting was convened, and the movement was started which has now been crowned with success. Gen. Bruce was given an unfeigned welcome, and his reading of the report was listened to with the closest attention, and at its conclusion heartily applauded.

Mr. Walter S. MacGregor, of the Onondaga Anglers' Association, then read the text of the constitution, and moved the adoption of the committee's report and of the constitution. His own society, said Mr. MacGregor, had demonstrated what might be done by a union of men determined that the fish laws should be enforced; and what the Onondaga anglers had done in their local field might be accomplished in every county of New York if the sportsmen of the State were united in such an organization as the one now possible under the new constitution. The motion was seconded by Mr. W. L. Gavitt, of the Lyons Fish and Game Protective Association and was adopted unanimously and with a ring of applause.

A nominating committee of five, for naming the president and vice-president of the Association, reported at an adjourned meeting, Tuesday, the names of Mr. Charles B. Reynolds of FOREST AND STREAM, for President and Mr. W. S. Kimball of Rochester, for Vice-President, and they were elected. Mr. John B. Sage of Buffalo was appointed by the president as the secretary-treasurer pro tem. Syracuse was selected as the place of meeting of the Executive Committee in October.

The maximum limit of the salary of the secretary-treasurer, and the amount of his bond were referred to the Executive Committee with power, and to them was left also the selection of the place for the first winter meeting.

The report of the committee of five, and the new constitution as finally adopted, follow:

The Committee's Report.

To the Officers and Members of the New York State Association for the Protection of Fish and Game:

GENTLEMEN—At a convention of men interested in the preservation of fish, game and forest, held in the city of Syracuse in February of the present year—said convention having the sanction of regularity under a call issued by the president of your Association—a committee was appointed pursuant to a resolution unanimously adopted, and empowered to confer with the State Association with a view of so centralizing thought and action among sportsmen as to create an influence so powerful that their wishes will have at least some weight in the framing and passage of wholesome game laws by the Legislature. It is unnecessary in this convention to discuss the desirability of adopting such measures as will accomplish the objects and purposes for which this Association was organized in 1859. Every delegate feels the need of such action. The large attendance and great earnestness of the February convention showed the deep interest in the subject which prevailed throughout the State.

This committee has devoted much time and thought to the subject committed to it, and has come to the unanimous conclusion that it is possible to effect the reform which is so much desired through the instrumentality of your Association.

But it is respectfully suggested that some changes should be made in the Association's plan of organization and government if it would exert the power it ought to exercise. We ask your indulgence if we plainly state some facts, and give some reasons why certain changes are necessary. For many years past, the chief interest exhibited in the annual conventions has been in the tournaments. The business or legislative sessions were more formal than influential in their character, and carried little or no force before the public. This was not because there were not earnest, able men in the councils of the Association, but rather because a spirit of indifference prevailed among the many, whose chief interest was in the field sports.

Probably never before was such general interest manifested in the subject of protection as now. People are beginning to realize that unless something is speedily done which will surely end the devastation which seriously threatens the entire destruction of forests, fish and game, this country is very soon to become barren of them. If associations organized for their protection fail to discharge the duties they voluntarily assume, who shall or will act in their places? What the times demand is better organization, more activity, more earnestness on the part of the public, particularly so on the part of those who have a particular fondness for nature and for her gifts to those who love the rod and the gun. The roll of this Association contains the names of many men who in other years conscientiously maintained it as a public necessity, and who gave it influence and power at a time when its purposes were not popular. They foresaw the existing condition of things, and if their admonitions had been heeded and their efforts continued by their successors, a few men having only selfish purposes would not now control legislation as against many thousands of the true sons of Izaak Walton. The "Gould bill" of last winter was massacred by men who cared but little for, if they did not wholly disregard, the public interest. The power which a thorough organization of the sportsmen of the State could have exerted was not present to help the faithful few who were compelled to stand aside while the bill was manipulated by such influences as greed creates and inspires.

It is all important that the devotees of the rod and gun, and the forests, the admirers of song birds and the friends of propagation of fish and game, should manage to act as a unit in an effort to procure proper legislation. It is time to rise above personal influences or desires in considering the greatest good for the greatest number. Sportsmen should speak through a well organized State Association, where minorities should bear out the first principle of a republic by permitting the majority to rule. Unless they are willing to lay individual preferences aside in obedience to the will of the majority, it would be useless to spend any time in making an effort to increase the efficiency of your organization. The compact must be solid if it would be effective. If so made, it would become invincible.

THE NEW ORGANIZATION.

The committee has deemed it best to submit the form of a new Constitution of the Association, which may be epitomized as follows:

The plan of re-organization recognizes and makes ample provision for the two purposes of the Association—game protection and trap-shooting. In the practical conduct of the Association each one of these interests is given its own place, but the two are kept entirely separate. Provision is made for the fullest activity in each, but neither one is permitted to conflict with the other. Two meetings are provided for annually, one in the winter for game protection interests only, and one in the summer for trap-shooting and other competitions.

The summer tournament is retained in all essential details as now conducted. The provisions suggested relative to it involve no radical changes of practice, but incorporate into the constitution what have come to be the unwritten rules with respect to the conditions of holding the "State Shoot." The management of the Association tournament is entrusted to one of the local clubs, to be named from year to year. This club is given full charge of the meeting, assumes the financial responsibility and reaps the profit or bears the loss. The present mode of selecting the place, time and club remains unchanged. Clubs are entitled to representation by five delegates. The officers of the managing club are made *ex-officio* the officers of the tournament and the tournament convention.

THE WINTER MEETING.

The annual winter meeting for game protection interests is set for a fixed date in January of each year. The business of this meeting is restricted to the game protective purposes of the Association only. Clubs are entitled to representation by five delegates.

THE EXECUTIVE COMMITTEE.

That the will of the Association, as expressed in its winter meeting, may be carried into effect, an executive committee has been provided. One member of the committee is elected from each club by the club. The committee has practical control of all the interests of the Association as a game protective body. It is the permanent, continuous, active, working force of the organization; supports or opposes legislation, assists local clubs to enforce the laws, organizes new clubs, disseminates information respecting fish and game, and forestry, and is charged with the general advancement of the purposes of the Association and the interests of the sportsmen of the State. The executive committee controls the finances. It meets four times a year. It directs the work of the secretary-treasurer.

THE SECRETARY-TREASURER.

So soon as the Association shall earnestly and actively undertake the practical accomplishment of its objects, a large amount of clerical service will be involved. No one, however enthusiastic, can be expected to do this work gratuitously and do it well. To secure satisfactory service provision must be made for its adequate recompense. In the plan now under consideration the two offices of secretary and treasurer have been combined in that of a paid secretary-treasurer, appointed by the executive committee, subject to its control and holding office during its pleasure.

MEMBERSHIP.

The Association, under the new constitution, will be composed of clubs and individuals.

Individuals are associate members. They are entitled to one delegate for every 25 associates, or a major part thereof, appointed by the president. The age limit for admission of associates is 18 years.

Membership imposes upon clubs and individuals certain obligations, as set forth in Section 5 of Article III.:

SEC. 5. Membership in the New York State Association for the Protection of Fish and Game shall carry with it an obligation on the part of the clubs and individuals to obey the letter and spirit of all game and fish laws, and to encourage by personal conduct and influence a public regard for game and fish protection. All members, whether clubs or individuals, shall be pledged to a hearty support of any legislation regarding fish and game approved at an annual winter convention.

If by this broadening of its field the Association shall enroll under its banners an army of individual sportsmen, enlisted in its support, and pledged to a high standard of sportsmanship, it will have added an important factor of strength and influence.

With this brief outline of the proposed plan of organization of the Association, we submit the constitution.

Respectfully,

C. B. REYNOLDS, Chairman,
D. H. BRUCE,
F. J. AMSDEN,
J. S. VAN CLEEF,
ROBERT B. LAWRENCE,
Committee.

The New Constitution.

ART. I.—NAME.

THE name of this Association shall be the New York State Association for the Protection of Fish and Game.

ART. II.—OBJECTS.

SEC. 1. The objects of this Association shall be: To procure the enactment of suitable laws for the protection and preservation of birds, quadrupeds and fishes; to promote the observance of such laws; to conserve and foster the game and fish supply; to preserve the forests; and to encourage a high standard of field sportsmanship.

SEC. 2. The further objects of this Association shall be the promotion of kindly intercourse and generous emulation among sportsmen by competitions in trap-shooting, fly-casting and other sports.

ART. III.—MEMBERSHIP.

SEC. 1. This Association shall be composed of clubs and individuals. The term "club" when used in this constitution shall be construed to mean also "society," "league" or "association."

SEC. 2. Any club duly organized for the purposes named in Art. II. shall be eligible to membership in this Association. Any individual more than eighteen years of age, a resident of New York, shall be eligible to associate membership.

SEC. 3. A club or individual seeking membership shall mail to the secretary-treasurer an application on application blank "A" or "B" hereto annexed, together with the dues for the current fiscal year. Such application shall be acted upon by the Executive Committee. It shall require the affirmative vote of two-thirds of the members present to elect.

SEC 4. Associate members shall be entitled to all the privileges of the Association, but no associate member shall be entitled to vote unless he be a delegate. The president of the Association shall appoint as a delegate one associate member from every twenty-five associate members or major part thereof.

SEC. 5. Membership in the New York State Association for the Protection of Fish and Game shall carry with it an obligation on the part of the clubs and individuals to obey the letter and spirit of all game and fish laws, and to encourage by personal conduct and influence a public regard for game and fish protection. All members, whether clubs or individuals, shall be pledged to a hearty support of any legislation regarding fish and game approved at an annual winter convention.

SEC. 6. Honorary members may be elected at any winter meeting by unanimous ballot. They shall be exempt from the payment of dues, and shall have no vote.

ART. IV.—MEETINGS.

SEC. 1. *Winter Convention.* There shall be a winter convention of the Association on the second Thursday of January of each year. Such convention shall be held for action relative to the objects named in Sec. 1 of Art. II. only. The place of meeting shall be determined at the preceding winter convention. A special meeting of the Association or of the Executive Committee for these objects may be called by the president at any time, and shall be called by him on the written request of five members, and due notice of such meeting shall be mailed to the president of each club at least fifteen days before the date fixed for it.

SEC. 2. *Summer Convention.* There shall be an annual summer convention of the Association for the objects named in Sec. 2 of Art. II. The place and time of meeting shall be determined at the preceding summer convention. A special meeting for the same objects may be called by the tournament president, and shall be called by him on the written request of five members, and due notice of such meeting shall be mailed to the president of each club at least fifteen days before the date fixed for it.

The management of the summer convention shall be intrusted to one of the constituent clubs, chosen by ballot from year to year in the preceding summer convention. Such club shall conduct the meeting under the Rules and Regulations hereto annexed. The financial control, expenses, liabilities and profits or losses of the meeting shall vest in such club. No funds of the Association shall be expended nor liability created for a summer meeting.

SEC. 3. *Special Meetings.* At a special meeting no business shall be transacted other than that specified in the call.

SEC. 4. *Representation in Winter Convention.* In any meeting named in Section 1 of this article each constituent club shall be entitled to representation by five delegates. Each delegate from the associate members shall cast one vote.

SEC. 5. *Representation in Summer Convention.* In any meeting named in Section 2 of this article each club shall be entitled to representation by five delegates. Delegates from the associate members shall have no vote.

SEC. 6. No club whose dues are unpaid shall be entitled to representation in any meeting. No delegate shall represent more than one club.

SEC. 7. No delegate from a club shall participate in a meeting until he shall have filed with the secretary his credentials signed by the president or secretary of such club.

SEC. 8. *Quorum.* Delegates representing ten clubs present at any regular or special meeting of the Association and seven delegates present at any meeting of the Executive Committee shall constitute a quorum for the transaction of business. A smaller number present at any regular or special meeting of the Association or of the Executive Committee respectively may adjourn to any specified day.

SEC. 9. Any meeting may be, on motion, adjourned from time to time.

ART. V.—OFFICERS.

SEC. 1. The officers of this Association shall be a president, a vice-president, a secretary-treasurer and an executive committee; also a tournament president, vice-president, recording secretary, corresponding secretary and treasurer.

SEC. 2. The first election of officers except as provided in Sections 3 and 4 of this Article, shall be held by ballot immediately upon the adoption of this Constitution; and the officers then chosen shall hold office until their successors shall have been elected. Thereafter the president and vice-president shall be elected by ballot at the annual winter meeting.

SEC. 3. *Secretary-Treasurer.* A secretary-treasurer pro tem. shall be appointed by the president elected at this meeting and shall serve without remuneration until his successor shall have been appointed, and shall not be required to give a bond. Thereafter the secretary-treasurer shall be appointed by the executive committee and shall hold office at the pleasur of such committee.

SEC. 4. The president, the vice-president, the recording secretary, the corresponding secretary and the treasurer of the club, under whose management a summer meeting shall be held, shall be *ex-officio* the tournament officers respectively for the current tournament year.

SEC. 5. All officers except the secretary-treasurer shall serve without pay. The salary of the secretary-treasurer shall be fixed by the Executive Committee, but shall not exceed $— per annum.

SEC. 6. Any vacancy in any of the offices may be filled at any meeting of the Association or of the Executive Committee.

ART. VI.—DUTIES OF OFFICERS.

SEC. 1. *President.* It shall be the duty of the President to preside at the winter convention and at the meetings of the Executive Committee. He shall appoint all committees except as provided in Art. VII. He shall have no vote except in the election of officers and of new members, and except on equal division, when he shall have the deciding vote.

SEC. 2. *Vice-President.* It shall be the duty of the Vice-President to perform all duties of the President at any meeting in the absence of the President.

SEC. 3. *Secretary-Treasurer.* The Secretary-Treasurer shall issue calls for all meetings of the Association and of the Executive Committee, and he shall keep a record of all such meetings. He shall keep a roll of membership and take charge of all papers belonging to the Association; he shall collect all moneys belonging to the Association and dispense the same under the direction of the Executive Committee. He shall transact such other business, and fulfil such further duties as may be directed by the Executive Committee. He shall be required to execute a bond of indemnity in favor of and satisfactory to the President of the Association, to an amount not less than $ — before assuming office. He shall not be a delegate.

SEC. 4. The duties specified in the foregoing sections shall not apply to nor include those to be performed by the Tournament Officers as provided for in the next section.

SEC. 5. *Tournament Officers.* It shall be the duty of the Tournament President, Vice-President, Secretary and Treasurer to perform all duties usually pertaining to their offices which shall relate to the summer convention. Within five days from the adjournment of such convention the tournament secretary shall transmit to the secretary-treasurer the minutes of the meeting, and a copy, duly attested by the tournament president, of any changes in the Rules and Regulations adopted in such meeting.

ART. VII.—EXECUTIVE COMMITTEE.

SEC. 1. *How Constituted.* One delegate from each club shall be named by such club to be a member of the Executive Committee, and the delegates so named, together with the delegate or delegates representing the associate members, shall constitute the Executive Committee; the term of office shall be for one year; the President shall be *ex-officio* a member of the Executive Committee.

SEC. 2. *Duties.* The Executive Committee shall have general charge of the interests of the Association named in Sec. 1, of Art. II. and of such interests only. It shall consider and report to the Association all proposed changes in the game laws, represent to the Legislature the sentiment and action of the Association respecting the enactment of such measures, and urge their adoption or rejection; it shall secure the enforcement of the game laws; disseminate literature relating to game and fish protection; promote fishculture, forestry and the introduction of fish and game; and adopt such other means as it may deem expedient to further the objects of the Association.

SEC. 3. *Sub-Committees.* The Executive Committee may appoint such committees as it shall deem expedient.

SEC. 4. *Financial Control.* The Executive Committee shall have full charge of the funds of the Association and power to expend the same, but shall be prohibited from incurring any obligation for any sum above the amount of funds in the hands of the treasurer, and from making any expenditures or creating any liabilities for the objects named in Sec. 2 of Art II.

SEC. 5. *Meetings.* The first meeting of the Executive Committee shall be held on the 13th day of October, 1892, in the city of Syracuse. Thereafter the Committee shall meet four times annually, viz., at the time of the annual winter meeting of the Association, and on the second Thursdays of April, July and October respectively.

SEC. 6. *Reports.* The Executive Committee shall report to the Association annually at the winter meeting.

ART. VIII.—DUES.

SEC. 1. *Clubs.* The annual dues to the Association from each club to entitle it to representation in the winter meeting shall be a sum equivalent to twenty-five cents per capita of its highest membership in good standing at any time during the current year. The dues from each club to entitle it to participate in the summer meeting shall be one dollar. In all cases the membership shall be attested by a certificate signed by the president or secretary of the club.

SEC. 2. *Associate Members.* The annual dues of an associate member shall be twenty-five cents.

SEC. 3. All dues shall be payable in advance before the second Thursday in January, which shall be the beginning of the fiscal year. A club or individual in arrears may be suspended or dropped from the roll by the Association or Executive Committee, but may be reinstated upon the payment of the amount in arrears.

ART. IX.—AMENDMENTS.

All proposed amendments of the constitution shall be submitted in writing at least one month before the winter meeting, to the secretary-treasurer, who shall at once mail a printed or type-written copy to each member of the Executive Committee, and no amendment shall be adopted unless it shall have been so submitted, nor unless it shall be approved by three-fourths of the members present at such meeting. But a proposed amendment may be entertained and acted upon without such previous reference by unanimous consent of the delegates.

ART. X.—RULES AND REGULATIONS.

SEC. 1. The Rules and Regulations hereunto annexed shall govern all contests in the summer convention of this Association.

SEC. 2. Immediately after the election of officers in the summer convention the Tournament President shall appoint a committee of five delegates, who shall constitute a standing committee on Rules and Regulations relating to the summer convention. The committee shall hold office for one year or until their successors shall be appointed.

SEC. 3. All proposed amendments of the Rules and Regulations shall be submitted in writing to the standing committee on rules at least one month before the date of the annual summer convention; and shall be acted on in such convention.

ART. XI.—ORDER AND DEBATE.

Cushing's Manual shall be the authority for order and debate.

Edward Pardridge, the big Chicago wheat operator, who has more than once made a turn of $500,000 by a break of the market in a single day, was asked recently what had been "the proudest moments of his life." Mr. Pardridge climbed out of the noisy pit to answer, and he said in his abrupt way: "Well, there isn't any doubt that I was never prouder or happier than in the old days on the farm, when I used to run in bare-headed from the river with a big string of suckers and lay them down before my father." An uproar in the pit cut Mr. Pardridge short and he scrambled back to catch other kinds of fish.—*Evening Post.*

Sea and River Fishing.

Trout and Bass Fishing.

WE have secured, for the private information of the readers of FOREST AND STREAM, knowledge of a number of streams and lakes easily accessible from this city, where we believe that good fishing for trout and black bass may be had. The information we shall be glad to furnish without charge to any reader of FOREST AND STREAM who will apply for it, either personally or by letter.

THE SHADOW OF A LIFE.

BY IGNATIUS.

IN rippling shallows where the gravel clean
Is bathed in waters from th' eternal hills,
Pure, sweet and cold, the youngling found its birth,
And there in mimic shoals its childhood spends,
Seeking its tiny prey, and quick to see
The shadow, in the sunlight, of a foe.
When swift as swallow in the upper air
It darts to find the safer, deeper tide,
And learns to chase or fly as need requires.
Then dawns a time when a new impulse stirs
The ganglia that are neither heart nor brain
To follow out this strange, mysterious flow;
This ever widening, deepening liquid world,
And know to what it tends. With steady stroke
It sculls mid-depth, and learns to pierce the gloom
Of deeper, fouler waters; feels the want
Of something for the need of which it pants
Like racer overtaxed on sultry day,
Feels strange reversals of the onward flow,
As if the river's mind had changed, and learns
That neither strength nor skill nor toil alone
Can gain the end apart from wind and tide.
Then comes a new and sickening bitter taste,
But day by day less nauseous, more desired,
Until at last a very wine of strength,
Surcharged again with that rare vital force
That mountain streamlets brought in childhood's days,
But richer now, more sapid, more intense.
Ah, this is Life, and this at last the World!
No sedgy shores on either right or left,
No rocky floor to bruise the diver's breast,
But overhead an ever-heaving sky
Of ever-charging hues, while seething sounds
Tell how its crests are yielding to the breeze,
Or thunderous with awful resonance
When from that upper world the storm beats down,
And blacker than the utmost of those depths
Which none can sound save the strange things that bear
Their own weird torches where the daylight fails,
And right and left no limit to the ways,
Nor barriers to thwart the swimmer's will.
Ah, this is Life, and this at last the World!
Dangers? Ah, yes; what would you have, I pray?
Shall this illimitable field be ours,
Teeming with living creatures that were made
To be our prey, and this fierce energy
Born of the crested waves and sunlit weeds,
Shall these be ours, and we pay not the price,
When swift and sudden from the distant gloom
There comes a rush, a gleaming of white teeth,
A swirl of waters? Some of us are gone!
But Kismet, it is fate; the sea is wide,
And we are many—and their pang was brief.
And ere our time shall come what leagues and leagues
Of this unfathomed world shall we explore,
What raptures of the chase shall we enjoy,
Under the Saragossas what new forms
Of life and beauty are for us to find,
In the rank tangle what preserves of game?

The seasons come and go unrecked of them
Whose aimless wanderings touch the Arctic seas,
And then the warm rich tide that from the Gulf
Flows up to melt the southward drifting berg,
But some day comes again an impulse strong
To seek once more the waters clear and sweet,
That from the Ocean's bosom went aloft,
Distilled from all their saltness, and were caught
Descending, in the filters of the hills,
And thence poured out in many a babbling brook
To make the Delaware, the childhood's home;
A longing strong and irresistible
And guided by an instinct sure as fate,
That cannot err in finding its own stream,
However many pierce the ocean's shore.
In vain the waters foul with landwash stain
And vapid with the loss of salt, disgust,
In vain the narrowing limits cramp the sense
Of freedom, and the things that should be food
Sicken with their unseasoned earthiness.
Surely the childhood's home had wider ways!
The river has grown smaller in these years!
And we forget how large to little eyes
The things may be, and yet how small to them
Who later on have looked upon the world.
But let the way be sordid, narrow, mean,
The home is still the home, and on we press,
And some shall find it; and shall linger there,
And in the clean swept gravel leave in trust
The nest for Nature's kindly nurturing
From which another brood shall seek the sea,
And enter on the fullness of its life.

But some shall fail. Alas! the murky tide,
Befouled with all the washings of the land,
How shall the eyes that in the crystal seas
Could tell afar the glassy tentacles
That streamed beneath translucent jelly-fish,
Detect the coarse rude threads the fisherman
Has woven into snares? How can the touch
That ever found the seaweed lightly yield
To give a passage through its tangled maze,
Reveal the danger of those knotted cords?
A moment of bewilderment, and then
A gallant, desperate fight for liberty,
A moment more, and in the unkindly air
The life is gone. The groveller in the ooze,
The sluggish swimmer that in muddy pools
Finds worlds enough, when tossed upon the land,
May gasp, and linger, and hold on to life
Till every scale is hardened in the sun;
But such a life as this, born in the stream
Of unpolluted waters from the hills,
Nurtured for years in Ocean's purity,
Apart from these can but a moment live,
Its native element, its liberity,
These, only these, or welcome death at once.

But after all, is it ignoble end?
Whether is better, with scant funeral,
To find in some shark's maw a cold, damp tomb?
Or to be borne in solemn state on plank,
With mingled incense of the charring wood
From forests that o'erlooked the natal stream,
And subtle odors, latent in the sea,
But now brought out in fragment, misty steam,
The silvery sheen turned into richest brown,
Revealing here and there the flakes of white,
While grave and reverend men, the wise, the good,
Rise up to greet its coming, and pronounce
Their benediction on the Planked Shad?

UNIVERSITY OF PENNSYLVANIA.

A HEAD WAITER.

I HAD walked out upon the trunk of a fallen tree, and cast so as to be clear of its entangling twigs, when hearing a succession of short sneezes, and turning in the direction whence the sounds issued, I observed a full-grown boy, barefooted and coatless, engaged in fishing from the rock ledge a short distance from me. The point I had reached through thicket and brier, was a wild, unfrequented bend of the stream where no sign of life had been visible, except here and there the quick, restless flit of a bird, and the playful antics of a young squirrel, as he ambled along the zig-zag lines of a rail fence on the opposite bank. I was therefore pleasantly surprised in having my solitude broken upon by a human companion so unexpectedly near, and decided to learn to know him. I thereupon accosted him.

"Good morning, young man!" I ventured.

"Mornin', Mister," he answered pleasantly.

"Your name isn't Wilkinson, is it?"

"Nope, it's Brill. I'm Lije Brill."

"Well," I replied, "Brill is a better name than Wilkinson, at least it is more easily spoken, because there is less of it. How are they biting your way, Elijah?"

"Only midlin peart. I've got a few bass, and some goggle-eye, and a bachelor or two;" he said, as he raised a tempting string that made me envious and anxious to own it for the sake of my reputation and the encouragement of our desponding commissariat of the camp; "but," he continued, "I'm not fishin', Mister! You see, pap, he sent me to town to fetch a new beam for the plow: and when I got to the cattle path as winds through the timber to the crick, I jest natchally, somehow, couldn't get past it, and 'lowed pap might wait while I dropped a line in and rested up a spell. This is not one of my reg'lar days to fish. Only happened to be on my way to town in somethin' of a hurry to get that dratted beam for pap; and I must be goin', or ma, she'll"—

"I dare say your father needs it," I said, interrupting him.

"Well—pap's waitin' for it. He likes to wait, Mister, pap does. He can't plow till I get back, but he'll sit around under the shady end of the tool shed and wait and whittle, and whittle and wait. But, I must be goin', Mister. Ma, she'll skin me whole, I do reckon. She's the one as wants the beam to get there—not pap."

"I see how it is, "Lijah," I interposed, "your ma runs the tavern, as it were. and your pa is the head waiter."

"That's the idee. Your'e got it, Mister, Maybe you know my ma. No? Well you ought to call, jest to see her make him stand 'round and know his place. A cat-amount honeymoon has lit up our farm for nigh on to twenty year. But I must go. You haven't got a little tobacco about you, I reckon? Obleeged to you. Here, Mister, take my string. Ma, she natchally hates water that fish swim in; pap, he'll wait till they spile afore he cleans 'em, and I haven't got time. Dassent take 'em home, anyway, Mister, kase I haven't been a fishin', you know. Only resting up a spell to give pap another good chance to wait."

J. T. H.

VIRGINIA'S DEFECTIVE LAWS.

LYNCHBURG, Va., May 26.—*Editor Forest and Stream:* A few simple, unvarnished facts about "Game Protection" may not be nice doses to swallow, but the truth when plainly told may possibly do some little good. Several parties were brought up on trial in our police court for illegal fishing. The cases were sent on to the corporation court, and the parties were forgiven of their offense on promise to sin no more. I had gone over the code of Virginia to find a law under which I could push the cases to a happy final. The law was there, but the provisions had expired by limitation, so I was satisfied with the rulings of the court, as it was the best that could be done under the circumstances. I am sorry to say that at this time there are no laws in force in this State protecting fish above tide-water. Those that were in effect two years ago were so defective as to be practically useless. The law did not exclude from the rivers all nets and traps, but specified such as should not be used. There was one great mistake. It should have excluded all nets and traps, and allowed fish to be taken only with hook, line and rod, and then only at certain seasons of the year. This is the fight we will make before the Legislature next winter. Our Mr. Alex. McDonald, representing Lynchburg in the Legislature, will be with us. Until then we are powerless. The waters I and my friends are interested in mostly is James River and its tributaries above Richmond. If we can free and protect this river it is just possible the government will come to our aid in restocking. Up here the James is a bold, rapid stream, just suited to game fish—and with proper protection should afford thousands of pounds of good, solid food. I am an uncompromising enemy of the pot fisherman, and I want to see every net and trap driven from the river. The bass are the fish we want to see swarming in the James, and if we can get the proper laws enacted we will have the game fish there. This spring the catch of bass was very small. The season was unusually backward, and I am glad of it. Our field game is well protected. The universal individual posting of land makes it almost impossible for the game butchers to do any great harm. One must have friends in the country to get a day's shooting. It's a good law and well enforced.

D.

A NATIONAL SALMON PARK.

[A paper read before the American Fisheries Society.]

WHO would have thought thirty years ago that the creation of a National Park in this country would be the means of rescuing the buffalo from extinction? Who thought then that anything was needed to rescue the buffalo? The buffalo roamed in myriads over the plains and mountain slopes of the central portions of the United States and were so innumerable that, with the exception of a few far-sighted persons, no one thought that this noble race of animals was even in danger. The supply seemed inexhaustible and the species at least safe from extinction.

How soon we found out our mistake, and how suddenly the change came. The note of alarm had hardly been sounded long enough to be distinctly comprehended over the country, before the buffalo were gone—all gone practically, except a few straggling survivors which, if they had not found refuge in Yellowstone Park, would have been gone too, long before this. The Yellowstone National Park saved them. It saved the wild race from extinction, and if nothing else should ever be accomplished by the creation of the Park, this alone would, in the writer's estimation, justify its existence.

But if any one had said thirty years ago, "Let us form a National Park in the buffalo region for a protection and refuge for the buffalo," the proposition would have been laughed down from one end of the country to the other. It would have been thought a most ridiculous expedient, a scheme too foolish and crazy to be even seriously entertained. Nevertheless, the creation of the National Park has accomplished this very object, and has been, I think it may be safely said, the only means of accomplishing this most important object, the preservation of the American buffalo.

Now what this paper is going to propose will appear, doubtless, just as ridiculous, just as foolish and crazy, as the formation of a park for the preservation of the buffalo would have been thought thirty years ago. It is nothing less than the creation of a national park for the preservation of our salmon.

I hear already from all directions the question, "What do the salmon need a park for? Are there not plenty of places of safety for them already in all the rivers and streams of this country, not to mention the pathless ocean where man cannot follow them?"

It looks so at first sight, I admit; but let us try to find these places of safety if they exist, and then see how it looks. We certainly cannot find them on the Atlantic coast, where the scanty yield of the only two American salmon rivers—the Kennebec and Penobscot—is only a drop in the bucket compared with the total consumption of salmon. Passing over to the Pacific coast we find only the Sacramento, the Columbia and the lesser streams on the Washington and Oregon coast, and in all these the salmon are about as safe as the fur seals were last year in Behring Sea.

I will say from my personal knowledge that not only is every contrivance employed that human ingenuity can devise to destroy the salmon of our West coast rivers, but more surely destructive, more fatal than all is the slow but inexorable march of those destroying agencies of human progress, before which the salmon must surely disappear as did the buffalo of the plains and the Indian of California. The helpless salmon's life is gripped between these two forces—the murderous greed of the fishermen and the white man's advancing civilization—and what hope is there for the salmon in the end? Protective laws and artificial breeding are able to hold the first in check, but nothing can stop the last.

To substantiate this statement, which may seem exaggerated, let me inquire what it was that destroyed the salmon of the Hudson, the Connecticut, the Merrimac and the various smaller rivers of New England, where they used to be exceedingly abundant? It was not overfishing that did it. If the excessive fishing had been all there was to contend with, a few simple laws would have been sufficient to preserve some remnants at least of the race. It was not the fishing, it was the growth of the country, as it is commonly called, the increase of the population, necessarily bringing with it the development of the various industries by which communities live and become prosperous. It was the mills, the dams, the steamboats, the manufactures injurious to the water, and similar causes, which, first making the streams more and more uninhabitable for the salmon, finally exterminated them altogether. In short, it was the growth of the country and not the fishing which really set a bound to the habitations of the salmon on the Atlantic coast.

Let me illustrate this same statement more in detail by presenting the testimony of the salmon rivers of the Pacific coast. Take for an example the Sacramento. When the first rush of gold seekers came to California in 1849, every tributary of the Sacramento was a fruitful spawning ground for salmon and into every tributary countless shoals of salmon hastened every summer to deposit their eggs. When the writer went to California in 1872, only twenty-three years later, not one single tributary of the Sacramento of any account was a spawning ground for the salmon except the McCloud and Pit rivers in the extreme northern part of the State, where the hostility of the Indians had kept white men out. It was not fishing by any means that had caused the disappearance of the salmon, for the miners did very little fishing in those times; but it was the debris from the quartz mines which drove the salmon out, ruining the spawning grounds and rendering the river uninhabitable for the salmon.

This was in 1872. In 1878 the writer took 14,000,000 of salmon eggs from the summer run at the U. S. Salmon Station on the McCloud River. In 1883 the Southern Pacific R.R. Co. (then the Central Pacific) extended their line northward up the Little Sacramento, crossing the mouth of Pit River, into which the McCloud empties, a mile or two above.

So disastrous to the salmon was the effect of the road building along the Little Sacramento and the mouth of the Pit, that that year it was with great difficulty and only by very hard work that we succeeded in getting barely 1,000,000 salmon eggs, and the next year Prof. Baird, in disgust at what he considered the unpardonable indifference of the Californians, discontinued taking salmon eggs at this station. Since that time sawmills of immense capacity have been erected at the head of the Little Sacramento and the McCloud, and have done very effective work in increasing the now alarming scarcity of the spawning salmon of the Sacramento.

I think these instances are sufficient to show that what the friends of the salmon have to fear more than overfishing, is the growth or development of the country always attendant upon an increasing population, but the fatal consequences of which to the salmon it is impossible to avoid. Nothing can stop the growth and development of the country, which are fatal to the salmon. For instance, there was no power in the world that could have prevented the mining on the Feather, the Yuba, the American Fork or the other spawning streams of the salmon; nothing could have stopped the building of the railroad up the Little Sacramento or the erection of the sawmills on the upper McCloud. They came along naturally and inevitably in the march of events, and they could not be withstood; and nothing was left for the salmon but to suffer the consequences and disappear as by a decree of fate.

Now actual fishing in the salmon streams can be regulated by law and rendered comparatively harmless, but the country will continue to grow more and more populous, and the fatal march of civilization will proceed as irresistibly as ever. That cannot be held back, and unsafe as the salmon are now in our Atlantic and Pacific coast rivers, they will become more and more unsafe every year; all of which goes to show that there is no safe place for the salmon within the limits of the United States proper.

This leaves us only Alaska. Now, how is it with the salmon streams of Alaska? Not even there are the salmon safe. Countless myriads of salmon formerly filled all the rivers and streams of the long Alaskan coast, and they were nearly 2,000 miles from the destroying hand of civilized man, but they were not safe even on those distant shores. The ubiquitous canneryman found them, and he already has his grip on the best and most fruitful of the Alaskan rivers. The pressure of the world's demand on the world's supply of canned salmon renders it necessary for the salmon canner to occupy more distant and less fruitful fields every year, and it is only a question of time when all the Alaskan salmon streams are given over to the canneries, and when that time comes no one will claim, I think, that the salmon are safe in Alaska.

One or two illustrations are sufficient. The Karluk River on Kodiak Island is probably the most wonderful salmon river in the world. On Aug. 2, 1889, the cannery nets caught on Karluk beach at the mouth of the river, 153,000 salmon by actual count. A short time after, the writer went up the Karluk River in a bidarka—the skin boat of the natives—expecting to see myriads of salmon spawning and thousands on their journey to the spawning grounds, but instead of the wonderful sight we anticipated, our whole party, I think, saw less than a dozen in the river till we reached the lower spawning grounds, and then to our astonishment we saw only a few scattering fish spawning, such as one might expect to see in the most commonplace salmon river in the world; 153,000 salmon caught in one day at the mouth of the river, and none to speak of going up the river to reproduce their species. Everyone can draw his own inference. The fact is significant enough.

On another river, a large one, the Nushagak, where vast numbers of salmon were taken at the mouth one summer for canning, we were told that the succeeding winter the natives living up the river were brought to the verge of starvation because the salmon which they had always depended on for their winter's food were so scarce. Of the thousands and thousands of salmon that usually ascend the river to spawn, not enough spawners escaped the nets at the mouth to keep the natives on the upper waters from starving. This fact speaks for itself also.

So much for the safety of salmon in Alaska in general, but it would yet seem that on the uninhabitable shores of the Arctic Ocean the salmon might find a place of refuge, but not even there can they stay unmolested, for parties were planning three years ago, the writer was told, to establish canneries on the affluents of the frigid and forbidding Arctic. So we see that our salmon are not safe even in Alaska, their last refuge, and if not there, they are not safe anywhere within the limits of our broad land.

But now the question comes up, "Will not protective laws and artificial breeding make the salmon secure enough?" My answer is that good laws and artificial breeding will do a good deal toward it, but not enough. Good laws can prevent overfishing, but no laws can arrest the encroachments on the salmon rivers of increasing populations and their consequent fatal results to the salmon. No laws could possibly have been enacted which for instance would have stopped the manufacturing enterprises on the Connecticut, or the vast water traffic of the great metropolis at the mouth of the Hudson, which doubtless drove the salmon out of these rivers. Protective laws may regulate the salmon fishing of the Sacramento, but no laws can stop the mining, the logging and the railroad building that are destroying the spawning grounds of the tributaries of the Sacramento. It is not in the power of law enactments to save the salmon from all their dangers.

Artificial breeding can do a great deal, and has done a great deal, but it cannot be relied upon for a certainty. In the first place it is very uncertain where one can find a suitable place for hatching salmon. The writer traveled over four thousand miles up and down the Columbia and its tributaries, from the Continental divide to the Pacific coast looking for a good place for salmon hatching, first in 1877 for the Oregon and Washington canneries men, and afterward in 1883 for the U. S. Fish Commission, and found only two places in that great stretch of country which were suitable, one on the Clackamas River where the writer built a hatching station, and the other on the Little Spokane a few miles from Spokane Falls, which is still unoccupied.

There is in all the great State of California but one stream suitable for salmon hatching on a large scale, and on this stream, strange as it seems, there is but one spot that meets all the requirements of the case, and that is the place that the writer selected and built upon, on the McCloud River in 1872, and named Baird, in honor of the distinguished Commissioner, under whose direction the work was done.

Allow me to add by way of confirmation that subsequently the State Fish Commissioners of California, after hunting all over the State for another place for hatching salmon, have given it up and now get their supply of salmon eggs from the Government station at Baird.

The above instances illustrate the difficulty of finding suitable places for hatching salmon on a large scale, and not only is it not easy to find such places, but they cannot be relied upon to a certainty when they are found, for they are always in danger from logging, mining, railroad building, lumber manufacturing and other causes which yearly become more imminent and dangerous as the country gets settled up and the population increases, and which threaten at any time to destroy their efficiency.

We must come to the conclusion then that even with the help and support of protective laws and artificial breeding, our salmon, like the buffalo of thirty years ago, are not safe. The destroying agencies of advancing civilization drove the buffalo to the last ditch, so to speak, and then the last survivors, or almost the last, were slain. They were obliged from sheer necessity to come to feed, where from all directions the hand of man was raised against them. Whether they turned to the north or to the south, to the east or to the west, they went to their certain death, and in an incredibly short space of time they practically disappeared.

The story of our salmon is analogous. They are obliged to come inland to breed. They are compelled from sheer necessity to come up the rivers into the very midst of their human enemies. They cannot stay in the ocean like other fishes of the sea, where they are safe from the hand of man, but they must necessarily come, one might say, into his very grasp, and, like the buffalo, whether they turn to the north, south, east or west, they go into the very jaws of death; for what hope is there for a salmon to escape after he has entered a river, if man chooses to employ his most effective agencies for his capture? There is none. The salmon is doomed. There is no altar of refuge for the salmon in this country any more than there was for the buffalo.

Ought not something to be done, then? Ought this state of things to continue? The salmon of the United States are one of our most valuable possessions. As a matter of ordinary prudence, ought not the country to have some place, if it is possible, where the salmon can come and go in safety? If a stock raiser saw that his cattle were daily diminishing because they had no spot where they were safe from beasts of prey, what kind of man should we think he was if he did not very soon fix a place where they would be safe?

We should, to draw it mildly, think he was very improvident and negligent. Is it any less improvident and negligent for this country not to provide a place for its rapidly diminishing salmon where they will be safe? It seems to the writer that not a day ought to be lost, but that if it is possible to provide a place where our salmon can resort unharmed and remain safely their allotted time, it should be given them without hesitation. If there is such an asylum of refuge within our borders, by all means secure it for the salmon and let the salmon have it for an eternal heritage.

Is there such a place within the limits and jurisdiction of the United States? The writer can say from personal knowledge that there is one place at least. Most fortunately for us Americans there is in our Alaskan possessions just such a place as is wanted—probably more than one—and so exceptionally fortunate is America in this respect that it is not likely that this side of the frozen and uninhabitable shores of the Arctic, it can be duplicated many times in the possessions of all the nations of the earth combined, which significant circumstance, allow me to add in passing, goes to show how near the world has reached the extreme limit of its salmon supply.

The locality which the writer has in mind is an island in the North Pacific about 750 miles nearly due west of Sitka. Its name is Afŏgnak, and it is the northernmost of the two largest islands of the group, called the Kadiak Islands. It lies just north of latitude 58° and between 152° and 153° west longitude. It is a small island, probably not over fifty miles across at its widest part, but there are several streams flowing from various points of the island to the surrounding ocean, that at the proper season contain salmon innumerable. It is no exaggeration to say that salmon swarm up these streams in countless myriads. When the writer was on the island in 1889, the salmon were so thick in the streams that it was absolutely necessary in fording them to kick the salmon out of the way to avoid stumbling over them. I know that this story is an old salmon chestnut, but it illustrates as well as anything the wonderful abundance of salmon in the Afŏgnak streams; and it can be easily believed when it is remembered that about a month earlier 153,000 salmon were caught in one day at the mouth of the Karluk, which is a river only 60ft. wide where it empties into the ocean. But there is no need of consuming time in proving the abundance of salmon at Afŏgnak Island. It is a matter of record. The salmon are there in as great numbers as could be wished. All the varieties also which inhabit the Pacific Ocean come to Afŏgnak. The list is as follows; it is a royal catalogue:

1. The red salmon, the "blue-back" of the Columbia (*Oncorhynchus nerka*).
2. The king salmon, the "quinnat" or "spring salmon" of the Columbia (*Oncorhynchus chouica*).
3. The silver salmon, the "silversides" of the Columbia (*Oncorhynchus kisutch*).
4. The humpback salmon (*Oncorhynchus gorbuscha*).
5. The dog salmon (*Oncorhynchus keta*).
6. The steelhead, the "square-tailed trout" of the tributaries of the Columbia (*Salmo gairdneri, Salmo truncatus*).
7. The Dolly Varden (*Salvelinus malma*).

It is easy to see what a paradise for salmon this island is, and what a magnificent place of safety it would be if it were set aside for a national park where the salmon could always hereafter be unmolested. But the abundance and variety of its salmon are not the only recommendations that Afŏgnak Island has for a national park. It has several others which may be enumerated, as follows:

1. The island is inhabitable all the year round, with a comparatively even temperature. Although so far north, the winter's cold is not excessive, probably not equalling that of parts of New England. It is cooler than New England in the summer, it is true, but there is much less variation of temperature between summer and winter.

2. The rivers of Afŏgnak still exist in all their original purity and fruitfulness. No overfishing has left them barren. No mills have polluted their primeval purity. No railroads have frightened the salmon away from them. No mining has disturbed their native spawning grounds. As salmon rivers they are still in their original glory. To quote a not inappropriate line of Byron, "Such as Creation's dawn beheld" them, they are

rolling now. Consequently nothing need be done nor any expense incurred in putting the rivers in order for asylums of refuge for the salmon.

3. No complications now exist or can come up in future, in regard to land titles in the island. The United States Government owns the land already like the rest of Alaska, by direct purchase from Russia, and has never parted with any of its exclusive rights of ownership. No State or Territory, or company or individual owns an acre of it. Consequently the U. S. Government can set aside the island for any purpose whatever, without interfering with any prior rights or titles, or incurring any risk of litigation.* Alaska is already one great reservation.

4. The island will probably never be wanted for anything else. The summer season is so short that no crops can be raised there, and it is not likely that for many generations, if ever, the land will be wanted by permanent settlers, and it is now inhabited only by a few Aleuts and half breed families who would not be interfered with. There would be no injustice done to individuals by making a reservation of the island.

5. Last but not least, artificial hatching can be instituted there at any time, if it is ever thought best, and on a vast scale if desired; and unlimited numbers of the eggs of the various kinds of salmon noted above, can be obtained for distribution and sent to all other parts of the country where they may be needed.

The above considerations seem to indicate that Afognak Island possesses all the qualification required for a place of safety for our Pacific Ocean salmon without presenting any objections to its being reserved by the Federal Government for salmon, or in other words, converted into a National Salmon Park.

The writer, however, would not urge the claims of Afognak or any other place to this distinction as against those of any locality that may be found to be better fitted for it. This island has been brought forward merely as showing that one place at least is known that would answer the purposes of a salmon park. There are doubtless others in our Alaskan possessions. There are possibly better ones. If a better place can be found, let us take it. If not, let us take Afognak Island; but at all events let some place be selected and set aside by the authority of the National Government. If not Afognak Island, let it be some other place. Provide some refuge for the salmon, and provide it quickly, before complications arise which may make it impracticable, or at least very difficult. Now is the time. Delays are dangerous. Some unforeseen difficulties may come up which we do not dream of now, any more than we did a few years ago of logging on the Clackamas, or railroad building on the upper Sacramento.

If we procrastinate and put off our rescuing mission too long, it may be too late to do any good. After the rivers are ruined and the salmon are gone they cannot be reclaimed. Exaggerated as the statement seems, it is nevertheless true that all the power of the United States cannot restore the salmon to the rivers after the work of destruction has been completed. The familiar nursery rhyme about the egg applies here with peculiar fitness:

> "Humpty Dumpty sat on a wall,
> Humpty Dumpty had a great fall.
> All the king's horses and all the king's men
> Could not set Humpty as before."

That is the whole thing, so to speak, in an eggshell. After the salmon rivers are ruined all the king's horses and all the king's men, that is to say, all the power of the government, "cannot set them as before."

Let us act then at once and try to do something for the salmon before it is too late. Dangerous complications may come suddenly upon us which we cannot foresee, How little we foresaw the danger to the buffalo and the fur seals. How suddenly the disastrous results came. Even if not impracticable it may cost large sums of money to do hereafter what may be done now for nothing. No expense may be incurred at present. All that is required is to have Afognak Island or some other suitable place set aside by national authority as Gen. Grant set aside the McCloud River Reservation during his administration, and it can be left to future events to decide whether it is expedient to expend any money on the reservation, a subject that can be safely left, we all know, in the hands of our efficient Commissioner of Fish and Fisheries. There seems to be no impropriety in the United States having a national salmon park, but on the contrary it appears eminently proper that a great natural salmon country like ours should have set apart some safe repository and fruitful breeding grounds for this noble fish.

Consider for a moment what the salmon has done for us, and then think how mercilessly we have treated him. Our salmon have been to us a source of national revenue, enjoyment and pride, and what return have we meted out to him? He has been hunted pitilessly with hooks and spears, with all kinds of nets and pounds, with wheels and guns and dynamite, and there is not a cubic foot of water in the whole country where he can rest in safety. The moment he comes in from the ocean he meets the gill nets and the pounds at the mouth of the river, the sweep seines further up, the hook everywhere, and at last on his breeding grounds, which at least ought to be sacred to him, he encounters the pitchforks of the white man and the spears of the Indian.

Let us now, at the eleventh hour, take pity on our long-persecuted salmon and do him the poor and tardy justice of giving him, in our broad land that he has done so much for, one place where he can come and go unmolested and where he can rest in safety.

Allow me to add in closing that it seems to me highly appropriate that this Society, which represents with such intelligence and ability all the fishing interests of every kind of this country, should take the initiative in a matter in which those interests are so closely concerned. The writer trusts that it will, and ventures to predict that, if its efforts in that direction should happily be rewarded by the creation of a national salmon park, it would become an enduring monument to the usefulness of the Society that would last as long as the Nation lasts.

LIVINGSTON STONE.

* There are two canneries operating in the southern part of the island, but there would probably not be great difficulty in making satisfactory arrangements with them.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

ANGLING NOTES.

HERR VON DEM BORNE writes that Prince Hartfeld-Trachenberg, a nobleman of Silesia, has been elected president of the Deutscher Fischerei-Verein, to succeed Dr. von Behr, who died last January. It was Dr. von Behr for whom the United States Fish Commissioner named the common European trout introduced into this country, "Von Behr trout."

By this time it is quite generally known that Dr. Theodatus Garlick, of Bedford, Ohio, was the first in this country to propagate the brook trout by artificial means. Mr. J. M. Greene, of Cleveland, Ohio, tells me that he made the first photograph that was made in the city of Cleveland; that it was made in July, 1857, and that it was a photograph (portrait) of Dr. Garlick.

A copy of the first edition of "Walton's Complete Angler," 1653, was recently sold by Sotheby, in London, for £210, or about $1,020 American money. The price of the book when published was eighteen pence, or say thirty-five cents of our currency. At the Richard Haworth sale in London, 1826, by Sotheby, a copy of the first edition of Walton brought £10 15s. At the John Milner sale in London, 1829, a copy brought £15, and at the Higgs sale in 1830 a copy brought only £11; but at the same sale an illustrated Walton, edition not given, brought £63. When Dr. Bethune edited the first American edition of Walton, in 1847, he estimated that a copy of the original edition in good order was worth twelve guineas. In 1883 Westwood said that a perfect copy of the first edition was worth £70 to £80, and at the Beckford Library sale in 1883 a copy was sold for £87. And yet that same year I got a catalogue from Sabin, the London bookseller, in which he advertised a fine copy of the first edition for £55. Sabin's copy was bound in extra red morocco and in a brown morocco case, and this may have made it £160 cheaper than the copy sold at aution at the Beckford sale.

Mr. Lawrence D. Alexander, of New York city, has one hundred editions of Walton's and Walton & Cotton's "Complete Angler," and he is the only collector in this country who has one hundred different editions, beginning with the five editions published during Walton's life and ending with Mr. R. B. Marston's sumptuous edition which rounds out the hundred.

I am tempted to quote from a personal letter of Mr. Alexander's in regard to a visit that he made to Blooming Grove Park, Pike county, Pa., for the trout fishing at the opening of the season in April. He caught the regulation five trout per diem from Lake Giles, which is all that club law permits. "They were taken with live bait, as it was too raw and cold for them to rise to a fly. The fish were loggy and lacked the vigor of ours in the Adirondacks. No mid-winter fishing for me. The club is doing wonders in rearing trout and restocking streams and lakes. I never in my life saw so complete and extensive a plant for hatching and rearing. Five hundred thousand trout hatched yearly, and nearly all turned out when ¼ to ½ pound in weight. That is, two or three-year-olds only are deposited." The park waters would not now be a very good place to plant trout fry expecting them to come to anything.

Trolling for lake trout in deep water with long line and heavy sinker is "like railroading, a very particular business." The novice has a bite every time that the sinker strikes a rock or the grass, and fifteen-sixteenths of the time that he is fishing he is between the devil and the deep sea whether to pull in a long line because a fish may have loosed the bait or leave it in the water because the "bite" was only the sinker striking the bottom. Experience, and plenty of it, teaches him to distinguish between striking the bottom and the bite of even a small trout when there is a tug at the end of the line where the sinker and bait are "keeping company," but after much practice it requires a delicate sense of feeling to tell when a baby trout has immolated itself on the hooks 900ft. away, while a heavy sinker is pulled down on the line between the fish and the fisherman. I once detected a bite while fishing with 450ft. of line and using 20oz. of sinker, and upon drawing the fish in judged it to weigh not over a quarter of a pound. A few days ago a Lake George fisherman fishing the bottom felt a suspicion of a strike, and upon drawing in his line found that he had a very, very small trout. As it was alive and unhurt he put it in his bait bucket, took it ashore, weighed it, found that on post-office scales it weighed 2½oz and then returned it to the water. This, I think, beats all previous records of small lake trout captured in deep trolling.

A week ago, in reply to a correspondent, I said that black bass fishing was legal in the waters of Warren county, except Lake George, on and after May 30. Several fishermen from the cities are now located in Warren county expecting to fish for black bass during this month; but the Warrensburgh *News*, in its last issue, contains this item: "Bass fishing is prohibited in this (Warren) county until July 1, by laws passed by the Board of Supervisors two years ago. The new law passed at the recent session of the Legislature repeals all previous State statutes, but does not affect local legislation by county Boards of Supervisors." Then follows the local law with its penalties. It would be of immense benefit to the black bass if the *News* was correct about the law, for the bass spawn all through the month of June: but unfortunately the *News* is in error in giving the advice that it does. Section 272 of the new law reads as follows: "All laws or ordinances heretofore passed by any Board of Supervisors of any county in this State, relating to birds, fish, shellfish and wild animals, are hereby repealed." The next section, 273, gives the Supervisors power to enact, at their annual session, laws for the "additional protection" of fish and game. This opportunity to furnish actual protection for black bass should be embraced by fishermen and others interested in the fish.

The mention of Warrensburgh and the game law in connection, brings to mind another matter. The new game law is sometimes mentioned as the code resulting from the labors of the Codifying Commission, and this gives an entirely wrong impression, for the present law resembles the one reported by the commission as nearly as a human freak in a museum resembles a perfect physical man. Deputy Attorney General Edward G. Whitaker, who was one of the Codifying Commission, has compiled an annotated edition of the game law to correct the wrong impression. One of the most infamous sections of the law is numbered 140, and it might be termed very fittingly the "poachers' and fish-murderers' section." It applies only to Warren county waters in its worst features, which are that spears, guns and nets may be used to kill certain fish, which of course means all fish. Mr. Whitaker's note to Sec. 140 is this: "The provision in this section authorizing the netting, etc., of suckers, etc., in Warren county, was advocated to the commission by Albert H. Thomas, and it is in the interest of those opposed to protection and in favor of netting in the fresh waters. The commission opposes this provision."

Yes, the Commission opposed this provision successfully, but it was added to the bill in Assembly, then killed and added again in the Senate.

Mr. Albert H. Thomas is the treasurer of Warren county, and I think claims to be a sportsman; anyway he kills fish and game. When the bill was in the Senate he offered to bet one hundred to one (the odds would indicate that he had a dead open-and-shut cinch on the Senate) that the bill would not become a law unless woodcock shooting was permitted in August, and yet I never heard that Mr. Thomas was a market gunner or that he "kept a hotel," like "Mr. Riley," and there seems to be but one other reason for his interest in the matter. An Albany sportsman said: "The pot-hunter and market fisherman, aided by the big hotels like those of Saratoga, had a lobby here, which prevented the fish and game bill from going through in its original form."

A year ago this month I was writing late at night when one of the smaller drakes (May flies) came in at the open window and quietly settled on my paper, as if to say, "May flies are up; it is time to go fishing with the fly."

A few nights ago I was again writing late, and in at the open window came a drake and settled on the sheet upon which I was writing. A few moments after in came a spinner with its long slender legs, cylindrical, jointed body and narrow wings, and after a tilt with the light dropped into my ink. If this was not an invitation to get out fly-rod and fly-book and go afishing, what was it?

The next morning I found on a window screen seven drakes, six of one species and one of another. I regret that I have not studied the score of smaller drakes to be able to tell one from another at sight, and I saved none of them for identification, as I supposed I could get more on succeeding mornings, and I wished these to live for another purpose. After breakfast I filled my largest pipe, lighted it, and sat down by the screen with the May flies. Six of the drakes had two whisks each, the other had three, and was a bit larger in body and wings. My daughter's eyes, which are sharper than mine, were the first to discover that the skin on the back of one of the smaller drakes, near the head, had split. Then there was an undulating motion of head and body, and first one and then another leg was lifted as a man might pull his legs out of the mud. The legs grew longer and longer, and a glass showed that they were being withdrawn from an outer skin, as, to continue the simile, the man stuck in the mud would pull his legs from his long boots. The outer skin seemed to adhere to the screen as if fastened with a sticky substance. In a few seconds the legs were clean and the drake rested for a moment. Then the undulations of the body began again. Before they had been distinctly up and down, now they were forward and back, or serpentine, as though the body contracted and elongated. This movement was intensified to the eye by the ringed body of the drake. The head was slowly bending backward toward the extremity of the body when suddenly the wings were drawn clear of the outer skin. Another rest for a moment and the brave little drake crawled forward a trifle, leaving the filmy skin, even to the covering of the whisks, fast to the whisks, fast to the screen. The drake, which had been dusty and gray, was bright and shining. Its wings were transparent and glossy, its winged body was brighter and altogether it was a neater and more trim little drake than before throwing off its outer skin.

A. N. CHENEY.

The Professor's Profit.

BEFORE the Fish Commissioners decided to stock the streams of the State with that much despised but powerful fish the German carp, it was greatly concerned as to whether the species would live in certain waters. It debated the question through several meetings, grew red in the face over it, and to save heat and a possible disruption of the board, determined to submit the question to Prof. Hochstadter, the eminent pisciculturist, for decision. Numerous samples of the water were obtained and turned over to the Professor, who in a very brief space submitted a report and a bill for $100. The bill was paid and the devastating carp turned loose to disorder the rivers. It was not until the other day, however, when Judge Henshaw and Prof. Hochstadter were straining their imaginations over fishing experiences while crossing on the Piedmont, that the truth about the great scientist's experiments with that water came out. He chuckled so much over telling about his bill for $100, that Henshaw asked: "But how did you ascertain that carp would live in the water submitted to you?" "Why, I bought a carp for ten cents and put it into the water. It lived."—*San Francisco Examiner.*

Pennsylvania Trout Waters.

MUNCY, Pa., June 10.—The late rains and cold weather has had its effect on the fishing, and no big catches were made until within the last ten days. The trout were in their winter quarters when this last rain came on. It is expected now, however, that they will move up the streams, as the streams are bank full. A fisherman of this place spent last Wednesday on the Loyalsock and caught twenty-eight before the "splash" came, which was about 11 A. M. He had one trout that would weigh 2lbs. and a number that weighed from ¾ to 1lb. each. Some large ones have been caught at English Center. Good catches for the stream were made in Lycoming Creek soon after April 16. Several weighing 1lb. each have been taken at the dam in Muncy Creek by Mr. L.W. Crawford, of this place.—M. E. J.

TRANSPLANTING LANDLOCKED SALMON.

THERE are many anglers who hold that the winnanish, landlocked or Schoodic salmon, afford more sport to the ounce of weight than any other fish that swims, bar only their brothers who pass to and fro between the sea and the fresh water. One of the chief waters for winnanish is the Lake St. John region north of Quebec.

Mr. A. H. Light, the lessee of the Grand Batiscan property which lies south of Lake St. John, has been considering the feasibility of introducing the landlocked salmon into the many lakes which are included in the preserve which he controls. Before taking any steps in the matter he consulted Mr. Samuel Wilmot, well known as an expert angler and fishculturist and prominent in Dominion government circles. We are permitted to print a portion of Mr. Wilmot's letter to Mr. Light, and give it below:

RIDEAU CLUB, Ottawa, May 22.—You have asked me what is the winnaniche, and in reply will you let me tell you what I not only think, but know it to be, namely, the true *Salmo salar*, somewhat degenerated, as it were, by changed habitat, which, living wholly in fresh water for some time, has adapted itself to the new conditions. Reduced areas of water as compared with the expanse of the sea, and the change from saline to fresh water food, have reduced its size, somewhat changed its outward markings, and given a lighter color to the flesh. But in the opinion of many, and I am one of them, its delicacy for the table is quite equal to that of the original salmon of the sea, whose richness and fatness is often too much for the digestive organs of the epicures.

The smaller scion of the family, the so-called landlocked salmon, Schoodic salmon or winnaniche is nevertheless quite as gamy for the sportsman as his original parent, the salmon of the sea; and its habits of migrating from fresh water seas or lakes to rivers and streams for breeding purposes is precisely the same. Although the winnaniche in many waters is smaller in size than the salmon, it is yet found to grow to a goodly weight. I have seen in the earlier settlement around Lake Ontario many thousands of them that weighed from 8 to 15lbs., and instances are to hand where they have reached from 20 to 25lbs., and I am informed that even now in the upper waters of Lake St. John, in the same section of Quebec as your splendid game domain is situated, the winnaniche is taken at times as high as 20lbs. in weight. I have also heard of instances in the Schoodic Lakes, in Maine, where these fish have reached 20lbs. Extensive waters with abundance of food in them is what tells in relation to the growth and size of fish of all kinds. If the beautiful lakes on your domain in the Province of Quebec, now so abundantly supplied with speckled trout and other game fish, are not inhabited by the winnaniche, the task is not difficult to stock them with this fish. Suppose you and your friends were to put up some cheaply constructed buildings at a cost of $300 or $400, put in some fish hatching apparatus, supply it with pure fresh water, get a quantity of the winnaniche ova, or failing in that, get a lot of the eggs of the salmon from the sea, put them in your building in charge of one of your guardians, and you will accomplish the work of stocking some of your lakes with this much prized game fish. Of course your building should be made to keep out frost in winter, and your guardian should be a reliable person to look after the eggs and fry during the winter months. If you pursue this course I have no doubt that in a few years you will have obtained successful results from the undertaking.

Many theorists and hair-splitting scientists may say the winnaniche is a distinct species of *Salmonidæ*, but practice and ocular trial, as well as results, conclusively show that the *Salmo salar* and winnaniche, or landlocked salmon, are one and the same fish; their change of habitat and food producing their changed appearance to the eye of the ordinary observer. Any one can produce the landlocked salmon by simply taking the fry of the *salar* and putting them in landlocked lakes where there is no direct passage to the sea, and the result will be winnaniche and Schoodic salmon, so called. I may here mention another instance in relation to this landlocked salmon. During my presence in London in 1883 as Commissioner for the Canadian exhibit at the International Fisheries Exhibition, a number of fresh-water salmon were on exhibition, and many of them had been yearly put on the London markets, so I was informed. They were caught and brought from Lake Werner, in Sweden, where they could have no communication with the sea. These were beautiful, bright, symmetrically-formed salmon, ranging from 8 to 16lbs. They were identical in every particular with the Lake Ontario salmon of former years, with which I have been familiar during the past sixty years, and great numbers of which I have taken with net and spear from a stream running through my own property, up which they came from Lake Ontario in the autumn months for the purpose of spawning; this Ontario salmon being the winnaniche of Lake St. John, Province of Quebec, and the Schoodic Lakes, in Maine.

In conversations had with the Swedish Commissioners, I learned the character and habits of their Lake Werner salmon, which are precisely similar to the Ontario salmon, their size and color being the same. This Lake Werner is wholly landlocked. Its outlet to the sea is by a river upon which is a fall impassable for the ascent of any salmon from the sea. How these fish got there originally I could not learn, and the conclusion reached was that by some upheaval of nature this lake became peopled with the *Salmo salar*, or its young, and food and other requisites suited for them. They became acclimated here, making it their sea, and the stream emptying into it their breeding grounds. Such has been the case with the so-called landlocked salmon or winnaniche of the Schoodic Lakes, the St. John's Lake and Lake Ontario.

In the two latter waters the fish differ somewhat from others of their kind by reason of the possibility of their reaching the sea, which in some instances a few no doubt do, but in the great majority of cases they make these lakes their sea and breed in the tributary streams which feed these large bodies of fresh water. I have no doubt on this question, as I has given most positive proof of acclimatization of the Atlantic and Pacific salmon to the fresh-water lakes by hatching fry from the eggs and introducing adult fish in Lakes Huron and Ontario, specimens of which are on hand for verification of this fact.

I think I have said enough to convince you that if you felt desirous you could stock any lake within your domain with these gamy fish, providing always that it was of sufficient magnitude and purity to supply food for these fish, and that the rivers or other streams connected with the lakes so as to form natural spawning grounds.

Food is the great desideratum for giving growth to fish of all kinds, for it is well known that wherever there is an abundance of fish there will be found the larger growth of fish, and it is frequently the case that from some cause or another certain waters may not have in them supplies of small fish or crustacea sufficient to give the better kinds of fish their full growth. On this line I would say with some application of ingenuity and skill, you could introduce fish food into waters by planting supplies of either fresh or salt water species of small fish into these lakes. The experiment of transporting quantities of smelts into such waters has proved most successful. It is within the writer's knowledge that this has been done, where a man owning a small lake on the top of a mountain, which was inhabited by trout, caught several barrels full of smelt in the Saguenay River and transplanted them to the lake where they throve so as to produce a marked change in the size and flavor of the trout. All that is required to bring about what you desire both in stocking some of your lakes with winnaniche and supplying them with food of good growth and superior flavor is ingenuity and perseverance aided by some means. Very truly, your friend and fellow angler,

SAMUEL WILMOT.

THE HABITS OF THE OUANANICHE.

A COUPLE of recent visits to Lake St. John, at an earlier season of the year than I have been hitherto accustomed to visit that territory, and a pleasant and instructive intercourse with American anglers met there, and with observing residents upon the shore of the lake, have enabled me to glean some few facts respecting the habits of the ouananiche, new to me, as they perhaps may be to the majority of your readers. Here, in Canada, the prevalent idea of the early spring fishing in Lake St. John has hitherto been that whatever ouananiche were taken in the month of May fell a victim to the vulgar wiles of the bait-fisherman. The supposition has probably been seasoned with a flavoring of truth, because the May fishing in the past has been principally, though not entirely, confined to the residents of the locality, whose fishing is rather for food than for sport. But the intimation that the season had opened this year at Lake St. John several days earlier than usual sent numbers of Canadian and American anglers thither a fortnight and three weeks ago whose first visit in the year to this locality had rarely, if ever, before been prior to the month of June. Their success with the fly has been, as a rule, in excess of any that has crowned their efforts at the Grande Discharge at a later period of the year and warrants the belief that large numbers of fishermen would in other years imitate their example and at the same time avoid the plague of flies that advances with the season, if only hotel proprietors would afford them accommodation by opening their houses in the early part of May and announcing the fact in advance to the anglers of the continent through the columns of FOREST AND STREAM.

It is a curious circumstance that while the largest fish have generally been taken in the Grande Discharge with the smallest flies, an eight-pound ouananiche having been killed last summer by an American gentleman on a No. 8 hook, the fish in the lake itself and in the mouths of the Ouiatchouan and Metabetchouan, where they have been most plentifully taken this spring, have risen almost entirely at the largest trout flies and at the bright flies of the silver-doctor and Jock-Scot variety, when they approached the size of salmon flies. In regard to the movements of these fish it is pretty clearly established from recent observations that they are still arriving in the lake. As the water has not commenced to fall at present writing, and is not likely to for a week or ten days to come, the fishing will be good in the mouths of the lake's feeders up to about the 20th inst. But by the 15th the fish will also be plentiful about the entrance to the Grande Discharge, and a fortnight or so later the season for fighting them in the rapids will open, and usually lasts till the end of August, when the ouananiche commence to re-ascend the rivers.

Very few favorable reports of fishing in the south shore salmon streams have yet been received here. The north shore fishermen have not as yet gone down to their rivers, but several are about preparing to leave for their preserves.

E. T. D. CHAMBERS.

QUEBEC, June 9.

Trout Near Toronto.

TORONTO, Ont.—One May day the writer and Bob McCready took the train for a little town 35 miles from Toronto (I am not at liberty to give name now) for a day's trouting. It was a cold, raw day, and consequently we got no trout, but we had several hard pulls and saw some large fish. We were fishing in about 30ft. of water among old roots and logs, and when we got a strike the trout would get home before we could get him in a clear space to play him. The following Friday Mr. McCready and a friend made another trip to the pond, with the following result: Seven trout, the smallest weighing a little over 1lb. and the largest 2lbs. 8½oz.; it was 20in. in length. Mac is getting it mounted, and it will probably be on exhibition at his store next week. He is negotating for the pond and will start a club as soon as arrangements can be made, which he thinks will be a grand success.—BROWN.

Wall-Eyed Pike in New Hampshire.

WOODSVILLE, N. H., June 3.—*Editor Forest and Stream:* I send to-day a photograph of fish, supposed to be a wall-eyed pike, of which I wrote you April 23. I thought I could get a larger photo, but find this is all the kind taken. Don't know as this will assist you much. I have been unable to obtain and send it before on account of absence. Should like to be informed positively about it as there is still considerable discussion over it among local fishermen. [The photograph represents the wall-eyed pike. The occurrence of this species in the Connecticut basin is comparatively rare, but recently several announcements have been made of its capture in the main river.]

WHITE PERCH FISHING.

HEARING of the fine perch that were being caught in the Potomac, Will Caulfield and I decided to try our luck. We had put off going for nearly a month on account of rain and the condition of the water, but on May 19 we concluded to go no matter how the water might be. We used silk handlines with two hooks and a sinker weighing about two ounces, as the current, up the river, is rather swift. We reached the river about 10 A. M. and procured a boat resembling a canoe, to stem the swift waters.

The day was a fine one for fishing, being cool and somewhat cloudy. We stopped first about 200yds. above the Three Sisters, near Georgetown, where we found the water about 50ft. deep and would certainly have had good fishing, for when we threw in our lines they had not time to touch bottom before each of us hauled in a fish; but on account of blasting operations on the shore we were obliged to move, much to our dislike. Not wishing to be disturbed again we went about one-half mile further up the river and anchored. I suppose we had been there about 15 minutes when I pulled out two perch about six inches long and afterward took one about every three or four minutes, but they were small. We moved out into deeper water, hoping to catch larger fish, but we found that we would have to be satisfied with small ones, as we were baiting with worms only and the large perch seldom bit at them. The best baits for big perch are minnows and clams, especially clams.

We stopped fishing about noon to eat lunch. About three o'clock the tide began to come in and each of us caught about thirty fish, including some catfish and eels. At 4:30 we pulled down the river against the tide and a stiff breeze, with light hearts and sunburned faces.

On Decoration Day Mr. Looker fished in about the same water and took eight dozen white perch besides some catfish and eels.

A curious thing happened at Uncle Cliff's with a pair of the catfish which reached the house alive and were put in a bath tub to amuse the children; it was nothing less than a duel with rough, but deadly, weapons. A violent commotion was heard in the night and loud splashing, but we paid little attention to it at the time. Later on Uncle Cliff went to the tub to change the water and found the smaller of the two catfish very lively while the other had its mouth open and was stiff in death. Upon examination he found a small roundish hole in the side of the dead fish just behind the breast fin. The smaller cat had driven his spine into a vital part of his enemy and ended the battle which we had heard but did not understand. We boys knew that catfish can cause painful wounds on our hands, but if the poison is deadly enough to kill as tough a thing as the fish itself we will handle them in future with boxing gloves.

WASHINGTON, D. C. PAUL MORRIS.

Fish in the Hudson River.

FROM Major Fred Mather, Superintendent New York Fish Commission, it is learned that shad fishing in the Hudson River has been poor this season. Owing to the unfavorable weather and the cold water the Commission has not been able to secure as many ripe fish as usual. However, the work of fish hatching is going on in the Commission's new car at Rhinecliffe. Many of the shad fishermen along the river are now opposed to the Commission, blaming it for the passage of the law which forbids the use of nets between Saturday night and Monday morning. They therefore refuse to give the Commission their ripe fish. Mathew Kennedy, State Game Protector, who fishes for shad near Hudson, reports that since May 20 he has taken eight salmon weighing from 10 to 25lbs., and has returned them to the water as the law requires. Salmon are said to be plentiful in the river. No doubt many of the fish go to market as Maine or New Jersey salmon. The catch of herring, as well as that of shad, has been light.

"Fish Hog" does not Express it.

HAVERHILL, Mass., June 8.—*Editor Forest and Stream:* I inclose a clipping from the Haverhill *Gazette*, our local paper: "There was left at Day & Stevens's market, to be dressed to-day, about 200 brook trout, none of them over 2in. long. There is a law which prohibits the catching of trout under a certain size, and it ought to be enforced." I have reason to think that the trout came from New Hampshire, in the vicinity of Lake Winnipesaukee. What is the proper name for such "skinners?" Your paper this year is far ahead of last, and then it was on top. You are doing more for the preservation of game than all the other sporting papers, so-called, together. Wishing you God speed in the good work.—C. H. E.

Potomac River Notes.

ON the night of June 7, Mr. L. G. Harron seined 125 bug-fish or menhaden at Bryan's Point with a seine 125ft. long. The fish were small—only about 4in. long. It is very uncommon to see so many of them in fresh water so far up the Potomac. Only two adult fish of this kind were caught at the Point during the shad season. The conditions have been peculiar in various respects; few shad came up the river, and the males, as a rule, were very small; during last spring salt-water fish were unusually plentiful in the lower river. Young alewives are abundant now at Bryan's Point; the water has been full of them for the last fortnight; the largest are about 1½in. long, and the fish appear to be remarkably well fed.—T. H. B.

Salmon Notes.

DURING May salmon were reported as from fair to good at Anticosti, Gaspé, Port Medway, Gaspereaux and White Head. Reports of scattered individuals were also received from Nova Scotia and Newfoundland. Fish ranged in weight from 10 to 47lbs. each. One weighing 47lbs. is the largest of which we have a record. It was taken in the Restigouche and forwarded to the U. S. Fish Commission Exhibit, Washington, D. C., where it has been cast and is to be exhibited at Chicago in 1893.

Indiana Net Curse.

FORT WAYNE, Ind.—Net fishing in our waters is going on continually and I do not know what to do. There would be lots of fishing here (with hook and line), if nets were barred out—B. E. D.

Ida Lake Black Bass.

Editor Forest and Stream:

I have sent you to-day per express a specimen of the small-mouth bass. They are commonly called the gray or Oswego bass. Mr. C. Bidman, of Ida Lake, Alexandria, Minn., informed me you were desirous of obtaining a specimen, and having just returned from a fishing trip on the lake, I take the liberty of sending it. Through the courtesy of the American Express agent here the package goes through free of charge. I have taken pains to pack fish carefully and hope you will receive it in good order. Kindly let me know if it arrives O. K. J. RIDLER.

ST. PAUL, Minn.

[The fish reached the office of FOREST AND STREAM in beautiful condition and was found to be the small-mouthed black bass. Mr. Ridler's method of packing cannot be too highly recommended. The gills were cut out, leaving the head uninjured, and all the contents of the belly were drawn out. The cavity was then filled with salt and the fish was packed in ice and sawdust. If it had been intended for the table, moss could have been used instead of sawdust. The beautiful yellow and bronze colors of the sides were retained, and the red iris had not lost its brightness. The black bass of Lake Ida, if this is an average sample, are distinguished by their rich colors and elegant shape, as well as their fighting qualities, concerning which Mr. Mershon has written.]

Dead Bluefish in Chesapeake Bay.

BLUEFISH have made their appearance in Chesapeake Bay in enormous schools and among them are some very large specimens measuring 3 to 4ft. in length. At Easton, Md., on June 2, dead bluefish were reported floating at the surface in considerable numbers and it is suspected that certain parties are killing the fish with dynamite to get them for manure. The light keeper at Sharp's Island saw twenty dead fish while going from the lighthouse to the shore on June 1. Passengers on the steamer B. S. Ford saw many of them between Claiborne and Baltimore. Commissioner McDonald thinks it impossible that the fish were killed by the explosion of dynamite, but they may have been lost by some fisherman or by the capsizing of a boat. He believes that the use of dynamite for killing fish should be prohibited by all the States, for in certain localities, as in the narrow inlets of the Labrador coast, the fisheries could be entirely destroyed by this means. The explosion of dynamite over oyster beds would kill every oyster within a considerable radius. We have referred already to the use of this deadly substance in Great Egg Harbor Bay within the last five years ostensibly for clearing out wrecks, but really for the illegal destruction of sheepshead, and we have shown how entirely successful the savage practice has been in exterminating the fish, which were slowly increasing in numbers up to 1887.

ROD AND GUN AND CAMERA.

As a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

From time to time we shall reproduce by the half-tone process samples of the work submitted, and should the interest in FOREST AND STREAM'S Amateur Photography Collection prove to be what is anticipated, we may ask for an expression of opinion by a vote of all our readers after the manner of the successful and famous "Camp-Fire Flickering Vote." Such popular vote will be quite distinct from the award by the committee.

One of the natural curiosities in this country is Lone Lake which lies in a butte or mound in the Simcoe foothills, six miles northwest of this city. This butte looks as though the top had caved in, as the trees are lying dead all over the bottom and years ago were growing where the lake now lies. This lake cannot be seen until one reaches the summit of the butte, as it is circular in form and surrounded by a wall or bank of earth which is covered with trees. The bank itself is more than 100ft. wide. The early settlers tell of cutting hay on the ground which this body of water now covers a good many years ago. There is no doubt, the waters steadily rising, trees have been covered, have fallen and now lie slowly decaying beneath the waters. It is fairly possible that the lake will one day fill the entire cavity in the butte and overflow the banks. A few years ago the lake was stocked with carp, and its waters are fairly alive with them now. Last season a great many catfish were put into the lake. They will likely do well there and soon exterminate the other fish. The lake affords excellent boating, and is becoming a pleasure resort.—*Glendale (Ore.) Sentinel.*

Since May 14 the weather has been so stormy and so cold that the insect food of swallows and peewees was too stiff to be awing; so, lacking food, the birds were the worse chilled for their emptiness; and at Millington, in this town, the children have found 19 dead birds in and around the store's shed. They seem to have been, from descriptions, peewees, wood peewees, swallows, vireos, with a tanager and a blackbird not far away.—*New Salem (Mass.) Correspondence Springfield Republican, May 24.*

The Kennel.

POINTS AND FLUSHES.

CHICAGO, June 11.—During a number of months past there have been many articles written which contained a number of adverse criticisms on field trial rules, field trial dogs and field trial theories. Many of the writers were men who had never seen a field trial, presumably, as their writings were entirely from a day's shooting standpoint, in every particular. The writings also assumed, in most instances, that field trial judges and reporters favored wild, headstrong dogs, ones which would race out of sight and be absent during long intervals of time, scurrying over vast tracts of country, causing long searches to find them. It has also been intimated that the press has indorsed and advocated this kind of dog; that such dog is designated "high class," while a useful field dog is contemptuously called a "plug shooting dog." Thus the field trial standpoint is fully defined by the critics, and very caustic and elaborate criticisms are deduced therefrom, as is easily the case where the critic defines the position of the opposite side to suit himself, and therefrom draws such deductions as accord with his ideas or prejudgments.

I never could see any benefit in exaggeration or unfairness in discussion, or in arguing from a detail or part as if it were a whole.

It is only necessary to review the records to prove the fallacy of all the recent strictures.

In the first place, no field trial club or field trial judge whom I know (and I have the honor of knowing nearly, if not quite, all of them) have any such ideas as those ascribed to them of what constitutes a high-class dog. Every field trial judge knows what constitutes a good, practical field dog for "an ordinary day's shooting" quite as well as the critics of field trials; indeed, they number among them the best sportsmen in the land.

It is a noticeable feature of every adverse writing that it contains no specifications. Everything is in general terms, one sweeping assumption of field trial incompetency serving for a starter, while the imagination does the rest.

Neither field trial judges nor field trial associations favor a wild, untrained dog which will abandon his trainer and bolt or go self-hunting. In all the field trials held in this country but a very small per cent. of the winners were other than dogs which worked well to the gun. A very few instances can be mentioned where dogs, which would range out of sight and be gone a longer or shorter time, have won, but this peculiarity was only betimes and was not habitual. In every instance, without one exception, such dogs did not, by any means, win because they would hunt out of sight betimes; on the contrary, such fault scored heavily against them, but they won because they had field qualities of an exceptionally high order and superior by far to those of their competitors. Such dogs have always been subjected to the most thorough tests and have won in spite of their faults, instead of for their faults, as assumed by recent critics.

As remarked hereinbefore, the number of dogs which have won after exhibiting the errors mentioned, is extremely small compared to the whole number of winners. Even these dogs, when found after apparently abandoning their handlers, were frequently found pointing staunchly, which explained their long absence and relieved them of the suspicion of being self-hunters. This being granted, it by no means affords an argument to show that such dogs are the ones approved of by field trial men. Unless a dog has some remarkable superiority, an exhibition of prolonged absence or self-hunting is certain to destroy his chances, and there are instances where the dog of remarkable superiority in all other respects, was retired for being absent too long. A dog which wins under such circumstances, does not win on account of the fault. He is the rare exception, yet this exception is taken by the critics as being a fair representative of the whole.

Nor are the field trial dogs unfit for ordinary shooting. If a dog has not been properly trained, he is not fit for good field trial or field work. It is much more difficult to keep a well-broken dog up to field trial form than to field form, since, in the former instance, he must be in fine spirits, keen for work, and capable of doing accurate work quickly. It is the work of some weeks to get a dog in field trial form, and in the greater number of cases the work of a few days to get him back to field form. This is true of any competition where physical perfection and skill are brought into competition.

Now, in respect to the press advocating the bolting or self-hunting dog as "high-class," I will be a gainer in knowledge and under obligations if any one of the critics will point out a single instance in which a dog hunted out of sight of his handler an unreasonable or improper length of time, that the sporting journals did not declare such work faulty.

Associations do not desire ill-broken dogs, and they do not encourage them. The press has for years criticised adversely the scrambling at field trials, the noisy handler and the half-broken dog; and field trial associations began to remedy the evils long before the outside public was thoroughly conscious of them. To overcome the evil effects of a wild unmanageable dog on an honest competitor, some of the leading associations adopted the rule that a dog could be run alone when necessary, this admirable provision giving an honest dog full opportunity to display his qualities without obstruction. If a handler runs a half-broken or unbroken dog, the judges cannot be blamed for that. If a half-broken dog should win, it is because he has some remarkable qualities and is superior to all others.

The heat system was a great obstruction to the best work, and had some inherent defects which neither associations, judges nor handlers could remedy.

Since the adoption of the spotting system, there has been a remarkable improvement in field trial handling and breaking. In the heat system, it was a direct competition in a heat between two dogs, and one was absolutely required to beat the other. If one dog was wild and his handler noisy, the competing dog, if well broken, was almost sure to be beaten, everything else being equal or even near equal. When a dog was beaten, all the dogs he had previously beaten were beaten also.

In the spotting system all this is changed. When two dogs are running, they are not competing dog against dog, but one dog's performance against all the dogs' performances severally in the stake. There is no inducement to scramble, for a handler knows that if he by rushing gains more in quantity it may not help him if the work is of poor quality. And there is no gain whatever in obstructing his competitor, since the judges will allow such disturbed dog to work alone till his merits are fully determined.

After the winners are determined, there are commonly many dogs left in the stake which are most excellent performers. The greater number of field trial dogs are good field dogs. There are many dogs on the other hand used for field dogs which are very poor dogs. And, strange as it may seem, there are not a few men who have shot for years who do not know what real good work is.

It is commonly assumed by those who have not had experience at field trials that a man with large experience in ordinary field shooting is therefore necessarily a good field trial judge. Nothing could be more mistaken. He may be a good judge and he may not. If he is a judge, he is out for an entirely different purpose than when shooting; and if he has not been a close student of the dog and had opportunities to see many different dogs at work, his experience afield will be of little value to him. In fact a man who has shot over a few dogs for a long while becomes intensely prejudiced in favor of their peculiar manner of work, and considers it superlative. Everybody knows how prone the man of field experience is to praise his own dogs and their performances, and how firmly he believes they can beat all other dogs easily. At a field trial he will see different and successful methods of pursuit exercised by different dogs. The great variety of methods and performances will require careful consideration.

It requires experience to manage a competition between two dogs in a field trial. Most "ordinary-day's" shooting men, when judging, are continually getting the dogs into corners, and turning here and there, back and across, and round and round till handlers and dogs are all bewildered. Or the dogs are run on such grounds as keep them searching vainly for birds; and the orders are continuous and inconsistent. It requires experience to be a good judge in every respect. B. WATERS.

THE MERCER CASE AND "MOUNT ROYAL."

Editor Forest and Stream:

"Mount Royal" gives us another illustration of exasperating perversity in FOREST AND STREAM for May 26, and I fear his back will bear many stripes ere he learns that dogmen will not be pedagogued in such style. What the meaning of his first paragraph is I don't know, nor does anybody else that I can find. His second paragraph would have read much better had it accompanied his letter in the *Canadian Kennel Gazette*; as it now shows forth, it is simply fishy. His third "par" starts off as a statement of facts. Very well; but when he builds so much on Mr. Mercer's acquaintance with rules, I would ask him to point out the rule forbidding a man to enter another's dog without the owner's consent! I don't know, and care still less for, what Dr. Mills chooses to call a "fraud," and am not going to play dictionary to supply him with the knowledge that he lacks; but I do say that entering another man's dog, as the owner's agent and without the owner's consent, is not "fraud." Finally, "Mount Royal" does say something right. He says that there has been too much sophistication about this business and it is time things were called by their right name. Then why in the world does he continue his schoolmaster sophistications? and why does he call grave indiscretion or unwarranted liberties, "frauds"? That word is sometimes double-edged. Dr. Mills has never hesitated to speak his mind, and it would have been better for him if he had often spoken somebody else's.

The unutterable rot and nonsense of saying that had the C. K. C. inflicted on Mr. Mercer anything less than the extreme limit of the law, the penalty properly applying to rascals, swindlers and liars, it would have been encouraging such liberties as Mr. Mercer took with Mr. Little, is—well, it is thoroughly "Mount Royalish." It will be many and many a day before the C. K. C., under Dr. Mills's guidance, stands as firmly established in public respect as the Spaniel Club, and it took the correct view of Mr. Mercer's offence, censured him and let him go. Now, if Dr. Mills wishes to dispel sophistications, he should distinctly point out the exact disgrace Mr. Mercer was guilty of, whom he deceived, whom he injured, and wherein he swindled. Failing in so doing, I will not hesitate to charge him with using his official position to punish a man against whom he has a grudge.

The most objectionable part of the C. K. C.'s action is that they resorted to this method of getting rid of a man they "have it in for," knowing that by virtue of their agreement with the American Kennel Club the latter would be forced to support them without possibility of meeting the case as it deserved. Persecution is bad, but cowardly, sneaking persecution is far worse.

While I propose no such task of Tantalus as attempting to instruct Dr. Mills, I will say to the doggy public that Mr. Mercer entered Mr. Little's dog without any authority from Mr. Little; a most unwarrantable liberty to take, certainly; but if this is fraud, if it is the kind of act that leads men into indignation at, or disgust with, the actor, why I guess we will have to dispense with existing authorities and set up "Mount Royal" as the sole, universal authority on ethics, moralities, proprieties, the Graces, physics, physicking, *et omnia*. It wouldn't hurt if he gave us his views on boldly pirating from "Ashmont," if perchance he ever heard of such a writer or read anything of his writings, although perhaps this last is asking too much of him. W. WADE.

HULTON, Pa., May 28.

DOGMATICS OF DOGDOM.

NEVER judge of a dog's disposition by the size of his mouth.

—§—

Dogs which can pay their own board bills are rapidly becoming the favorites.

—§—

It is noticeable that some men discover for the first time that the dog is a noble animal when he can be sold for a good price.

—§—

Most of us think that a dog never sleeps cold because he does not complain of the weather.

—§—

A sportsman is often the work of a day—the day on which he buys a dog and gun. On the second day he is ready for disputation.

—§—

The modesty of dog men is their greatest virtue.

—§—

A dog believes that his own master is the one perfect, supreme being of the universe, and the master loves the dog for his belief.

—§—

The man who is noisily and ceaselessly interested in the welfare of the dog always asks the highest prices for them and makes a sneak on the advertising columns when possible.

—§—

Some dogs born with good dispositions and honest purposes become indifferent by association with man.

—§—

When a man owns a dog neither the man's nor the dog's nature is changed; the dog has the same nature and the man shows his real nature.

—§—

Dogs are proud animals and have good taste in some things—meat, for instance.

—§—

The A. K. C. is run entirely for the improvement of the dog! The difference between getting a cur and a blue blood recognized by the A. K. C. is 75 cents.

—§—

Is the dam of a dog a dog-ma? THE CYNIC.

The National Beagle Club are out with their dates for bench show and field trials, to be held at Nanuet, N. Y. The dog show will be held Oct. 24, and the trials commence Oct. 25. The entries for the bench show close Oct. 1, for the Derby, entries close Aug. 1, and entries for all other stakes, Oct. 1.

RETRIEVING AT FIELD TRIALS.

Editor Forest and Stream:

IT has been truly said that "It is the unexpected that happens." I was never more surprised than of late while reading the many articles that have appeared in FOREST AND STREAM and *American Field* on the above subject. I had thought no class of men was more practical than American sportsmen. I had been taught to define evolution as a passage from lower to higher and more complex forms; a doffing of useless appendages: a survival of the fittest. I had not dreamed that we were to revert. Truly we are progressing backward. The best information at present obtainable tends to show that the grand body of American sportsmen are in a chrysalis state; they neither know their wants or what it takes to constitute them. To thoroughly appreciate the requisites of a high class dog a man must be the recipient of a "special blessing," and that the gods have been rather parsimonious in dealing them out. There is an idea prevalent, too, among this unregenerate mass that we are developing speed and range to the exclusion of other and equally as important factors, viz., brains, endurance and vitality. Some very practical sportsmen are advocating the admixture of colder strains with our blue-bloods in order to avoid the defects incident to inbred dogs, and endow them with those qualities they deem most desirable. How such a fad could ever prevail in this country I can't see. To this host who are following after false gods we would say, "Seek the old paths which are the good ways, and walk therein, and ye shall find rest for your souls." To those gentlemen who see no use in dogs retrieving and who would have it knocked out of public contests, I would like to propound a few plain, practical, straightforward questions, and as brothers Jones and Murnan say to each other, "No dodging the question."

First—For what were field trials originated?
Second—What are the essentials of a high class dog?
Third—What do sportsmen want with bird dogs?
Fourth—Is it desirable that a dog should retrieve?
Fifth—Does the act of retrieving *per se* injure a dog?
Sixth—Is a dog more or less valuable because he retrieves?
Seventh—If a dog can't be taught to retrieve without injury at three years old, at what age can he be taught?
Eighth—Can you intensify the disposition to retrieve through ancestry?
Ninth—How is the way to perpetuate those qualities in our dogs we deem most essential?
Tenth—Is it possible to make a practical test of retrieving at our trials?

Interrogatory first—For what were field trials originated?

There were two objects in view. (*a*) That we might improve our dogs in those qualities that make a day afield one of pleasure rather than annoyance. That we might render them more valuable both practically and financially. (*b*) That the dogs might be brought into competition under some system so that the public might judge of their merits, and further that we might have some data to which we could refer when occasion required, as public and private statements in regard to dogs had been found inaccurate and misleading.

Interrogatory second—What are the essentials of a high class dog?

(*a*) He should point. (*b*) He should have speed. (*c*) He should have range. (*d*) He should have endurance. (*e*) He should retrieve. (*f*) He should back. (*g*) He should be intelligent, obedient and well disposed. (*h*) He should be quick, positive, accurate and stylish in his work. (*i*) He should be handsome.

(*a*) He should point. I regard nose as of the most vital consequence in a shooting dog. Of what avail are all other qualities in a dog if he never points? Conversely, if he never points he is quite sure to flush, and the greater his speed, range and endurance the more frequent will he perform the act. Why do we use pointers and setters as shooting dogs to the exclusion of other breeds? Is it not because they are more liable to point. I never owned but one dog I could not get to point; he filled an untimely grave. The character of the performance I will admit is a factor, but when I want game I must confess I incline to the frequency of the occurrence by a large majority. I doubt whether one of the "elect"—one of the four hundred—could tell from the eating whether a quail was killed over Clinker or Potterer. I have seen Old Ponto make draws that would have delighted Edward Laverack, points that would have sent the hot blood tingling through honest Dave Sanborn's veins. I have seen him rigid as the marble gods of Greece, and in poses that would have gladdened the hearts of a Raphael or Michael Angelo, and not a —— bird in a mile of him.

What if Gladstone or Count Noble had never pointed?

(*b*) He should have speed. (*c*) He should have range. (*d*) He should have endurance. These three are clearly correlated, about equal in value, and without either of which a dog, when thoroughly tested, returns to the level of a common plug. Of what value is speed if a dog runs around on an acre of ground all day? Of what value is range if a dog is totally devoid of speed? Of what value are speed and range if he has no endurance? Who wants to cart around a dozen dogs to get a day's shooting? I am inclined to think where speed and endurance are highly developed, that range applied in its highest forms stands next to pointing. To have a really high-class dog he should have all three, and they highly developed.

(*e*) He should retrieve. The reasons why are many. First, because he can do it easier, quicker and more effectively than the shooter; second, the bird may have fallen in grass or weeds where the powers of scent are necessary to its recovery; third, I shall insist upon the dog's retrieving until I learn to smell as well as him; fourth, it is nonsensical to talk of the average sportsman in this country keeping a special dog to do the retrieving; and last, but not least, the authorities on this subject all hold that retrieving is an essential.

B. Waters, that prince of good fellows and bundle of humor, has written a work entitled, "Modern Training, Handling and Kennel Management," which the public have been pleased to adopt as the standard in this country. Now, there is a legal maxim that the record imports absolute verity on its face, and that you cannot go behind it. The record: "Notwithstanding its indispensable value in successful field work, it at times in the first or perhaps also in part of the second season is the source of objectionable traits in relation to other parts of field work, which are more or less associated with it." We are willing to stand by the record. We think it correct.

(*f*) He should back. Now, I have never heard of an authority on dogs who did not consider backing an essential. In Europe a dog that refuses to back is thrown out of the trials. Will some one of the élite please tell us why a dog should back? Is it not a pot-hunter's quality, wholly in the interest of the bag? I have seen dogs that would hunt an hour for another dog just to get in a real æsthetic back, and when they could not find anything else to back would back the gunner upon the slightest change of his gun. Is it not because if a dog refuses to back he is liable to go in and flush, and if he flushes it is to the detriment of the bags? If you don't want birds there is no earthly use for a dog to back. Let us suppose a case. You and I start out shooting. You one way, I another. You have a dog that backs on the slightest provocation, but does not retrieve. I have one that retrieves but does not back. Which do you think will have the more pleasant trip or the better bag?

Which would you prefer your dog do, back or retrieve? Backing is a quality no dog needs except when worked in company. Retrieving is a quality necessary and desirable at all times and under all circumstances. Why not knock out backing? because, like pointing and retrieving, it is one of the essentials in a high-class shooting dog.

(*g*) He should be intelligent, obedient and well disposed. The same may be said for these that are said for backing, pointing and retrieving, they make the dog's field work more effective.

These are qualities that render him more companionable, more pleasant, and more desirable; these are the qualities that make a dog handle nicely, make him more valuable, but they are not held in as great esteem as they should be. Intelligence is a quality that can hardly be over-estimated in any animal. It is a characteristic that marks the highest types of mankind. Intelligence is the cantilever that bridges the chasm between the cave-dweller and Charles Robert Darwin, Herbert Spencer or William E. Gladstone. It is a long way from the pipe of Pan to the phonograph. Obedience to and veneration for law separates civilization from barbarism. Disposition makes a man god-like or a demon. They are essentials in the *Canidæ* family just as in man.

(*h*) He should be quick, positive, accurate, and stylish in his work. These are a few of the qualities that distinguish a high-class dog from a potterer. They are essentials in the make up of an ideal dog. They make a dog more pleasant, more effective, more valuable. They are essentials in a field trial dog.

He should be handsome. From the earliest period of history mankind has been in love with the beautiful. The sarcophagi in the catacombs along the Nile attest with enduring fidelity a love of the sculptor's art. Rome has its arch to Titus, its column to Trojan, Paris has its arch to Triumph, its Eifel Tower; Washington its stately shaft to the Father of his Country. The beauties of Homer, the rippling cadences of the blind bard of Scia's rock-ribbed isle, will live when cold and callous years have ceased to make their footprints on the sands of time. Men have always been in love with the beautiful. This is purely an æsthetic quality in the dog, but it is safe to say that mankind will never cease to demand it in animal life. It makes an animal more valuable, therefore more desirable.

Interrogatory third—What do sportsmen want with dogs?

I want mine to shoot birds over. "I can conceive of nothing more worthless than a dog whose only value lies in his bench show qualities.—B. M. S." Give the gentleman credit for a dead center on that statement, will you?

Interrogatory fourth—Is it desirable for a dog to retrieve? No one denies it, but some seem to think it should not be required in our field trials. Why not knock out backing in field trials also? The great body of practical sportsmen insist on their dogs retrieving. I take it for granted they know what they want.

Interrogatory fifth—Does the act of retrieving *per se* injure a dog? I say emphatically no. The best dogs I ever saw were the best retrievers. Physically it entails no injury. Now a dog is not required to retrieve in the Derby Stakes of any of the clubs, and he is eligible to these until he is two years old.

Interrogatory sixth—Is a dog more or less valuable because he retrieves? You answer.

Interrogatory seventh—If a dog can't be taught to retrieve at three years old, at what age can he be taught with safety? Don't everybody answer at once; please be specific, as to date, hours and minutes included.

Interrogatory eighth—Can you intensify the disposition to retrieve through ancestry?

I say without the slightest hesitation, yes. We control the disposition to kill rats, to fight, to herd sheep, etc. There have been some pointers in this State through three generations and I never heard of one of them that did not retrieve naturally. You can intensify any trait in a dog you want. It can be seen at a glance, if biblical history is to be trusted, into what varied forms and dispositions the Canidæ family can be transformed, and that by starting from a single pair.

Interrogatory ninth—How is the way to perpetuate those qualities in our dogs we deem most desirable?

We thought by field trials, but it appears that we were mistaken.

Interrogatory tenth—Is it possible to make a practical test of retrieving at our trials?

We say without the slightest hesitation, yes. You ask how? I will answer this question for you if you will answer mine that have preceded it. Now, this is the very rock on which we are stranding. If we do not mean to test the dogs, and it cannot be done practically and fairly, by all means do away with it. Now, some one is afraid that if he kills a bird it will not fall in the open where he can show it to the dog; another one is afraid the bird will fall in a thicket or in a pond. If birds always fell in nice open places where we could see them we would then be in a fair condition to do away with retrieving. When all the dogs have been spotted out down to six or eight, give these a thorough test in all those essentials that go to make up a high-class dog. Hunt for the weak spots in them, test them thoroughly if it takes a week; know which is the best. It should not be a matter of guesswork; it should be one ample and complete test. If I belonged to a club and thought it did not mean to place the best dogs regardless of strains or ownership, I would resign before breakfast. Now as to the practical part of retrieving at our trials. Why can you not have retrieving just the same in field trials that you do in field work? I have shot over the grounds of the Southern Field Trials Club for twenty years, I never saw any trouble in having birds retrieved on these grounds; I have shot from Pennsylvania to Mexico, and they are about as good grounds as I ever saw. It is safe to say there will be 2,000 quail on the grounds in February, '93. If you can't make a practical test of a dog as a retriever on grounds that are faultless and with 3,000 birds to work on in a radius of two miles, in the name of all that is holy, what do you want? If the handlers won't kill the birds to the dog's points (they can if they want to) let the judges get down and kill them themselves, I will agree to replace, without cost to the club, every bird killed over a point on the grounds of the Southern Club in the Derby and All-Age stakes, and think a bird should be killed to every point, if possible. Make a rule to read about this way: "No dog shall win that does not retrieve;" that will go a long way toward settling the question. Knock out retrieving and you have hit the most vital blow to the dog interests that has struck them in two years; an injury to grow with years; we may not feel its effects now, but they are as sure to come as that night follows day. We have virtually done away with training, for now a thoroughly trained dog does not stand as good a chance to win as his less accomplished brother. Do away with retrieving, in a few years do away with backing, then say that pointing is not an essential; then ring down the curtain. TARQUIN.

Helen Keller has a Mastiff Again.

HULTON, Pa.—*Editor Forest and Stream:* The misfortunes of Helen Keller with her mastiffs have been singular. First Lioness was shot by a stupid policeman; next poor Erie, that replaced her younger sister, contracted rabies in defense of Helen's little sister from the attack of a rabid cur. With the numerousness of the darky down South, a big dog is a prime necessity to a child down there, and our beloved "Uncle Dick" has come to the rescue by presenting Helen with the mastiff dog Eumer, litter brother of the dam of his two unfortunate predecessors.—W. WADE.

THE BEAGLE STANDARD.

Editor Forest and Stream:

IN entering on this much discussed question of the beagle standard I feel that I can add but little, if anything, to those who have gone before, but to show how two men may use the same facts for a basis and draw very different conclusions, I will devote myself principally to the very able article of Mr. F. C. Phœbus in the FOREST AND STREAM of June 2, and while my experience does not cover a period of years equal in number to that of Mr. Phœbus, still I have owned and bred several hundreds, and have either owned or seen almost all of the best dogs of the day, both large and small.

Let us take the first point in Mr. Phœbus's letter, *i. e.*, that the committee who drafted the present standard, viz., Dr. L. H. Twaddell, Gen. R. Rowett and Mr. N. Elmore, established the fact that there should be 3in. between the large and the small beagle. I have before me a copy of the standard now under dispute, and under Height, I find the following: "The meaning of the term 'beagle' (a word of celtic origin, and in old English beagle) is small, little. The dog was so named from his diminutive size. Your committee, therefore, for the sake of consistency, and that the beagle shall be in fact what his name implies, strongly recommends that the height line be sharply drawn at 15in., and that all dogs exceeding that height shall be disqualified as overgrown and outside the pale of recognition." Does any one find any 3in. clause in that? or do they find any provision at all, other than that a beagle to deserve the name shall not exceed that outside limit of 15in.? Manifestly not. No, and had the National Beagle Club decided to divide the beagle into 10, 11, 12, 13, 14 and 15in. classes, they could have done so and still not have made the dog other than a beagle as the committee defined it.

So we come to the second point in this letter and find there is no precedent, there being no clause in the standard (as regards height) other than the 15in. one. I fail to see where the National Beagle Club has swerved a hairsbreadth from the designs of the original committee as exemplified in the standard, therefore must mark the assertion made by Mr. Phœbus that the change has already taken place, as incorrect.

The next point Mr. Phœbus desires to make in connection with this reasoning is that dogs that could not win in the 15in. class are now prominent winners in the 13in. class since that class was raised from 12in. Cite us an instance, Mr. Phœbus. Perhaps what appears to me to be the best argument for leaving the present standard alone was the statement that there was a limit to which a beagle will grow, a sort of invisible line, as it were, to which one may reach, but may by no means pass beyond, and the accompanying instance of the constantly increasing size of dog, from Damper to Ralph W. I suppose Mr. Phœbus is aware of the fact that this same J. Crane had at one time a pack of 8in. beagles; these were found to be too small for the purpose for which they were designed, and the progeny were allowed to increase to such a size as would enable them to do good work afield, and yet be small enough to be followed by fleet-footed runners. These beagles were not used by horsemen, but by college men, and were called the "basket" or foot beagles. Now, as Mr. Phœbus has shown conclusively that without the most careful breeding for small ones the beagle tends to increase in size, will he also kindly give his reasons for believing that when they reach that invisible but arbitrary line of 16in., set by him, they will refuse to go beyond? He says that he will guarantee that the progeny of Ralph W. will not increase, as he has shown his five ancestors have done before him. We will admit there is a limit, but why 16in.? Why not 26in.?

If a beagle can, by successive breedings, be reduced in size from the gigantic foxhound (to which size he is constantly reverting when left to himself), even as savages brought within the bounds of civilization by the untiring labors of some mission return to their old ways as soon as that influence is removed, why will he not, as each restriction (in the shape of an extra inch) is removed, claim his vantage ground and encroach as before on the domain of his forefathers?

That the beagle does exceed this 16-inch limit even in this country, where the 15 inch limit prevails, it is useless to deny, for I know of at least half a dozen which equal or exceed that limit, and I believe it is owing to our present standard entirely that there are not many more. I have in mind now a dog by a son of Gen. Rowett's Old Lee, out of a half-sister to Frank Forest, that measured full 18in. high. Further, let us turn to England, where we find beagles from 16 to 19in. high, and one has only to turn to the pages of the English *Stock-Keeper* to find such specimens advertised in its columns. Will any one tell me now that the beagle in America will refuse to equal his English brother in height, if once given the opportunity?

"Stonehenge" tells us the harrier varies in height from 16 to 20in., and his description of the harrier and the beagle are so manifestly alike that it leads one to conclude that the only difference must be the size. What, then, is to prevent a 19in. beagle from being entered and winning as a harrier, or a 16in. harrier showing as a beagle, if beagles be allowed this extra inch? I think the whole question hinges on the work to be done. Evidently those desirous of the 16in. dog do not want, if they did but know it, a beagle at all, apparently. What they want is a dog 16 to 20in. high to run hares, they to follow on horseback. They want from ten to twenty couples of these dogs and expect them to catch their game without the gun. This is no doubt sport but it is nevertheless sport that not one out of a hundred who own beagles in America can indulge in, because, perhaps unfortunately, field sport in this country is not confined entirely to the wealthy classes, but is open to all who can raise the purchase price of a single beagle. Every old sportsman knows that the rabbit, "grey bob" or "cottontail," etc., as he is called in different places, will, when hard pushed by a fast dog, go to cover. With the hare it is different; but still, even a 12in. dog will sometimes drive one out of hearing, and the larger and faster your dog the larger the circle and more difficult your chances of getting a shot, to say nothing of losing the chief pleasure, *i. e.*, listening to the cry of your hounds.

Why then do not those who enjoy the run on horseback and can afford it, add an extra inch or two to their present stock (the type of the majority of which much resembles the harrier), ask the bench show people for a harrier class, enter and win with their dogs as harriers? When so eminent an authority as "Stonehenge" finds the matter of size to be the principal difference between the breeds, it ought not to be very difficult to entirely eliminate any other slight difference which may exist.

This seems to me to be the only way out of the dilemna, as I think to-day that the beagle men outnumber the 16in. men five to one (to put a moderate estimate), even as the poor or comfortably off outnumber the rich. In conclusion I would say this is not, in my opinion, a case of the large dog vs. the small dog, but of the large dog vs. the still larger dog; or, in other words, beagle vs. harriers, the very thing the original committee spoke of as wishing to avoid in making their report to the club. F. W. CHAPMAN.

MELROSE, Mass., June 9.

Editor Forest and Stream:

In your issue of June 2 appears an article by Mr. F. C. Phœbus on the beagle standard. It looks as if he desired to jump on me for saying I believed he was interested in the 16in. beagles as the reason he asked for that limit. I am still of that opinion. I would refer him to Mr. A. C. Krueger's ably written article in the FOREST AND STREAM

of May 19, in which he says of all the large acquaintance he has among those interested in beagles he knew of only two (Mr. Phoebus is one) that favor a 16in. limit. I am afraid Mr. Phoebus will not get Dr. L. H. Twaddell to agree to have 3in. difference in the two sizes if the smaller class is now made at 13in., as I met Dr. Twaddell a day after he had received his FOREST AND STREAM of May 19, and we had a long talk upon the subject of the change. He said he was glad to see the stand I had taken, and all who have written upon the subject agree it was for the interest of the breed to not change. He also admires Mr. Krueger's article. Mr. Phoebus need not try to enlighten me on beagle matters; I got my information from those who are entirely disinterested. He asked how I acted when the change was made from 12 to 13in.: I wish to inform him I was not a member of the club at the time and took no action whatever.

The article I wrote and with which he finds fault was written in reply to a request for my opinion on the letter he wrote, and I am still of that opinion.

W. H. ASHBURNER.

YEADON, Delaware County, Pa., June 4.

UNITED STATES FIELD TRIALS DERBY ENTRIES

Editor Forest and Stream:

THE entries for the United States Field Trial Club's second annual Derby closed June 1 with 106 nominations—sixty-one English setters, one Irish setter and forty-four pointers; all whelped in 1891. Inclosed herewith is the list:

ENGLISH SETTERS.

COUNT NOBLE III (A. A. Bogen), black and white dog (Count Noble, Jr.—Dashing Flora), May 14.

HOOSIER GIRL (J. H. and J. A. Hunter), orange and white bitch (Dad Wilson—Daisy Hunter), Jan. 1.

HOOSIER LADY (F. R. Hitchcock), liver, white and ticked bitch (Dad Wilson—Daisy Hunter), Jan. 1.

HOPE'S PRIDE (Manchester & Wartrace Kennels), lemon belton dog (Gath's Hope—Georgia Belle), Aug. 2.

PINK (Manchester & Wartrace Kennels), black, white and tan dog (Vanguard—Georgia Belle), Jan. 8.

RANGER B. (Manchester & Wartrace Kennels), lemon and white dog (Vanguard—Georgia Belle), Jan. 8.

SPORT (Manchester & Wartrace Kennels), lemon and white dog (Vanguard—Georgia Belle), Jan. 8.

TOLEDO SUE (Manchester & Wartrace Kennels), black, white and tan bitch (Toledo Blade—Belle S.), April 16.

CLEM GLADSTONE (John L. Sneed), black, white and tan dog (Paul Gladstone—Latonia), April 6.

DAN'S LADY (Theo. Goodman), black, white and tan bitch (Dan Gladstone—Lilly Burges), May 14.

BOB DUDLEY (D. F. Welkin), black, white and tan dog (Simonides—Daisy F.), January.

APOLLO HILL (J. Shelly Hudson), black, white and tan dog (Ben Hill—Dolly S.), May 9.

DIRECT (J. W. Shriver), black, white and tan dog (Gun—Victoria Lavarack), Aug. 1

CLEO (J. W. Shriver), black, white and tan bitch (Gun—Victoria Lavarack), Aug. 1.

GALE NOBLE (H. K. Devereux), black, white and tan bitch (Breeze Gladstone—Katie Noble), March 11.

SPOT CASH (H. K. Devereux), black, white and tan dog (Vanguard—Georgia Belle), Jan. 8.

REX-THE-KING (the Jackson & Denmark Kennels), black, white and tan dog (Laddie Browdre—Phyllis), Jan. 2.

LILLIAN RUSSELL (the Jackson & Denmark Kennels), black, white and tan bitch (Phillip Gladstone—Lou K.), May 15.

DUFF (W. T. Hunter), black bitch (Toss—Pitti Sing), May 5.

GLADSTONE'S PET (W. T. Hunter), black, white and tan bitch (Roderigo—Gladstone's Girl), March.

BESSIE JUNE (W. T. Hunter), black, white and tan bitch (Chance—Bessie Avent), May 30.

HOPE'S TRAP (Geo. E. Gray), lemon and white bitch (Gath Hope—Trap, Jr.), April.

CECIL H. (J. L. Adams), black, white and tan dog (Dr. Maclin—Cosette), Jan. 8.

SIR KENT (J. L. Adams), blue belton dog (Kent II.—Nicolette), April 8.

ROWDY DASH (J. L. Adams), black, white and tan dog (Rowdy Rod—Flame Gladstone), May 17.

DAN BURGES (J. M. Freeman), black, white and tan bitch (Dan Gladstone—Lilly Burgess), May 14.

BRIGHTON CLIP (T. G. Davey), black, white and tan bitch (Canadian Jester—Lassie), April 5.

DOT NOBLE (Geo. S. Starr), black, white and tan bitch (Cincinnatus—Fly Noble), Feb. 1.

LAGGARD (Meadow City Kennels), black, white and tan dog (Roderigo—Gladstone's Girl), March 3.

DIXIE'S ROD (W. G. Peters and J. E. Guinotte), black and white dog (Roderigo—Dashing Dixie), April.

ORSINO (E. W. Clark, Jr.), black, white and tan dog (Rod Gun—Winnie Davis), April 21.

SUNFLOWER (N. B. Nesbitt, agent), black, white and tan bitch (Dick Turner—Babe Gladstone), April.

RAP-EYE-DAN (Will Wilson), black and white dog (Ben Hill—Dolly S.), May 9.

JEAN MEDA (Will Wilson), black, white and tan bitch (Jean Val Jean—Andromeda), April 23.

SANCHO (Wm. Daniels, agent), black dog (Tipton—Maud), Feb. 19.

FLY (Wm. Daniels, agent), black and white bitch (Tipton—Maud), Nov. 29.

PEMBROKE'S BLUE GROUSE (Scott's Wood Kennels), black, white and tan dog (Pembroke's Don—Sue of Hatchie), March 4.

CAPSICOOLIAS (T. W. Stoutenburgh), blue belton dog (Toledo Blade—Bell S.), April 15.

RUBY BONDHU (T. W. Stoutenburgh), black and white bitch (Dick Bondhu—Cosette), July 18.

FLING (Bert Crane), black, white and tan bitch (Dick Bondhu—Cosette), Jan. 6.

DAN'S DAN (T. H. Poindexter), black, white and tan dog (Dan Gladstone—Belton's Princess), April 10.

GAIETY (Royal Robinson), black, white and tan bitch (Lone Jack—Gay Rhaebe), Feb. 13.

DESSIE HOPE (P. T. Madison), orange and white bitch (Gath's Hope—Stocking), May 9.

PROCTOR KNOTT (Blue Ridge Kennels), black, white and tan dog (Gath's Hope—Dashing Lady), January.

HOPE'S MINT (Blue Ridge Kennels), orange and white dog (Gath's Hope—Dashing Lady), January.

LANCIER (Blue Ridge Kennels), chestnut and white dog (Gath's Hope—Stocking), May 9.

DECK FOX (Blue Ridge Kennels), black, white and tan dog (Chance—Countess Rush), April 8.

LADY BROOKS (Blue Ridge Kennels), black, white and tan bitch (Chance—Countess Rush), April 8.

STEWART HILL (Bradford Kennels), chestnut and white dog (Ben Hill—Kate Q.), Jan. 2.

LOCHINVAR (Avent & Thayer Kennels), black, white and tan dog (Chance—Bessie Avent), May 30.

KINGSTON (Avent & Thayer Kennels), black, white and tan dog (Chance—Bessie Avent), May 30.

SHADOW (Avent & Thayer Kennels), black, white and tan bitch (Jean Val Jean—Lucy Avent), June 7.

KATE B. (J. W. Thurman), black, white and tan bitch (Vanguard—Georgia Belle), Jan. 8.

NANCY FOREMAN (A. J. Gleason), black, white and tan bitch (Dan Foreman—Hope's Lucille), Jan. 8.

JUNO SMITH (E. D. Garr, agent), black and white bitch (Rowdy Rod—Flame Gladstone), May 17.

LADY BELTON (T. M. Lawry), black and white bitch (Tennessee Bob—Dixie Belton), Jan. 14.

BELLE OF KENTUCKY (Fairmount Kennels), black, white and tan bitch (Dad Wilson—Bohemian Girl), June 23.

PRINCESS RAY (Geo. A. McLin), black, white and tan bitch (Prince Lucifer—Princess Lill), March 2.

TEAL SCHWINGE (Henry Schwinge), black, white and tan dog (Royal—Juno), March 2.

BABY BLUE (F. R. Harris), black, white and tan bitch (Blue King—Kate), April 22.

STOCKINGS HOPE (Dr. J. McDowell), black and white ticked bitch (Gath's Hope—Stocking), May 9.

IRISH SETTERS.

ERIN II. (E. B. Bishop), red bitch.

POINTERS.

ONWARD (G. W. Amory), liver and white dog (Wise C.—Velce V.), April 21.

BOY'S FAUST (Rudolph Schmidt), liver and white dog (Spotted Boy—Sally Ale), July 24.

KENT'S BOY (T. T. Achford), black and white dog (King of Kent—Vesa Bang), May 2.

CROXIE O'BANNON (R. L. Shannon), liver and white bitch (King of Kent—Croxie Wise), April 2.

MAME (R. L. Shannon), liver and white bitch (Brown Stout—Pearl's Pride), April 1.

GINGER ALE (R. L. Shannon), black and white bitch (Osborn Ale—Pearl's Dot), May 15.

KENT'S MIKE (J. F. Pantler), liver and white dog (King of Kent—Croxlill), April 13.

RIDGEVIEW DUKE (Drake Sefton Kennels), liver and white dog (Beppo III.—Blithesome), April 13.

RIDGEVIEW DUCHESS (Drake Sefton Kennels), liver and white bitch (Beppo III.—Blithesome), April 13.

RIDGEVIEW PATCH (Drake Sefton Kennels), liver and white bitch (Beppo III.—Lady Norrish), May.

BANKRUPT (W. T. Hunter), liver and white dog (King of Kent—Lass of Bloomo), March 20.

LADY PEG (W. T. Hunter), liver and white bitch (King of Kent—Lass of Bloomo), March 20.

MAGPIE (J. A. Balmer), black and white bitch (Rube—Black Fanny), July 25.

POMME DE TERRE (T. G. Barstow), liver and white dog (Ossian—Clipaway II.), June 19.

LAD OF RUTH (J. L. Adams), liver and white dog (Ruth of Lad—Topsy L.), March 16.

DAISY SOCWELL (J. L. Adams), liver and white bitch (Ossian—Devonshire Jilt), April 15.

BONNIE LASS (Ed. A. Gordon), liver and white bitch (Earl of Kent—Carlotta), June 21.

LEDA (T. G. Davey), liver and white bitch, (Devon Nero—Meg), May.

BESSIE RANGER (T. G. Davey), liver and white bitch (Major G.—Belle), March 9.

TOSCAR (Hon. J. E. Guinotte), liver and white dog (Ossian—Nellie E.), April.

KENT'S QUEEN (John Bolus), liver and white bitch (King of Kent—Vera Bang), May 5.

BRANDY (C. H. Wetmore, agent), liver dog (Wetmore Guy—Wetmore Bud), Aug. 7.

BANG'S STAR (Lewis Stuchmer), liver and white dog (Trinket's Bang—Pearl's Fan), June 25.

SPRINGATA (David Castleman), liver and white bitch (Castleman's Krup—Springa), Aug. 23.

OSNELL (Gen. J. B. Castleman), black and white dog (Castleman's Rex—Castleman's Nell), Aug. 2.

VARRO (Gen. J. B. Castleman), liver and white bitch (Castleman's Rex—Castleman's Nell), Aug. 2.

NELLOS (Gen. J. B. Castleman), black and white bitch (Castleman's Rex—Castleman's Nell), Aug. 2.

MAINOS (Gen. J. B. Castleman), black and white bitch (Castleman's Rex—Castleman's Nell), Jan. 1.

ABDALLAH SHELL (J. B. Turner), liver and white dog (Grand Duke—Rose King Don), March 17.

CROXIE KENT (Bob Cooper), liver and white bitch (King of Kent—Croxie Wise), April 2.

RIDGEVIEW BEPPO (The Graphic Kennels), liver and white dog (Beppo III.—Revelation), Feb. 14.

RIDGEVIEW TENNEY (D. L. Darby), liver and white dog (Beppo III.—Blithesome), April 6.

RIDGEVIEW CLIMAX (Harold Strebeigh), liver and white bitch (Tribulation—Bloomo II.), June 23.

LADY ALICE (T. H. Poindexter), liver and white bitch (Ossian—Devonshire Jilt), April 15.

EARL OF KENT (Gus Schrever), liver and white dog (King of Kent—Sal), July.

KENT'S MAID (H. J. Riginald, agent), bitch (King of Kent—Galena), April 19.

MAID OF OSSIAN (J. B. McGuffin), liver and white bitch (Ossian—Pickwick), April 10.

MONKEY SMOKELESS (C. W. Meeker), liver and white dog (Ossian—Devonshire Jilt), April 15.

BIZ (W. Hinckle Smith), liver and white dog (King of Kent—Lass of Bloomo), March 20.

DON C. (Geo. A. Castleman), black and white dog (Rank—Fly), May.

TEN SLEEP (Edgemont Pointer Kennels), liver and white dog (King of Kent—Woolton Game), Dec. 30.

TROUBLESOME (Edgemont Pointer Kennels), liver and white bitch (Tribulation—Pride of Idstone), July 9.

DAVID C. (Joseph Crugom), liver and white dog (Duke of Hessen—Princess Marguerite), June 8.

PRINCESS DOLLY (Joseph Crugom), liver and white bitch (Duke of Hessen—Princess Marguerite), June 8.

P. T. MADISON, Sec'y-Treas.

INDIANAPOLIS, Ind.

FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—Mr. W. H. Middleton, Mr. Mercer's partner in the Clumber Kennel, has felt compelled to tender his resignation to the Ottawa committee, which body has referred the matter to the C. K. C. Mr. Middleton acted under Rule XXV., which reads, "The partners in the kennel will be deemed equally culpable in the case of fraud perpetrated in the kennel name." Mr. Middleton had no personal knowledge of the transaction.

Mr. Wm. McDonald, Hamilton, has lost by death the red cocker dog Red Jacket. As he refused $150 for him a month ago he is just that amount out, and now wishes he had accepted the offer.

Mr. H. P. Breay, also of the "Ambitious City," who owns a kennel of St. Bernards, has bought a Great Dane bitch from Dr. Nicolai, of Detroit, as the nucleus of a kennel of this breed. She will be bred to Favor.

My abominable fist has caught me tripping again. In the paragraph in last week's "Flaps" relating to the Ontario Collie Club, last line, the word *the* should be *ten*, "there were fifty bench show entries and *ten* entries for the trials."

H. B. DONOVAN.

There are several new notices of dogs for sale in our business columns this week. Shabbona Kennels offer broken pointers and setters; Edward Booth several valuable St. Bernard bitches; C. E. Stanley, English setter; L. M. Wooden, foxhound pups; H. G. Arnold, cocker spaniels; Dr. H. C. Deane, fox-terriers; F. H. Perry, broken Irish setters; A. and M. Spaniel kennels, prize cocker and field spaniels; A. Laidlaw, fine cocker spaniels; Oak Grove Kennels, Irish setter pups and have also their noted dogs in the stud.

DOG CHAT.

AT a meeting of the New Jersey Kennel League held at the Continental Hotel, Newark, N. J., on Friday evening last, the following officers were elected: President, Edward H. Radel; Vice-President, Dr. Edwin Field; Treasurer, Edward R. Christopher; Secretary, E. H. Johnson, and an Executive Committee composed of the president, secretary, treasurer, W. O. Kuebler, Edwin H. Morris, T. Farrar Rackham, E. A. Dillhoff and Frank Link, with power to increase to fifteen and elect two more vice-presidents, representing different sections of the State or kennel interests, in order that the League may be thoroughly representative. There were upwards of forty members elected at this meeting, including Mr. Kuser, one of Governor Abbett's staff; G. H. Muirhead, secretary of the Inter-State Fair; Rowland P. Keasbey, secretary of the American Spaniel Club; ex-Alderman M. A. Hanckett and many other well known dog men and representative citizens, and as there is also a young ambitious element forming a desirable combination, besides the whippet racing interests, there seems to be a great career of usefulness for the League. The secretary and treasurer were appointed to get the constitution and by-laws in print, and to circulate them among the sporting and kennel devotees throughout the State, and Mr. Christopher was also instructed respecting the incorporation. The League is already in communication with the different fair associations for bench shows, sheepdog trials, whippet racing and other events, and as it proposes taking in hand the laws and regulations upon dogs in force throughout the State and different cities, to insure that they shall be not only equitable, but humane, there is plenty of work in view for the executive officers. This committee has been invited to hold their first meeting at the residence of the president, who is known in connection with a very typical St. Bernard which he exhibited at the spring shows and whose wealth enables him to take up his duties in an open-hearted, enthusiastic, as well as a liberal manner. The names of those wishing to become charter members may be sent to any member of the executive committee.

In the Constitution and By-Laws of this League we find that the initiation fee for charter members is $2 until a certain date to be decided upon later, when $5 will be charged, this amount to be paid within thirty days from date of election. The annual dues are now $2 to charter members. Charter members can become life members on payment of $20 or become such after twelve years membership. For other than charter members the fee will be $25.

Among the St. Bernards offered by Mr. Booth in our business columns is Lady St. Gothard, by Gothard III., that was in this country a few years ago, ex Saffron. Lady St. Gothard was recently imported and is described as a very handsome typical bitch. Mr. Booth has sold his recent purchase, Kinglimmon, to the Gody Pub. Co., of New York, to be delivered at the end of July, when Mr. Con-Anuis, the advertising agent of the company, will make use of the dog in a rather novel manner to draw the attention of the public throughout the country to the merits of the magazine.

Empress of Contoocook was due to whelp last Sunday. She was bred to Aristocrat and the result, we learn later, was only one pup. Baroness Cardiff was also bred to Aristocrat, and Lady Gladys will also shortly visit the lord of the harem.

The Kingston (Ont.) Kennel Club have after all fallen into line and will hold their show Sept. 19 to 22. The circuit this fall now reads: Hamilton and Rochester, same week; Toronto; Kingston and Grand Rapids; finishing at Ottawa. If the Hamilton and Rochester clubs do not adjust their difficulties both shows will surely suffer, for neither is so firmly established as to defy competition.

The Mount Holly (N. J.) Fair Association will add a dog show to the many attractive features of their popular gathering. Mr. John E. Diehl will superintend. The show will be held Sept. 12 to 16. The prizes will be, champion class, $10 gold medal, and a $10 silver medal, and diplomas in open classes. Entries close Sept. 1, with an entry fee of $3.

It strikes us that the N. B. C. committee is going ahead a little too fast in the matter of laurels for Frank Forest. Good dog as the latter is, and probable as it was that he could, in the 1890 trials, have beaten anything on the ground at the time, the title of "absolute winner," that the N. B. C. committee would confer on him, was not won by him, as no such title was in vogue at that time. That he won the special for best in all classes by default of others is admitted. Belle Ross, winner of under 13in. class, her owner not thinking her good enough, was withdrawn and Tone, winner of the bitch class under 15in., being in heat, was also withdrawn, thus leaving a clear field for Frank Forest. The only honors, through actual contest, that Frank Forest won were first prize in the class A for dogs 15in. or under and special for best dog or bitch of all classes, for which he had a walkover; and as far as we can find his owners, the Forest Beagle Kennels, never claimed anything more for him in their advertisements.

A good many people have a dread of physicking dogs and sooner than bother with the different remedies that may be prescribed by a doctor, often allow the dog to get well or die as best he may. These people should therefore hail with delight a remedy that is at once easy to administer and efficacious. Sergeant's Condition Pills are too well known to need any praise from us, but those who would like to know in what estimation they are held by dog owners should read their advertisement in our business columns.

The mastiff bitch Lady Caution is dead. She was owned by David Woodson, Philadelphia, Pa., and was one of the best of the breed in that city. She had won several prizes, including a first at the late Keystone Kennel Club show.

The Seminole Kennels have purchased from the Kildare Kennels the young Irish setter dog Troubadour, winner of third in the open and first in the novice classes at the Pittsburgh show this spring. He is by Murdo ex Mirtie, and is quite a promising young dog, and will, together with the Seminole Kennels' already strong team, make competition in the fall shows very interesting for the others in this breed. Champion Tim and Laura B. are said to be in excellent condition and just about as active as ever. Troubadour has been renamed Merry Monarch.

Mr. Frank Seabury, master of the Myopia Hunt, Boston, Mass., makes, through our columns, a very sportsmanlike offer in the interests of sport and breeding. His hounds are from some of the best packs in England, the Warwickshire and Lord Egglestone's (Scotland). They are bred for the "drag," for which he requires exceptionally fast, strong, large hounds, and many of those he breeds do not come up to his standard, but are just as good for hunting foxes, and in fact better than the headstrong ones. As there are probably no better bred hounds in the world than these, Mr. Seabury thinks that perhaps there are some breeders who would like to get the blood, though the specimens are not of the best though sometimes he has very fine ones which will not run a drag. He will, therefore, be pleased to box such hounds and send one or two to any reputable man who will give them a good home, and when finished with

put them out of the way and not have them "banged about." Mr. Seabury has been breeding them since 1882, and he has now three or four couple, whelped in September, 1891, that are not large enough for his purpose, and are at the disposal of breeders on the above terms. This is an opportunity that many foxhound breeders should avail themselves of as an outcross on their own stock.

At first glance the large Derby entry (106) secured by the United States Field Trials Club struck us as being a record one, but on investigation we find that in one instance this large number has been excelled. In the Central Field Trials Derby of 1890 there were 115 nominations—71 setters and 44 pointers, with 14 starters in the Setter Derby and 10 in the Pointer Derby. The Eastern Field Trials come next on the list with 102 nominations in 1886, which included 71 English, 4 Irish and 2 Gordon setters, and 25 pointers, from which there were 29 starters. The United States Field Trial Club can, however, congratulate themselves on a record entry so far for this year, and the Elizabethtown meeting will probably be a lively one.

The regular quarterly meeting of the National Beagle Club will be held at 266 Washington street, Boston, Mass., July 1, at 7 P.M. The revised constitution and by-laws will be voted upon.

The California Kennel Club held a banquet in San Francisco May 29 and kindly sent us an invitation, but unfortunately previous engagements precluded our acceptance.

"Brockenhurst" should remember that those who live in glass houses should not throw stones.

New England Field Trial Club.

A MEETING of the board of governors of the New England Field Trial Club was held at 266 Washington street, Boston, Mass., Monday, June 19, at 2 P.M., President Power in the chair. Present: Messrs. Hayward, Tucker, Lovell, Stickney and Power. The records of the last meeting were read and approved. Dr. J. W. Hayward, for the committee on game and grounds, reported progress. A communication from Mr. C. D. Roberts was read and filed. It was then voted to admit Mr. O. W. Donner to membership. Dr. Hayward, chairman of the committee on judges, reported progress. Voted that the committee on judges be instructed to invite Messrs. N. Wallace, of Farmington, Conn., Washington A. Coster, of Saratoga Springs, N. Y., and John Davidson, of Monroe, Mich., to judge at the coming trials. The meeting was then adjourned to meet at 266 Washington street, Boston, Tuesday, June 28, at 2 P.M.

Too Successful.

LIBERTY TRAINING KENNELS, Breeders of Pointers and English Setters, Fine Dogs in Stud.—Hyattville, Ohio, May 16.—*Forest and Stream Pub. Co.*: Your favor received. Do not renew advertisement, as it was only too successful the first time. We sold our surplus stock and took all the dogs we can train for the season, and **90 per cent. of our patrons say they saw that little ad. in "Forest and Stream."** Greatly pleased with the increased amount of good reading matter. Yours truly, W. B. MCCLOUD, Manager.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

J. P. C., New York City.—My setter puppy, two months old, has a small rupture at the navel. Kindly advise me what to do for it? Ans. Do nothing, it will disappear as the puppy grows older.

J. G. B., New York City.—Give pedigree of Gordon setter Bess III. (A.K.R. 6983). Ans. Sire, Dan, owned by Cyrus W. Field, from an imported bitch owned by Robert Bonner. Dam, Nellie.

F. W. E., New York City.—To register your dogs you must apply to A. P. Vredenburg, secretary A. K. C., 44 Broadway, New York city, who will furnish forms which give you every information. You will have to get Topsy's pedigree for two generations back.

G. C. W., Brinkerhoffville, N. Y.—Can you give me a tabulated pedigree of the collie dog Berry (A.K.R. 6657) for two full generations? Ans. The only record of pedigree we can find is the following: Sire, Sir George Macpherson Grant's black and tan collie. Dam, bred by Mr. C. Grant of an old Highland breed of collies.

C. D. R., Fort Niobrara, Neb.—1. Not very good. Baldur and Elgiva have the best blood. 2. Yes. There is a Rex in the A.K.R. (3,928) by Adam J. (3,367) out of Yolande (3,383). 3. The advantage of registering a dog should be apparent. It is, or should be, a hall mark of pure breeding, as the A. K. C. S. B. requires an authentic pedigree for three generations back on both sides before the dog can be registered, though a dog can also be registered, pedigree or no pedigree, if it has won two first prizes at any show under A. K. C. rules.

E. N. J., Rutherford, N. J.—My Irish setter, 14 mos. old, was taken sick about two weeks ago, and is getting worse all the time. When I first noticed him he was dragging his left hind leg and walking sideways, then he commenced to turn round in a circle, the circle decreasing all the time until now he will turn around almost by the hour without moving from the spot. If he tries to come to me when I call him he can only reach me by going around all the time and edging toward me. Both of his eyes appear to be drawn toward the left side. He eats a little, but has to stop eating to turn around and then commences to eat again. His nose is cold and moist, and he does not appear to have any pain. Ans. If the symptoms you mention are the result of distemper, then I fear treatment will not accomplish much. If not, treat for worms again, giving the medicine in pill form; also treat for thread worms, by injecting up the rectum a solution of salt and water two or three drams of the former to one ounce of the latter. Examine the ears thoroughly; if there are any small white bodies in it, or even if they are irritated, use the following lotion: Nug. Hyd. Nit 3i. Ol. Amygd 3ii. A few drops to be placed in the ear twice a day. Where the head joins the neck (the poll) insert a seton (about 4 or 5in. long); on the seton apply a little biniodide of Mercury ointment (strength 1 to 8). Give twice one teaspoonful of syrup of hypophosphites (Fellows); also give three times a day five grains of iodide of potash mixed with a little food, or in a capsule or pill. If the bowels become constipated, give two grains of calomel. If at any time the dog turns around very much, give him every two or three hours till he gets quieter, tablets triturates containing one-hundredth of a grain of Hyoscine. Write again in a week saying how the dog is.

"Whenever I hear of a break in the levee down in my district," said C. Stone, of Greenville, Miss., "I know that nine chances to one crawfish have caused it. The assertion may sound slightly exaggerated, but it is a fact, nevertheless, that the devilish little crawfish work more danger to the levees than does the water. On a big rise, when the bed of the river is stretched from embankment to embankment, the crawfish burrow into the levees and live there in the moist earth. They multiply faster than maggots, and loosen up the earth worse than moles. The levee may be completely sodded with grass, and you see no external evidence of the damage going on within, but when the next big rise comes you will see it. I have frequently known the water to break through the levee two or three feet from the top, and you can attribute it to nothing but the destructive work of the crawfish. This was particularly true of the break at Offut's in 1889, when a portion of the town of Greenville was submerged. The builder of the levee in the future will have to take into account the crawfish as one of his most stubborn foes."—*St. Louis Globe-Democrat.*

THE annual regatta of the New York Y. C. was the first and for many years the only important fixture in American yachting, an event in the social as well as the yachting world. In the 48 years of the club's existence but one regatta has been missed, in 1861, when the nation had little time or thought for sport and men were hurrying to the front as fast as steam could carry them. It has been evident for several years that this historic event has become but little more than a tradition, and after the experience of this year the question arises whether this traditional observance of an old custom is worth continuing. When out of a fleet of 160 sailing yachts but ten or a dozen come to the line on regatta day, and these few are so scattered over a number of classes that there is little competition in any one class, it is evident that the regatta has lost all interest both for yacht owners and for the yachtsmen who attend as spectators.

When at the same time the old spectacle of a dozen or so of large yachts, mostly schooners, which appealed to the ladies and nontechnical spectators, has also disappeared, there does not seem to be any good reason for attempting year after year what is a foregone failure.

The labor imposed on the regatta committee and other officers is considerable; the expenses of steamer, music, luncheon, tug, prizes, etc., are quite an item, over $2,000; and though the officers are willing to do the work, and the club is well able to stand the expense, it is a serious question whether the results are at all commensurate with the outlay, either in time or money.

The officers and the club at large have spared no effort of late years to build up the declining interest in the regattas, the courses are well arranged, the prizes are of sufficient value, either in cash or cups, the racing and measurement rules are more perfect than in the past, the regular classes are such as to group the racers well together, and the special conditions, of cruising trim, etc., have been devised to meet the wants of the owners of the partially outbuilt yachts. With all this, men will not enter or start, and so long as they will not, there is little use in preparing for them on the elaborate scale that is necessary.

The New York Y. C. is by no means the only club in which this state of affairs prevails, it exists in all of the other large clubs, though more noticeable in the case of the New York, because that club has always been celebrated from the size of its racing craft; and it cannot, as some others are doing, meet the case by the encouragement of racing in the 25, 30, or even 46ft. classes.

So far as the total amount of racing carried on each year under the club flag, there is no special cause for complaint; August and the annual cruise bring out a magnificent fleet, the greater part of which joins in the races of the runs, if not the special events. The only question is with the early June racing, shall it be continued in the way that has characterized it for the past four years, or shall it be abandoned entirely, the racing season of the club beginning some six weeks later with the rendezvous for the annual cruise?

THE New York Y. C. sets an example that might well be generally followed in the size of its racing programme, a sheet 8×10in., a little smaller than double note size, the map of the course on one side and the details of prizes, classes, courses, etc., on the other. In marked contrast to the compact and handy programme is another, a thick sheet nearly 12×18in., largely made up of blank pages and margin, too large for the pocket and not to be unfolded and read at all on deck in a breeze. The model programme would be one of the smallest possible dimensions, not over note size, or about 5×8in. The instructions should be very clearly expressed, the reverse of the general practice at present, and the matter should be set as plainly as possible; the purpose of such a document is to give a clear and accurate information to yachtsmen, not to display the skill and artistic taste of a compositor. In some cases it is desirable to use a rather large sheet in order to give a full chart of all possible courses; but, as a rule, a small card, of the size mentioned, with all directions set forth in plain legible type, will meet with favor from the racing men. There may be a time when one common system of classes, measurement, racing rules and conditions of starting will prevail; but in the meantime it would be a step forward if all clubs, as nearly as possible, adopted a common size of racing programme and of simple and clearly expressed starting and sailing directions.

WITH the large number of races now sailed, sometimes three or four in a week, there is no necessity for the long courses formerly in vogue when much more depended on a single race. The merits of modern boats are not determined by one or two races, but often by a dozen, and the opportunities for comparison being thus multiplied, there is no occasion for sailing from 35 to 50 miles to secure a thorough test. The present New York Y. C. course, from the Narrows around the Sandy Hook Lightship, is much shorter than the old course, but it is still long enough for the largest of the racing schooners, and the course around the Scotland—30 miles—is even longer than is necessary for the smaller yachts. The most popular length of course, even for the larger yachts, is 25 nautical miles, such as the triangle of the Corinthian Y. C., off Newport, and of the Eastern Y. C., off Marblehead. The Captain's Island course of the Larchmont Y. C. is also a very good one for length—21 miles.

With the long courses sometimes sailed it is absolutely necessary, and even with a 25-mile course it is desirable that the starts should be early and punctual; with a little care in advance the too common starts between noon and 1 P. M. may in most cases be avoided to the advantage of all concerned. With a start promptly at 10:30 A. M., the chances of wind and also of a finish before dark in case of a slow race are far better than with a noon start; and such a start should be easily practicable. To those who are ready in time—and they are the best racing men—the common delays with the yachts about the line are most trying, a good helmsman sometimes losing his nerve completely in the interval. There are always a few ardent Corinthians who want to rise at 9, breakfast leisurely at a club in town, and wend their way later to Bay Ridge or Larchmont for a race; but the interests of yacht racing are not likely to suffer seriously if these gentlemen are occasionally left on the club float.

With an early start there is time to wait for a breeze if one is not forthcoming, and if there is wind the race is made in about four hours, bringing the fleet in by 3 P. M., with an hour or two for visits and chat before going to dinner or back to town, a far pleasanter proceeding than the too frequent finishes between 7 and 9 P. M., the evening wasted before one gets to the club house or catches the last train for home.

THE new class created by the New York Y. C. last week promises to be a most excellent institution, and to simplify the racing both in the annual regatta and the racing runs of the cruise. Within the elastic and comprehensive limits of class 8 will be included all yachts of whatever size or rig that would otherwise sail over for want of competitors, the allowances being based both on rig and measurement. Of course such racing as this, practically the same in vogue forty years ago when racing fleets were as small as they are now, is no test of the merits of the yachts, but it can be made to add a certain excitement and interest that will induce entries and add to the pleasure of all concerned. There was no occasion, as it happened, to test the new class in the regatta of last week, but one is likely to occur about the end of the cruise, the regular classes, however well filled up to Vineyard Haven, usually going to pieces after that.

FOR the past six weeks American yachtsmen have had a sample of the weather enjoyed in England for the greater part of the last two seasons and can sympathize fully with their British cousins. The cold, wet and rainy summers of 1890-91 have had a serious effect on outdoor sports in England, and yachting has suffered in common with canoeing and rowing. The weather here this spring, up to the day of the New York Y. C. regatta, has been of much the same sort, cold and rainy; and the effect is visible in the delay in fitting out, and the few and unimportant races thus far sailed. Just now New York at least is enjoying a "warm wave," sent on from the Far West, which from all appearances is likely to lend sunshine to the coming races. The condition of yacht racing is serious enough at best just now without the weather bureau taking a hand in to make matters worse.

A YEAR or two since we called attention to the very faulty method of class nomenclature followed by most yacht clubs, each class being numbered or lettered after a purely arbitrary system; the name, class 1 or A, giving no possible indication of the actual limits. As each club has its own system, it is impossible to carry the many limits in mind, and no man who races in more than one club can tell without reference to the club book what the limits are; for instance, of the 6th class of the New York, the 4th class of the Larchmont, or the 2d class of the Atlantic clubs. The remedy for this confusion is so simple that the only wonder is that it should be so generally overlooked. Each class should bear the name of its highest limit, as 90ft schooner class, 70ft. or 40ft. class, no effort then being necessary to memorize the entire list of classes in all clubs.

New Rochelle Y. C. and Seawanhaka C. Y. C.

THE following reply has been sent by the New Rochelle Y. C. to the letter of the Seawanhaka C. Y. C., published last week:

NEW ROCHELLE, N. Y., June 7, 1892.

Walter C. Kerr, Chairman Race Committee, Seawanhaka C. Y. C.:

DEAR SIR—At the meeting of the New Rochelle Y. C., held last evening, the secretary was instructed to acknowledge the receipt of yours of May 31 and to accept your explanation that no intentional discourtesy was involved in your choice of July 2 for the Seawanhaka annual regatta.

The annual meeting of the New Rochelle Y. C., was held Feb. 1 and July 2 was appointed as the date of the annual regatta, it having always been the custom of the club to choose the Saturday nearest to July 4, except when the date was a Saturday.

The date appointed was published in all the New York papers the morning of Feb. 2.

Recognizing, however, that the choice of coincident dates was to be regretted, and desiring to extend the utmost courtesy to your club, the New Rochelle board of governors, at their May meeting, did consider a change of date, but engagements made immediately after the annual meeting made this impossible.

One of these engagements was with the Iron Steamboat Company, who could give us no other date.

It is the desire of the officers and members of this club that I should express their regret over the event and their willingness to have made a change in date had it been possible.

Very respectfully, R. CONDIT EDDY, Sec'y.

The American Y. C. Steam Yacht Race.

IT is now certain that no more than two steam yachts, Vamoose and Norwood, will start from New London next Saturday in the race of the American Y. C., postponed from last fall; while it is by no means certain, in spite of many promises and protestations, that both of these yachts will start. The torpedo boat Cushing is in use, being fitted for testing torpedoes, and Now Then and Yankee Doodle will not enter. Norwood and Vamoose are to be at New London early in the week, and there seems really no reason why both should not race if their respective owners really desire a trial.

South Boston Y. C., June 11.

IN consequence of a protest over the incorrect marking of the course in the Memorial Day race of the South Boston Y. C., the race was resailed on June 11, the times being:

	Length.	Elapsed.	Corrected.
Tantrum, F. L. Perkins	14.05	1 15 10	5 05 43⅘
Laurel, J. K. Hutchings	13.04	1 21 17	1 00 47
Annie, E. H. Rich	13.02	1 22 27	1 01 16⅖
Escort, W. H. Ransom	13.10	1 21 37	1 01 27⅘

Yorkville Y. C.

THE eighth annual spring regatta of the Yorkville Y. C., now located at Port Morris, the old anchorage of the Knickerbocker Y. C., was sailed on June 12, the course being around the Gangway Buoy for classes A, B, C, D, F, and I; and around the Stepping Stones for classes E, G, H, and J. The wind was fresh from S.W., making a fine race. The full times were:

CLASS A—SLOOPS OVER 30FT.

	Elapsed.	Corrected.
Welde	4 34 05	4 34 05
Peerless	4 36 58	4 32 33
Calamity	Withdrew.	

CLASS B—SLOOPS 26 TO 30FT.

Rover	Withdrew.

CLASS C—SLOOPS UNDER 26FT.

Columbus	Withdrew.
Twilight	Withdrew.

CLASS D—JIB AND MAINSAIL; 23FT. AND OVER.

Neptune	4 59 10	4 59 10
Maud M	4 49 42	4 47 02

CLASS E—JIB AND MAINSAIL; UNDER 23FT.

Zetes	3 46 50	3 46 50
Tip Top	3 54 50	3 50 44
Regina	3 49 52	3 43 02

CLASS F—OPEN CATS; OVER 23FT.

Jessie	4 36 09	4 36 09
Truant, Jr	6 04 56	6 04 36

Crocus	6 01 45	5 57 45

CLASS J—CABIN CATS; UNDER 21FT.

Julia S	4 28 18	4 28 18
Emily	4 18 34	4 17 04

The winners were: Class A, Peerless, by 1m. 40s.; Class D, Maud M., by 12m. 8s.; Class E, Regina, by 3m. 48s.; Class F, Jessie, by 1h. 12m.; Class G, Anglesey, by 25m. 23s.; Class H, Mollie McCarthy, 15m. 59s; Class I, Village Maid, by 49m. 24s.; Class J, Emily, by 11m. 14s.

Anglesey wins the Downs & Slattery pennant for best elapsed time over the shorter course. Peerless won the Sultzer cup and McFadden pennant for best elapsed time over the longer course.

The regatta committee included Messrs. J. F. McKenna, Robert Ecke, and J. F. King, chairman. The judges were Com. T. H. McDonald, Harlem Y. C.; Com. J. C. Summers, Cherry Diamond Y. C.; James Shannon, Coronet Y. C.

Pavonia Y. C. Annual, June 13.

THE twenty-third annual regatta of the Pavonia Y. C. was sailed on Monday on New York Bay, the start and finish being off Oyster Island, and the courses being for classes D, E and F, around buoy 12, off Southwest Spit, twenty-five miles. For classes G and 4 around the red bell buoy on Romer Shoals, twenty-five miles, and for classes 2, 3, 6 and 7 around buoy 9, off Swinburne Island, fifteen miles.

The day was clear and very warm ashore. The wind was S.W., light and moderate, the tide running ebb through the race. The full times were:

Gypsey	2 18 32	2 14 26
R. K. Fox	3 26 40	2 22 34
Lilly	3 39 29	2 34 27

The winners were Avalon, Carrie Van Voorhis, Pavonia, Christine, J. T. Corlett, Mosquito, Truant, Torment and Ges So. The prizes will be presented at the club's regular meeting, Tuesday, July 12. Carrie Van Voorhis lost her topmast.

The judges were Com. Prime, Yonkers Cor. Y. C.; George E. Gartland, New Jersey Y. C., and Com. T. H. McDonnell, Harlem Y. C. Regatta committee, Rear Com. D. W. Kohn, C. E. Baldwin and L. Mittlesdorf.

The iron steamer Cygnus, with a large party of guests, accompanied the fleet.

Marine and Field Club Annual, Bath Beach, June 11.

THE Marine and Field Club, of Bath Beach, on Gravesend Bay just outside the Narrows, profited greatly by the change of weather at the end of last week, the first touch of the warm wave promised from the west, but which was delayed until after the New York Y. C. regatta. The weather was bright and clear, though still a little cool, but much more like June than anything which has yet been seen this year. The Marine and Field Club had secured a very good entry list, but as usual a number failed to start, making very poor sport in some classes. The actual starters were:

Class 2, 46ft.—Penguin, Geo. E. Brightson; Nautilus, Com. W. D. Dickey; Wasp, Archibald Rogers.

Class 4, 35ft.—Saona, Col. A. P. Ketcham; Tigress, James Weir, Jr.

Class 6, 25ft., including 25ft. s.l. class.—El Chico, H. Maitland Kersey; Waunita, Charles Perret; Freyja, T. W. Davis; Iroquois, E. H. Chandler.

Class 7, cabin cats.—Oconee, C. T. Pierce; Aura, W. H. Simonson; Truant, G. R. Townsend; Marguerite, E. R. Simmons.

The start was made off the club house, the 46ft. class rounding Sandy Hook Lightship, the 35ft. class the Scotland, and the smaller boats rounding the Bell Buoy off Sandy Hook.

Wasp was out with a clubtopsail that looked even larger than that of Glorianna last year. Nautilus, flying the flag of Com. Dickey, looked as neat and new as she did when first out, she also setting something of a sail aloft. Saona, always looking trim and clean, showed to good advantage in a new spring suit of canvas, and El Chico was out looking for something more formidable on the Bay than she has yet met on the Sound. Iroquois is one of the local cabin sloops; Freyja was built by Wintringham two years since, a compromise model of very good form, but not a racer, and Waunita is another new Wintringham boat, just from the builder's yard, and untried. Aura and Truant have already won local fame, Oconee is the new Gielow cat, and Marguerite is the old Hanley racer A. P. E., once of Boston, now owned in New York.

The wind was moderate to fresh and east of south, and the tide was on the last quarter of the ebb. The steamer Bay Queen carried the members and guests of the club, and the tug W. J. McCaldin carried the judges, Messrs. Stephen Peabody, T. C. Zerega and H. J. Gielow.

The preliminaries for the race were generally well arranged save that from a desire on the part of some one to practice with the club cannon up on the bluff, the judges on the tug out in the bay were not allowed to give the preparatory signal when the yachts were all ready, and a long and tedious delay occurred, causing some well-grounded grumbling among the helmsmen. At 10:00, however, a puff and a blaze from the bluff called the yachts to the line, and 10 minutes later a long whistle from the judges' boat sent them away. El Chico, handled by Messrs. Kersey and Willard, was first away, going like a steam launch direct for the Southwest Spit, traveling fast and holding out to windward in a wonderful manner. Nautilus made a very good start, just ahead of Wasp, but the latter worked up on her weather, slid by her and took the lead, pointing higher, holding on better and footing so fast withal that the race was over in the first 10 minutes. Penguin crossed the line but soon withdrew. The fleet was timed:

El Chico	12 08 42	Waunita	12 10 08
Iroquois	12 08 47	Freyja	12 10 22
Truant	12 08 57	Tigress	12 10 28
Aura	12 09 00	Oconee	12 10 32
Marguerite	12 09 19	Saona	12 12 08
Nautilus	12 09 48	Penguin	12 13 00
Wasp	12 09 56		

Waunita had trouble with her jibstay and gave up, after sending a man aloft. Nautilus soon made a hitch toward Coney Island Point, but Wasp and El Chico held for the Spit Buoy on the original tack. They were so far ahead of their respective classes that all interest ceased, and the only real racing was in the 35ft. and cabin cat classes. Tigress and Saona were rivals all last season, and during the winter the latter has been improved, so that their first meeting in a good sailing breeze was quite exciting. The four cats made a good race, being quite close together for a long time. Wasp finally fetched the Spit Buoy on the one tack, and El Chico did so too, but Nautilus was obliged to make a second tack when near the buoy. The times at this mark were:

Wasp	1 03 00	Penguin	1 24 30
Nautilus	1 13 10	Truant	1 30 15
El Chico	1 15 45	Aura	1 30 50
Tigress	1 17 15	Oconee	1 31 10
Saona	1 19 00	Marguerite	1 34 00

El Chico, 25ft. l.w.l., had beaten her own class by 15m., had sailed even with the 35-footer Tigress, and was but a little astern of Nautilus.

Outside the Hook and especially on the Bar there was some sea, but Wasp went in easily, though with a constant splashing under her full bows, while El Chico danced along as though she enjoyed it. Saona, the little keel boat, was doing excellent work alongside of the larger Tigress, carrying her jibheader bravely. When near the Bar Tigress found the seas anything but pleasant, and went on port tack for the Jersey shore and smoother water. Saona kept on the same tack until well out to the Scotland, when she tacked, heading off Tigress, though the latter had gained since they parted tacks. The times at the turn were: Saona 2:25:00, Tigress 2:25:40. The larger pair were timed at the Sandy Hook Lightship: Wasp 2:06:20, Nautilus 2:26:30. El Chico had turned the Bell Buoy, old No. 5, at 1:14:00. The wind was strong by this time, and the race between Tigress and Saona was quite exciting. Tigress soon took the lead, gaining still more as the Hook was neared through the loss of Saona's topmast. The finish was timed: El Chico 3:09:45, Truant 3:27:53, Aura 3:28:05, Oconee 3:32:18, Marguerite 3:33:10, Iroquois 3:44:18, Freyja 3:51:02, Wasp 4:09:31, Tigress 4:20:22, Saona 4:28:20, Nautilus 4:29:52. The full times were:

CLASS 2—46FT.

	Start.	Finish.	Elapsed.	Corrected.
Wasp	12 09 56	4 09 31	3 59 35	3 59 35
Nautilus	12 09 48	4 29 52	4 26 04	4 18 15
Penguin	12 13 00	Withdrew.		

CLASS 4—35FT.

Tigress	12 10 28	4 20 22	4 09 54	4 09 54
Saona	12 12 08	4 28 20	4 16 12	4 14 42

CLASS 6—25FT.

Iroquois	12 08 47	3 44 48	3 36 01	3 33 01
El Chico	12 08 42	3 09 45	3 01 03	2 58 08
Freyja	12 10 22	3 51 02	3 40 40	3 37 30
Walmeta	12 10 08	Broke down; withdrew.		

CLASS 7—CABIN CATBOATS.

Aura	12 09 00	3 28 05	2 19 05	3 19 05
Truant	12 08 57	3 27 53	3 18 56	3 16 56
Oconee	12 10 32	3 32 18	3 21 46	3 17 27
Marguerite	12 09 19	3 33 10	3 23 51	3 20 03

Wasp wins $150, Tigress $75, El Chico $75 and Iroquois $25, Truant $40.

Hudson River Y. C. Annual, June 12.

THE spring regatta of the Yorkville Y. C. was sailed on June 12 in a fresh southerly breeze, the course being a 10-mile triangle on the Hudson River between West Ninety-second street, New York, and Guttenberg, N. J. The times were:

CLASS A—CABIN SLOOPS.

	Elapsed.	Corrected.

New York Y. C. 47th Annual Regatta, June 9.

Though anything but a brilliant success, it can hardly be said that the regatta of the New York Y. C. on Thursday last was much of a disappointment save in the matter of weather, as it has been evident for some time that the entry list would be short and the list of starters still shorter. But few of the older schooners have fitted out for racing, the two new ones, Alcaea and Lasca, which were originally promised in time for this race, were neither of them ready, Alcaea being still in hand in Boston and in no state for racing, while Lasca was still on the ways. The 70ft. class is practically on the sale list, Katrina having just changed hands, while Titania and Bedouin are still waiting for purchasers; there is but one yacht in the 53ft. class, and the forties have entirely disappeared. There was a general hope that Glorianna's new owner would start her in the early races in order to give Mr. Rogers at least one opponent for his new Wasp; but that, too, has been dispelled, and not until the August cruise will the two come together. The earnest efforts of the regatta committee in the way of a personal canvass of the owners of raceable craft resulted in only the following list of entries:

KEEL SCHOONERS—CRUISING TRIM.

	Sailing length.
Dauntless, C. H. Colt	111.83
Alert, J. N. Luwing	Not measured

THIRD CLASS SCHOONERS—RACING TRIM.

Comanche, Bishop and Taylor	85.74
Fleur De Lys, George Trotter	Not measured

FOURTH CLASS SCHOONERS—RACING TRIM.

Marguerite, R. Suydam Palmer	83.48
Shamrock, J. Roger Maxwell	Not measured

FIFTH CLASS SCHOONERS—CRUISING TRIM.

Peerless, J. Edward Ackley	68.03
Viator, W. Gould Brokaw	65.92

FIFTH CLASS SLOOPS AND CUTTERS.

Clara, R. A. Osborn	55.12
Sunbeam, Dwight Bowman	Not measured
Wasp, Archibald Rogers	Not measured

Dauntless and Alert, the latter designed by her original owner, Mr. H. E. Bryant, are well-known craft. Comanche is the old schooner Æolus, rebuilt last year, and racing for the first time; Fleur de Lys is the cruising schooner designed two years since by Mr. Burgess for her present owner; Marguerite is a well known Burgess boat, but with a new lead keel and sail plan since last season; Shamrock has just joined the schooner class after five years' racing as a single-sticker, this being her second race under the new rig. Peerless, of late years hailing from Boston, was built for Shamrock's owner in 1872, and won many cups for him in the following ten years; Viator is a small cruising schooner, a Burgess keel, that has been very pluckily raced for two seasons by her present owner. Wasp and Clara need no special mention; their only competitor, however, is so old as to be new to the present generation, having been built in 1866, since which time she has met with many changes of names and owners. She made an odd appearance with the old fashioned sloop rig, hall lowermast and stub topmast, and big single jib.

The conditions of the race were as follows:

The regular prizes were: in each class $200 for first; $75 for second.

The following special prizes were offered for yachts in cruising trim. In each class $150 for first; $50 for second. Prizes of equal value will be offered for keel schooners, in cruising trim, sailing as one class.

The limits of "cruising trim" are: At least one anchor on the bow with cable bent; cruising complement of boats carried; cruising deck, cabin and galley fixtures in place; topsails extending above the truck, or beyond the end of the gaff, barred.

The following conditions governed the race: At least two yachts must start in each class, or no prize will be awarded in that class. Second prizes will be awarded when three or more start. No yacht shall receive two prizes. The prizes will be cups or money at option of winners.

The classes were: Schooners, Class 1, over 100ft. l.w.l.; Class 2, Class 2, 90 to 100ft.; Class 3, 80ft. to 90ft.; Class 4, 70ft. to 80ft.; Class 5, 70ft. and under.

Sloops, Cutters and Yawls.—Class 1, 80ft., l.w.l.; Class 2, 70ft. to 80ft.; Class 3, 61ft. to 70ft.; Class 4, 53ft. to 61ft.; Class 5, 46ft. to 53ft.; Class 6, 40ft. to 46ft; Class 7, 40ft. and under.

Any yacht launched prior to June 20, 1888, exceeding the higher limit in any class by not over the fraction of a foot, shall be included in that class.

Any yacht when alone in her class may sail in the class above.

The start will be off Buoy 11 (Lower Bay), and the preparatory signal will be made at 10:50 A. M., wind and weather permitting.

The course will be from a line between the judges' boat and Buoy No. 11, and past to Buoy No. 12, near Southwest Spit (red nun with perch and ball); thence south of Buoy No. 10 (red nun), and north of Bell Buoy off the point of Sandy Hook to Sandy Hook Lightship, turning from the north and east, and returning over the same course; 31 nautical miles. All yachts must pass to the eastward of West Bank Buoy Nos. 7 and 9, both going and returning.

The judges' boat will fly the United States ensign at the fore until the preparatory signal is given. As a preparatory signal one gun will be fired, the United States ensign lowered and the Blue Peter set in its place. Ten minutes later a second gun will be fired, the Blue Peter lowered, and letter N (club code) set in its place. And this will be the start for Classes 6 and 7, sloops, cutters and yawls. Five minutes later a third gun will be fired—(handicap time for Classes 6 and 7, sloops, etc.)—the letter N lowered and the club signal hoisted. And this will be the start for all other yachts. Ten minutes later a fourth gun will give their handicap time.

Yachts sailing the race must carry their private signals at the main peak, and display their numbers on each side of the mainsail, as near the middle of the sail as possible, and just above the upper reef band.

Yachts not entered will keep to leeward, and behind the contestants, and will be careful not to interfere with them in any way, particularly at the turning points.

Thursday was no exception to the cold and rainy weather of sunny June, the wind hung to the eastward, though there was a flat calm and a dense fog over the harbor at 9:30 A. M., when the flagship Electra, with Com. Gerry and his staff and a party of guests left the club station at Twenty-sixth street, East River, for the starting line outside the Narrows. At 11 o'clock, the hour for starting, the sky had cleared a little, and a light southeast wind had sprung up, dispersing the fog, but the only hope of a race was in the strong ebb tide that was helping the fleet down from the anchorage off Bay Ridge. The club steamer Taurus, with the members, including the usual large party of ladies, was at the line, and when the sun appeared, just before noon, the regatta committee, Messrs. S. Nicholson Kane, Irving Grinnell and W. E. Iselin, the latter acting in place of Mr. Chester Griswold, determined to attempt a start. The conditions were still unfavorable, the wind being so light and the skies so threatening, but a postponement was in every way so undesirable that the best course was to start, trusting to luck to make a race.

The preparatory gun, at 12:15, found the fleet in a group to the northeast of the flagship, which marked the weather end of the starting line, several having kedges down in order to hold their own in the strong tide. All weighed anchor at the gun and maneuvered slowly for the line, but there was a general miscalculation throughout the fleet as to the force of the tide and wind, and before the starting gun fired, ten minutes later, six of the schooners were so closely tangled together that all independent movement was at an end, and the lot drifted down directly under the jib boom of the flagship. The leading yacht, Comanche, squeezed up, but with Marguerite so closely following on her weather, and so pressed by the others under her lee that a general fouling seemed inevitable. As the tide carried them all under the sharp iron stem of the flagship, she slacked out cable quickly, giving a little more room, but with Shamrock close under her lee, and held there by others to leeward of her in turn, Marguerite was unable to do more than squeeze by, her bowsprit running through Comanche's mainsail, just above the boom. The two were so badly entangled that they lay together on the line for several minutes before they were clear, Marguerite coming off without damage, while Comanche suffered a bad tear in her mainsail. The others had all they could do to keep clear of each other and the mark boat, but got over safely.

Wasp and Sunbeam came a little later, the former screwing by just under the Electra's stem. The big Dauntless and the diminutive Clara were last, coming for the line together, Clara to windward, or inside; both with all that they could do to stem the strong tide. Together they drifted down under the Electra's starboard bow, then Dauntless swung in as though to crush the lightly built cutter between her oak sides and the iron sides of the Electra as they rapidly drifted astern. The flagship was sent ahead a couple of turns to her original berth, allowing the two to pass under her quarter and clear each other, after which they had a long and tedious task to beat up over the lost ground, finally crossing the line with a handicap of some eight minutes. The start was timed:

Preparatory	12 15	Peerless	12 28 11
Start	12 25	Fleur de Lys	12 29 14
Comanche	12 26 13	Albert	12 30 36
Marguerite	12 26 32	Wasp	12 31 52
Shamrock	12 27 02	Handicap gun	12 35
Sunbeam	12 27 18	Dauntless	12 38 50
Viator	12 27 58	Clara	12 42 31

At 1 o'clock there was a little more wind, but up in Princess Bay the skies were black with a threatened squall, and the rain was falling over the fleet. Shamrock had rather increased the lead she had at the start, while Wasp was third boat. She was carrying over full

lower sails a gaff topsail set some three feet down on the topmast and well in on the gaff, a marked contrast to the second jackyarder that Gloriana swung over the whole course under much worse conditions of wind and sea in the New York race of last year. It is true that Gloriana was racing, while Wasp had practically a sailover, but the new boat showed by no means the same initial stability as the old one. The times at the Southwest Spit were:

Shamrock	1 14 00	Peerless	1 26 25
Marguerite	1 17 00	Fleur de Lys	1 29 50
Wasp	1 20 15	Sunbeam	1 32 40
Viator	1 22 15	Clara	1 36 00
Comanche	1 23 30	Dauntless	1 39 00
Alert	1 25 00		

The weather for several days had been anything but the sort that breeds the usual summer squalls and thunder storms, more of the sullen and continued northeast storm, but in spite of this there was a well-developed thunder storm up Raritan Bay, an echo of which was found in a very violent and sharp crash of thunder, brief as the report of a cannon, as a lightning bolt struck the water within a short distance of the Electra as she passed the Southwest Spit. The rain fell heavily and obscured all view of the yachts between the Hook and the Sandy Hook Lightship, but with more wind Marguerite pulled up on Shamrock, and passed her as they neared the outer mark. The times here were:

Marguerite	2 19 00	Comanche	2 37 25
Shamrock	2 19 45	Viator	2 43 50
Wasp	2 29 00	Alert	2 45 03

None of the others were timed, and Dauntless had taken a tug and towed home.

Both Marguerite and Shamrock made slow work with jib topsails, a long time passing before they were set. On the way home the wind shifted in a way that made work for the crews, spinakers being set and shifted at short notice as it chopped about between N.E. and S.E. The following times were taken at the Southwest Spit:

Marguerite	3 33 00	Wasp	3 46 00
Shamrock	3 36 20		

Marguerite finished first, setting a protest flag, claiming that Shamrock failed to give her room at the start.

Shamrock was next, finishing well within her time, the full times for the fleet being:

KEEL SCHOONERS—CRUISING TRIM.

	Start.	Finish.	Elapsed.
Alert	12 20 36	5 23 28	4 52 52
Dauntless	12 35 00	Withdrew.	

THIRD CLASS SCHOONERS—CRUISING TRIM.

Comanche	12 26 13	5 23 42	4 57 29
Fleur de Lys	12 29 14	5 56 42	5 27 28

FOURTH CLASS SCHOONERS—RACING TRIM.

Marguerite	12 26 32	4 32 34	4 05 32
Shamrock	12 27 02	4 35 39	4 08 37

FIFTH CLASS SCHOONERS—CRUISING TRIM.

Peerless	12 28 11	6 02 30	5 34 19
Viator	12 27 58	5 25 55	4 57 57

FIFTH CLASS SLOOPS AND CUTTERS.

Clara	12 35 00	6 21 13	5 46 13
Sunbeam	12 37 18	Withdrew.	
Wasp	12 31 52	4 39 12	4 07 20

The conditions of wind and weather made the race of little value as a test, but it is certain that Shamrock is a fast schooner, much faster in her new class and rig than of old. As to Wasp, she had nothing to try her; Clara could not hold her own with the 46ft class last year, and in this race, beside her bad start, she made a very poor showing all day. Comanche defeated Fleur de Lys very handily, but in the smaller class the honors went to the keel cruising boat, Viator beating Peerless by a large margin. Taken all together, the regatta was as much of a success as is possible in such weather and under the prevailing conditions of yacht racing in the larger classes; the most encouraging feature of the day was the display of schooners, which is the best for three years.

New York Yacht Club Cruise.

A SPECIAL meeting of the New York Y. C. was held on June 7 to ratify the proposed changes of rules that were approved at the regular meeting and to decide on the date of the annual cruise. The date set for the rendezvous is August 2, Tuesday; the place being Glen Cove, as last year. The further programme of the cruise was not decided on, but the long run of 63 miles to New London, made last year, will probably be divided. No announcements of special races and prizes have yet been made, but there will probably be the Goelet cups, off Newport, and several special matches. If shorter runs are made, or the weather is unfavorable, the fleet will be unlikely to reach Newport in season to sail a race on Saturday, August 6, which by custom would be the date of the Goelet cups. Several changes were made in the racing rules and by laws, as follows:

Each yacht shall have a number assigned to her by the Regatta Committee, which shall be entered opposite her name in the club book, and shall be known by her official number. A yacht entering for a race shall display her number on both sides of the mainsail just above the lower reef band and in the middle of the sail. Such numbers shall be 30in. square, and shall be issued by the club on application, but no yacht shall be entitled to more than one set at the expense of the club in any one year.

The following amendments to Rules I and 5 create a new mean class, and are intended to avoid the necessity for a yacht sailing over alone when she has no class competitor. They read as follows: Rule 5 was amended by adding thereto a new section, to be known as four, which reads as follows:

In all races for which cups shall be offered by the club, if at the close of the entries there be more than one class in which there shall have been only one entry, the provisions of section 3 of this rule shall not prevail, and all such single entries may be grouped in and sail as one class, to be described as "Class eight, mixed." As between vessels of different rig sailing in such class eight, the provisions of rule 3 for time allowance shall apply.

Rule 1 was extended as follows: (4) Class 8. Yachts entered for any race, in whose respective classes there shall have been one entry.

Course No. 2 is intended for classes 6 and 7 of sloops, cutters, and yawls, but shall not apply to class 8, unless the contesting yachts therein embraced shall have been taken from classes 6 and 7 alone.

Rule 17, section 16, was amended so as to read:

When a yacht is approaching a shore, shoal, pier, rock, or other obstruction (not a mark), and cannot go clear by altering her course without fouling another yacht, then this latter shall on being hailed by the former, at once give room; and in case one yacht is forced to tack or to bear away in order to give room, the other shall also tack or bear away, as the case may be, at as near the same time as is possible without danger of fouling.

A new rule, to be numbered 18, was also adopted: Rule 18—Danger. In construing and obeying these rules, due regard must be had to all dangers of navigation, and to any special circumstances which may exist in any particular case, rendering a departure from them necessary in order to avoid immediate danger. (United States Revised statutes.) But this rule shall not be construed as removing or abating the disqualification of any yacht under rule 19.

Lake Ontario.

THE sloop Atalanta, which raced for the America's Cup in 1881 and two years later won the Fisher champion cup for sloops at Chicago, and subsequently had a checkered career, has been hauled out here for a rebuild, which will have to be a thorough one, as there is little of her that is not very badly decayed. She is to be lengthened some two feet, her sides raised a foot, and the new hull will be of 2in. oak throughout. Before leaving these waters for her new quarters in Chicago she may have a try for the Fisher Cup, now held by the Norah.

The Iolanthe, completely rebuilt, with her ballast in the form of a keel, and beautifully smoothed up and polished, is in the finest trim for racing—at least she will be when her new sails, shortly to be received, have been bent and stretched. She will no doubt be very near the top of her class.

The Norah is in perfect condition and ready to defend the Fisher Cup, a possible challenger for which is the new Zelma, of Toronto.

Preparations for the L. Y. R. A. circuit races here on July 15 have not yet been commenced. PORT TACK.

BELLEVILLE, Ont.

Guinare.—The "dark horse" of the 46ft. class that sailed her first race at Larchmont on June 4, was designed and built by Capt. Lou Tonnes, at Mariner's Harbor, Staten Island. She is a sloop with a very full waterline of the old style forward, a fine entrance with the fulness forward of the chainplates and a very fine waterline aft, the old "cod's head and mackerel's tail." Her after body and stern are a cross between the Atlantic and her namesake. John Harvey's famous yawl Julianar (Guinare). The rudder is well under the boat, the counter being immersed, while above water the stern shows a high sheer and a very narrow triangular transom. The deck amidship is carried up to the top of rail, making a break forward and aft. The yacht has a centerboard.

The opening cruise of Oswego Y. C. on May 28-30 including a cruising race from Oswego to Great Sodus Bay, 27 miles for the O. Y. C. pennant, Yama beating Pappoose by 16min. 21sec.

Atlantic Y. C. Annual June 14.

THE Atlantic Y. C. was fortunate in having fine picnic weather for its 27th annual regatta on Tuesday, the day being clear and hot, with just enough air astir on the water to make life pleasant in contrast with the unusual heat of the city. So far as yachting is concerned the wea her was good enough, there was too little wind at times for a good race, but the sole interest was confined to the smaller boats, the racing being very dull in the classes over 35ft. The club issued a very good entry list, 32 yachts, but it was a foregone conclusion that half of these had no intention of starting, and as a matter of fact the true list included but 17. Those which entered and did not start were Waterwitch, Vidette, Gracie, Fanny, Anaconda, Oriva, Chispa, Delvyn, Lena, Arab, Moya, Notus, Enid, White Cap, Novice and Stranger. Gracie would have started, but had no competitor. Anaconda missed the chance she has been looking for since she was built, as Clara has never sailed in such poor form as this season, in this race barely beating the 35ft. Tigress out to the Scotland.

The courses this year were new, the start and finish being off Buoy 11 (old Buoy 15), outside the Narrows. All above the 53ft. class sailed past Southwest Spit, past the Scotland Lightship, and around a markboat five miles S S.W. of the Scotland, returning over the same course. The 46ft. class sailed straight down past a markboat off Buoy No. 6 (old No. 8), thence by the Scotland around the outer mark, and home the same way. The 35ft. class sailed the same course as far as the lightship, returning from there, and the smaller boats turned the workboat off Buoy 6. The starters were:

Schooners, 90ft. class—Shamrock, J. B. Maxwell; Marguerite, R. S. Palmer.

Schooners, 70ft. class—Peerless, J. E. Ackley and J. M. Mitchell.

53ft. class—Clara, R. W. Osborn.

46ft. class—Wasp, Archibald Rogers; Guinare, J. E. Dwight; Daphne, A. Booth.

35ft. class—Tigress, J. Weir, Jr.; Saona, A P. Ketchum; Daffodil, J. R. Whiting.

25ft. class—El Chico, H. M. Kersey; Waunita, F. A. Perret; Freyja, T. Davis.

Catboats—Marguerite, F. R. Simmons; Acorn, P. H. Jeannot; Oconee, C. T. Pierce; Wilmerad, J. H. Hanan.

The iron steamer Cepheus carried a very large party of club members, and on the judges' tug were Messrs. H. J. Gielow, G. W. McNulty and G. B. Frisbie.

There was a very light air when the yachts left the club station off Bay Ridge at 10:30, and with a strong flood tide it was noon before all were at the line a couple of miles below. With the change of tide and a light S.E. wind, a start was made at 12:20 for the larger yachts, the preparatory and crossing intervals being 5m. Those under 53ft. started 5m. later. The start was timed:

Preparatory	12 15 00	Wilmerdad	12 27 27
Start, 1st division	12 20 00	Guinare	12 28 33
Peerless	12 22 24	Saona	12 29 18
Marguerite	12 23 03	Handicap gun	12 30 00
Handicap gun	12 25 00	Tigress	12 30 31
Shamrock	12 25 18	Waunita	12 30 40
Clara	12 25 52	Daphne	12 31 12
Marguerite, cat	12 26 04	Oconee	12 31 20
Freyja	12 26 38	Daffodil	12 31 33
Acorn	12 26 44	El Chico	12 31 35
Wasp	12 27 02		

The fleet crossed on starboard tack, heading for Coney Island Point, the three schooners, however, standing off for the Spit Buoy. When well up with it they lost the wind and were becalmed, while the smaller yachts had enough wind to bring them down to Buoy 6, where they were timed:

Wasp	1 52 18	Acorn	2 05 00
Tigress	1 53 45	Marguerite	2 05 28
Clara	1 54 18	Wilmerdad	2 07 16
Saona	1 58 05	Daphne	2 09 35
Guinare	2 00 00	Oconee	2 10 00
Daffodil	2 00 05	Waunita	2 10 18
El Chico	2 01 23	Freyja	2 10 31

El Chico, sailed by Mr. Walter Thompson, had not wind enough to show her best speed.

Outside the Hook there was a strong S.W. wind and quite a swell to the sea, topsails coming in on several yachts. It was not until 2:16 that Shamrock passed the Spit Buoy, Marguerite following at 2:23 and Peerless at 2:28:30. The fleet was timed at the Scotland:

Wasp	2 35 22	Guinare	2 50 55
Clara	2 48 02	Saona	2 52 10
Tigress	2 49 00	Daffodil	3 08 00
Shamrock	3 08 45	Marguerite	3 11 30

No times were taken at the outer mark, Wasp turning first at about 3:30 with Marguerite leading Shamrock. The homeward course was not specially exciting, the usual June regatta squall holding off just long enough to allow all the yachts to get safely to their moorings when it broke heavily over the bay. The times were:

SCHOONERS.—90FT. CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Shamrock	12 25 00	6 14 00	5 49 00	5 40 57
Marguerite	12 23 03	6 07 14	5 44 11	5 44 11

SCHOONERS — 70FT. CLASS.

Peerless	12 22 24	Not timed.

Wilmerdad	12 27 27	4 14 33	3 47 06	Not timed.

Shamrock wins $70, Clara, half prize for sailover, $28; Wasp, $50. Tigress, $4; El Chico, $30; Marguerite, $25.

Columbia Y. C Annual, June 14.

THE Columbia Y. C of New York sailed its 25th annual regatta on Tuesday over the following courses on the North River: Classes C, D, E, F and G, from club house at the foot of West Eighty-sixth street to stakeboat anchored off the Yonkers Cor: Y. C. house and return; ten miles to leeward. Class H, around stakeboat off Spuyten Duyvil and return.

The wind was moderate from S W. The times were:

CLASS C—CABIN SLOOPS, 45FT.

	Elapsed.	Corrected.

New York Y. R. A. Cruise.

THE following orders for the annual cruise of the New York Y. R. A. have been issued by President A. J. Prime:

The annual cruise of the New York Racing Association shall start on July 4. Yachts will rendezvous in Gravesend Bay, off Bath Beach, on Saturday afternoon, July 2, report to the fleet captain and remain at anchor over Sunday and sail as follows:

Monday, July 4, to Keyport; Tuesday, July 5, to Highlands; Wednesday, July 6, to Red Bank; Thursday, July 7, to Atlantic Highland; Friday, July 8, to Sewaren; Saturday, July 9, to Brooklyn Yacht Club and disband. This part of the programme will be decided upon by the owners of yachts present at the rendezvous.

The start will take place at 10 A. M. each day. The first yacht reaching the destination for the day will take her own time of arrival, anchor in some convenient place, hoist an ensign and take the time of arrival of all the other yachts, all of which must pass between this yacht and the nearest shore. The record of each day's run shall be delivered to the fleet captain immediately after the arrival of the last yacht. In the event of a steam yacht accompanying the fleet the time of all arrivals will be taken by the steam yacht. Yachts desiring to leave the fleet must first obtain permission from the admiral.

During the cruise the president of the association shall command the fleet and act as admiral of the fleet, and shall issue such orders as may be necessary. He shall also appoint a fleet captain, who shall see that his orders are executed. The vice-president of the association shall act as vice-admiral during the cruise, and in the absence of the admiral shall command the fleet. The admiral shall appoint a fleet surgeon, who shall attend to all sickness or accidents to members while on the cruise.

The fleet shall be composed of a squadron from each club in the association, numbered according to the date of organization, and each squadron will be commanded by the commodore of the club represented by the squadron, who shall receive all orders from the admiral and execute the same. All yachts shall carry the association flag at the masthead and its club flag at the peak, but yachts may display both flags at the masthead while at anchor. The daily runs shall be subject to such changes as may be deemed proper by the admiral during the cruise. Commodore B. F. Sutton, of the Brooklyn Yacht Club, will act as fleet captain during the cruise. Prizes will be given to yachts making the best average runs in their respective classes during the cruise.

A Trophy for Model Yachts.

At the regular meeting of the American Model Y. C., on May 6, it was decided to offer a trophy, open to all recognized model yacht clubs of the United States, this trophy to be called the American Model Yacht Club Trophy, all races for same to be sailed on July 4 of each year (when challenged for), all challenges to be sent thirty days prior to that date, and to be accompanied by a voucher as to existence of challenging club. Models not to be less than 35in. or more than 48in. on L.W.L. The measurements will be

$$\frac{\sqrt{S.A.}+L.W.L.}{2} = \text{sailing length for time allowance.}$$

Owners only to sail their yachts. Further rules and regulations governing this trophy will be mailed on application to H. Mellvin, Sec'y, 144 Park place, Brooklyn, or F. Nichols, Measurer, 353 Broadway, Brooklyn. All challenges to be sent to the above.

H. MELLVIN, F. NICHOLS, } Regatta Committee.

YACHT NEWS NOTES.

On the afternoon of June 11, at about 3:30, the steam yacht Alva, Mr. W. K. Vanderbilt, left her anchorage off Thirty-eighth street, North River, New York, bound for Newport. Shortly after she was under way a small rowboat with a man and a woman on board was seen ahead, close to the warship Atlanta. The man became panic-stricken as the yacht approached, and stopped rowing, and the boat was cut completely in two by the sharp steel stem of the Alva. The two persons were thrown into the water, and though a boat from the Atlanta, a tug, a catboat, and other small craft were soon on the spot, they were unable to rescue them or even to regain the bodies. The man was later identified as Nicholas Michaels, a Frenchman, who with his brother kept a saloon at 276 Seventh avenue, the woman, Marie Simonin, being their housekeeper. They had hired the rowboat a few minutes before at the foot of Thirty-fourth street. The Alva stopped for a few minutes and then proceeded on her way, supposing that the two had been picked up by the neighboring boats. She met Mr. Vanderbilt at City Island and reached Newport on Sunday, where Capt. Morrison forwarded his account of the accident to the Inspectors of Steamers at New York.

Tranquillo.—The latest craft from the Herreshoff shops, seen this week at all the New York regattas, is somewhat of an exception, to recent Herreshoff yachts the main object being accommodation and comfort rather than extreme speed. She is a cruising steamer of 82ft. over all, 68ft. l.w.l., 11ft. 6in. beam and 5ft. draft. She is of the usual Herreshoff construction, steamed oak frames and double skin. The yacht is arranged to give a maximum of room on a small cost of running, her engine and boiler space being quite small, and the coal consumption very economical, though a speed of 12 miles is easily made. The main cabin is quite large, with good headroom, located just forward of the engine space. The steerage has room for a winding stairway from the pilot house on starboard side and toilet room to port. Further forward are two good staterooms, with wardrobe, closets and lockers. The deck is roomy, being built to tie cut up by hatchways. Altogether the yacht is a most desirable cruiser superior both in speed and accommodation to many larger steam yachts.

The annual regatta of the Corinthian Y. C. of Yonkers will take place on June 25. The course will be from Yonkers to Tarrytown buoy and return. The classification will be: Class A, schooners; B, cabin sloops over 30ft.; C, cabin sloops 30ft. and under; D, open jib and mainsail; E, cabin cats; F, open cats over 25ft.; G, open cats over 20 and under 25ft.; H, open cats 20ft and under; I, steam launches. Caroline A. Peene will accompany the fleet over the course. The yachts composing the New York Y. R. A. have been invited to enter. Franklin A. Rigby, John Dickson, Charles A. Valentine, William E. Meyers and Edwin Moore, Jr., make up the regatta committee.

Freak, the new Paine fin-keel, has been slung up in Lawley's large building shed to receive her fin-keel. The fin is rectangular, about 5ft. long and 6ft. deep, the ends being vertical and not sloping as in the Herreshoff fins. The lead, over a ton in weight, is flat on the bottom and nearly square in section, but with rounded corners and ends fined away. The fin is made of two sheets of $^3/_{16}$in. Tobin bronze, rivetted together, but separating near the top, the upper edges being turned to form flanges. These flanges are further stiffened by bronze angle-bars, and both are strongly bolted through the cross floors inside the hull. The total draft of the boat will be about 7ft.

The classes in the open race of the Corinthian Y. C., of Marblehead, on June 18, will be as follows: Class A—Sloop and cutter-rigged yachts not over 21ft. waterline. Prizes—First, $30; second, $20; third, $15; fourth, $10; fifth, $5. Class B—Cat-rigged yachts not over 21ft. waterline. Prizes—First, $25; second, $5; third, $10; fourth, $5. No prize will be awarded a yacht which has not defeated a competitor. There will be one gun starts for each class, with 10m. interval between the two classes. Entries must be made by noon of the race day. The regatta committee includes Messrs. W. P. Fowle, chairman; G. W. Mansfield, secretary; John B. Paine, Everett Paine and Henry Taggard.

The success of the fisherman Mary G. Powers has brought another order to Messrs. Stewart & Binney for a similar but shorter craft, to be commanded by Capt Hodgkins. She will be 108ft. over all, 90ft. l.w.l., 24ft. 6in. beam and 12ft. draft. The Stewart & Binney racing sloop for R. N. Burwell, of New Haven, now building by E. H. Thatcher & Son, will be 32ft. 6in. over all, 23ft. 6in. l.w.l., 10ft. 6in. beam and 3ft. 6in. draft, with about 1½ tons of lead on the keel. Her low cabin trunk will give 5ft. of headroom.

Ituna, steam yacht, is reported as now on her way to this country, having been purchased by Vice Com. Morgan, New York Y. C. Ituna is a steel vessel, of 243 tons. Thames measurement, her tonnage length being 137ft. 6in., beam 19ft. 7in. and depth of hold 11ft. 8in. She was designed by Mr. G. Watson and built by A. & J. Inglis, Glasgow, in 1886. Her engines are 10in., 16in. and 26×22in., and she is classed 100 A1 at Lloyds.

Lasca, the new schooner building from Mr. A. Cary Smith's designs for Mr. John E. Brooks, former owner of Resolute and Montauk, was launched at Piepgrass' yard, City Island, on June 11, being christened by little Miss Adelaide Bayles, a niece of the owner. The new yacht will be very elaborately fitted up below, the carving being very handsome.

On June 8 one of the crew of the schooner Columbia, Mr. J. T. Perkins, was seriously injured by the premature discharge of a yacht cannon which he was moving about the deck. The yacht was off Bay Ridge at the time and a Brooklyn ambulance was called, but the surgeon refused to care for the man, as he was injured while afloat.

The injured man, Frederick Benson, died next day. The curious sequel to the accident is that he was injured by a similar accidental discharge of a gun in the 40-footer Nymph in 1890, and had brought suit for $10,000 damages, which has been abandoned in consequence of his death.

Minerva, cutter, Mr. W. P. Ward, arrived at Wintringham's yard, Bay Ridge, on June 8, in charge of Capt. John Barr. Another skipper will command her, and Capt Barr returned to Boston at once. Her after cabin joiner work, removed two years since, has been replaced.

The new steam yacht Corsair No. 2, designed by Mr. J. Beavor Webb, made a trial trip on Tuesday. She is the handsomest, and gives every indication of being the fastest, of her class in the American steam fleet.

Nourmahal, steam yacht, has been chartered through Mannings' Agency by the estate of the late Wm. Astor to Mr. James M. Waterbury, former owner of the Lurline, steam yacht. Captain Daly will command her.

The Great West is still in the lead in yachting, the latest wonder being a sloop 22ft. over all, 18ft. l.w.l., so light as to be easily lifted by two men, carrying a party of twenty, and making 9¼ miles per hour.

A cable message reports the loss of the new Watson 40 rater Varuna in a gale during the Cinque Ports regatta on Tuesday in the English Channel, her crew being saved by a mail steamer.

The entries for the special schooner race of the New York Y. C. fixed for Thursday, Sept. 8, over a triangular course of 30 miles outside of Sandy Hook, closed on June 9 with four boats.

Adrienne, the 45ft. schooner built from Stewart & Binney's designs by Story, of Essex, was launched on June 9, and is now at Boston fitting out for the trip to Southern waters.

We are indebted to the Corinthian Y. C., of Marblehead, for a copy of the new club hook, and also to the Royal Nova Scotia Yacht Squadron for a like courtesy.

SULTANA, steam yacht, Mr. Trenor W. Park, arrived at Newport on June 11 after a voyage of twenty-five days from Southampton, having called at the Azores.

Florida, sloop, recently purchased by President A. J. Prime of the N. Y. Y. R. A., is hauled out at Smith's yard, Nyack, to be altered into a schooner.

Harpoon, formerly Beatrix, has been hauled out at Lawley's, where her wooden board will be replaced by one of boiler plate filled with lead.

Thistle, sloop, went on the Hen and Chickens reef off Larchmont on Monday night and was badly stove in.

Alcaeus, schr., Messrs. Clark, was at Lawley's up to yesterday, when she expected to sail for New York.

Grippe is the alluring name of the 21 footer built by Partelow, at Marblehead, and launched on June 11.

New York C. C. Sailing Races.

THE spring sailing races of the New York C. C. took place on June 11 off the new club house station in Gravesend Bay, the object of the races being to choose a defender to represent the club in the coming races with Mr. Ford Jones for the club's international challenge cup. The first race was called at 11 A. M., the wind being quite fresh from S.E. Captain Wm. Whitlock, sailing his old canoe Hornet, won the race, Mr. Barrington, who was second at the finish, being disqualified for not sailing the correct course. The times were:

FIRST RACE. M. S.

Hornet, Wm. Whitlock, New York 34 20
Toltec, T. E. H. Barrington, New York 35 00
Glenwood, T. S. Oxholm, Yonkers 36 05
Bonnie, C. B. Vaux, New York 38 09
Tornado, F. C. Moore, Knickerbocker ..... Not timed.
Truant, W. S. Elliott, Marine and Field ..... Not timed.
Torment, H. H. Smythe Brooklyn ..... Not timed.

In the afternoon race, at 3:36, there was more wind, Hornet and Torment capsizing, and Bonnie carrying away her forward maststep. Mr. Oxholm won very easily, sailing a beautiful course throughout.

The times were M. S.

Glenwood, T. S. Oxholm, Yonkers 48 15
Toltec, T. E. H. Barrington, New York 54 08

Another race is needed to select a defender, and Tuesday afternoon was set for it.

Red Dragon C. C.

ON Saturday afternoon, June 25, the Red Dragon C. C. will hold its annual regatta in front of the club house, near Wissinoming Station, New York Division P. R. R. The events will consist of ¼ mile single paddling; Class 4; ½ mile tandem paddling, Class 4; 220yds. upset paddling; 3 miles unlimited sailing for canoes; 3 miles unlimited sailing for canvas canoes; 3 miles unlimited sailing for St. Lawrence skiffs; 1½ miles novice sailing. Prizes will be given to the first and second in the single paddling, upset paddling, and 3 miles unlimited sailing for ordinary canoes. The first in the tandem paddling each will receive a prize.

Prizes will be given to the first in the 3 miles sailing for canvas canoes, 3 miles sailing for St. Lawrence skiffs, and 1½ miles novice sailing race. All canoeists are invited to participate in the above events. Entries will be received until June 23. Please send name and the event you desire to contest to A. S. Fennimore, 700 Walnut street. The committee reserve the right to reject any entry. A. C. A. rules will govern all races. In the evening a "camp-fire" will be held upon the beach and grounds surrounding the club house to celebrate the entrance to our new quarters. All participants in the races are invited to join with us. A. S. FENNIMORE.

Prize Flags for the A. C. A.

THE regatta Committee of the American Canoe Association has received the following promises of prize flags since the last publication in the FOREST AND STREAM, and herewith begs to tender its thanks for same. The committee hopes to receive the additional promises which will be necessary to complete the list.

	Prize Flags.
Com. C. B. Winne	1
Mrs. F. B. Lawrence	1
Mrs. W. C. Lawrence	1
Mrs. Edward Leigh	1
Miss Beatrice Winser	1
Miss Jennie Stanford	1
Mrs. Bessie Woolworth Leonard	1
Miss Lillie C. Sherwood	1
Mrs. J. H. Ten Eyck Burr	1
Mrs. W. P. Stephens	1

Canvas Canoes.

Editor Forest and Stream:

A mutual acquaintance of ours some weeks past inquired through this journal after a suitable canvas canoe, to which he might apply oars, one having sufficiently stiff gunwales. If he requires a folding boat then my experience would be of little use to him. Some two weeks ago I received a canvas canoe from Maine which for beauty, stiffness and seaworthiness simply surpasses all my expectations. She has gunwales stiff enough to fasten a horse to; bow-facing oars could be easily adjusted and used indefinitely with no risk whatever to the boat. She is ribbed full length and covered by closely-fitted cedar boards about ¼in. thick and covered outside with heavy canvas, painted. Weight about 45lbs. Outside of her beauty and ease under paddle she has this advantage over all wooden boats in that she can be turned bottom up in the hot sun for weeks and then when dumped overboard is absolutely dry. I should advise our inquirer to address Mr. B. N. Morris whose advertisement he may see in this paper and perhaps he may find something nearer perfection than he already has. RAG BOAT.

NORWALK, Conn., June 10.

CANOE NEWS NOTES.

At a meeting of the Ianthe C. C. on June 6 George W Baxter was elected captain, B.E. Boggs measurer, and George P. Douglass chairman of the regatta committee and one of the delegates to the A. C. C. F. R.

The Lachine Boating and Canoe Club of Montreal will start on June 30 for Rouse's Point, by rail, making a three days' cruise on Lake Champlain and the Richelieu River and up the St Lawrence to Montreal.

The memorial Day races of the Miququonous C. C. were held off the Red Dragon C. C. station at Wissinoning. The sailing race and upset race were won by Malta, J.A.Barten, the paddling by H. Fleischman, the paddling upset by W. W. Bain, and the tandem paddling by A. W. Dean and H. Fleischman.

A. C. A. Membership.—Eastern Division: Frank B. Moulton, Somerville, Mass. Central Division: Wm. F. Brown, Plattsburg, N. Y.;—A. W. Treadwell, Newcastle, Pa.

Mr. Poultney Bigelow, of the New York C. C., now on a canoe cruise in the Baltic, has been expelled from Russia by the Government, and his cruise stopped.

Rifle Range and Gallery.

"FOREST AND STREAM" TOURNAMENT

FOR NEW JERSEY RIFLE CLUBS.

FOLLOWING are the details of the Essex Amateur-Miller score of which the totals were given last week:

ESSEX AMATEUR R. C.

Coppersmith	24	23	24	25	24	24	21	24	23	24	—236
Newman	24	25	22	23	23	25	23	23	23	25	—236
Deitz	22	23	23	24	22	25	24	23	24	19	—229
Cooper	23	23	24	25	21	24	22	24	24	19	—226
Snellen	24	23	23	23	23	25	24	25	24	23	—237—1167

RICHARD W. DEWEY.

New Jersey Rifle Shooting.

[Specially Reported for Forest and Stream.]

EXCELSIOR RIFLE CLUB, Jersey City, Tuesday, June 8.—The scores made to-night in the regular weekly medal competitions are given below. Ten shots off-hand, 25-ring target, possible 250:

Jas Hughes	240	W J Channing	236
L P Hansen	239	W Weber	232
C L Penney	238	W J Hennessy	232
C Baunchle	221		
Thos Hughes	219		
R J Duff	216		

The medal winners were: Class A, L. P. Hansen with score of 239; class B, James Hughes with score of 240. The Excelsior "boys" are keeping up a steady practice, so that at the commencing of the winter season they will be ready for work without doing any preliminary work, thus keeping in form.

The Hudson Rifle Club, Capt. Henry L. Hansen, of Jersey City, as an inducement to its members to attend the weekly shoots of the club, have offered for competition several handsome gold class medals. It is a hard matter at present for a club to get its members to attend, as it is now warm for indoor shooting, a good many riflemen at present being busily engaged in shooting on the long ranges. The Hudson Club is, however, strengthening its ten men team. With such "good un's" as those mentioned below it will be observed that they will have a team hard to beat. It will consist of Capt. H. Hansen, Charles E. Bird, Henry E. Boddey, John Reahan, Adolph Malz, A. Stenhle, A. Braun, H. Mahlenbrock, A. Braun, Jr., and Walter Mussehl.

The shoot arranged by the Palisade Rifle Club, Capt. John Reinhard, takes place at headquarters, 354 Palisade avenue, Jersey City Heights, on Saturday and Sunday, June 18 and 19. It is open to all comers, any .22cal. rifle. They offer prizes ranging from $10 to $2.

Miller Rifle Club, Hoboken, Capt. Richard W. Dewey, Wednesday, June 8. The scores made to-night are appended below, the conditions being 10 shots off-hand, 25-ring target, possibe 250:

First Class.

D Miller	241	L Vogel	238	L Sohl	236
G Schlicht	240	J H Kruse	237	J M Bach	235
F Brandt	238	F Liell	237	Capt Dewey	229

Second Class.

F Kloepping	237	C Brien	235	W T Taylor	226
D Peters	235	W Forkel	229	F Drewes	224
R Zoch	235	H Seltenreich	227		

Third Class.

H F Meyer	228	H Vanderheyden	221	F Kammel	209
A Stadler	222	F Dunsteadt	211		

The team of the club, the winners of the FOREST AND STREAM New Jersey championship trophy, were photographed last Sunday morning in Hoboken. A reproduction will shortly appear in FOREST AND STREAM.

The Hoboken Rifle Club, Captain John Yeck, has remodelled its range, at headquarters, Third and Adams streets, Hoboken. A serious drawback to good shooting heretofore was the poor light, which is now remedied. This was an improvement badly needed.

The twelfth annual Schuetzen festival of the entire Germania Sbhuetzen Bund, Washington Rifles, of New Jersey, President Peter Trieber, took place at Saal Brothers' Schuetzen Park, Paterson, Monday and Tuesday, the 6th and 7th inst. Every company in the Bund were inspected at the Market street depot in Paterson, of the Erie road. A matter that was freely commented upon was that none of the local companies took the least particle of trouble to point out the location of the park to the out of town Schuetzen companies. As it was, the park was fully four miles from the depot; in fact too much out of the way. Upon arrival at the park President Trieber fired the first shot on the target of honor, thereby opening the festivities. Shooting was a prominent feature during the rest of the day, as also bowling and games for prizes. At the close of the shoot on the second day it was found that the winners on the several targets were:

Target of Honor—First prize and therefore king of the festival, gold medal and $15, with a score of 66, A. Rostedt, of the 57th Company of Elizabeth; second prize, $12, August Meyer, Hoboken Company No. 11, with a score of 62; third prize, $11, Capt. L. Weber, 31st Company, with a score of 61; George Schlicht, 33d Company, took fourth prize, $10, with a score of 59; fifth prize, $9, was secured by Lambert Schmidt, of Freischuetz Company No. 53, of Hoboken, with a score of 51. In all 50 prizes were distributed on this target.

"Open to All-Comers" Target.—First prize, $15, A. Loos, 72; second prize, $12, L. Schmidt, 71; third prize, $10, L. Vogel, 69; fourth prize, $9, Geo. Schlicht, 68; fifth prize, $8, A. Meyns, 67; sixth, seventh and eighth prizes, $6, J. J. Tobler 67, J. Drachsler 66, J. J. Tobler, Jr., 65; ninth prize, $5, F. Brandt, 65; tenth prize, $5, Edward Ludwin, 64. Thirty-five prizes in all were offered for competition.

Brewers' Medal Target.—First medal, L. Schmidt, 70; second, Geo. Schlicht, 70; third, J. Drachsler, 68; fourth, J. J. Tobler, 66; fifth, A. Meyns, 65; sixth, L. Kram, 62; seventh and last, L. Zoch, 61. On the bullseye target George Schlicht secured the premium for the most flags. The committee in charge of the affair were: Arrangements: Chairman, Major George Schwarz; ex-Captain B. Bloch, and Captains F. Freitag, Chas Kroeger, A. Mullen, J. Arnstett, and Secretary J. J. Tobler. Shooting: Herman Luettich, Bund Shooting Master and shooting masters of every company present. As for the park it is finely laid out, but a dangerous factor is that the shooting range is not built so that those present are protected from stray bullets. This should be quickly attended to.

The Hoboken Independent Schuetzen Corps, Captain John Koellisch, held a two days' shoot and festival at the Union Hill Schuetzen Park, Monday and Tuesday, the 6th and 7th inst. The companies in attendance were: The New York Central Schuetzen Corps, Hoboken Schuetzen Corps, and the Union Hill Schuetzen Corps. All attired in their neat blue uniforms. They were handsomely entertained, shooting of course the main feature. Henry Von Der Lieth, by reason of his having made the largest score on the target of honor (open to members only), was crowned king of the festival. His score was 61. He was presented with a handsome medal and $15. The crowning and presentation was done by Miss Mary Hossmann. Shooting Master William Forkel took second prize with a score of 51, J. Stellman third with 45, John Baman fourth with 45. On the judges' target Ernest Fischer, Miller Rifle Club, took first prize with 69. A handsome silver cup was won by William Forkel, Miller Rifle Club, with scores of 65 and 64, total 129. On the bullseye target L. P. Hansen, Excelsior Rifle Club, of Jersey City, took first prize with 28, Ernest Fischer second with 14, and William Forkel third with 11. On the prize target L. P. Hansen and Ernest Fischer tied with 71 points. They divided first and second prizes; David Miller and John Meyer divided third and fourth prizes with 69. In the ladies' eagle-shooting competition Mrs. Kluever and Mrs. Louis Finke tied with 36 points; each secured a handsome gold medal. The Independents are justly proud over the successful termination of the festival; although the shooting programme did not attract many shooters.

The match arranged between Captain Henry L. Hansen and Charles E. Bird of the Hudson Rifle Club, of Jersey City, was decided at headquarters on Saturday evening the 4th inst. Each man fired a hundred shots. Bird led for awhile, but Captain Hansen finished up strongly, he winning by a margin of nine points. The scores made are appended below:

H L Hansen	232	235	231	232	234	244	240	243	236	224	—2361
Chas E Bird	237	234	234	230	236	235	234	237	234	241	—2352

It will be seen that Chas. E. Bird, the genial secretary of the club who is a comparatively new shooter, is doing some tall shooting at present. "I'll take the same Charley!" In Capt. Hansen however, he tackled a man who has been shooting quite a while longer. It is probable another match will be arranged.

Massachusetts Crack Riflemen.

THE spring meeting of the Massachusetts Rifle Association will be held on June 16, 17 and 18 on the Walnut Hill range. The first competition for the M. R. A. State championship off-hand medal, and the first competition for the M. R. A. State championship pistol medal will be held on Thursday, June 16, during the afternoon. Also the three-men-team rifle match.

In the championship rifle match the winner will receive a gold medal. The conditions of this competition make it open to all persons residing in the State, all matches to be shot on the range of the Massachusetts Rifle Association, 200yds., off-hand, twenty rounds, standard American targets, entry fee 50 cents. Any number of competitors can enter each match by entering before the match begins. The holder of the medal must defend the championship title against all comers within one month after being challenged, or forfeit the medal, and must give the Association at least ten days' notice of the date on which he will shoot the match, and must deliver the medal to the Association two days before the match, and he shall leave a deposit with the Association while the medal is in his possession. Any competitor winning the medal ten times, or five consecutive times, or holding it continuously for one year, shall become sole owner of the medal. A bronze medal will be presented to the winner of this medal for his first victory, and a bronze bar for each victory thereafter. All matches will be shot under the direction of the executive committee or some person appointed by them, and will be shot on regular rifle shooting days, unless otherwise permitted by the committee, and all unsettled questions and conditions shall be referred to this committee for settlement.

The M. R. A. championship pistol match is one that will attract much interest. It is open to all persons residing in the State; 50yds.; rounds, 30; standard American target. The prize is a gold medal.

The rifle team match will be shot at 200yds. range; 7 shots, off-hand. The number of prizes will depend upon the number of entries.

Another competition that will be decided during the progress of the meeting will be an off-hand rifle match open to all comers; 200yds., standing, any rifle. In this event five scores will count, but the entries are unlimited. The prizes aggregate in value $394.50.

A rest match, open to all, is included in the programme. Telescope sights are to be handicapped 10 points on the aggregate of five scores. Prizes to the value of $124 50 will be given to the 12 leading scores in this event. A military match, open to all comers, prizes, value $96, and a pistol match, also open to all, prizes $122, complete the list of events.

Massachusetts Rifle Association.

BOSTON, June 11.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day, with a large attendance of riflemen and a large number of militiamen.

Some very fine scores were made by the latter at 600yds. Messrs. Paine and Crowninshield each won the gold pistol medal on high scores.

June 16-18, Thursday, Friday and Saturday, the association will hold its spring meeting, with a large list of matches and over $700 worth of prizes for rifle and pistol shooting. Also team matches of three men each and a championship State match for an elegant gold medal, both for rifle and pistol shooting.

This is the best programme ever offered by this Association.

Below are the scores made to-day, distance 200yds., standard American target, all being re-entry matches:

At 600yds., military rifle, Major Foster, Sergt Huddleston, Sergt. Facey, Sergt. Lounsbury, Private Dudley and Lieut. Marshall each made perfect 5-round scores

Gold Pistol Medal.

Won on 10 scores of 92 or better by F.

B. Crowinsbield	94	94	94	93	96	92	93	92	92	93	
Sumner Paine	92	93	92	92	93	95	95	93	93	94	

Fifty-shot Revolver Match. 50yds.

Third Brigade Rifle Association.

ALBANY, N. Y., June 11.—The following scores were made by the Third Brigade Rifle Association at Rensselaerwyck Range to-day, at 200yds., standard American target. Although there was almost no wind, the conditions were unfavorable, as extremely bright sunlight on the target prevented accurate sighting;

Off-Hand.

Major Chas H Gaus	6	9	6	7	7	9	8	7	10	10—79
Wm C Gomph	10	10	7	9	8	7	10	10	6	8—85
Wm T Mayer	8	8	9	7	6	8	8	7	10	7—78

Rest.

Major Chas H Gaus	12	9	9	12	12	11	11	10	11	9—106
Wm C Gompt	12	12	10	12	9	10	9	9	12	10—105
L Geiger	12	10	12	10	11	11	12	9	10	10—107
Chas P Frey	12	9	10	10	10	9	12	12	10	10—104

Garden City Rifle Team.

THE Garden City Rifle Team met for their weekly contest Tuesday evening, June 7, at Geo. McCune's shooting gallery, 146 South Halstead street, Chicago. Conditions were 25yds., 25 shots each, open sights, free off-hand position, Massachusetts paper target. Scores as follows:

Geo McCune	275	M Tadro	260	R McBean	251
A McBean	274	H S Burley	259	F Erickson	250
W J Gibbs	265	Mrs L Thornton	258	J Pelities	248
C A Hankle	262	Roy Taylor	257	W Frisby	246
T Ford	261	Jas Hosie	254		

A. McBean won sweepstake, scoring 111 points out of 120.

Pennsylvania vs. New Jersey.

MARION, N. J., June 11.—*Editor Forest and Stream:* This is to certify that the Hudson Rifle Club, of Jersey City, has issued a challenge this date to the Wurfflein Rifle Club, of Philadelphia, Pa., to shoot a 10-men team match by telegraph, each man to to fire 10 shots, off-hand, on American 25-ring target. The score of each man to be sent by telegraph as soon as complete, and at the end of the match targets are to be sealed and sent by first mail to the opposing club for inspection, together with an official score sheet duly signed by competent judge. FOREST AND STREAM and the sporting editor of *Evening Journal* (Jersey City) and *Shooting and Fishing* representative are kindly asked to officiate at the Marion ranges. C. E. BIRD, Sec'y H. R. C.

Bisley Meeting.

THE spring meeting of the National Rifle Association was held on the 24th ult. with Earl Waldegrave in the chair. Sir Henry Halford and others spoke pro and con on various points in the programme of the meeting of 1892, but on the whole general satisfaction was expressed. The meeting will open on July 11 and shooting will begin on July 12. The big volunteer shoots for the Queen's prize, etc., have this year been put into the second week, and opinion is divided as to the effect of the innovation.

Enlarging the Smith & Wesson Factory.

SPRINGFIELD, Mass.—At the close of the present month the works of Smith & Wesson will be shut down to permit of extensive changes and enlargements of the plant. Several months will be devoted to this work, when the re-opening will find improved machinery and facilities for a larger quantity of the fine work which has made the factory famous for years.

Turtle Bay Rifle Club.

NEW YORK, June 9.—The weekly handicap shoot for the Jantzer cup resulted as follows:

C H Plate...	244 245 245+ 1—741	F Fredericks.	235 235 237+15—722
J Ochs, Jr....	246 246 247+ 8—739	H W Steffun.	232 236 244+ 7—719
H Lingelbach	222 230 237+40—729	W Lubeck....	225 225 229+35—713
Unlandherm.	214 219 231+60—724	T Fitzpatrick	216 216 218+50—710

F. J. FREDERICKS, Sec'y.

Heidenreich Rifle Club.

THE following scores were made June 13 at our headquarters, 425 W. Fifty-third street, 100ft. range, open air: Aigeldinger 237, Hicks 235, Kaufman 229, Hippold 224, Busch 223, Enders 223.

Trap Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

June 14-16.—North Star Gun Club tournament, Minneapolis.

June 15.—Ansonia Gun Club tournament and sixth team contest of the Connecticut Shooting Association, at Ansonia, Conn.

June 15-17.—Waverly Gun Club tournament, at Waverly, Ia.

June 16-17.—Third annual tournament of Island Gun Club, Wheeling, W. Va. R. B. Burt, Sec'y.

June 16-18.—Sportsman's Association of the Northwest tournament, Seattle, Wash.

June 20.—Fifty bluerock match. $3 entry, at Dexter Park, L. I.

June 21-23.—South Dakota State Sportsmen's Association tournament, Bresford, S. D. Professionals barred.

June 21-23.—Second annual tournament of Winchester Gun Association, Winchester, Va. Chas. F. Neeson, Pres.

June 22.—Brightwood Gun Club tournament, Brightwood, Ind.

July.—New Jersey Trap Shooter's League, sixth monthly team contest and open tournament, at grounds of South Side Gun Club, Newark, N. J.

July 4.—Machimoodus Gun Club, tournament at Moodus, Conn.

July 4.—Connecticut Shooting Association, sixth contest for Keystone trophy, South Norwalk, Conn.

July 4-7.—Atlantic City Gun Club's tournament, at Atlantic City, N. J.

July 6-8.—Lafayette Gun Club tournament, at Lafayette, Ind.

July (second week).—Interstate Manufacturers' and Dealers' Association tournament, at Watertown, N. Y.

July 12-13.—White House Gun Club tournament, at White House, N. J.

July 12-15.—Saratoga Gun Club's third annual tournament, at Saratoga Springs, N. Y.; $2,000 guaranteed in purses. Wm. Henry Gibbs, Sec'y.

July 21-22.—Independent Gun Club tournament, Plainfield, N. J.

Aug. 9-12.—Pennsylvania State Sportsmen's Association's annual tournament, Reading, Pa. Walter D. Eller, Sec'y.

Aug. 10-12.—Missouri State Amateur Association tournament, at Lexington, Mo. Added purses. Address G. A. Sturges, Sec'y.

Aug. 23-26.—International tournament, Des-chre-shos-ka Island, Detroit, Mich. Live birds and targets.

Aug. 30 to Sept. 1.—Hackettstown Gun Club tournament, at Hackettstown, N. J.; two days at targets, third day at live pigeons. Address James L. Smith, Hackettstown, N. J.

Sept. 5.—Frankfort Game and Fish Protective Association, first annual tournament, at Frankfort, N. Y.

September (second week). — Interstate Manufacturers' and Dealers' Association tournament, at Auburn, N. Y.

Oct. 5-7.—First annual tournament of the Riverside Gun Club, at Red Bank, N. J. First two days targets, last day live birds John P. Cooper, Sec'y.

ILLINOIS STATE SHOOT.

CHICAGO, Ill., June 6.—The sun rose this morning.

The common impression is that it rises every morning, but common impressions are often wrong. There is nothing to prove that the sun rose at Chicago more than six times during the entire month of May just past, or that it has risen more than twice this month so far. This morning, however, the sun understood that no more foolishness would go, and accordingly it rose. It rose "all haired with living fire." It winked solemnly to Lake Michigan, hitched up its trousers and proceeded to put in a good day's work for the 18th central event of the earth, to wit, the tournament of the I. S. S. A. This was very kind of the sun. The Gun Club tent stuck its feet firmly in the mud at Watson's Park, but it was only a bluff, for it knew a good puff of wind would pull its pegs out. So did its white-winged sister behind it, and also the Evanston Gun Club tent, and the Montgomery Ward & Co. tent. They were all scared. John Watson did not have up any sign "Keep off the Grass." Grass that grows on top of 2ft. of mud is able to take care of itself. Everybody kept off of it and hung to the walks and the cinders, and the platforms around the shooting headquarters.

The husky Indians who make life miserable for newspaper men in this rose-clad month of June began to drift in on J. Watson his pigeon grounds, about 8 or 9 o'clock in the morning, and they were making trouble around there about 6 o'clock in the evening. The usual entertainment was offered. On the forninst side of the house the five King automatics kept folks guessing, and over beyant two sets of bluerock traps, electric triggers, P. North high priest, entertained those who like to shoot, and shoot, and shoot.

It may perhaps be too much a jest to speak of plowing corn, for this spring the farmers are hunting bullheads in their cornfields, but a great many would be plowing corn, or planting it, if they could, and if they can't, they don't feel much like going to tournaments. Of course this affects everybody else. Then Tom Laflin broke his leg, and Charlie Strawn got married. Take it altogether it has been an awful spring for shooters. Last year we had 123 entries in the Board of Trade badge shoot. To-day they halted near by the 80 post. This event is the key to our shoot. The L. C. Smith cup closed with a sullen jar at 53. All in all we have a rift in our lute this year, one that you could throw a cat through. The wet weather did it. This is the worst spring ever sprung.

We had eight States represented here to-day, Illinois, Ohio, Iowa, Wisconsin, Nebraska and Missouri. Messrs. Pumphrey, Sanford, Young, Hamilton and North came from Ohio. Lew Harrison came on from Minneapolis; George Maillet led a cohort from Indiana; Messrs. Parmalee, Kennedy and Dent came all the way from Omaha and Nebraska; Dick Merrill and a friend or two spoke for Milwaukee; Charlie Budd and H. Durant held the Iowa banner and expected more in to-morrow, and Jimmy Elliott again trusted his life to this dangerous clime, far, far away from Kansas City's clay-ribbed mounts.

As for the shooters of Chicago and Illinois, the reader may look upon them herewith, 53 of them, more than ever appeared at once in any sporting paper, and the only collection in any way representative of the sportsmanship of this Association. The faces may be seen here of those whose names are already familiar to thousands who know them not personally. FOREST AND STREAM offers the first opportunity to see them all together. I am bound to say they are a good-looking lot of men, and such as one need not be ashamed to be tangled up with. I wish every scoffer at shooterdom could look on this picture and do a little thinking over it. Not a dude in the lot. Every fellow a man clear through. Not one who hasn't got on a shirt and collar. Comparisons are needless, and one hasn't time to point out all the especially beautiful ones in this galaxy of beauty. To me, however, the sweet, retiring grace of Mary J. Eich will ever have a subtle charm, and I cannot evade the attractiveness of the smile evinced by Charlie Burton, or by Fred Donald. The winsome face of Sister Thomas is also hot stuff, and one cannot too much admire the calm dignity displayed by Col. Cooney Cahoon, in the southeast corner of the rosebud garden. The serene features of Brother John Kleinman are set in a peaceful, but firm repose, as who should say, "I fear no yellowleg chicken upon earth." Col. Felton, to the right of the sweet thing in glasses, is doing the title role in Blackhawk, the Indian Chieftain, but he isn't cross, and neither is Billy Wells, nor Mr. McFarland. It's only a bluff. It's too bad about the bald-headed men, but then you never can tell what a bald-headed man is going to do, even in a picture. On the whole, it is thought that this plate will offer a pleasant study to those who know or read of these Chicago and Illinois men. This is an enlargement of the plate which appeared in the Association's programme, under FOREST AND STREAM copyright. It's just a little FOREST AND STREAM idea. Nobody ever had it before. Read FOREST AND STREAM, and you will find these ideas every once in a while. Read the other papers, and you will find the methods of the past. The past is not good enough for FOREST AND STREAM.

In the past when sporting papers had little news and had to pay for it, the custom arose of printing all scores in detail. Everybody accepted as correct this sort of score, even when its *raison d'être*, as the office boy says, no longer existed. In the past, therefore, the "dead, lost, one naught, naught-naught, naught, naught-one" sort of report went. In the modern report, or the one which soon will be modern, there is nothing extenuate, but there is no naught set down in malice. The record, the character, the features, those are the things of most importance in the estimate of any sporting event, and useless detail must not envelope these in this age of the world. To-day I hired a man to copy target scores in full while I sat on a fence and whistled. In the afternoon he came running to me.

"Sire," said he, "alas, I have fallen down and spilled the details."

"Son," said I to him, "behold what carelessness will do. Nevertheless you are forgiven."

In fact there had arisen a desire to show those who read about

ABNER PRICE, PRESIDENT, 1891-92.
(Found more illegal game than all his predecessors.)

the 18th annual tournament of this great body of sportsmen less about the exact points at which the gentlemen punctured the atmosphere, and more about how they look and act and do. There are a good many things which have often been spoken of in these columns in a jeering, flippant way which ought to be presented as they actually are. For instance, there was Billy Mussey's safe, that receptacle which has figured so largely in the match shooting which harsh aliens have thrust upon Chicago. That safe has gone bounding down the ragged slopes of history, but nobody outside of Chicago knows how it actually looks—except Mr. Elliott and Mr. Fulford and a few others. The FOREST AND STREAM special artist has prepared from sketches on the spot a truthful representation of this historic safe as it appeared just after the latest Eastern raid on it, and now everybody can see just how it looks. It works free on the hinges, and the mechanism of the trigger, simple, yet positive in action, is shown perfectly. Come and see it. Drop a nickel in the slot and see it work.

Br'er George Kleinman, a tall sick-looking fellow, has long been one of the features of Chicago trap shooting, and the old horse and buggy by means of which he transported home his winnings in the several hard-fought battles wherein he upheld so gallantly the eagles of Chicago—that old horse and buggy have been written of so often that they belong to the public almost as much as George himself. But who knew how they looked until the special artist depicted them? And who knew how George's famous prize machine gun actually appeared?

I found fault with the artist about this picture. I didn't see any use in making a burlesque of a thing, and I told the artist he had no right to draw George's feet in any such exaggerated style, for it wasn't true to nature and wasn't right.

"Whose drawin' them feet?" asked the artist, "me or you?"

"Well, I won't have it," said I.

The artist then apologized. "The fact is," said he, "I was drawin' along on the feet, you know, an' I sort o' got fascinated, an' went on longer'n I meant."

I also pointed out to the artist that he had drawn the horse in such a position that only a fraction of it showed. I told him he ought to have made the picture on a sideways view, so as to give the horse a chance. As it was, it looked as if he couldn't draw a whole horse, anyhow.

"I can draw a whole horse all right all right," said the artist, "but I'd rather not." This I looked upon as insubordination, and so discharged him.

I believe something has been said about Col. Jas. W. Sheahan's smile. It is a smile that deserves perpetuation. Col. Sheahan's smile is shown herewith, in all its spontaneous loveliness. He is liable to do it any moment. No bad man could smile that way. You may search high and low, far and wide, and you will not find in any sporting paper nor any other paper, nor in any collection of actors' photograph's nor any other sort of photographs, so real and genuine a smile as this. Indeed, it is the photograph of a smile, and Col. Sheahan did not know when it was taken.

But we digress. The following are the scores:

The Board of Trade badge shoot began at once in the morning, but was not shot down to the first tie and will be finished to-morrow. Accordingly only target events were decided.

Second contest for the L. C. Smith cup, emblematic of the individual State championship at inanimate targets, the winner of the cup this year to receive sixty per cent. and the club of which he is a member forty per cent. of the contest at next year's tournament, the winner to execute a bond in the sum of $500 to guarantee the production of the cup next year. Twenty Peoria blackbirds, entrance $5. Illinois State rules. First prize, the L. C. Smith cup, value $500; second prize, cash and merchandise, $109; third prize, cash, $75; fourth prize, cash, $50:

Skelton	9		
Lamphere	9		
Budd	14		
Booth	11		
J J Smith	7		
Soleman	9		
Dekhart	7		
England	12		
Partington	15		
Westfield	15		
Eich	13		
F B	10		
Porter	6		

Extra sweep, 15 bluerocks, $3: Young and Westfield div. 15; England, Merrill, Schick, Blattner, Partington, Heikes, Bingham, Bartlett and Fahnestock div. 14; North Kleinman, Sanford, Harbaugh, Ambrose, Budd, Jones, Harris, Taylor, Elliott, Fortier, Keifer, Willard and Pumphrey div. 13.

Extra sweep, 15 bluerocks, $3: Elliott, Budd, Ott and Buck div. 15; England, Bingham, Taylor, Heikes and Harris div 14; Merrill, Parmalee, Pumphrey, Partington, Blattner and Kleinman div. 13.

Extra sweep, 15 bluerocks, $3: Budd, North and Westfield div. 15; Bingham, Parmalee, Merrill, Young, Sanford, Elliott, Wooster, Taylor, Ott and Kleinman div. 14; Ambrose, Eich and Schick div. 13.

Tuesday, Second Day, June 7.

The sun rose again. So did the silken-winged zephyrs of the south. If anybody has an accurate knowledge of about how merry a marriage bell ever gets he can tell how things went here to-day. John Watson's dairy lunch was a dream.

It was late in the afternoon when the ties were concluded in the great badge shoot. As usual, these ties were spirited, that for the badge itself and the State championship exciting. They were shot at 5 birds each, and at the close of the first round only four men remained in, your uncle Abner Price, sister Mary J. Eich, Mr. C. Reese and Mr. Wooster, Mayor of the city of Amboy. Your uncle Abner got too hot a one out of No. 1 and that clinched his resolve of resigning the presidency. Mr. Reese likewise ceased to trouble and only the mayor and the gold-toothed phantom from the West Side remained in. The mayor man got shaky with his right. Mary J., she wasn't shaky. She was pasting 'em. She kept on pastin', and I believe could have kept on all day. Down went the last bird in the third tie, and amid a big shout the two-time winner of the big badge was carried into the club house.

Mr. Eich is the only man who ever won the Board of Trade badge two years in succession. His victory is a popular one, and moreover it is a deserved one. It is not generally known, but for the past two months Mr. Eich has been in regular training for this shoot, taking arm, shoulder and neck exercise, and otherwise getting himself into perfect condition. He is the only amateur shooter I ever knew to take such wise precautions, and it is a pleasure to think that his deliberate patience and ambition have won their reward. Following are the scores in full of this event:

First Contest.—For the Board of Trade diamond badge, emblematic of the individual championship of the State, the winner of the badge this year to receive the proceeds of next year's tournament. Ten live birds, entrance $10. First prize, the diamond badge, value $500; second prize, cash, $100; third prize, cash and merchandise, $83; fourth prize, cash and merchandise, $54; special prize, second best score in tie shoot for medal, merchandise, $6:

THE TARGETS.

About 5,000 targets were shot, this being the number shot yesterday. Following are the target events of interest:

Ninth contest, 25 bluerocks, $5, 38 entries:			
Parmalee	21	Heikes	22
Elliott	21	Bingham	18
Hamilton	23	North	21
Murphy	22	Budd	21
Westfield	22	Stice	21
Kleinman	21	J B Smith	22
Booth	20	Eich	15
Taylor	22	Flickinger	14
Reese	16	B White	22
McCahon	15	Ott	22
England	21	Jones	20
Willard	23	Schick	20
White	24		
Sanford	25		
Young	21		
Merrill	18		
Leser	14		
Gardner	19		
Harris	21		
Park	17		
A W Adams	16		
Mosher	20		
Partington	18		
Turtle	19		
Buckner	20		

First money in this shoot, won by Mr. Sanford, was $64.60. Mr. Young won $48.45 in second.

MR KLEINMAN AND HIS BUGGY.

Tenth contest, 10 bluerocks, unknown angles, $2. 34 entries: 10s div., Kleinman, Heikes, Elliott and Sanford; 9s div., North, Budd, Merrill, Parmalee, Young, W. Westfield, Allen and Bob White; 8s div., Harris, J. B. Smith, S. Palmer, Hickey; 7s div., Jones, Kennedy, T. W. Taylor, Bingham, Hamilton, Mosher, Fortier and Jim Stice.

Extra sweep, 15 bluerocks, $3, 39 entries: 15s, div. Westfield, B. White and Kennedy; 14s, div. North, Sanford, Budd, Heikes, Elliott, Soleman and Hamilton; 13s, div. Murphy, Kleinman, Schick, Merrill, Young, Bingham and Partington; 12s, div. Parmalee, Taylor, Young, B. Rock, Jones, Mosher, W. H. Hale, Willard, Eberhart, J. B. Smith, R. C. White.

Extra sweep, 15 bluerocks, $3, 33 entries: 15s, div. Heikes and Budd; 14s, div. Merrill Young, J. B. Smith, Westfield, B. White, R. C. White and Park; 13s, div. Sandford, Sohmer, Hamilton, Stice and Beucher; 12s, div. Elliott, Schick, Willard, Wooster and Gardner.

Extra sweep, 15 bluerocks, $3, 44 entries: 15s, div. Elliott, Bingham and B. White; 14s, div. Budd, Merrill, Harris, Park and Heikes; 13s, div. North, Sanford, Parmalee, Turtle, England, Taylor and Lewis; 12s, div. Young, Stice, Jones, J. B. Smith, L. C. Willard, White, Reeves, Buck and Kleinman.

Extra sweep, 10 bluerocks, $1, 50 entries: A. Harris, North, Young, Parmalee and Bingham div. 10; Fahnestock, Hicks, Elliott, R. C. Solomon, E. Babcock, Taylor, Kennedy, Sanford, Budd, J. B. Smith, B. White, Haynes and Schick div. 9; Cap. Knowles, Hamilton, Ambrose, Eich, Murphy, White, Plattner, Allen, Merrill, and C. Reese div. 8; Keller, Ott, G. Kleinman, Peasley, Adams, Franklin and Cairncross div. 7.

Extra sweep, 15 bluerocks, $3, 36 entries: Elliott, Kleinman, Heikes, Merrill, Sanford, Young, Taylor, Schick, North and Westfield div. 15; Budd, Stice and B. White div. 14; Bingham, Willard, Parmalee, Leser, Kennedy, J. B. Smith and A. Harris div. 13; Murphy and Gardner div. 12.

THE CONVENTION.

The convention convened at the Sherman House, 8:40 Tuesday evening, June 7. The following clubs had delegates in attendance: Eureka, Garfield, Grand Calumet Heights, Ft. Dearborn, Prairie, Amboy Shooting, Highland, Carmen, West Chicago, Evanston, Geneseo Sportsmen's, Lake Co., The Gun Club, Chicago Shooting, Duck Island, Douglas, Audubon, Cumberland, Lake George, English Lake, Maksawba. No delegates appeared for Canton, Pullman, Pekin, North End, Chicago Mud Hen, Evanston Prairie, South Chicago, Blue Island, Kenwood or Crescent City Clubs.

President Abner Price, the best president this Association ever had, and the one who has gained more dignity and respect for the Association than it ever had in the matters of its real purposes, was in the chair and addressed the meeting with characteristic modesty, as follows:

"GENTLEMEN OF THE CONVENTION—As president of the Illinois State Sportsmen's Association, it is a pleasure to welcome you to the eighteenth annual convention and tournament. It has been the practice of my predecesors to address you upon similar occasions, and it seems fitting that I should make a few remarks. As there will be a large amount of important business requiring your earnest attention this evening, I will occupy your time but for a little while. I will not go back to the early settlement of our State to give you a historical sketch of the abundance of game birds and animals that then inhabited our prairies, forests, lakes, rivers and marshes. Nor will I attempt to eulogize the merits of some noble sportsmen of the past or present, but will confine myself to matters most concerning this Association.

"When I assumed the office with which it was your pleasure to honor me last June, I had a strong desire to carry out the objects for which this Association was formed, *i. e.*, the protection of the game birds and fish of our State. In making a survey of the work before me, the same obstacle presented itself that Presidents Donald and Rowe explained to you in their addresses. An incompetent, inactive and useless game warden seemed to hold the key to the fort. After a full discussion of the matter, it was decided to appoint a committee to visit the Governor of the State, and ask for the removal of Mr. Brusewitz and the appointment of Mr. Bortree. Chairman Low, Mr. Organ and Dr. Rowe waited upon the Governor at the Sherman House, in our city, and our case was ably and fully represented. The Governor replied that on his return from his vacation he would give the matter his earnest consideration and requested the committee to forward their charges. Chairman Low forwarded the charges and petition signed by many sportsmen, which resulted in the removal of Mr. Brusewitz and the appointment of Mr. M. R. Bortree. I congratulate the Association upon the appointment of that gentlemen. Mr. Bortree is deeply interested in the preservation of our game birds.

"Near the middle of last July I received a communication from an active and prominent sportsman requesting me to call at his place of business. I responded immediately, and was informed that he, in company with a number of gentlemen, had dined at one of our prominent restaurants and was served with young prairie chickens. I was asked what course I would pursue in the matter. I informed the gentleman that I would prosecute any and all violators of the game laws. A number of gentlemen present deemed it advisable to call a meeting of the sportsmen; the meeting was called and responded to by a few of the ardent sportsmen. It was thought advisable to visit the hotels and restaurants. We formed ourselves into committees of two. We found that prairie chickens and young wild ducks were being served by a number of first-class hotels and restaurants. This investigation was kept up until we had some thirty cases. I at once consulted the law committee, and was advised to bring suits one at a time until all the offenders had been brought to justice. Twenty-six suits were commenced, all of which were won by the Association except one, that being lost by limitation of time. Great and good results were attained from these prosecutions; it has had a wholesome effect, and resulted in stopping the sale of game in our city out of season and establishing a healthy regard for the law—the net proceeds of the various suits appearing in the secretary's report. The sportsmen of Chicago deserve great credit for the interest taken in these prosecutions. It has been said by some that our game laws are weak and ineffective and that we could not win; but, gentlemen, we have demonstrated the fact that our game laws are strong enough, and all that is needed is energy and push and the hearty coöperation of each and every individual who claims to be in fact what he is in name—a sportsman.

"A precedent has been established by these prosecutions, and if followed up by this Association it will be of lasting benefit to the whole people of the State. Gentlemen, the time has come when, if you wish to save the little game we have left in this State, you must rise in your strength and act. United action of all sportsmen of the State is needed to save our game birds. And, gentlemen, while our attention is engaged in the preservation of the game birds we must not forget the beautiful little songsters that are constantly being destroyed for their plumage, and used for the decoration of ladies' hats. These little birds are protected by the laws of our State, and should receive a share of your attention.

"Your association needs strengthening; you must increase its membership. Game protective clubs should be encouraged throughout the State. In localities where clubs cannot be formed, I would suggest the admission of individual members. This Association should be represented in every county of the State, in order to thoroughly carry out the work for which your association was formed. I ask you to consider this matter well, and do not let the responsibility of so weighty a matter rest upon the shoulders of an interested few, but let the honor and credit be equally divided by the many.

"I have not deemed it expedient to refer to matters relating to fish and fish violations feeling that you would, through the proper channel, be fully entertained on that subject. The local organizations have been very active, and have accomplished great good in their field and deserve the thanks of all faithful followers of Izaak Walton.

"A very recent construction of the law, relating to a favorite game bird, and which no doubt will, or does, cause considerable diversity of opinion as to whether that bird is a water fowl or runner, compels me to say that with the limited knowledge at my command I am prepared to bow to the higher authorities as to its final classification. I refer to the Wilson snipe.

"In conclusion, I desire to return to my executive committee my earnest thanks for their labors in behalf of this Association, their duties having been cheerfully assumed, and perfectly executed. To the law committee, the thanks of the Association for their untiring effort, and for the successful prosecution of the numerous game cases is due, and should be made manifest in language that I am unable to employ. To the other officers and committees, I return my sincere thanks for their faithful services.

"In memoriam, with feeling of regret I refer to the great loss that this Association has sustained in the death of an old and true friend, an earnest advocate and defender of our game laws, and one who will always be missed by his co-workers and by this Association in particular. The absent one is the Honorable John Lyle King.

"And to you, gentlemen of the Association, for your patience and respectful attention, I desire to attest my appreciation."

Hearty applause interrupted the address and followed its close. Mr. Price is very much approved of by the shooters of this section.

The treasurer's report showed $210.45 on hand. The board of directors declined to interfere with the earlier action of the Association withholding the Smith cup winnings from Mr. H. Babcock, whose credentials were found deficient three years ago. The law committee had little to report beyond suggestions. The chairman named certain individuals whom he thought entitled to special credit for work in the game cases last summer.

The committee on amendments to the constitution, composed of Messrs. Felton, Donald, Mussey, Harbaugh, and Cairncross, submitted some changes of minor interest with exception of two clauses. The first of these proposed striking out the words "May or June" for the holding of the annual tournament, and leaving the date open for fall, preferably for October or November. The second amendment proposed to change the number of birds shot at in the Board of Trade badge shoot from 10 to 15 birds per man. The reading of the proposed changes took time and caused running comment. Before the discussion had closed a scene transpired which should have discounted a backwoods camp-meeting for enthusiastic disorder. In his confusion Col. Felton moved the adoption of his own report, and an eager sportsman seconding this, the motion carried at once, probably quite on a misunderstanding. Then, strange to say, discussion arose on the separate clauses above mentioned, the result in brief being that the meeting resolved to retain the old conditions of the badge shoot, 10 birds, $10, and also to retain the spring date for the tournament.

At this stage of the game Mr. Low, of Chicago, arose. He said that the convention did not know what it was doing in thus adopting an amended constitution off-hand. There should be full and deliberate consideration before these changes were allowed. He moved to table the motion with the instruction to the secretary to send out to all the members printed slips showing the proposed changes, so that each man could know exactly what he was doing, the matter to be taken up at the next convention. Of course a motion to table could not carry such a rider clause, and was not entitled to discussion, but the discussion would not quell and went bravely on in spite of Mr. Donald's well-taken point of order. In the final shake-up it was discovered that the motion had been tabled, but the chair ruled Mr. Low's rider out of order. Mr. Low with heat appealed from the decision of the chair, but an ominous silence met his wait for a second and the ruling stood. Everybody now seemed to realize that things were not quite right, and it was promptly moved to reconsider the motion to table. This carried and the report was taken up. It was moved that the report of the committee be adopted, and this also carred. Total result, not technically, but as per sense of the meeting, no change of importance, date unchanged, and conditions of badge shoot left as previously existing.

ONE HUNDRED YEARS BEHIND THE TIMES.

But this was not all. The crowning act of enactive wisdom was yet to follow. This appeared when there came up for action the report of the committee appointed on revision of the shooting rules. This committee, Messrs. Organ, Felton and Eich, submitted the draft which they had prepared last winter, these being the rules which were wired to FOREST AND STREAM a week in advance of any other publication. There is no necessity for republication, for the rules were adopted, clause by clause, with the exception of Rule 6, relating to the handicap on guns. This clause as submitted reads as follows:

"RULE 6. The standard gun shall be a 12-bore, weighing not less than seven pounds and not exceeding eight pounds. Guns of less caliber shall receive a handicap allowance of one-half yard for each size bore less than the standard bore, provided the weight of such gun shall not exceed seven pounds. Ten-gauge guns shall be penalized two yards by handicap. Any gun exceeding eight pounds shall be classed at the handicap distance of a 10-bore. No gun of larger caliber than a 10 bore shall be used. Any gun weighing less than seven pounds and exceeding six pounds shall receive a handicap allowance of one yard in excess of that given for reason of its gauge. Guns weighing less than six pounds, two yards allowance.

Dr. N. Rowe, editor of the *American Field*, arose at this point and made a ringing and silver-tongued grand stand speech. He was opposed to putting the 10-gauge at 32yds. Such a handicap practically barred that arm. It said to the poor shooter who could afford only one gun, "Go home, stay away, we do not want you at our tournaments." He could not sanction this most unrighteous act. This called out heavy 10-bore applause.

Col. Felton offered a substitute in the handicap of the old rules, retaining the 10-gauge at 30yds., but striking out the 3yds. credit for guns under 7lbs. This was really not a bad solution of the difficulty, but it was not taken up. It seemed, however, to give Dr. Rowe an inspiration, for he arose and said:

"Mr. President, I move to strike out the words 'standard gun' from clause 6 now before us, and to change said clause to so read that no gun over 10-gauge shall be used, and that all guns, tens, twelves and all others shall stand at 30yds."

This motion was put and actually carried. In a few moments gentlemen began to think, and soon it became realized what had actually been done. To accommodate those who had objected to a 32yds. score instead of a 30yds., the Association had passed a rule which will make it fairly the laughing stock of the country and put it upon record as deliberately assuming a position a hundred years behind the times. This is conservatism gone daft, and not the progress we have a right to expect from this organization.

It may be very well to strike out the word "standard" as adjective for either 10 or 12-gauge gun, and it may be wrong to put the 10-gauge at 32yds., but that does not make or unmake the actual standard of the day, and it does not destroy the necessity for handicaps say between a 10 and a 16-gauge gun. To-day the practically standard gauge is the twelve. It is the privilege of the Illinois Association to wrap the cloak of its wisdom about it, and withdraw from the common run of life if it so choose, but that is about all the credit it can claim for enterprise on this head, and the live shooting public will only shrug its shoulders and pass on. What is especially singular is the rapid change of front evinced by the proposer of this motion. The deadly parallel column of his own paper, as well as his constant utterance, will show that he has long preached the 12-gauge for the standard. This rapid acrobatic flop in opinion is clever as a feat *per se*, but cannot escape the imputation of being a bit of demagoguery marked neither by wisdom nor by ability.

The public sizes up these things very rapidly and very accurately. The public will see in this only a lack of backbone, and a timidity in standing by a belief or an expression of belief, so soon as that expression meets pronounced opposition. The public will know that the real utterance of the mover of this change is this: "I was in favor of the 10-gauge as a standard, then I was in favor of the 12-gauge as a standard, now I am in favor of both the 10 and 12, and also of the 16 and 20-gauges as standard, if that will cover the whole question. I am in favor of anything to be popular with you, gentlemen, and I will change my opinions radically just as often as you say. I want support for my journal of course. I haved tried quite a while for the support of the city element, and now I am temporarily going after the suffrages of the country element. Excuse me, gentlemen, it will only be for a few moments; I will be with you shortly, and will then advocate the 8-gauge as a standard, if you will show me a few 8-gauge men who are kicking about a horrible injustice. I am after that raccoon."

It is hardly probable that this rule will be allowed to stand very long, and there was strong talk of a special meeting to change it before next tournament. One tournament would probably be enough, for many of the 12-gauge men will not shoot at 30yds. with a 10 gauge. Unfortunately, however, our next tournament is the great World's Fair tournament, at which this Association should appear at its best, and representative of the best and most progressive thought and study in shooting matters of this entire country. Under our constitution we must shoot under these rules.

Are these the rules for to-day?

Will not a special meeting be necessary before next June?

Is not the injustice done to the 12-gauge and all smaller gauges greater than that from which it was sought to save the 10-gauge, especially since the 10-gauge was offered its old position at 30yds., with the 12 at 28?

But this bright and shining Rule 6 goes, anyhow, and on motion of Col. Felton 2,000 copies of the new rules were ordered sent out, not less than 25 to each club.

Chicago was chosen as the meeting place. Election of officers followed.

Mr. Organ nominated Mr. Abner Price for re-election, and applause burst out. Mr. Price declined positively, for business reasons.

Mr. R. B. Organ, of Chicago, was then nominated, the nominations closed, and one ballot cast for him by the secretary in about one minute. Mr. Organ said he would take anything he could carry off, and he would try to carry off this.

Mr. H. A. Fahnestock, of Peoria, was chosen first vice-president; Mr. A. D. Cairncross, of Amboy, second vice-president. It goes without saying that Mr. W. L. Shepard was again elected to the office of secretary-treasurer which he has held so many years. He had to make a speech. Mr. Shepard improves as a secretary every year, grows more amiable and easier to monkey with, and yet not less vigilant and efficient. He has a lead-pipe cinch on the secretary business out here.

Resolution of regret were adopted upon the death of the late John Lyle King, and were ordered engrossed and sent to the Bar Association, of Chicago, in which he was so long prominent.

Resolutions were also passed commending city game warden M. R. Bortree for efficient work, advocating the aid of the Association officers, and pledging the Association for the costs in any action at law he might bring. The usual votes of thanks followed. At this time a touching and pathetic scene occurred, and one which brought tears to many eyes. Mr. Chas. Kern, ex-president, etc., in whose restaurant, it may be remembered, some illegal prairie chickens were found last summer, arose and moved a vote of thanks to Mr. Abner Price, for his efficient work in punishing violators of the game laws. But what Mr. Kern might have said in support of this motion is lost, for by this time everybody was pretty well adjourned.

Wednesday, Third Day, June 8.

Weather hot and muggy, some rain, the birds not flying very well. The club team shoot was finished late in the afternoon. Score:

The club team championship, open to teams of four men from any club members of the State Association, 10 live birds, entrance price of birds only. First prize, sterling silver cup, donated by the Association, value $100; second prize, cash, $75; third prize, cash, $60; fourth prize, cash, $50; special prize, split-bamboo bass rod for highest team score aside from winning team, value $5:

Shooting at once began in the big $20 sweep at live birds, open to the world, which bids fair to be the heaviest event of the week

THE TARGETS.

Meantime the targets were getting a severe and systematic pounding on the other side of the grounds. It was a hot old crowd. Jim Elliott shoots targets very well. The Ohio contingent dropped in every once in a while and made a killing. Sanford, of Ohio, was this evening $200 ahead of the game on three days' shooting. He made one string of 98 out of 100, it is said. Scores:

Extra sweep, 10 bluerocks, $2, 30 entries: 10s div., Stice, England, Elliott, Sanford, Westfield and Hamline; 9s div., Merrill, Smoke, Vories, Heikes, Schick and Harris; 8s div., North, Ambrose, Bingham, Jones, Hamilton, R. C. White, Kleinman, Fannestock and Budd; 7s div., Gardner, Durant and Wadsworth.

Extra sweep, 15 bluerocks, $3, 37 entries: 15s div., Merrill, Westfield, Heikes, Stice and Hamilton; 14s div., Budd, Bingham, Elliott, Sanford and Schick; 13s div., Harris, Smoke, Hamilton, Willard Parmalee, Park, Kleinman and Lehman; 12s div., Jones, Vories, North, Young, Kennedy and B. White.

Extra sweep, 15 bluerocks, $3, 32 entries: 15s div., Elliott, Stice, Heikes, Sanford, Harris and J. B. Smith; 14s div., Budd, Vories, England, Merrill, Kleinman, Willard, B. White and Lehman; 13 div., Bingham, Jones, Ambrose, Westfield, Schick, R. C. White and Park; 12s div., North, Hamilton and Allen.

Extra sweep, 20 bluerocks, $4, 35 entries:

(First money in this shoot was $47.20.)

Extra sweep, 10 bluerocks, $2, 30 entries: 10s, div. Bingham, Merrill, Parmalee, North, Buck, Smoke, Hamilton, Hamline, Bob White and J. B. Smith; 9s, div. Budd, Heikes, Harris, Murphy, Young and Henry; 8s, div. Kennedy, Jones, Schick, Russell and Sanford; 7s, div. McMurchy, Hatke, Wharton and Elliott.

Thursday, Fourth Day, June 9.

Comparison of the entry lists snows that last year there were 46 shooters who are not on hand this year. Of these, 30 are Chicago men. The reason of this is not apparent. In spite of this fact, however, it became apparent that this is a pretty able-bodied tournament all by itself. It improves with the week. The big live-bird sweep had 51 entries. These represented ten different States of the Union, namely: California, New York, Iowa, Nebraska, Minnesota, Indiana, Wisconsin, Ohio, Missouri and Illinois. Mr. J. Orr is here from San Francisco. Mr. W. T. Den is on from Brownsville. Lew Harrison, of Minneapolis to-day introduces his friend H. W. Jones, of Atwater, Minn. McMurchy and Lindsley of the Old Guard, New York, are here, also Mr. Kellar, and Ed Taylor is on from Cincinnati, to cast a fatherly Ohio eye over Jesse Pumphrey and the other Buckeye youths, who seem pretty well able to take care of themselves, however. S. A. Tucker is here because he couldn't stay away. There is also an unusually strong set of shooters, for their numbers, in from the smaller towns of this State.

This morning the sun winked at the Lake Breeze, and said, "We have been letting the boys off easy. Suppose we give them a touch of high life?" The Lake Breeze was willing, and this afternoon it took a hand in the fun. In the morning the birds were easy, but in the afternoon they began to slip out pretty fast. A great many shooters thought they saw some phantoms, shot-proof, and some lost birds through not seeing the trap open, and not seeing any bird go out. You can't shoot at a small hiss in the air, and that was all the evidence at hand, in some cases. It began to look something like Watson's Park. The shades of night fell with the great 20 birds, $20, open sweep unfinished, and with only two men straight at the 15 hole out of the entire fifty-one entries. These were Messrs. Budd and Solomon. If they stay straight to-morrow they will divide $320.

THE TARGETS.

Extra sweep, 20 bluerocks, $4. 37 entries: 20s div., Merrill, Partington, Sanford; 19s div., Gardner, Heikes, Allen, Young and Park; 18s div., Kleinman, Bingham, Stice, Solomon, Pumphrey, Hamilton, North, Smith, D. V. Palmer and McMurchy; 17s div., Bob White, Westfield, Eich, Kennedy, Elliott, Runge.

Extra sweep, 15 bluerocks, $3, 31 entries: 15s div., Heikes and Elliott; 14s div., Gardner, Park, Westfield, Parmalee, Smith, Budd, M Murchy, North and Hamilton; 13s div., Young, Jones, Sanford, Merrill, Smoke, Lindsley, B. White and Stice; 12s div., Eich, G. Kleinman, Kennedy, Taylor and Polster.

Extra sweep, 15 bluerocks, $3, 21 entries: Fifteens div. by J. B. Smith, North, Merrill and McMurchy; 14s div. Bob White, Heikes, Sanford, Elliott, Partington, Gardner and Park; 13s div. Jones, Bingham, Parmalee, Pumphrey, Young and Hamilton.

COL. SHEAHAN.

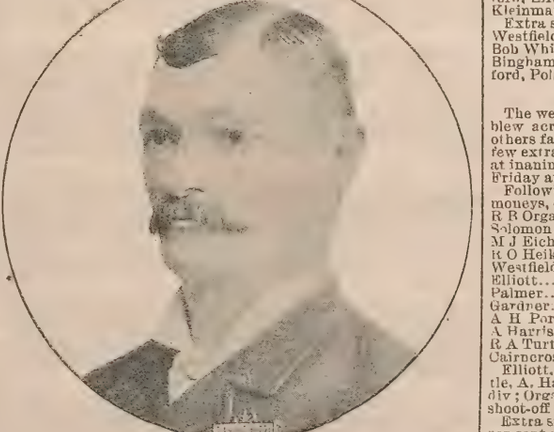
Accepting an Invitation.

Extra sweep, 10 bluerocks, $2, 30 entries: Tens div. Budd, Kennedy, Park, Smith, Merrill, Dr. Palmer, Elliott, Parmalee, Partington, Runge, Bingham and Sanford; 9s div. Young, Stice, Pumphrey and Taylor; 8s div. Gardner, H. Kleinman, G. Kleinman, Comstock, Turner, North, McMurchy and B. White; 7s div. Allen, Smoke and Solomon.

Extra sweep, 25 bluerocks, $5, 21 entries: Ties for first on 24 div. by Sanford. Bingham, Elliott and Young; 23s div. Park, McMurchy, Westfield, Budd, Heikes, Pumphrey, Smoke and Taylor; 22s div. Parmalee, Kennedy, Merrill and North; 21s div. Partington, Stice and Smith.

Extra sweep, 15 bluerocks, unknown traps, $3, 34 entries: First, 14, Westfield alone; 13s div., North, Hamline, Heikes, Partington and B. White; 12s div., Elliott, Jones, Smith, Bingham and Hamilton; 11s div., Stice, Budd, Merrill, Polster, Pumphrey, T. W. Taylor, Sanford and Palmer.

Extra sweep, 15 bluerocks, unknown angles, $3, 22 entries: First, 14, North alone; 13s div. Elliott, Young and Merrill; 12s div., Sanford, Ed. Taylor, McMurchy and Pumphrey; 11s div., Heikes and Taylor.



Extra sweep, 15 bluerocks, $3. 13 entries: 15s div., Bingham, Pumphrey and Sanford; 14s div., Elliott, B. White and McMurchy; 13s div., Hamilton, Westfield and Kleinman; 12s div., Park, Hamline, Merrill and Heikes.

Friday, Fifth Day, June 10.

Weather overcast and warm. The birds flew poorly. The attendance still held up well, but had dropped away largely from previous days. The big sweep was finished this morning. This was by odds the greatest event of the week. Indeed, it is the heaviest big sweep ever shot in this country at ground traps. John Watson does not remember one so big. There was over $1,000 in the purse. That there should be an entry of 51 shooters at $20 entrance shows better than anything else the character of the shooting crowd assembled here.

Mr. Budd and Mr. Solomon, who were the only straights last night, finished their scores without a miss and divided. Following is the score in full:

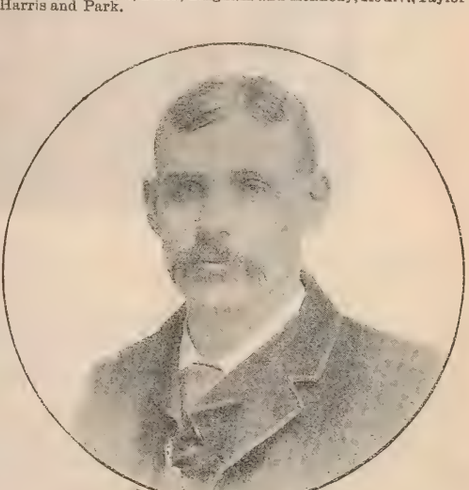
Eich, Gardner, Cairncross, Turner, Westfield, Hersley, Elliott, Budd, Smith and Sanford divided first. Parmalee, Heikes, Lamphere, Turtle, G. Kleinman, Harris and Lindsley divided second after shooting the other ties on second out. Porter, Solomon, Harrison, L. C. Willard, Reeves, Voorhis, Torkington, Farmer and Hall divided third.



THE TARGETS.

Paul North went home last night. The best of the target shooting was over, but shooting continued in smaller sweeps and in more desultory fashion throughout the day. Scores:

Extra sweep, 10 bluerocks, $2 entrance, 27 entries; 10s div., Elliott, Bingham, Heikes, Bob White, Budd and Parmalee; 9s div., Sanford, Kleinman, Merrill, Westfield, Cairncross, Young, Kennedy, Polster and Eich; 8s div., Willard, Oller, E. Taylor, Vories, Hale, Stanford, Hamline; 7s div., Smoke, Harris, McMurchy, W. H. Fleming and Wooster.

Extra sweep, 20 bluerocks, $4 entrance, 20 entries; 20s div., Young, Westfield and Parmalee; 19s div., Sanford, Heikes, Elliott and Budd; 18s div., Merrill and White; 17s div., Smoke and Willard.

Extra sweep, 15 bluerocks, $3 entrance. 23 entries; 15s div., Elliott, Parmalee and Young; 14s div., Westfield, Smoke, Smith, Heikes, Merrill, Henry and Bob White; 13s div., Sanford, McMurchy, Stannard, Budd, Bingham and Kennedy; 11s div., Taylor Harris and Park.

R. C. WHITE, GENESEO, ILL.

Winner of L. C. Smith Cup, Illinois Target Championship, 1891.

Extra sweep, 15 bluerocks, 9 singles, 3 doubles, $3 entrance, 19 entries: 14s div., Heikes and Merrill; 13s div., Parmalee, Smoke, Stannard, Westfield, Pumphrey, Bingham and Budd; 12s div., Sanford, Elliott, Kennedy, Young, McMurchy and Willard; 11s div., Kleinman, Turtle and Hamilton.

Extra sweep, 15 singles, $3 entrance, 25 entries: 15s div., Smoke, Westfield, Henry and Heikes; 14s div., Elliott, Parmalee, Merrill, Bob White, Cairncross, Sanford and Kleinman; 13s div., Kennedy, Bingham, Harris, Eich, Turtle, Smith and Knowles; 12s div., Stanford, Polster and Young.

Saturday, Sixth Day, June 11.

The weather was close and sultry, although an irregular wind blew across the traps. The birds were a mixed lot, some slow, others fast. A large part of the shooters left in the afternoon. A few extra sweeps were shot at live birds. There was no shooting at inanimate targets. The eleventh contest, which was begun on Friday afternoon, was finished this afternoon.

Following is the score of the eleventh contest, 10 live pigeons, 4 moneys, 40, 30, 20 and 10 per cent.:

R B Organ.....0221022222— 8	C Harris.....2020?600w.
Solomon.....0122211212— 9	Merrill.....2101211110— 8
M J Eich.....2112201022— 8	Hale.....2010220222— 7
R O Heikes .....2220122222— 9	Parmalee .....1111202221— 9
Westfield.....2121110122— 9	Bingham.....2122122222—10
Elliott.....1112221212—10	G Kleinman..... 2220212222— 9
Palmer..... 1212222202— 9	C H Wooster.....1111212111—10
Gardner.....2222222202— 9	Sanford .....1121122222—10
A H Porter .....0211002112— 7	Budd .....2021221200— 7
A Harris..... 1112122101— 9	Smith..... 0110110111— 7
R A Turtle.....0122221112— 9	G Farmer.....1201110111— 8
Cairncross.....2122122202— 9	M F Lindsley.....2222222202— 9

Elliott, Bingham, Wooster and Sanford div. first; Solomon, Turtle, A. Harris and G. Kleinman shot out the ties on second and div; Organ, Eich, Merrill and Farmer div. third; Budd in the shoot-off won fourth.

Extra sweep, 7 live birds, $5, 19 entries, 3 moneys—50, 30 and 20 per cent.: 7s. div. Eich, Westfield, Heikes and Porter; 6s, div. after shooting off ties by G. Kleinman and Sanford; 5s, div. between Parmalee and Elliott after shooting off ties.

Extra sweep, 7 live birds, $8, 7 entries, 2 moneys—60 and 40 per cen .: 7s, div. Westfield and Heikes; 6s, Kleinman.

Extra sweep, 5 live birds, $5, 11 entries, 3 moneys—50, 30 and 20 per cent.: 5s, div. Burns, Westfield and Heikes; 4s, Kleinman; 3s, A. Kleinman.

CERTAINLY SAID SO.

Ex-President Abner Price.—I shall now try to buy the baby some shoes. It takes time to be president, and is expensive. About 10-gauges? Well, all I ask is to have those 12-gauge men stand at 30yds. with my old 10-gauge Westley Richards.

R. B. Organ, President.—I am 48 years old and weigh 205lbs. Am of American descent, so far as known. My name would have been Wadsworth if I had not been elected. About the new no-handicap rule? It is most unfortunate, coming just at the time of the World's Fair tournament, where we wanted everything united, smooth and at its best. You may say I shall try to keep up the good work begun by Mr. Price in game law cases. There will be some fighting done.

W. L. Shepard, Secretary.—God bless you. How are you? I will see you in a minute. Yes, the sweep costs 20 large calico dollars, gentlemen. The official scores will show that I got more than 3 out of 10 birds.

S. A. Tucker.—I have a fine job lot of old Parker seal guns, 10-gauge, which I have ordered shipped at once to Chicago. I threw up my hat when that Rule No. 6 went through, because I saw where I could work off these old guns.

C. E. Willard.—I have wired for a car-lot of 10-bore Colts. Tuck and I sold a lot of 10-bores before the meeting adjourned last night.

H. McMurchy.—I wear these glasses to make people think I am older than I am. I'm too young looking, that's what keeps me back. I start for the factory to-night, to see if we can't scrape up a few old 10-gauge hammer Smiths for the Chicago trade.

Jim Stice.—Yes, Charlie Strawn got married. He hasn't been right for some time.

Frank Parmalee.—W-w-what do I th-th-think of this-s-s-s-s? S-s-say, you s-s-say this is to be c-c-c-continued in our n-next.

John Orr, San Francisco.—I am on my way to New York. I have not been in Chicago for twenty-three years. A wonderful place or wonderful fine body of sportsmen. We certainly are having some pigeon shooting here. Our trouble on the Coast is to get the birds. We import a great many birds from Kansas City.

W. W. McFarland.—I think putting a 10-gauge gun at 32yds. would have been an outrage.

F. H. Lord.—If Frank Place had killed all his birds, and not missed them all, on our team, my name would be Lord. As it is, it is F. H. Hollister.

Tom Laflin.—Yes, I broke my leg. If I couldn't have got around in time for the shoot, it would have broken my heart.

W. Allen, Indianapolis.—The rain ruined our shoot. We would not send out any scores at all, it was so light. I think FOREST AND STREAM is now the best trap paper published.

Gib Harris.—I have no photograph of myself except one showing me with a cigar in my hand. If you use this you must cut the cigar off, for I wish to appear only as a very moral young man.

Rolla Heikes.—I guess I'm 'bout even.

Milt Lindsley.—The difference between me and McMurchy is that my glasses have gold bows. He has a little more glass in his but he can't afford anything but steel rims.

O. H. Porter.—People needn't think the game is further West. I have just been all over the West on a business trip. They say there the game is further East.

A. D. Cairncross.—I would take a position with a good gun house.

John Watson.—I lose my lease on Burnside grounds July 1, and have not yet secured another site. I kick on the World's Fair Buildings. They coax my pigeons away from home.

Paul North.—The report that the trappers struck Thursday is a canard. The traps had a hot box.

Ed. Taylor.—I regret to say that our friend Wick, of Cincinnati, is in a bad way. He is dying of laziness. Wick is so lazy he carries a hen under each arm to do his breathing for him. Me? Oh, I'm all right.

M. J. Eich.—My name is not really Mary Jane. That is only a joke the boys have. My name is Michael January Eich, and it's a cold day when I get left. I am Italian by descent. I wish it understood that I do not drive a street car for profession. Several people have asked me how I got a lay-off from my car.

Billy Crosby—Westfield.—This is not sunburn. I was born that way.

Lew Harrison, of Minneapolis.—Whitest set of men in Chicago on earth.

C. A. Young.—This is a good place to shoot targets, if you know how.

Jim Elliott.—I am going down the line again. Going to shoot everybody.

Abe Kleinman.—I think the new 10-gauge rule is all right.

Charlie Budd.—I have bought me a farm, and may take a notion to reform and settle down. I am still young.

Dick Merrill.—John Watson raises the hardest birds and also the hardest chickens in America.

Chicago.—Come to the World's Fair tournament. It will lead the world to date.

The State Shoot at Maple Bay.

THE latest advices from the seat of war report heavy firing at Maple Bay just out of Syracuse, on Onondaga Lake. Tuesday was the day set for the bombardment, but an advance squad was on the field Monday afternoon and opened the proceedings of the State shoot with sweepstakes until the sun went down and the most eager enthusiast could no longer see to shoot.

Monday night the convention assembled in Music Hall. In the absence of President Horace White, Vice-President Gates filled the chair with ability and dignity; and for the twenty-ninth annual occasion Mr. John B. Sage, of Buffalo, as secretary, called the roll. Forty-eight clubs responded as follows:

Oswego Boulevard Gun Club, North Cayuga Gun Club of Cato, Saratoga Gun Club, Onondaga Gun Club of Onondaga Castle, Leather Stocking Game Club of Oswego, Frankfort Game and Fish Protective Association, Rochester Rod and Gun Club, Lakeside Gun Club of Geneva, Salina Gun Club of Liverpool, Union Gun Club of Western New York, of Buffalo, Fultenay Rod and Gun Club, Honeoye Falls Gun Club, Spencer Sportsmen's Club of Lyons, Syracuse University Gun Club, Canajoharie Gun Club, New York County Gun Club of New York, North Side Gun Club of Brooklyn, Johnstown Game Protective Association, Riverside Gun Club of Rochester, Lyons Fish and Game Protective Association, Fountain Gun Club of Brooklyn, German Gun Club of Syracuse, Trojan Gun Club of Troy, Clyde Gun Club, Lefever Arms Co. Gun Club of Syracuse, Canostota Gun Club, Anglers' Association of the St. Lawrence River, Emerald Gun Club of New York, Charlotte Gun Club, Hill Top Gun Club of Pompey, Lake Ontario Gun Club of Irondequoit, Lafayette Gun Club, Auburn Gun Club, Syracuse Rifle Club, West End Rod and Gun Club of Syracuse, Anglers' Association of Onondaga, Northern Wayne Gun Club of Williamson, Onondaga County Sportsmen's Club of Syracuse, Rome Gun Club, Buffalo Audubon Club, Oneida County Sportsmen's Association of Utica, Cortland County Sportsmen's Club, Watertown Gun Club, Syracuse Gun Club, Genesee Sportsmen's Club of Irondequoit, Shamrock Gun Club of New York, Syracuse Indoor Gun Club, Lima Woodpecker Gun Club of Lima.

The committee from the February sportsmen's convention reported a new plan of organization and this was adopted. Their report will be found on another page.

President Mann, in behalf of the Rochester Rod and Gun Club, invited the Association to come to Rochester in '93, and after a graceful yielding in favor of Rochester by the Brooklyn, Saratoga and Lyons clubs, it was voted to go to the beautiful city on the Genesee. The kingbirds were adopted as the targets.

The entries for the Tuesday events were very large and there is every promise that in attendance and management of the shoot the Onondagas will have abundant reason for satisfaction.

The FOREST AND STREAM, as usual, will have full reports of the event.

DRIVERS AND TWISTERS.

"WILL a 12-gauge shotgun send a charge of shot through an inch board at 50yds.?" asked one of the amateur shooters at the late Knoxville tournament. "Of course it will," said another, "and further I think it will come pretty near doing the trick at 100yds." This statement brought forth a volley of "yes" and "no's" from different sides, and in order to settle the question Paul North, J. H. Hunter and the writer went down to the foot of the bluff and began to blaze away at a hemlock board 50yds. distant. After putting several charges under, over, or to the right or left of the board, North gave up the job in disgust, and handed his gun and cartridges to the writer with the advice to "try some of your rifle shooting work on that thing." The writer fired one shot at the above distance and down went the board with a clean hole through it, the hole being almost the exact size of a 12-bore shell. A little later in the day I repeated the experiment at 96yds. distance. Not having the elevation of the gun I was of course obliged to fire several shots before "finding" the board. Finally, however, over went the board, and there was another hole almost identically the same size as the one made at the shorter range. The board had been placed against a telegraph pole, and after passing through the board the charge had ploughed a good-sized groove across the width of the pole. Both shots were made with a 12-bore L. C. Smith cylinder, the charge being 3¼drs. of American Wood powder and 1¼oz. chilled shot. Several others tried the experiment and failed to do more than to spatter the boards until they were "let in" to the scheme of cutting the cartridge completely in two just in front of the powder, this practically transforming the front portion of the cartridge into a bullet.

* * *

The Pennsylvania State Sportsmen's Association intends to publish an elaborate programme for its State shoot at Reading in August. On the front cover, in gold will appear the title of the organization, and list of officers and directors for 1892. Inside the book, in order will appear the constitution, by-laws, rules for inanimate target events with diagrams, rules for handicaps, rules for live-bird shooting, roster of clubs comprised in the Association to June 1, 1892, open seasons for game and fish in the State, list of Pennsylvania Fish Commission, reasons for joining the State association and blank form of application.

* * *

What should be a closely contested and interesting match at live pigeons will take place at Woodlawn Park, on Tuesday, June 28, beginning at 2 P. M. The principals will be William Tell Mitchell, the well-known trap and field shot and dog handler, of Lynch Station Va., and J. Frank Class of Pine Brook, N. J. The conditions will be 100 live birds per man, 30yds. rise, Hurlingham rules, for $250 a side. The shoot will take place rain or shine. This will be the first of a series of matches, the second to be shot at the Morristown (N. J.), Driving Park, at a later date.

* * *

Winchester, Va., on the Valley Division of the B. & O. railroad, will be the center of attraction for a large number of trap shooters next week, when the Winchester Gun Club, one of the strongest and most popular shooting organizations in the State, will hold a three days' tournament. The events, with one exception, will be open to the world and the list of prizes is of a character to insure a big list of entries. The affair will take place on Tuesday, Wednesday and Thursday, shooting to begin at 9 A. M. each day.

* * *

During the second day of the Woodlawn shoot only two Keystone targets were broken in the traps during the nine regular events. This is a record that is hard to beat and it speaks for the traps and their adjustment as well as for the new Keystone targets, which are pronounced perfect. Mr. Penrose says that ten new machines are ready for work turning out these targets, the capacity of each machine being 4,000 per day. In order to catch up with orders he says the factory will run three gangs of men and work twenty-four hours a day.

* * *

The secretary of the South Norwalk Gun Club requests Connecticut teams who enter for the Keystone trophy shoot on July 4 to enter their teams immediately upon their arrival on the grounds, as it is desired to start the team race at 11 A. M. in order that the afternoon may be devoted to sweepstake shooting. Clubs may enter as many teams as they choose, but no man can shoot on more than one team. The entrance per team (three men) is $1.80, this being the price of the targets.

* * *

J. W. Tredway, of Tredway & Wirth, of Philadelphia, was at the Woodlawn shoot exhibiting his "Comfort Recoil Check," for shotguns and rifles. Those who examined the appliance pronounced it "just the thing." It comprises a false butt-plate with springs let into the butt of a gun. We will have more to say about this article in a later issue.

* * *

A letter from S. Van Gilder, captain of the Knoxville Gun Club, states that their next shoot will be held the last week in May, 1893, when $1,000 cash will be added to the purses. Mr. Van Gilder adds: "We propose to make this 'the big shoot of the U. S.,' and so arrange our programme that every shooter in the land will have a show for his 'stuff'."

* * *

The programme of the Independent Gun Club for June 23 at Plainfield, N. J., comprises five 10 target events, three at 13 targets each, one at 20 and one at 25 targets; one 4, one 5 and one 7 live bird event, and a miss-and-out. The shoot will begin at 9:30 and continue until dark.

* * *

W. A. Story of Portland, Oregon, sends us a statement to the effect that about a dozen of the Portland shooters went over to the Salem shoot and were so overcome by the royal reception they received that they were unable to win places in the target events.

* * *

"Dutchy" Smith says he wants "the earth" to be represented at the tournament of the Independent Gun Club at Plainfield, N. J., on June 23. Live birds and Keystones.

* * *

H. A. Penrose says he used only 2½drs. of "S.S." powder during the Woodlawn tournament. On Thursday he ran up a total of 23 straight kills in the pigeon events.

* * *

The annual Keystone tournament will be held some time in August. A feature will be the contest between ten Jerseymen and ten from Connecticut.

Frank Class will open his new shooting grounds at Morristown, N. J., with a two-days' tournament, the dates to be announced later.

* * *

Saturday will be live bird day at Syracuse and the events will be open to the world.

* * *

A match at fifty bluerocks, $3 entry, open to all, will take place at Dexter Park on Monday.

* * *

Atlantic City, N. J., will draw shooters from all over the country July 4 to 7, inclusive.

* * *

Ten-bores and 20-bores on the same mark! What a rule for a State like Illinois.

* * *

The next "Interstate" tournament will be held in Watertown, N. Y., the second week in July.

* * *

Hot work is expected in the contest for the Dean Richmond trophy at Syracuse to-morrow.

* * *

L. J. Alston, formerly of Atlanta, Ga., who represents the Lefever gun in the South, is at the Syracuse shoot.

* * *

July 4 has been fixed upon for a tournament of the Machimoodus Gun Club at Moodus, Conn., and a big time is expected.

* * *

Judging from the local turnout at Woodlawn Park last week, Long Island is in need of an artificial target boom.

BURNSIDE STATION, NEAR WATSON'S PARK.

EVENING—WAITING FOR THE TRAIN HOME.

There will be a two days' target shoot at Flemington, N. J., the latter part of July.

* * *

Charley Wingert gave a great exhibition of pump-gun work" at Woodlawn Park last week.

* * *

Walnut Hill will draw a big crowd of trap shooters on June 29 and 30.

Don't forget the Winchester, Va., shoot next week.

C. H. TOWNSEND.

A New Plan for Scoring.

THE plan for scoring live bird events, explained below, was devised by a veteran sportsman of Washington, D.C., and is warmly commended by members of the Capital City Gun Club.

Example of improved system of scoring, 10 men in sweep, 8 birds apiece, use of both barrels, but a kill with the second barrel counts .75 instead of 1:

	1	2	3	4	5	6	7	8	
A	1	1	.75	0	.75	.75	0		1—5.25....4th.
B	0	1	0	1	0	1	1		0—4.
C	.75	.75	.75	1	1	1	.75		1—7. ....2d.
D	1	0	1	.75	1	1	0		0—4.75
E	.75	1	1	0	.75	1	.75		1—6.25... 3d.
F	0	1	0	1	0	0	1		0—3.
G	1	1	1	.75	1	.75	1		1—7.50....1st.
H	0	1	1	0	1	0	0		.75—3.75
I	1	0	1	0	1	1	1		0—5.
K	0	1	.75	.75	0	1	1		0—4.50

This method gives a slight advantage to a kill with the first barrel, besides varying the scores, thus diminishing the chances of ties, and consequently the jockeying for places. By the old method of counting, a shooter in an 8-bird sweep could score from nothing up to 8; that is, it was possible to make 9 different scores. By the present method it is possible for every shooter to make any one of 39 different scores. This, counting the second barrel .75, gives greater variety than by counting it .50.

The slight advantage given to a clean kill with the first barrel is in favor of that humanity which should always govern sport. Nevertheless the shooter who steadily counts, though with the second barrel, has a fair chance. At 8 birds he can score 6, even should he use the second barrel every time.

For all sweepstakes it is undoubtedly the fairest and best system.

COMIS.

The Colt Gun Club of Hartford.

THE club has just finished the series for last year and it was so successful we are to try it over again. The conditions are that the club is to shoot every two weeks for 24 shoots, and any member shooting 10 times out of the 24 is entitled to be in for the prizes, his total of 10 best scores to count. This year a committee of three is appointed to handicap the better shots by giving the poorer shots from 1 to 7 birds each shoot. Last year we had over $400 worth of prizes; the principal ones were two Colt hammerless guns, $50 in cash, one target revolver and many others.

Scores of June 11 follow:

Decker	11	Nichols	11
Peard	11	Green	17
J Cook	5	White	8
Treat	20	Melrose	19
Willey	20	Risley	22
Douglass	23	Alger	20
Burbidge	24		
Collins	5		
Hotchkiss	23		
Wood	22		
Hyde	12		
M Cook	21		

M. F. COOK, Sec'y.

Syracuse Shots.

SYRACUSE, June 9.—The Onondaga Sportsmen's Club members to-day commenced shooting under a new system of handicaps. The shoots will be once in two weeks and extend over a period of one year. Members must contest in twenty shoots to have their scores count. The member breaking the greatest number of birds at the end of the year's contest will receive a $200 Lefever gun; second best, a gold medal valued at $25. The score of to-day's shoot with handicaps follows:

Mowry, shooting at 52 birds	51	Mann, 58 birds	48
Luther, 55 birds	52	Ayling, 58 birds	51
Mosher, 55 birds	47	Duguid, 58 birds	49
Hookway, 55 birds	47	Ashton, 58 birds	48
Lefever, 55 birds	47	D Walters, 58 birds	48
Holloway, 55 birds	45	Ginty, 58 birds	36
Hudson, 55 birds	44	McCormick, 58 birds	37
Allen, 55 birds	38	Denison, 61 birds	29
Courtney, 56 birds	51	Strange, 62 birds	47

The Interstate at Brooklyn.

EARLY on Tuesday the sun shone clear and bright and scarcely a cloud was to be seen. Those who had concluded to go to Woodlawn Park to participate in the Interstate Manufacturers' and Dealers' tournament felt happy for everything presaged a lovely day. At 8:30 little patches of clouds appeared here and there, and these kept growing larger, the air meanwhile becoming chill and damp, until at last it began to look as though the weather bureau, which had promised the shooters a fair day, had changed its mind and concluded to give them a dash of rain. Later on, however, the wind veered around to a more favorable quarter and the clouds lightened, as did the hearts of the Fountain Gun Club, under whose direct auspices the shoot was to be held. Although the wind continued to blow in a fishy manner that carried many a Keystone target out of the course hoped for by the shooters, there was no rain and the light in the main was favorable.

Woodlawn Park, situated on the line of the Sea Beach Railroad, about midway between Bay Ridge and Coney Island, is one of the most accessible shooting grounds in this locality, affording a pleasant boat ride from South Ferry to Bay Ridge en route. The grounds are admirably adapted for the purpose of trap shooting and afford a full 80yd. boundary for live bird events. It was here that Fulford and Brewer shot their great match on Dec. 12, 1891. The grounds comprise about five acres, inclosed by a tight board fence some 10ft. high. On the south side, along the railroad, the fence is in a straight line, it is about 45yds. from this fence to the traps when live birds are being shot. The entire fence is usually utilized as a boundary.

The club house is 50ft long, about 20ft. wide and 15ft. high. In front are long glass windows which are kept raised during warm weather shoots. A platform, 15ft. wide, extends the whole length of the house. On the eastern side of the grounds the view is obstructed by a heavy growth of timber, but on the south and west there is a fine clear foreground. The Fountain Gun Club secured a lease of the grounds over twelve years ago and they are under the direct supervision of Herman Blattmacher.

The grounds on Tuesday presented a very picturesque appearance, the tents of the various subscribers to the Interstate Association being pitched on the right and left of the cashier's and secretary's office. On the left of the blackboard was the Squire tent and to the left of this the American Wood Powder Company's tepee. The first tent on the right of the secretary's office was that of FOREST AND STREAM, with its invitation to "Come in and Sit Down" showing across its top. Then came in order the striped tent of our Chicago contemporary; the smokeless "S. S." powder; Colt's Patent Firearms Company; Tatham Brothers; Jacob Pentz's and the Standard Keystone Target and Trap Company. All day Monday E. D. Miller had labored to get the grounds in order and the tents properly arranged, and right well was the work performed. After all his hard work Mr. Miller was unable to take part in the shooting, as he was taken sick on Tuesday morning and was obliged to return home.

The more prominent of those who took part in the opening day's shoot included Charles W. Tuttle, of the Auburn (N. Y.) Gun Club; C. C. Dean, of the Maplewood (N. J.) Gun Club; R. H. Breintnall and C. M. Hedden, of the South Side Gun Club, of Newark, N. J.; "Uncle Billy" Sigler, of Montclair, N. J.; Eddy Collins and W. R. Fisher, of West Hoboken, N. J.; Thomas H. Keller, of Plainfield, N. J.; Neaf Apgar, of Plainfield, N. J.; James L. Smith, of Hackettstown, N. J.; W. R. Hobart, of the South Side Gun Club, of Newark, N. J.; George H. Pushee, of Boston, Mass.; Harry L. David, of Philadelphia, Pa.; Chas. H. Sterry, of Tolland, Conn.; E. L. Edger, of Willimantic, Conn.; Paul Paulsen, John Hein and Edward Valentine, of Yonkers, N. Y.; E. F. Ward and C. D. Sutton, of White Plains; J. H. Richmond, of the New Jersey Shooting Club. Dickey Schaffer, the hustling salesman for Schoverling, Daly & Gales was also there in all the glory of an auburn complexion and a new gun, and he shot a great pace. A look over the scores will show that the New York and Brooklyn shooters were conspicuous by their absence, so far as shooting was concerned. I noticed, however, among the spectators a great many who are seen at the various club shoots on the island, and take it for granted that it was modesty alone that prevented them from becoming contestants. It would seem, however, that the members of the Fountain Gun Club should have turned out stronger for the tournament and have taken a hand in the shooting. The work done during the day was of a high order, the scores running very even. The work of the cashier's office was done in great shape by Wilbur Morse, the old-timer who used to handle the cash and manipulate the scores during the palmy Dunnelan days. The official scoring was done by Chas. A. Dellar, while the blackboard was chalked by "Baron" Von Wossau. The averages of the leaders during the day were as follows:

Experts.—Hobart $87\frac{3}{10}$. Apgar $86\frac{6}{10}$.
Semi-professionals.—Tuttle $85\frac{1}{10}$, Breintnall $71\frac{1}{10}$.
Amateurs.—Sterry $94\frac{4}{10}$, Edgar $90\frac{3}{10}$, Sigler $87\frac{3}{10}$, Dean $86\frac{6}{10}$, Landis $85\frac{9}{10}$, Smith $84\frac{4}{10}$.

The scores follow in tabulated form, the conditions of the various events being as follows: 1, 10 singles, entrance $1, $10 guar.; 2, 10 singles, $1.50, $20 guar.; 3, 15 singles, $2, $30 guar.; 4, 10 singles, $1, $10 guar.; 5, 20 singles, $2, $20 guar.; 6, 15 singles, $1.50, $20 guar.; 7, 10 singles, $1, $10 guar.; 8, 20 singles, $2, $30 guar.; 9, 15 singles, $1.50, $20 guar.; 10, 10 singles, $1, $20 guar.

Experts.	1	2	3	4	5	6	7	8	9	10
Penrose	5	5	12	9	18	11	6	5	12	7

The Second Day.

Wednesday opened with a fair sky and bright sun, and until 10 o'clock it looked as though a good day was ahead. At that hour the clouds began to gather and these kept growing heavier and blacker until 4 P. M., when the rain began to fall, lightly at first, then gathering force until the ninth regular event had been concluded, when a veritable torrent prompted the management to shut down on the shooting. Several new-comers were noticed, among them being Justus von Langerke, of this city; R. G. Moore, of the New Jersey Shooting Club; Harry Thurman, of the Philadelphia *Item*; J. W. Lyon, of the North Side Gun Club; Louis Shortemeir, of the Emerald Gun Club; Ferd Van Dyke, of the South Side Gun Club of Newark, N. J.; Charles Hughes, of the Roseville Gun Club, of Newark, N. J., and W. Treadway, of Philadelphia.

The shooting was begun about 9:30 A. M., half a dozen extra events preceding the beginning of those on the regular programme. The leaders in averages were as follows:

Experts—Hobart 79, Apgar 77.
Semi-Professionals—Breintnall 79, Sterry 74.
Amateurs—Van Dyke 92, Richmond 88 8-10, Hall 88 1-10, Woods 87 5-10, Moore 84 4-10, Landis 84 4-10.

Below are the scores and the conditions of the various events: No. 1, 10 singles, entrance $1.50, $20 guaranteed; No. 2, 15 singles, $1 50, $30; No. 3, 15 singles, $1.50, $30; No. 4, 20 singles, $2, $40; No. 5, 15 singles, $1.50, $20; No. 7, 20 singles, $2, $40; No. 7, 10 singles, $1.50, $20; No. 8, 20 singles, $2, $40; No. 9, 10 singles, $1.50, $30; No. 10, 10 singles, $1.50, $30:

Extra No. 1, 10 singles, $1 entry: Penrose 10, Moore 9, Richmond 9, Sterry 9, Edgar 9, Hall 8, Lyon 4.

No. 2, same: Hobart 10, Hall 10, Breintnall 10, Penrose 9, Van Dyke 9, Richmond 9, Sterry 9, Edgar 9, Apgar 9, Tuttle 9, Landis 8, Moore 7, Lyon 7. W ods 7.

No. 3, 15 singles, $1 50 entry: Van Dyke 15, Collins 14, Breintnall 14, Moore 14, Hall 14, Hobart 14, Sterry 13, Landis 13, Edgar 11, Penrose 10, Apgar 14.

No. 4, 10 singles, $1 entry: Hobart 10, Collins 10, Penrose 10, Breintnall 9, Apgar 9, Hall 7, Tuttle 9, Moore 8, Landis 8, Sterry 8, Richmond 7, Woods 7, Engar 7.

No. 5, same: Hall 9, Sterry 9, Moore 9, Richmond 9, Landis 9, Tuttle 8, Van Dyke 8, Apgar 7, Brientnall 7, Wingert 7, Schaffer 5, Blattmacher 4.

No. 6, same: Moore 9, Van Dyke 9, Tuttle 7, Wingert 6, Collins 6, Brientnall 6, Schaffer 5, Richmond 5, Hall 5, Sterry 4.

The Third Day.

Thursday was the day when live birds were to be substituted for targets and a great big shoot was anticipated. Fifty entries was fixed upon as the bottom number provided the weather was good. But Sergeant Dunn was in a disagreeable mood, and the rain which started in on Wednesday evening was still falling on Thursday morning when the shooters peeped through their windows. The patter and pour was kept up until near 11 A. M., when the clouds lighted and the sun shone strong and fierce until after 2 o'clock, when the rain recommenced and did not cease falling until supper time. Afternoon the attendance was fair, thanks to the fact that places outside of Brooklyn sent delegations. These comprised G. W. Pushee of Boston, H. A. Penrose, H. L. Edger and C. H. Sterry of Connecticut, H. E. Smith, S. Castle, C. M. Hedden, Frank Class and P. J. Zeglio of the Newark (N. J.) Gun Club, Mr. Sykes of the New Utrecht Gun Club and "Uncle Billy" Hughes of Jersey City.

Long Island was away behind in turning out shooters, and in no event during the day did more than five Long Island men enter. Had it not been for New Jersey and Connecticut the shoot would have been a bleak and dismal failure. And the same may be said with truth of the two previous days. On Tuesday twelve men shot through the programme, of whom seven were from Jersey, three from Connecticut, one from Philadelphia and one from Auburn, N. Y. On Wednesday twelve men shot the full programme, eight being from New Jersey, two from Connecticut and two from Philadelphia. On neither day did a Long Island man shoot the programme, and on Tuesday only six men from the Island shot at all. The members of the Fountain Gun Club, who it would be natural to suppose would patronize their own shoot, were conspicuous by their absence. The membership of the club is, I believe, better than eighty, and yet the members took so little interest in the affair as to remain at home while outside people are shooting up targets and birds for the benefit of the club.

The birds used during the day were without exception the meanest lot of "squealers" and "duffers" it has ever been my fortune to see. Even had the weather been favorable I doubt if 20 per cent. of them could have been tempted to take an average speed, and as it was they would not fly at all. The only thing that surprised me was to see a bird missed, as I really believe a man should have been able to kill a thousand straight under the conditions. It is an outrage to put up such a lot of "peepers" for sportsmen to practice on. The management, of course, thought they were purchasing good birds and the chances are that when Herman Blattmacher and the seller meet the latter will hear some "English as she is spoke." The first two sweeps were shot under Monaco rules, the first being at 5 birds, $5 entry, two moneys and the second a $1 miss-and-out. Below are the scores:

No. 1.			
Davenport	00021—2	Castle	12211—5
Smith	11111—5	Hedden	10121—4
Morris	20212—4		
No. 2.			
Davenport	11112221112	Penrose	21222112111121
Smith	11111112111	Lambert	2110
Castle	11211112111	Sterry	10
Hedden	21221212212	Morris	20
Class	11111111211	Shields	10

At this point the six men concluded to stop, which they did The pot amounted to $10 and each had shot at 13 birds, which necessitated each one's going down in his pocket for $2.25 to "square up with Wilbur."

The regular events were as follows: No. 1, 5 birds, $5 entry, 4 moneys. No. 2, 7 birds, $7 entry, 4 moneys. No. 3, 10 birds, $10 entry, 3 moneys. No. 4, 10 birds, $5 entry, 3 moneys. The scores follow:

	No. 1.	No. 2.	No. 3	Ties.
Davenport	22121—5	1212221—7	1211112122—10—20	
Shields	21110—4	1121212—7	2111212111—10—110	
Smith	11102—4	2111112—7	1112122111—10—2111121112111110	
Edgar	11111—5	0112022—5

Hughes		1112111—7		
Leibinger			2211221101— 9	
Ibert			1121111011— 9	
Van Ord			1021112o61— 7	
No. 4:				
Sykes	11221111o1— 9	Morris	02121212023— 8	
Fergusson	1212211111—10	Leibinger	02112211111— 9	
Pearson	12111212022— 9	Ibert	1012002110— 6	
Streat	1111111111—10			

During the three days the shooters had cause for constant complaint owing to the sluggish manner in which the events were run. One event would be finished before any attempt was made to secure entries for another, and long delays were the result. H. A. Penrose was alone in the direct management, and had his hands full. The members of the club, excepting two or three men, seemed to be utterly indifferent as to whether the tournament was successful or not, and lent no hand toward performing any of the duties. About one-half the time during the two target days there was no trap-puller except when one of the spectators was impressed for duty.

The Fourth in Connecticut.

THE eighth contest for the Keystone trophy will be held on the grounds of the South Side Gun Club, South Norwalk, Conn., July 4. Shooting commences promptly at 9 A. M., trophy contest at 12 M. Teams are requested to enter immediately upon arrival at the grounds. Conditions, 3-men teams from any club in the State. No man to shoot on more than one team. Everybody invited. Four moneys in all events. Other events to fill out the day. Birds 2 cents each, included in entries. Those who desire may shoot for birds only.

The Independents Win Again.

DOWN on the edge of the Newark meadows, just below the Emmett street station of the Pennsylvania Railroad, stands the shooting box of the South Side Gun Club, and here on Saturday last were gathered representatives of nearly every gun club in New Jersey, who were on hand for the purpose of taking part in the team contest of the New Jersey Trap-Shooters' League and also in the open events scheduled by the local club.

The day was warm and clear, with just breeze enough to temper the rays of the sun without materially interfering with the regular flight of the targets. There were two sets of five traps each, one in front of the shooting box and the other to the right, a board screen separating the two sets. Shooting on the front set was done from a platform about 18in. above ground, this necessitating the use of a 5ft. screen behind the traps. As can be imagined, the targets had traveled some distance on their journey before rising to any height above this screen, and consequently the shooting was at long range. On the side set the shooters stood on the ground and the trap screens were just high enough to protect the trappers. On the left of the shooting box was a large wall tent, under the shelter of which were dispensed lunch, soft drinks and cigars. This proved to be such a center of attraction that the stock of edibles and drinkables were exhausted before 3 o'clock.

It was about 10 A. M. when the shooting began, the attendance at that hour being rather light. In twos, threes and half-dozens, however, shooters kept appearing until by noon a goodly company was present. The management of the shoot devolved upon W. R. Hobart, R. H. Breintnall and I. H. Terrill, who worked like beavers to keep things running smoothly, and they succeeded wonderfully well when it is considered that they, with the assistance of Dr. Hedden, were obliged to attend to all the clerical work in the office, as well as the work outside. The team shoot was superintended by Neaf Apgar, the League's efficient manager.

Quite a number of well-known visitors were present from various places, among them being Capt. A. W. Money and his son, E. Money, from Oakland, N. J., where they look after the factory of the American E. C. Powder Company; Al Heritage, "Old Smith Paw," from Jersey City, N. J.; "Uncle Billy" Sigler, of Montclair; Geo. E. Reading, of the Flemington (N. J.) Gun Club; S. S. Terrill, of New York, a veteran member of the Essex Gun Club, and Wm. G. Hollis, of the Newark Gun Club.

All the shooting was done under the rapid-firing system, in squads of six men each, the shooting being from known angles. United States targets were thrown and these proved to be good breakers despite previous adverse reports. About 7,000 targets were thrown and there were no complaints as to their non-breaking qualities.

The team match for the State championship, open to teams of five men each from any club in the State, 25 targets per man, was started about 2 P. M. the following clubs being represented: South Side Gun Club, East Side-Mutual Gun Club, and Woodside Gun Club, of Newark; Independent Gun Club, of Plainfield; Passaic City Gun Club, of Passaic; Boiling Springs Fish and Gun Club, of Rutherford; Maplewood Gun Club, of Maplewood; East Orange Gun Club, of East Orange; New Jersey Shooting Club, of Claremont, and the Brunswick Gun Club, of New Brunswick. Frank Mason was official scorer. This contest was a hotly contested one, and until the last shot was fired the result was by no means assured. The Independents, however, again proved their mettle by pulling out winners by the narrow margin of two targets from the South Sides, three from the Boiling Springs, four from the Maplewoods and five from the Woodsides. Baar, of the East Side-Mutuals; Squires, of the Independents, and Hedden, of the South Sides, made high scores, securing 24 breaks each.

Below are the full detailed scores of

THE TEAM CHAMPIONSHIP RACE.

During the time the team contest was running on the front set of traps the side traps were kept busy, 10-target sweeps being the rule. Previous to the beginning of the team shoot both sets had been running full time, 15-target sweeps being run on the front set. There was considerable delay between squads, owing to the fact of shooters being entered for sweeps on either set at once. Had it not been for this nearly 10,000 targets would have been shot.

During the day some of the shooters complained loudly because targets were charged for at the rate of three cents each, the maximum price allowed by the by-laws of the League. My opinion is that the above price is low enough and that no one has any right to complain. It costs considerable to put grounds in order for an affair of this magnitude, and as each gets but one out of ten shoots there is no reason why they should not be allowed to make money off the shoot.

Below will be found the result of the shooting in the programme events. In the 15-target events the entry was $1.50 and in the 10-target events $1. There were four moneys in all except where otherwise noted.

No. 1, 15 singles, 1 money: Hobart 15, Hedden 14, Breintnall 13, Moore 11.

No. 2, 10 singles, 2 moneys: Hedden 9, Dean 9, Hobart 8, Breintnall 8, Moore 7, Richmond 7.

No. 3, 15 singles, 2 moneys: Hedden 15, Hobart 14, Dean 14, Van Dyke 14, Moore 13, E. Money 11, Breintnall 10.

No. 4 was at 10 singles, 3 moneys; No. 5 at 15 singles, 3 moneys; No. 6 at 10 singles; No. 7 at 15; No. 8 at 10; No. 9 at 15; No. 10 at 10; No. 11 at 15; No. 12 at 10.

South Norwalk vs. Bridgeport.

THE teams of the South Side Gun Club, of South Norwalk, Conn., and the Park City Gun Club, of Bridgeport, Conn., met at South Norwalk on the 11th, with 12 men a side, and the day ended with a victory for the Bridgeport men. The men shot at 25 Keystones each, from 5 traps, the scores running:

Park City Club.		South Side Club.	
Wilson	20	Hendrie	20
W Wheeler	20	Coleman	18
Blakeslee	23	Seymour	22
Lewis	13	Fox	17
Longdon	19	Drake	19
A Wheeler	16	Sanford	22
Dean	19	Lockwood	16
Stead	14	Northrop	13
Hubbard	20	Richards	10
Hamilton	18	McHugh	21
Smith	22	Ferris	17
Thomas	21—225	Remington	18—213

The team shoot was made a 50-cent sweep, with four even moneys. The third of the series will be shot at Bridgeport, upon grounds of the Park City Gun Club. Each club now having won a race, the final is looked for, at a future date not yet arranged, with great interest by the shooting contingent of each club.

Kansas City Foresters.

KANSAS CITY, June 11.—The Forester Gun Club held its regular monthly medal shoot yesterday. The weather was pleasant and the birds an exceptionally good lot, resulting in the scores being rather below the ordinary. V. W. Floweree and F. Holmes tied on 12 for the first medal, and the latter leaving before the shoot-off, Floweree was declared the winner for the second consecutive time. J. P. Knoche, F. S. Groves, F. K. Hoover and J. W. Jones tied on 11, and the latter won in an exciting shoot-off, killing 17 straight. The score:

C F Holmes	12	N Scarritt	8
John Knoche	11	V W Floweree	12
F C Groves	11	D Snowflake	7
C A Young	9	Frank Graham	9
L S Mohe	9		
William Barton	8		
J W Jones	11		
F K Hoover	11		
Vaughn	w		

Stockyards Gun Club.

KANSAS CITY, June 11.—The Stockyards Gun Club held its regular weekly shoot on Monday and there were fourteen contestants for the club medal. R. J. Monroe won the club trophy on 16 out of 25 bluerocks. The club, is composed generally of novices, but they are showing a marked improvement. The score:

Gilliam	11	Trower	10
Mills	7	Olander	11
Nutter	5	Monroe	13
C P Baldwin	11	Shuff	13
B F Baldwin	6	L Peters	14
Col Gillett	10		
Geo Hockwell	11		
Keeney	6		
Johnson	6		

Shooting at Utica.

UTICA, N. Y., June 10.—Oneida County Sportsmen's Association shoot at 25 kingbirds:

Hunter	23	Gates	20
Kallies	22	Harris	23
Kilbourne	22	Knowlton	22
Eliott	22	Mayhew	22
Smith	22	Booth	22
Pfeiffer	20	Parker	20
F N Maynard	17		
Gilmore	20		
Salisbury	18		
Wheeler	21		
Smith	21		

Shoot for club prizes:

Smyth	25	Smith	16
Gates	22	Knowlton	25
Booth	24	Elliott	25
Hunter	24	Parker	22
Pfeiffer	23	Mayhew	23
Millspaugh	23	Gilmore	21
Harris	23	French	19
Kilbourne	22		
Wheeler	22		
Lane	15		
Salisbury	21		
Cummings	21		
Dexter	24		

A Challenge from New Haven.

NEW HAVEN, Conn., June 11.—I hereby challenge Messrs. C. H. Burbidge and Allen Willey, of Hartford, Conn., to shoot a match with two New Haven men for $200 a side at 100 inanimate targets per man, thrown from 5 traps, either expert rules or known angles. Match to be shot on any of the following gun club grounds in this State, viz., Ansonia, Willimantic, New London, Bridgeport, Wallingford or Bristol, on or before July 4, 1892. Inclosed find check for $25 forfeit. H. H. BATES.

[Check for $25 received].

THE SALMON FISHER.
BY
CHARLES HALLOCK.

CONTENTS: Distribution of the Salmon. Life History of the Salmon. Technology of Salmon Fishing. Salmon Fishing in the Abstract. Luxury of Salmon Waters. Itinerary of the Salmon Rivers.

A book to read *now*; and to be put in one's pocket for reading again in camp.
Cloth, 126 pages. Price $1.00.
FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

SOME anglers labor under the false impression that large dealers and manufacturers charge more for their goods than the keepers of small shops. A glance at our new Illustrated Catalogue and Price List for 1892, which we will mail on receipt of 6 cents to cover postage, will show how much they are mistaken.

ABBEY & IMBRIE,
Manufacturers of All Grades of Fishing Tackle,
18 Vesey Street, New York.

REPAIRING GUNS.

We employ the most experienced gunsmiths that we can find; no apprentices.

Extra fine work can be safely entrusted to us. Remodeling, re-boring, choke-boring, intelligently executed.

Parts for leading guns, rifles and revolvers usually on hand. Charges must invariably be prepaid on goods sent us for repairs.

Montgomery Ward & Co.
111 to 116 Michigan Ave., Chicago

Still Another Injunction.

THE CLEVELAND TARGET CO. vs THE U. S. PIGEON CO. } In the U. S. Circuit Court, Northern District of Ohio.

On May 31, 1892, said Court granted an injunction pendente lite, on complainant's motion, restraining said U. S. Pigeon Co., its officers, employees and agents from making, buying, selling, giving away and using the **trap** made, advertised and sold by said defendant, the same being held to be an infringement of complainant's **Expert Trap,** on which it owns Letters Patent, issued March 1, 1892. We therefore forbid all persons, corporations and clubs from buying, selling, using and giving away the **Targets and Traps** so made and described, under penalty of the law.

Beware of equivalents that may be substituted. They do not avoid the **Novelty** of these patents, and are equally infringements. **Use the Blue Rock.**

THE CLEVELAND TARGET CO., Cleveland, Ohio.

Notice to Fishermen! Cut Prices for 1892!

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down prices and not decreasing the quality, it increases my business every year.

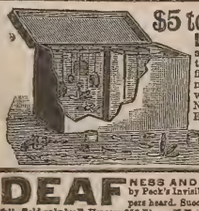
ANTI-STIFF



STRENGTHENS THE MUSCLES

It is a marvelous preparation for Strengthening the Muscular System. With Anti-Stiff there is no faith required; it goes straight for the muscles, and you can feel it at work. It has a peculiarly warming, comforting, and stimulating effect on all weak or stiff muscles and sinews. Quick in its action, cleanly and pleasant in use. Rub it into the muscles every night for a fortnight, and you will be pleased at its supporting and strengthening properties. There is not, nor has been, anything like it till now. It differs from all Oils, Embrocations and Liniments, both in substance and effect. Some Athletes are so fond of it that they rub it all over them.
Price 20c. and 35c. per box.
Trainers size, $1,00.

Wants and Exchanges.

Advertisements under this head, strictly limited to WANTS AND EXCHANGES, will be inserted at the special rate of three cents a word each insertion. The money must accompany the order.

BEAUTIFUL BIRD PICTURES.

I have several plates of Audubon's Birds which I will sell cheap. These are the edition of 1856, on heavy paper, and give the birds the size of life and in their natural colors. Among the species represented are: White-headed eagle, price $12; duckhawk, $10; pine grosbeak, $7; kingbird, $4; wood wren, $4; black duck, $12; and some others. These when framed would make superb ornaments for a sportsman's dining room. Address J. J. A., FOREST AND STREAM office.

WANTED.—LIGHT PADDLING CANOE, Vaux model preferred. Give full particulars. C. R. GROUT, 128 Fifth ave., Chicago, Ill.

PEDIGREE BLANKS, 6 GENERATIONS, 10 cents dozen. EBERHART PUG KENNELS, Cincinnati.

Hotels for Sportsmen.

ADIRONDACKS.

CAMPING OUT.

Fine camp sites to lease, furnished or unfurnished, on the Upper Saranac Lake; one of the most picturesque localities in the North Woods; fish, game, and recreation. Address.
UPPER SARANAC ASSOCIATION.
Secy's Office, 43 Wall st., (Room 47), New York.

TROUT FISHING.—TEN MILES IN THE I. Willowemoc and Monsaupe forest; trout streams free to guests. W. F. ROYCE, De Bruce, Sullivan county, N. Y.

30 per cent. off to members of Collie Club.

IRISH TERRIERS.

Breda Bill, - - $20.

Puppies and grown stock for sale. Dogs of all breeds taken to board, conditioned for shows, kept at stud and sold on commission.
Address
CHESTNUT HILL KENNELS,
Chestnut Hill, Philadelphia.

ARISTOCRAT

(Ch. Plinlimmon ex Lady Adelaide.)

Winner of forty first and special prizes, including five first and four specials this season, won almost consecutively. The tallest and heaviest son of Plinlimmon. He is the sire of Lord Courtenay, winner of second prize at the late St. Bernard Club show, Birmingham, also Baronet, winner of over forty prizes and specials, and numerous others. The above named progeny proves him to be one of the most successful stud dogs of to-day.
Fee $50.

YOUNG KEEPER

(Keeper ex Surprise, by Guide.)

This young dog has a massive and typical head. This with his superb breeding should be of especial value to bitches weak in that respect.
Fee $25.

DUTCHESS KENNELS, 1639 Third Ave., N. Y.
EDWARD BOOTH, Manager.

AT STUD.

IRISH AND ENGLISH SETTERS.

Ch. Inchiquin, 18,191, imported. The most famous sire in America. His get never fail to win when shown, and are remarkably handsome and excellent field dogs, just the blood needed to advance the Irish setter in America. Stud fee $25.
Prince Noble, 3242, English setter, blue belton, by Count Noble—Lassie, grand field dog; his get are first-class field dogs. Stud fee $20.
Gus Gladstone, 8210, by ch. Gladstone—Donna J., black, white and tan. A great fielder; none better, and an excellent stock getter. Brother to Rush Gladstone, the Derby winner. Stud fee $20.
Puppies by Inchiquin always on hand out of prize winning bitches, cheap. Pedigrees and cuts on application to J. J. SCANLAN, P. O. Box 339, Fall River, Mass.

AT STUD.

THE MASTIFF ORMONDE,

Son of the great Cambrian Princess.

Ormonde has won 1st at Rockford, Freeport, Cleveland, Cincinnati, and Chicago. Is sire of 1st and 2d prize winners, Rockford, Freeport and Chicago, 1892. Some grandly bred pups for sale. Send stamp for catalogue.
CHAS. E. BUNN, Peoria, Ill.

Great Dane at Stud.

CHALLENGE PEDRO

A.K.C.S.B. 20,425.
Sire, Mentor II. Dam, Minerva.
To a limited number of approved bitches.
SHOQUOQUION KENNELS,
Lyons, Iowa.

AT STUD.

Scotch Terrier KILROY.

Black brindle, no white markings, perfect head and ears, grand body, bone and legs, superb coat; winner of twelve 1sts and five specials, and twice winner of 30 guinea champion cup in England, and 1st and special in Boston, 1892. For particulars address
HENRY BROOKS, West Medford, Mass.

BULL-TERRIER AT STUD:

CHAMPION CARNEY,

(A.K.C.S.B. 24 986).

To a limited number of approved bitches.

THE DECLINE OF CREEDMOOR.

THE action, noted in another column, of the National Rifle Association in abandoning Creedmoor, is a move which has been forced upon it by the short-sighted policy of the militia authorities of the State. Apart from the rank ingratitude of thus ousting the N. R. A. from its range at Creedmoor, the move is one of the silliest of which even the newest of gold-laced subalterns could have been guilty.

Early in the seventies a few men noted the absurdity of a guard with guns but no shooting skill. Some were in the National Guard, others were not. Wingate, Hawley, Gildersleeve, Fulton, Yale, Hepburn, were among those who at the start recognized the deficiency and set about its remedy. They did it by the organization of the National Rifle Association. Everything was new and untried. The Regular Army had no provision whatever for rifle practice; the militia were even worse off. The programmes from Wimbledon were something of a guidance, and the most rudimentary details were gone over with patient precision by men who really knew very little more of the art than the tyros they were instructing. The press, daily and weekly, encouraged the movement, the more advanced of the militiamen took hold of it with vim, and then the international matches and the luck of winning them gave the whole scheme tremendous impetus. It settled back into a routine matter, but it did not die. When the regiments had taken up rifle practice under the tutelage of graduates, so to speak, of the National Rifle Association, the parent body drew back and watched the growth, not only in this but in other States, and saw too the somewhat haughty regulars compelled to follow the excellent example set them by the militia shots.

Now comes a latter day generation of managers, who are too self-satisfied and too heedless to read up a bit in the history of the movement. They are given authority and must show it and proceed to do so with a senseless disregard of the proprieties of the situation. What are the latest facts? The New York State and National Guard, and particularly those in New York and Brooklyn, have set days for practice. Many of them can not, or at any rate do not, go down. The wiser heads of the N. R. A. saw this difficulty and put in practice a measure of relief. It was to put on matches at convenient dates during the shooting season. These matches were at the regulation official distance and being fired over by guardsmen with the State arm, the scores carefully taken and authenticated were placed on the State record to the credit of the men. The men paid their own fares, bought ammunition, paid entrance fees in the matches, had all the excitement and rivalry of any match, won prizes, and left a modest surplus in the hands of the National Rifle Association, which surplus was expended to the last cent in carrying on the annual fall meeting at Creedmoor and defraying the other very limited expenses of the Association. There have been for several years past no other sources of income. The result of all this opportunity for practice was that the regiments, and particularly some of them having energy and zeal, made remarkably fine showing in the art of rifle shooting. Then went up a plaint from the more shiftless guardsmen that those having time and money could go down and qualify to the seeming detriment of others. This cry seems to have struck a listening ear in the new State Inspector General of Rifle Practice, and the process of leveling downward was entered upon. The N. R. A. matches were cut off. The regular order days for parade under uniform were kept on and certain free days for voluntary practice scattered through the year. What the N. R. A. did well, guided by an intelligent experience, the State will struggle with and show results not at all proportionate to the outlay. There will be expense to the State and no corresponding gain to the guard. The shiftless regiment will find they cannot drag the competent guardsmen down, and the comparative showing of inefficiency will still remain. The only positive result will be, or rather it has been, the driving out into an itinerant existence of the N. R. A. This year it is to have its challenge periodical match shot at Sea Girt through the shrewd courtesy of the New Jersey Guardsmen. The great Empire State has taken a step backward; but one very small man, trying to fill out to the dimensions of a "General," has thought it clever to issue a very absurd set of orders on an important part of the duties of the militia.

Discipline prevents members of the guard from expressing their opinions. The directors of the N. R. A. have too much respect for their own dignity and the distance to their adversary to stoop low enough to meet him on his own level. But the public at large who know the facts will not hesitate to say that some one has blundered, and that the blunder is a well blended mixture of idiocy and malice.

REARING FISH FOR DISTRIBUTION.

ABSTRACTS of three articles on the best method of stocking waters are published in continuation of our series of papers read at the last meeting of the American Fisheries Society. The subject is now considered one of the most important in the range of fishcultural operations. The various arguments in favor of fry planting or the introduction of yearlings are pretty fully and clearly brought forward in the articles of Messrs. Clark, Mather and Nevin, together with the subsequent discussion.

Mr. Clark fed 250,000 fry upon liver chiefly, and at the age of one year they had cost a little less than one cent each. He learned by actual experiment that the proportion of yearlings destroyed in confinement with larger fish is very small, while the loss of fry was almost total. The loss of yearlings in transportation also is small, but large numbers of fry die in transit. He remarks that there is never any uncertainty about the number of yearlings planted, because they are easily counted by sender and receiver, but fry cannot readily be numbered. He finds that artificially reared trout will rise to natural bait or the artificial fly as readily as wild trout. Mr. Clark further notes that the planting of fry has not been attended with results commensurate with the outlay involved.

Mr. Nevins and Mr. Herschel Whitaker called attention to the successful planting of many streams in Michigan and Wisconsin by means of fry. Mr. Whitaker also mentioned the increase of salmon in the Penobscot through the introduction of very young fish. In some cases he found that 500 fry were sufficient to stock a stream. Mr. N. K. Fairbank expressed his belief that fry planting has succeeded in Michigan and Wisconsin because the streams are deep; he considered the shallow waters of New York, Pennsylvania and New England not adapted to fry planting. Mr. Mather startled his hearers by producing statistics to show that the food of a yearling fish alone costs 11 cents; but we have corrected his calculation in connection with his article. Commissioner W. H. Bowman admitted that yearlings are better than fry for distribution, but opposed their use on account of the expense of rearing and carrying them. The New York Commission aims to secure the best results which can be obtained for a small outlay.

It was stated by Mr. W. L. Gilbert that the food of 30,000 yearling trout and 5,000lbs. of marketable trout cost him $400. Mr. W. F. Page, of the U. S. Fish Commission, reared at Neosho, Mo., 35,500 trout to lengths of from 4 to 10in. at a cost of 8 cents per pound. These were kept in small ponds, 8 by 20ft., supplied with a flow of 200 gallons of water per minute. The ponds were full of natural trout food. Mr. N. K. Fairbank, in discussing this subject, stated that he has at Geneva, Ill., about 25 trout ponds, 100 to 300ft. long and 50 to 75ft. wide. He finds masses of water plants which are full of shrimp, and these alone suffice for the rearing of his fish to the age of yearlings. Fully 50 per cent. of his fry reach yearling age—a greater percentage than by any other mode of feeding. In stocking trout streams vegetation can be introduced on which shrimp will grow and furnish ample food for the trout.

While there is no doubt that good results have been produced in many instances by fry planting, it has been generally agreed by persons who have seriously studied fishculture problems that better returns are assured from the introduction of fingerlings, and this belief is steadily gaining ground everywhere. If yearlings can be reared on artificial food at a cost of one cent each, and by means of natural food their cost can be still further reduced, their well known advantages over fry should determine their selection for stocking the waters.

CONGRESS AND THE NATIONAL PARK.

THE extraordinary neglect by Congress of the needs of the National Park is strongly emphasized anew by the occurrences of this spring. Each year lawless characters on the borders of the reservation come to understand better that neither the troops in charge of the Park, nor the civil authorities of adjoining States, have any power to punish infractions of the regulations, and each year these marauders grow bolder. This spring parties have gone into the Park and caught young buffalo and elk to take away and sell. Two such parties have been captured, all their live stock confiscated and the offenders turned out of the Park. How many others have succeeded in getting away with the wild animals that they had caught, we cannot know. What a farce this pretended protection is. But Congress does not mind a little thing like that.

Meantime the grabbers, those who want the Park for themselves so as to make the public pay them tribute, stand about and lick their chops. It is uncertain to which party the bone will be thrown, or indeed whether it will be thrown at all. The Committee on Public Lands of the House evidently does not know its own mind, and it is even doubtful whether it has a mind.

In favorably reporting a bill for the right of way of the Montana Mineral R. R., the Public Lands Committee recommended that no cut-off be made at the northeast corner of the Park. Now, a few weeks later, with charming frankness and singular complaisance, it stultifies itself by recommending the passage of Senator Warren's bill which provides for this cut-off. It is a prompt right-about-face. The committee evidently desires to please everybody and has no opinions of its own which will stand in the way of doing this. It is prepared to face in any direction on short notice. The committee evidently believes that consistency is no jewel.

What the outcome of it all will be no one can say. After having been guarded for twenty years, the integrity of the Park is most seriously threatened. It is easy to point out who will suffer by the neglect of Congress to give adequate protection to the Park. The people who will feel the effects of this neglect are not the politicians at Washington, nor yet the game thieves of Montana. The public will be the losers; that is to say, you who read these lines and men like you.

SNAP SHOTS.

If experience had not demonstrated that the lawful sale of fish and game in close season promotes the unlawful killing of such fish and game in close season, there would be no valid objection to such a law as that proposed for Massachusetts, permitting the sale of reared trout at a time when wild trout are protected. But experience has demonstrated this very thing. This is the beginning, the middle and the end of sensible discussion of Mr. Gilbert's proposal to open the Massachusetts markets for the traffic in cultivated trout.

Miss Fannie P. Hardy once wrote that the people of Maine would resent the establishment of game preserves in that State. Now here comes Jonathan Darling with a proposal to convert his Nicatowis Lake property into just such an exclusive preserve.

The Sportsman Tourist.

RAIDING THE MILL-POND.

GRAND RAPIDS, Mich., May 31.—Yesterday morning, immediately after breakfast, as I was enjoying my home journal in the reading room of the Morton House, a hand was gently laid upon my shoulder, while my ear was greeted with a familiar voice that bespoke an intimate. Turning around, the smiling face of Arthur Wood, a time-honored angler of this city, beamed a welcome that made me hastily arise and grasp his outstretched hand with a joyful earnestness. Everything now was of course consigned to oblivion except the "gentle art," and that we discussed in all its varying phases with the usual interpolation of angling narratives.

He unreeled one relative to the opening of the trout season at Shelby, a small town in the central part of this State, that was so enjoyable that I thought it good enough to find a place in your interesting paper, and so at the risk of spoiling Arthur's laughable recital, I will attempt its portrayal in substance as he pictured it:

"Being at that unromantic little town," began the narrator, "on business on the last day of April, I was, immediately after my vesperian meal, made aware by the influx of fishermen from far and near, that there was to be a raid made on a mill-pond near by, which was fed by a wandering little brook called Silver Creek. Said mill-pond covered an acre or more of ground, and was noted for harboring the big beauties that had reached their trout-hood in the shady and translucent waters of this sinuous stream. Here in this reservoir of cool waters was the trysting place of the tinted *fontinalis* that had outgrown the narrow limits of the ribbon-like stream. It was really a place where a trout would love to hide, for its bottom was strewn with water-soaked logs, gnarled roots, drifts of debris, and even tall trees reared their decaying trunks out of the water, standing like sentinels over this famed preserve. It had always been a covetous spot for the fisher lads here, and long before the season opened could be seen numbers of the scarlet-hued moving around with impunity through the tangled labyrinths that afforded them such cosy retreats. Many a noble trout has time and again been poached from these waters, but as the game warden has had his abode here of late, and is a strict guardian, it is a hazardous business to attempt the sly trick now.

"I was greatly amused at a sight of the rude and cumbrous cane poles this brigade brought with them, some being fully twenty feet long and almost as stiff at one end as the other, and prepared especially for vigorous yanking. For bait, some had the wriggling angle worm, some log-grubs, some raw beef, and a few knowing ones choice minnows, but not a man nor boy had a fly or the semblance of one. It was to be a pot-hunters' carnival, and as such I felt as if I would like to take it in, and so I prepared for the ignoble inaugural The game warden, a regular thoroughbred, was actively around and amid this noble band armed with a double-barreled shotgun and a copy of the statute, and declared that the first one that fished before 12 o'clock that night would be made to feel the heavy hand of the law as well as a dose of small shot.

"About 8 o'clock, amid a downpour, and in the dark, chilly night, the fishermen, each with a lantern apiece and their barbarous poles, began to depart in squads for the mill-pond in order to secure a favored spot, there to await the expiring day, the last of April. Early arrivals had choice of seats, but as there was ample room the late comers had no trouble in securing proper places for flopping out any trout they might impale on their baited hooks.

"One enterprising party had constructed a raft and hired the proprietor of the only skiff there was to tow them to the center of the pond, where they could have full sweep over the choicest grounds, as well as an avoidance of the crowd. They very soon repented of their isolation, for it rained so hard and continusly, and they were made so exceedingly uncomfortable amid it all that they concluded to depart to their homes near by. They did not just then hanker after any trout, and practically evinced such a disposition, for they shouted and shouted for the owner of the skiff till they were almost hoarse, and then had to listen to the jeers and jokes of those who lined the muddy banks. Their stentorian efforts were of no avail, for the proprietor of the boat desired had locked it up and gone to his home where he could luxuriate in slumber deep.

"It was, I assure you, a gloomy and disagreeable night, the rain falling with a steady patter, and the wind moaning a mournful dirge, and there with stolid stoicism, water-soaked and chilled to the marrow, sat the thirty-five fishermen, according to an actual count, anxiously awaiting the propitious moment when they could cast their bait to the freckled naiads that had their habitation in that mill-pond.

"Ever and anon some dissatisfied fisherman would change his position as he thought for a better one, but as he picked his way along the declivities and slippery bank would forget its treacherous condition, and into the pond he would go, lantern, pole and all, with a sudden splash that evoked a roar from the crowd. Such little incidents broke the monotony for the nonce, but the only thing that would wholly satisfy that impatient crowd was the whistle of the warden, who had promised to blow it at precisely the last expiring moment that was to open the season.

"Although I was wet, cold and hungry, the sight of the crowd that lined that basin of pure water, which the flickering lanterns plainly disclosed, was a sight that would have provoked laughter from the most sedate and serious—I smile whenever I think of it, and as a novel opening of a trout season it should be awarded no insignificant premium.

"Ten minutes before 12 o'clock I tried to steal a march on the warden by dropping in my line, but his ever-watchful eye and acute ear discovering the attempted larceny, he instantly brought his gun to his shoulder and demanded a withdrawal of the offending line and hook. Of course I complied, for I feared being mulcted in a heavy fine and costs more than the threatened fire from his gun, for that I considered mere bulldozing.

"At last the cheerful sound of the whistle rang out, and around the circumscribed shores of that mill-pond and with a wondrous unanimity thirty-five baited hooks from the thirty-five fishermen fell into that identical mill-pond with a splash and spatter and the opening day at Shelby was duly inaugurated, after which the warden, conscious of having done his entire duty on that provoking occasion, pocketed his whistle and shouldering his gun, trudged homeward through the rain and darkness with a world of care lifted from his broad shoulders.

"It was now a steady fish by all hands for hours without a single nibble, and not till the dawn began to peep over the eastern hills, was a single trout caught. I laughed till my sides ached to see the big trout they yanked out without a particle of play. It was a strong pull and a pull altogether, and a three-pounder came from his element in the same sudden manner as one of a few ounces."

Seventy-five trout were caught during the day, the largest being 3½lbs., and the average fully 1lb. So much for the opening at Shelby's classic mill-pond, and all honor say I to that warden, who held that army of pot-hunters down to the strict letter of the law.

ALEX. STARBUCK.

"SPORT" IN FRANCE.—II.

WE had left the Boulevards and got as far as the Quais of the river I remember because we had begun on the old books which decorate several miles of the parapets on either bank. Just below these parapets is the stone-cased margin of the river and along this in the summer season is always to be seen a close serried array of fishermen ardently yet patiently angling from morning to night. They must number thousands of rods, for the line is formed on both sides of the river and around the two islands, and extends for miles, and there they sit and sit, and fish and fish from early morning till late at night, from spring to fall, and never, never, never catch a single thing. I can never make myself believe they are really fishing; they might be writing poetry, for their faces have quite that expression. But I am afraid I have been betrayed into an exaggeration with regard to their success as fishers, for in spite of the unanimous negative testimony of scores of my friends here, I can adduce one mite for the affirmative. I did one day see a proud angler drag out a helpless fingerling. And what a commotion there was; how the crowd cheered, and how the hero blushed and raised his hat in graceful recognition of the "viva's." The crowd continued to gather about him till the steamer on which I was, took me out of sight. What happened afterwards I cannot say, but I must confess that I do not believe the report that the excitement spread until it got beyond the police control so that the military were called out to prevent a general uproar.

Further down the river, after passing the Pont des Invalides, one sees a curious little ark by the water's edge. It is like a small house-boat, and its inhabitants prove to be two men, a woman, a magpie and a cat, also a dozen or so of dogs as transients. This is in short the dog-washing establishment of Monsieur Marie. I took an early opportunity of visiting it to observe the manner of operating. The proprietor was very willing to talk, in fact I think he always did all the talking, leaving all the work to his wife, and I learned from him that he clipped from ten to thirty dogs per day, that he got from four to eight francs (80 cents to $1.60) apiece, and that the large breeds of dogs paid the best, while the poodles gave the most work and were paid only as small dogs. Then followed a dialogue which will, I am sure, interest those of our dogmen who have taken a stand on the Pasteur question:

"I see you do not muzzle the dogs, do you never get bitten in consequence?"

"Bitten!" said he, "look there," and he showed me his hands and arms slashed and scarred up to the elbows with innumerable old scars and one or two recent wounds. Then his wife showed me her hands and arms, and the assistant did the same. Each of these persons had been bitten once or twice a week for years, and yet were in perfect health.

In amazement and some horror I asked, "Have you no fear of hydrophobia, or perhaps you take ample precautions?"

"Never think of such a thing," said he. "If the wound is a bad one we tie it up, if not we take no notice and it heals in a few days."

Further down the river we come to the Bois de Boulogne, wherein is the Jardin d'Acclimatation, another interesting place for the dogmen, for here are always kept in stock a fine breeding stud of all the best races of dogs. I never realized what the words "big dog" mean till I saw the great Danes there. They certainly look over 3ft. at the shoulder, but I won't run the risk of a guess. They are like yearling calves, and have enormously muscular legs and chests, but I must say that their teeth were not of the size that I expected to see in such an enormous head. I am informed, too, that one of them is not a match for an ordinary wolf. There is a wolf at the London Zoo just now that, though he has not quite the size or weight of a great Dane, has teeth twice as large and jaws that could engulf and crush the big dog's head at one chop. At least one could almost believe it on seeing him.

In another part of the Bois is the bull ring that was established at the time of the great exposition of '89. It has been continued each summer since in spite of the opposition of the Humane Society. The company is permitted to carry on the sport on condition that the horns of the bull be padded, the horses thoroughly protected in leather armor, and nothing or nobody killed. Although thus shorn of its more revolting features, I was warned that twenty minutes of it would be enough for me. But it wasn't; after the first twenty minutes I became yet more interested and stayed to the very last, three hours in all, and saw some fifteen or twenty bulls baited. Each bull was in ten or fifteen minutes, and each made it his first business to charge the mounted man, who had a long pike wherewith to protect the horse. This he usually succeeded in doing without much difficulty, whereupon the bull went off savagely in pursuit of the men on foot, generally clearing the ring by forcing them to vault over the barrier. I never before realized the enormous strength of a bull's neck, for though these are of a small breed I more than once saw one lift up horse and rider together from the ground on his horns. One of the horses was a tremendous double kicker, and his rider amused the crowd again and again by turning him rear on when the bull charged. The tremendous whacks of that horse's heels on the bull's head and shoulders resounded afar and yet did not seem to have any effect on his horned majesty. The safety of the men on foot lay in the fact that the bull will always charge the cloak in preference to the man, and it was common for these latter to lead the infuriated animal right round the ring in a series of mad charges at the fluttering red cloth, while his real enemy stood calmly by at one side. After the bull was pretty well blown, there appears the great bull fighter, he who in Spain would kill the bull. He sits calmly on a chair and tempts the bull to charge him. At the last moment, when within half an inch of the horns, he adroitly plants a ribboned dagger in each of the bull's shoulders and avoids the charge like a flash. At length he takes a hollow sword and plants another ribboned dagger that it contains just on the spot where, if in Spain, he would thrust to kill the bull.

After several bulls had been teased in the ordinary way, one was turned in and men without cloaks entered to tease him. This is particularly dangerous and very popular, as it gives the men some rare chances to show their parts. One little fellow took a long pole, and tempting the bull to charge he vaulted up on the pole, and just as the bull struck it he let go and passed over the bull's back to the ground beyond. He did this several times and won several bouquets, but the crowd got tired of it and wanted something more, so he stood empty-handed, and, to the surprise of every one did not avoid the bull, but at the last moment seized the horns in his hands, and turning a somersault as he was tossed, came down behind on his feet.

In his next performance, however, a little later, he came to grief. He tried to avoid the bull, but just too late, one horn just caught his right thigh, and in another instant he was tossed high in the air. The bull waited and received him again on his horns, but he clung on this time, and how he escaped I know not, but his comrades arrived in time to distract the bull's attention. To the surprise of every one he was able to continue in the ring, though he did not play any more pranks that day.

On the other bank nearly opposite the Bois de Boulogne is St. Cloud, with its famous chateau and park. The woods in the park I found interesting, being the first French forest I had the opportunity of exploring. It is a characteristic one in at least one particular, viz., its great extent in spite of the great value of land here, for it is in the suburbs of Paris and overlooks the whole city. The wooded part of it is much like other woodlands in France and England, and may serve as a basis of comparison with those of America. An American is at once struck by the total absence of dead or fallen timber and the great rarity of large timber of any kind. The scarcity of evergreens, and the paucity of species are also noticeable. I was much struck also by the curious fact that every trunk at least at St. Cloud has a piece of ivy twined about it. There are numbers of large forests scattered over France, they were formerly royal properties, but have reverted to the nation. They are carefully preserved and yield a considerable revenue by the sale of timber and the letting of shooting privileges. The largest of these is Fontainebleau, it is about twenty-five miles long by 15 miles wide. It is famous for its large game, among which are found red deer, fallow deer, roebuck and wild boars. The fact that this otherwise useless tract of sand is by judicious forestry made to yield a fair revenue as well as serve for a national pleasure ground, is worthy of notice in connection with American forests.

The birds of this region correspond closely with those of the Middle States, and the voices of jays, crows, woodpeckers, titmice, creepers, thrushes, etc., may all be readily recognized by their resemblance to those of their American congeners. In the thick woods, however, there was one great want that I felt continually, that was the ruffed grouse. Why has he not been introduced? I am certain he would more than hold his own in the vast wilderness of Fontainebleau.

I am told that an attempt was made to introduce some American game and the failure of this deterred any one from further experiments. But clearly the importers had themselves to thank, for they selected the California quail and turned out some twenty-five couples on a low-lying, boggy, heather-grown moorland; then were surprised that the birds were no more heard of.

I am quite an enthusiast on the introduction of new species and would like to see both nightingale and skylark established in America. Of the nightingale I have no notes of importance excepting the fact, pretty well known, that it is one of the last birds to begin singing and one of the first to cease, while, as with most birds here so far as I have seen, there is no fall song period.

But the skylark is the most faithful of songsters; not even our own song sparrow can surpass him in the assiduity with which he sings in and out of season, while his song itself is remarkable almost to uniqueness for its uninterrupted earnestness from beginning to end. The skylark rising from the open field sings continuously as he soars, and at length high in the wind he hovers and still sings without the slightest break or interruption, till wearied and still singing he again floats downward, only to cease as he nears the earth and drops like a stone. A Missouri skylark (*Anthus spragueï*) which I once timed on the prairies of Montana, sang for an hour before he dropped, and with a view to making a comparison I timed a number of European skylarks at different times in England and France and got the following: 1½, 1, 1½, 6, 4½, 3½, 1½, 3½ minutes. These are the respective durations of each song from beginning to end and usually represents also the duration of the flight, though occasionally a bird would hover a minute or more after it had ceased to sing.

The skylark is here regarded as a game bird, of course, and immense numbers are killed and marketed in the winter. They are taken in a peculiar way; they seem irresistibly attracted by a strange flashing object and will come in numbers to hover over a revolving wheel set with bits of mirror, so that the gunner hidden near one of these decoys may kill numbers at a shot. One man told me he had seen between 200 and 300 killed at one discharge of a double-barreled gun. I am quite sure he was romancing, but I believe great bags are often made in this way, and his story may have been correct with a cipher off each of the numbers given.

E. E. THOMPSON.

CAMPS OF THE KINGFISHERS.—I.

GREEN LAKE, MICHIGAN.

Anticipation and Preparation.

IN casting around for a place to make our annual summer camp for 1891, we had some difficulty in making a selection from the several good points in northern Michigan under consideration, but it was at last decided to try Green Lake, a body of water lying about fifteen miles southwest of Traverse City, of which we had heard so much as "the best bass lake in Michigan," that we felt that nothing short of a camp on its shores would give us rest and ease the "innard yearnin' that had been a pesterin' of us" to pay it a visit for the last five or six years. If we made a camp on some other lake and happened to run against a disappointment, there would be growling and grumbling because we had not camped on Green Lake, and we made up our minds that we would not be satisfied during the rest of our lives and die happy without fishing Green Lake.

For five or six months before the time set for the start Green Lake had frequent place in our thoughts; everything seemed to take on a greenish tint long before the grass sprouted in the spring, and even the mess boxes, the frog box, floating minnow tank, tool box, the boxes containing the canvas boat, Dutch oven and the glass minnow trap were given a fresh coat of dark green paint to harmonize with the surroundings, when we were once settled on the shore of the Mecca of our winter dreams—Green Lake.

What a world of comfort there is in anticipation, and with what profound satisfaction and pleasure the grizzled angler overhauls his tackle, looking carefully over "calamities" to see that everything is in place in the mess chests and the tents in good order for the next camp, knowing all the time that "the old man with the scythe" is closing up the gap as the years go by, but hoping the while that when the season is over he may succeed in eluding him for just a few more times in the woods.

To make more certain about the fishing in the lake, my friend Jim Mason, of Leland, Mich., suggested that I write to his brother Aleck, who had lived near by it for several years and who, he said, could give all the information needed, and I could depend on it as reliable. I wrote Aleck, and in answer his letter read: "There are plenty of both the large-mouthed or black bass, and the small-mouthed or green bass [which looked mightily like Aleck had got the two varieties a trifle mixed in his mind], and I think there will be no trouble in getting boats, and not only Duck Lake but three other lakes can be reached from Green Lake, and as good bass fishing as can be found in Michigan. I could meet you if necessary at Interlochen, which is very near to where you would camp by a beautiful spring and stream with trout in it, also plenty of trout fishing all around here, and an abundance of milk, butter and eggs to be had, etc."

Shade of Izaak! Could heart of angler yearn for more? "A beautiful spring and a stream with trout in it" strucka chord in my heart that never stopped vibrating till we were two whole days in camp, and even as I write this I can feel a faint flutter, but it's something like old Dave Brockus's squeaky old fiddle when he played "Hang On" and "Hell's Broke Loose in Georgia" for "us boys" in front of the lime kiln, a good many years ago—"a leetle out o' chune," the result, doubtless, of too much anticipating before the start.

I wrote old Sam S., my side partner from Kentucky, some very vivid letters about Green Lake as I kept learning more about the great sport we were going to have, till at last he took to writing his replies on green tinted paper, and I may say with fear and trembling that he still holds my letters as a menace and claymore of vengeance over my head. I had great confidence in Aleck's representations, but for the discomfiture of some others of the party who were disposed to be a trifle skeptical I wrote to Postmaster Colbjornson at Interlochen asking about supplies, the fishing in the lake, etc., and received a reply of which the following is a copy in part, verbatim et punctu-at 'em, to wit: "I keep a good store myself and can supply you with all the requirements for camping out in regards to provisions There is two lakes they are 1½ miles from my place and the fishing is immense plenty of them and large there has been pickerel caught weighing 18½ and 21lbs. each There is about 2,000 feet between the two lakes and a splendid camping ground As near as I can guess there is about 1,000 acres in each lake and they are the finest lakes for fishing in the State of Michigan." This and some more without a dot, dash, comma or break of any kind in the whole two pages and a half, and the reader is left to shift for himself in the matter of punctuation and rounding up the sentences—as I did.

That letter settled it, and Green Lake stock went up with us in an alarming manner for the next two or three weeks and was the cause of another ten-page letter to Old Snakeroot that nearly destroyed his peace of mind. The outlook for sport was better than for years past. We had it in mind, however, that pickerel rarely pull the scale to 18½ and 21lbs. and we fell into the notion without much effort that the fish mentioned by the P.M. must have been maskinonje. More glory in store for us—in anticipation: "A leetle too good for the Joneses," perhaps, but we would take it all in; the splendid camping ground, the beautiful spring, the trout, the bass and the muskinonje, and be thankful to the gods for the opportunity.

A letter was proceeded to Mason requesting him to [illegible] living th[illegible]

A NEST OF THE RUFFED GROUSE.

From a Photograph.

hire three boats, get a load of straw and some lumber on the ground the day before our arrival and to meet us at Interlochen with a team to haul the calamities to the lake and then (I may be permitted to speak for myself) we waited and dreamed of camps and springs and trout streams till the day set for the start—the 16th day of July.

The Gathering of the Kingfishers.

The most anxiously looked for day of all the year came at last, and with it "Old Snakeroot" and "Old Frigid" (Sam S. and Charley F. from Frankfort, Ky.), and in the evening we took the train on the Panhandle to Richmond, Ind., and from there over the old "fishing line," the Grand Rapids & Indiana Railway, for Traverse City, Michigan, a road that for the past twelve years has carried us to more camps of solid comfort and good sport with the rod than usually falls to the lot of most anglers in a lifetime.

"Old Knots," that bundle of perversity, notions, contradictions, goodness, and some cussedness, with a grain as gnarly as a maple knot, was not with us, he having by force of circumstances dropped out of the party a couple of years before to flock by himself. Uncle Dan Sloan, the truest and best beloved comrade of them all, and the one brother of the gentle craft closest to my heart in all the Camps of the Kingfishers since the war, was called by the Master on the last day of April, 1890, to make his camp on the shore of the Unknown Lake, leaving of the old party of 1885 only Old Sam, Charley and "Old Hickory" as a reminder of the happy camp at the mouth of Sweeney's Creek on Central Lake in that year. I am not ashamed of the tears that came to my eyes at his death, for I loved him as a brother, and no one can take his place in the camp or in my heart. Peace be with him in the wilderness of the Unknown Land.

Another old angling friend, Mr. H. C. Culbertson, president of the famous Cuvier Club, had been with us the previous year and was eager to try it again, having made up his mind there was more solid comfort to the square yard in a camp of the Kingfishers than anywhere else "on the face o' this livin' airth." Two other disciples—Harry Foulds and Ed Gooder—who had been in camp with us for a short time the year before, were to meet us at Traverse City on the 17th, having gone ahead a couple of weeks to look after some interests they had at Omena Heights, a summer resort on Grand Traverse Bay. Then, early in June I had received a letter from brother "Kelpie," of Central Lake, Mich.,—who needs no introduction to the readers of FOREST AND STREAM—in which he said he was in very poor health; hadn't eaten as much as a healthy chipmunk for three months, and that if we made the camp within easy reach and had room for him he would like to join us and see if he could regain a lost appetite and pick up enough muscle to stand up for a couple of rounds against a full-grown Michigan grasshopper—"kickin' barred." A hearty invitation was at once sent him to pack his grip at the appointed time and meet us at Traverse City on our way to Green Lake, at the same time throwing in a few hints as to the kind of tackle he might find needful in handling a few of the 21-pounders that would doubtless be "a-layin' for him."

When we left Cincinnati we had hoped to make connection at Traverse City with the 12:35 P.M. south bound train on the C. & W. M. R. R., a new road finished some time the year before, but owing to some delay at Walton junction, where we changed from the main line, we missed it by about ten minutes—just enough to warrant the bestowal of a few well-chosen blessings on our hard luck and the connection that didn't connect. "Kelpie," Harry and Gooder were waiting for us at Traverse City, and we passed the afternoon in talking over the prospects at Green Lake, cussing a little at times at the loss of precious time that could have been used in putting the camp in order long before sundown only for that missed connection, and waited impatiently for the next train, which would leave at 3:15 the same evening. To make matters worse, it began to rain about 5 o'clock, which seemed to justify a little more cussing of not quite so mild a type as missing the train had called for, and in speaking of it afterward Kelpie said he thought the case very ably handled. But we got away at last, and after a run of fourteen miles in twenty-five minutes were yanking the calamities out of the baggage car at Interlochen; and piling them up under the projecting eave of the station out of the rain, which was still falling steadily without much sign of holding up.

Mason and his son-in-law were waiting for us (they had been waiting since noon) with a two-horse wagon, but now it was a question whether to make camp that night in the rain or stay all night at the only "hotel" in the village and wait for morning. It was decided to make camp, and the wagon was loaded with the tents, mess boxes, tool box and the big box of "grub" with a few smaller packages to fill up the chinks, leaving a fair load of other things that we couldn't find room for on the wagon.

Mounted on the top of the load with the son-in-law, Charley and I and Mack Barney—a much-browned son of Ham whom we had brought along as "keeper of the fryin' pans"—started for the camping place, leaving Mason and the others to hunt up another wagon and follow with the rest of the baggage as soon as they could. Out through the scattering village of twenty or more unpainted houses, the road led past a big sawmill on the little stream connecting Duck and Green lakes into a pleasant woods, where the drive would have been very enjoyable only for the rain, but somehow a smart drizzle, as this was, has a tendency to detract from the beauties of a landscape, especially when camp is to be made in it. However, we had our rubber coats, and as the mess boxes didn't leak, and the two big duck bags containing the tents, flies and bed clothing were in a manner waterproof, we could afford a show of hilarity and feel thankful at the same time that the rain was not coming down in torrents. Charley and I took turns in reminding the driver that he had a "mighty fine pair o' hosses," and that darkness would soon be along, both of which hints had the effect of taking us over the last quarter of a mile at a sweeping trot that kept us busy in trying to keep the calamities and ourselves from being scattered along the road. When on the point of asking the sailing master to "take a reef in his off hoss," as a matter of easing the rolling of the craft, he sung out from his lookout for'ard, "Boys, there's your camping ground," and in ten minutes more the wagon was unloaded under the partial shelter of some trees growing along the edge of the high bank overlooking the lake, and Baker (the son-in-law) started back with instructions to bring out the rest of the baggage and the boys, if they had not already hired another team.

We hadn't time for more than a brief survey of the pretty sheet of water spread before us; the tents were to put up and beds to make for the night and the shadows in the woods admonished us to bestir ourselves before darkness came down. The axe and the hatchets were got out of the tool box, the burlap ripped off the bundle of tent pins, tents pulled out of the bags and we went to work with a will in the pattering rain. A glance over the ground sufficed to determine the location of each tent, as the place was level, free of underbrush and the soil so sandy that it absorbed the rain as fast as it fell. While Charley and I steadied the uprights Barney drove the four corner pins for the guys, and then with the two hatchets and the axe we all took a hand and soon had the first and largest tent in shape and a fly over it. By the time we were through with the next one it had become so dark that we couldn't see to drive a pin, and we got out and lighted a candle, fitted it into an old bayonet for a candlestick, and while one sheltered it from the rain, the other two drove the pins and stretched the fly over the tent. We decided to put up only one more, a small A tent for Barney, as the two already up would hold the whole party without crowding, and there would be better light and more time in which to put up the other one in the morning. The old bayonet was stuck in the ground near one of the tents where the slanting rain would miss it and we stopped to rest a few minutes, for we had worked like beavers and were tired, and hot, and "sweatin' like a nigger at a hoe-down," and hungrier 'n a bear after a hard winter's hibernation.

In "projeckin' 'round" after some dry wood to start a fire Barney found an old resinous pine stump, which furnished the groundwork for a famous camp-fire, and in a few minutes we had a roaring blaze two yards high, that lighted up the woods for rods around so we could see to work almost as well as by daylight. Why hadn't we thought of it before it got so intensely dark! Mason had got a good-sized load of straw, and boards enough to build a small house, the greater part of which he had slanted over the pile of straw to protect it from the expected rain. For this forethought and precaution we felt duly thankful. We took advantage of the bright light of the camp-fire to spread a rubber piano cover and some rubber blankets in the two tents and hastily move all the dry straw into them, and then we put up Barney's tent and moved the mess boxes and other things into it out of the wet. No signs of the boys yet; no rattle of a wagon broke the stillness; no answer to our long drawn out yells that had disturbed the silence of the night at intervals ever since we had finished putting up the second tent. With a gravity of speech habitual to him, Barney "reckoned somethin's turned up, or Mister Culbertson done bin hyar shore." He had been with Culbertson two or three trips up the Nepigon and at other places as cook and game keeper, and knew his man.

All this time we were getting hungrier.

While Barney felt his way down the hill for a camp-kettle of water Charley and I ground some coffee, sliced a

section of bacon, got out some pilot bread, and when Barney got back with the water made a pot of coffee, strong and hot—which beats all the camp beverages ever thought of for "stimulatin' and sustainin' qualities"—fried the bacon, and with the remains of a lunch brought from home in a basket, we had a supper that put us in such good humor that we did not care whether it quit raining or not. That coffee, with two or three lumps of cut sugar dropped in the old army-pattern tin cup went to the spot with more directness than if it had been served in the finest china in the swellest hotel in the land. Supper over, we gave a final and combined yell that brought only a weird wail for answer from a sleepless loon a couple of miles down the lake. We listened till we strained our ears for old Sam's peculiar imitation of a locomotive whistle; but hearing nothing but the patter of the rain on the tents and the fitful sighing of the wind through the pines and hemlocks around us as it came in gently off the lake, we gave them up for the night and went to bed tired, sleepy and happy. It turned out that they had hired a team at the hotel and started for the camp about dark, leaving Baker and Mason to drive out to Baker's house a couple of miles back in the woods from the station and come back early in the morning with the rest of the baggage. Their boozy driver had somehow failed to understand the directions given and took the road to Duck Lake before Baker got back to the hotel, landing them at a picnic ground for the villagers on the bank of the lake where there was a roofed-over dancing platform called "The Bowery." By this time it was pitch dark and still raining, and they took refuge under "The Bowery," where they shouted themselves hoarse trying to get an answer from us before the chump of a driver found out that they wanted to go to Green instead of Duck Lake. For a while the air was full of strange profane-like sounds, so it was told us next morning in the recital of their nocturnal adventures—and the driver in serious danger of a ducking into the lake "to cl'ar up his obfusticated mental faculties," as old Sam said, but at last they took the back track for town through the rain and darkness, so disgusted and and red hot mad that as old Sam declared without twitch of a muscle in his solemn face, "every drap o' rain that fell on 'em was het up so 'at you'd a thought a locomotive was a runnin' wild thro' the bresh, from the streak o' steam they left behind." Back at the hotel they wanted the driver to make a fresh start and drive them to Green Lake, but he had experience enough for one night, and put his horses in the stable even after the offer of a double fee for the service. Then the "Colonel" (The Kentuckians from force of habit had given Culbertson the title of "Colonel" the year before and it had stuck to him), offered him or any one else around the hotel $5 to show him the way to camp on foot, but it seemed they all "stood in" with the house, or didn't care to risk finding the road in the rain and dark, and the boys gave up the attempt to reach camp that night and went to bed soured, and "clean buncoed," as old Sam made it out. To fill the measure of the disappointments and miseries of the night, the Colonel's bed broke down before he was fairly in it, and he passed the remaining weary hours till morning with head and heels a good deal higher than some other parts of his anatomy, in a vain endeavor to make the snores, and snorts, and growls come out even with the anathemas heaped at irregular intervals on the driver, the hotel in general, and "that $1.49 bedstead" in particular. The keeper of the fryin' pans was right: something had turned up. It may be noted that the Colonel stands "risin' o' six foot" in his socks and weighs considerably more than 200lbs.—hence the catastrophe that overtook that $1.49 bedstead. Morning came at last to give him rest, and with it Mason and the son-in-law with the team and baggage from the station, and after a breakfast, the strongest feature of which was the axle grease sailing under the name of fresh country butter, they paid the score, which was so astonishingly small that old Sam figured it out that the landlord had in his mind the axle grease, the .22-calibre biscuits, and the $1.49 beds when he named the bill; a tacit apology as it were for the miseries he had inflicted on them—and in half an hour more they were in camp, hustling the keeper of the fryin' pans around to get them another breakfast. KINGFISHER.

Snake-Charmed Birds.

WILLIAMSPORT, PA.—It is the popular belief that serpents have power to charm their prey before devouring it. This belief seems to be applied only to the smaller snakes and not to the larger ones. The small snakes, I observe, are endowed with more patience, and when they wish to procure a meal they do not rush upon their victim and by force crush out its life, but calmly and patiently await their opportunity. I believe that no serpent has the power to charm. The snake is a natural enemy to bird-life. For this reason, when a bird observes a snake it immediately sets about to drive away its enemy. The snake may raise its head and retain a motionless attitude, save now and then the thrusting out of the tongue. The bird will fly or flutter about, manifesting the greatest excitement, chafing and chattering, scolding and screaming by turns, all the while flitting in a hurried manner back and forth, until by this violent exercise in the fruitless effort to accomplish its purpose, it so reduces its physical force that it is unable to continue the warfare further than to retain with difficulty its hold upon some friendly branch. In this exhausted condition it can only flutter its wings, make fluffy its feathers and emit a slight vocal sound. Tired out, the bird is unable to escape and thus falls an easy prey to the snake, that simply bides its time and at the right moment reaches up and captures it.—CHARLES H. ELDON.

Natural History.

RATTLESNAKES AND THEIR WAYS.

TARPON SPRINGS, Fla., June 15.—*Editor Forest and Stream:* I am inclined to side with Dr. Ellzey in the statement that rattlesnakes do not spit or eject their venom. I have had some experience with rattlers, have been bitten by a five-footer, have killed a few, have seen more that others have killed, have pinioned them under a heavy billet of wood and then teased them with a long stick; and I have never seen one spit, have never seen one dripping poisonous saliva from its fangs; in fact I have never even seen one with his mouth open when in coil. The opening of the mouth is done at the time, and is a part of, the act of striking, and is done too quick for the ordinary eye to see.

And then again I have dissec ed some half-dozen or more, and have invariably found the fangs and poison sac inclosed in a slight membrane. In cases where the snake had been teased until it would strike at sticks or any other object, this membrane was broken; but in two instances where the snake was shot and the back broken the membrane was found intact. All of which goes to show that the snake must strike something to rupture this membrane before the poison can be ejected.

I have seen one rattler with a half grown rabbit in its mouth. The rabbit was alive, and when the snake was shot and in its writhings the rabbit slipped from its mouth it ran away unhurt.

Once again, I saw a rattler catch a mother quail. The bird had a brood of newly hatched chicks and in her efforts to lead the snake away from her young, she ventured too near and was caught. The snake was killed in the act of swallowing the bird. The quail when released was apparently stupefied, but after some time came to its senses enough to stagger off, and the next day was discharging the duties of a mother in good shape. Both of those snakes I dissected very carefully; and in both I found the membrane inclosing the fangs and poison sacs unbroken, which proves I think, that the rattler does not use his poison fangs to procure food, but simply for defense, and that he cannot spit, or throw his venom, until he has been in a scrimmage long enough to get his artillery in condition.

One writer in the *Century* not long ago told of a rattler spitting a full teaspoonful of venom, which struck the writer on the forehead. Now I would not dispute that statement for the world, but I don't believe that there is a full teaspoonful of venom at one time in any six of the largest rattlers to be found in Florida.

Now let us hear some one else tell their experience, it is all interesting and we may get down to bottom facts after awhile. S. D. KENDALL.

Editor Forest and Stream:

In your issue of last week it was suggested that some further facts as to the peculiarities of the rattlesnake might be useful, and I add my mite on the subject without pretending to the accuracy of the scientific observer. If in anything there is difference between me and the learned professor you quote I shall not know it, for the language used in his description is quite beyond my comprehension.

I have met with what I should call five or six different species of the rattlesnake. One was known as the yellow snake, found in New England and as far west at least as Ohio. In Michigan I found a spotted, short, thick-set beast, mostly on marshes and wet prairies, and one black variety, long, slim, and the most active and vicious fighter of any of the family. A dark brown species is very abundant in most of the cañons on both sides of the Rocky Mountains and as far south as the Mexican line in Arizona. They are found larger and more venomous as we go south. I have killed some very respectable-sized specimens in the foothills west of Denver, and also in southern California.

They are not often found more than 7,000 to 8,000ft. above the sea level, and in camping in the hills I have always made it a point to pitch my tent above the snake line when practicable. They generally have their homes and dens high up on the mountain side in some ledge of rocks where they gather in large numbers. I met with such a place nearly or quite 8,000ft. above the sea level, and came to notice it from there being a quartzite cliff with perpendicular face sitting apparently on the smooth surface of the blue limestone forming the body of the mountain. There was left between these strata a horizontal crevice some ten feet long and an inch or two thick. A buzzing from two or three rattlers about my feet drew my attention to the fact that ten feet above me at the foot of the cliff was the mouth of the den. The next morning at sunrise I returned to the place with my son (a lad of fifteen, carrying his shotgun). The brutes, or some of them, were at the mouth of the crevice, and the lad killed twelve at the first shot, and in three or four shots killed between thirty and forty. The next morning we returned to the cliff and I walked a few rods in advance carrying the gun. There were no snakes in sight but a cry of alarm from the lad caused me to turn back and I saw a very large snake on the side of the hill above the lad and coming toward him with head high in the air and with every appearance of anger and an intention to strike him in the face. The snake had got within a couple of yards of the lad when my shot struck it. A few days later I had a miner shove a stick of giant powder well into the crevice under the cliff and fire it. I had expected that the concussion would destroy what animal or reptile life had taken refuge there, but in addition the cliff itself went down the mountain side in fragments.

If disturbed at their dens, rattlesnakes sometimes go a mile or so and make a combined attack on their enemies. Mr. Hooker, a merchant of San Francisco, who had a large cattle ranch in Arizona, told me the rattlesnakes made a raid on his ranch house one night and drove his half-dozen herders out of the house, where they staid till morning.

In fishing or hunting in the hills, scarcely a day passes that I do not see one or more of these reptiles. For many years I have carried in my pocket a series of strong magnifying glasses, and have often examined the structure of the rattlesnake's mouth and fangs—the fangs appear opposite each other on the upper jaw, each lying along the side of the jaw when not in use, and are thrown down at the moment of striking. The fang is bent or curved and has a hollow or cavity running through the center from the jaw to near the extreme lower point, where it becomes solid and sharp. A piece is cut from the outside curve of the fang to near the point, and so deep as to open to the cavity. It is much on the principle of the hypodermic needle, if only the needle were curved and the opening to the cavity above the point, with good, solid, sharp steel for a point.

In experimenting with many specimens I find they rattle as often when running as when coiled, and generally seek a tuft of grass, bush or some other cover where they keep up their buzzing for a minute or so, if undisturbed. They strike when coiled or with no coil—simply bringing the head back a few inches. If one is stopped on the run, if you put a stick near him he strikes, and keeps on striking without coiling. Cut him in two, leaving 3 or 4in. of body with the head, and the same striking is continued for a while.

I have never seen in this snake the slightest disposition to spit or blow its venom. And with such perfection of apparatus for placing its poison where it is most deadly, I could not believe in the spitting method of defense.

In one case I saw a girl six or eight years old who had been wounded on the top of her foot by a rattlesnake. The marks of the fangs were seen in two dark-red spots. It was too late to open the wounds with a pen-knife and suck out the poison, I sat on the floor by her a hour or two and kept the foot and leg in cloths wet with whisky, and gave her some to drink once in fifteen minutes. The foot and leg swelled badly, but swelling went down after twenty-four hours. The bite of a rattlesnake is quite as dangerous as is claimed for it. They kill, in the West, a great many cattle and horses. If a domestic animal is struck in some muscular part of the jaw or neck, you can see it for weeks carrying a swelling nearly as large as the head, it becomes emaciated and unable to eat, and in a few weeks it dies. Struck in a more vital part, the whole poison gets into the blood at once and death is immediate. Deaths from snake bites among the poor half-clad people of Mexico, if actually counted, would show how dangerous it is to be bitten without the protection of stout boots, stockings, drawers and such other covering as an American wears in the mountains.

As pets, I prefer something higher in the order of creation than either a snake or a monkey. The Egyptians from the earliest times seem to have dealt much in serpents, and I find no fault with the tastes of that people. But I should regret to know that my countryman were getting up a cobra and rattlesnake market for pets.

IDARO. GEO. H. WYMAN.

Editor Forest and Stream:

The rattlesnake, so far as my observation goes, acts only on the defensive. I have observed them on several occasions, and have never seen the least approach toward taking the offensive.

I have watched them from a short distance, and after attracting their attention, observed how deliberately they will move away. The rattlesnake gives the impression that he does not intend to be hurried. He is very sluggish in his movements, as if crawling was a laborious business; in this respect he is the very opposite of his deadly foe—the big blacksnake, which goes through the woods at a pace that is most startling.

The rattler, if you are not far away, will often stop and look at you as if to warn you against too near an approach. If now you throw something toward him and it strikes the ground pretty close to him, he will at once coil and spring his rattle and give you warning not to approach too near. He will sometimes retain this position a long time, but after awhile, convinced that what you have thrown is not a living enemy, he will slowly uncoil and crawl away in the most deliberate manner.

Walking along a wood road I once put my foot down within a very few inches of a very large rattler coiled and asleep. My sudden departure from his immediate vicinity aroused him, and, as I stood watching him from a short distance, he started to crawl slowly away without even springing his rattle or raising his head in warning.

The catching of the rattlesnake alive is not at all difficult, and taxidermists and keepers of museums in Florida have no trouble in purchasing from the country boys all they may need to keep up their collections. The boy, if he has found a snake and happens to have a stout string in his pocket, as what boy has not—simply makes a noose in the end of it, and cutting a stick with two prongs at the end, pins the serpent's head to the ground, while he slips the noose over it, and then drawing it tight, marches off, dragging his victim behind him until he reaches home and can put him in a box until he can bring him into town for sale.

The rarity of accidents from snake bites in Florida shows how little danger is to be apprehended, anyway, and this danger could be very much lessened if proper precautions were taken, as the accidents that have occurred usually show this. A hunter in the scrub should always have on either heavy boots or leggings; and the snake rarely strikes as high as the knee. I do not believe a lady in any danger at all, as, if the snake should strike, the fangs would be caught in the folds of her dress. A story is told in St. Augustine of a woman and her little daughter picking whortleberries out in the woods, when the child, at some little distance, suddenly ran screaming toward her mother, who with horror saw a rattler dragged behind the child, his fangs having been caught in her skirt. The mother hastily tore the skirt from the child and left it with the snake, helpless and unable to remove its fangs from the dress. The child was entirely uninjured. W.

ST. AUGUSTINE, Fla.

Editor Forest and Stream:

While quail shooting in the vicinity of Santa Fé Lake, Fla., last March, I came across a rattlesnake, which, on seeing me, sounded its rattles and kept it up for some time, while I watched it. It did not try to escape. After shooting it I found it had a rabbit half swallowed. I mention this as an instance when a rattlesnake would like to have spit very much, but he had evidently broken off more than he could chew! The snake was 6ft. 6in. in length, and had eleven rattles. The rabbit was a full-sized one. A. W. HAMLYN.

BUTCHER BIRDS AND HAWKS.

Editor Forest and Stream:

Every one who knows a goose from a sandpiper knows the impaling trick of the butcher bird, and to relate what I have seen performed by them would be serving up a stale dish; but I never knew till recently that hawks were up to such wily tricks.

One of these worse than worthless rascals one day took it into his head to have a dove for his dinner. Like Johnny, I got my gun; but before I could get a shot at him he was off with the bird in his claws. Suspecting he had not gone far, I followed him up and he sailed out of a row of oleanders without his bird and I stopped him. I then took a look for the dove, and hearing a faint flutter I found it hanging with its head very neatly fixed in the fork of an oleander, while just far enough below it for a comfortable seat and convenient picking was a horizontal limb. He had got things nicely fixed for a feast when he was interrupted, and the dove was just at the last gasp from strangulation.

Now, this was evidently a premeditated arrangement on the part of the hawk. He could not have found it on the spur of the moment, for another place so exactly fitted for the purpose could not have been found in a day's hunt.

Familiarity with the bloody ways of the butcher bird have made me his sworn enemy. A pair of them had a nest on one of my orange trees and they remained there unmolested till I caught them at their rascally tricks, when I shot the old birds and tore down their nest, and the penalty for lighting on one of my trees since then is death. Seeing one of them dash down repeatedly and strike something on the ground, I had the curiosity to find out what he was at, and on going to him I found he was killing a chicken as large as himself. Again I saw a great commotion among the doves, and found a butcher bird had dragged one of the young doves from the nest and was slaughtering it on the ground. That settled it. I have set a mark upon them, that any one finding them may slay them. Selah! DIDYMUS.

ST. AUGUSTINE, June 13.

Florida Gallinule in North Carolina.

WINDSOR, N. C., June 13.—About two weeks ago a farmer living six or eight miles from this place found walking around in his lot a Florida gallinule. He caught it and brought it to town, where it has been confined ever since until yesterday morning it was found dead. I do not understand why it should die, as it seemed to be in good health and managed to devour a lot of minnows, etc. This is the second one seen in this county.

A. G. RASCOE.

Game Bag and Gun.

TO TAN A HIDE.

THE first step in tanning a hide is to flesh it; that is, to remove all fat and flesh from the skin. In the case of a small skin—that of a fox, mink or martin—this is best done bit by bit with a sharp knife, but when the skin is large and tough a flesher is the instrument to use. The back of a drawing knife will be found to do the work as well as a regular fleshing knife. The best time to flesh a skin is soon after the animal has been killed and before the hide is dry. However, if it is not convenient to do it then, dry the hide, and when ready to tan it throw it into a tub of water for twelve hours or more. But be sure the water is cold, and kept so, or the hair will slip. Now cut a piece of green timber, hard wood if possible, about 6ft. long and from 6 to 10in. in diameter. Bore two holes in one end and insert two legs, long enough to bring that end as high as your waist, letting the other end rest on the ground. Remove the bark from the upper side of the log and your fleshing horse is complete. Place the skin on this, hair side down, letting a little of it project over the end. Press against it to hold it in place, and holding the drawing knife firmly, edge up, press the back of it against the hide and push. After you have made a few strokes you will get the knack of it, and if the hide is in proper condition will be able to remove all flesh and fat in a few minutes. If it is an oily skin like a beaver, coon, or woodchuck, sprinkle it liberally with corn meal, sawdust or any other absorbent. If you can not conveniently procure a piece of timber for a fleshing horse as described, a 4x4in. scantling 6ft. long, will do, only be sure to round off the corners and oval the top, or you will tear the skin. After fleshing, dry the hide before proceeding to tan it.

Here is a recipe for tanning which I have found to be reliable. The quantity is for a hide the size of a domestic sheep. Use more or less as the skin you wish to tan is larger or smaller. First soak the skin thoroughly. Take of borax, saltpeter and glauber salts one-half ounce each, and dissolve in enough warm water to allow it to be spread on the skin. Double it, flesh to flesh, and keep in a cool place twenty-four hours. Second, wash the skin clean. Melt slowly together in a little water, 1oz. sal. soda, 1½oz. borax, and 2oz. refined soap, being careful not to let it boil. When cool enough to bear the hand in it, apply the mixture to the skin, fold as before and keep in a warm place twenty-four hours. Third, wash the skin clean, wring as dry as possible, and place in enough warm rain water to well saturate it, in which 2oz. of saleratus has been dissolved. Now dissolve 8oz. common salt and 4oz. alum in hot rain water, and when cool enough not to scald, place the skin in it for twelve hours. Then wring it out and dry it, at the same time pulling and stretching it. Do not use pumicestone or sandpaper. The last stage of this process is the most important, *i. e.*, the drying. If it is a deer or other hide not easily torn, stretch a stout cord or wire perpendicularly, and rub the skin back and forth over it vigorously every few minutes until perfectly dry. Do not let the skin dry too fast; a temperature of 80° is about right.

The Blackfoot Indians tan small skins, such as the fox, lynx, coyote, mink, etc., by a very simple process. After the skin has been fleshed and dried, they rub it well with fresh liver and lay it away a few hours where it will not dry out. The liver is then scraped off and the skin rubbed with white clay moistened with a little water (This part of the process is not absolutely necessary, the clay merely giving the skin a white, clean appearance), and then the tanner proceeds to dry it, holding it at intervals near the fire, but spending most of the time until it is dry working, twisting and rubbing it. This method makes a very soft tan."

I think the Blackfoot method of fleshing large skins better than the one I have described. They use an iron instrument shaped like a cold chisel, only twice as wide; small nicks are filed in the edge of it. This flesher can be made of hard wood or bone and will do the work nearly as well as the iron one. They throw the skin over a short post or stretch it out on the ground. Beginning at a place where the skin is quite fleshy, they start it with a knife, and grasping the started point of flesh with the left hand, strike between it and the skin with the flesher a sharp downward blow which still further loosens the flesh as the blows continue in an ever-widening strip.

These people, when tanning large skins (with hair or fur on), first remove one-half the thickness of the hide by "chipping" it with an instrument made of a piece of elk antler, to one end of which a sharp piece of steel is attached. It is, in fact, a miniature hoe. This chipping removes the part of the hide which is the hardest to tan, as it contains the most glue. It is an operation requiring a great deal of practice and skill to do well. In the old days the young girls used to chip pieces of bull hide for practice and never worked on robes until they understood the business. For tanning these Indians use a mixture of boiled brains, marrow grease and pounded roast liver. This is liberally spread on the hide and allowed to dry in. The hide is then well rubbed with fat, dampened with warm water, rolled up and laid away for a day, when the final process of drying is done; they expose the skin to the sun, or if in winter hang it before the fire, and every few minutes give it a thorough rubbing over a rawhide strand. This is the buffalo robe tan and the only tan which insured a soft robe. White men have tried to tan buffalo robes, and by many different processes, but they could never equal the Indian way of doing it.

In conclusion, my advice to the amateur tanner is this: Send your skin to a furrier and let him tan it for you, but if you are bound to do it yourself, use the first recipe for any skin larger than a fox, and the Indian process for anything smaller. J. W. SCHULTZ.

PIEGAN, Mont.

CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

CHICAGO, Ill., June 17.—There are several other journals beside FOREST AND STREAM in the line of field sports. I state this as matter of news chiefly, but it can be verified by consultation at the larger news agencies, or at the bric-a-brac shops. These journals profess to sportsmanship. They profess to foster all measures looking toward its preservation or protection of game or fish. They applaud the noble sportsman, and condemn the ignoble pot-hunter, and revile the cowardly citizen who will not inform upon a violator of the game laws. They claim Danielism for themselves, and invite all men to be Daniels in the cause of sportsmanship.

The gentle philosopher of Concord has said, "Consistency is the bugbear of small minds." We will not, therefore, cry simple shame for the violation of the laws of consistency, as shown by these other journals. We will simply cry shame on their cowardice and lack of manhood. Beyond that we will drop a tear of pity for their lack of ability and enterprise in the field of journalism, that field where enterprise is above all things admired, where ability is above all things considered.

These other journals, have they been really honest? Have they, or have they not, been purely selfish? Have they, or have they not, sought simply to make money under cover of their public signboards as conservers of true sportsmanship?

These other journals, what have they actually done? If it be bad taste to make accusations, let us avoid that and simply ask questions. These other journals then, or any of them, what have they done?

What one of them ever backed a practical measure of protection?

What one of them ever gathered evidence that led to a conviction?

What one of them ever even detailed a man to help in the work of getting up a case?

What one of them ever made a search for illegal game?

What one of them ever paid a dollar to aid protective work?

What one of them ever secured the passage of a better game or fish law, or any game or fish law, or any clause of such law?

What one of them ever brought forward or advocated any practical improvement in protective laws; or in protective methods?

What one of them ever awoke to the fact that the time had come to stop talking and go to work?

What one of them ever discovered that something practical could actually be done in protection?

What one of them ever thought?

What one of them ever hustled?

What one of them ever did a single, lonesome, solitary thing?

Upon the other hand, the record of FOREST AND STREAM would be enviable even if there were other records with which to compare it. It is a record too well known in every line of protective work to need recountal here. It is the record of all that journalism in America has ever done for the actual preservation and protection of field sports in America. It is the only record of thinking and of hustling. These other journals, let them have their talking record and be welcome. Heaven hates a coward.

Once I was out with a pack of hounds, and we fought about everything we could jump, from bear down to coon. We had one half-breed staghound with us, the only dog in the pack that would not fight. This fellow would run with the pack on the trail, and stick up his nose and prance around, but when it came to going into the swamp and tackling something he wasn't there. He was perfectly willing to sit out on the bank and do the heavy hollering for the pack.

Reverse the figure to make it true. FOREST AND STREAM is alone in the swamp. The rest of the pack are out on the bank doing the heavy hollering. God bless them for a pretty lot. When I fall to thinking of these things, I thank fortune not more that I am connected with a paper of good purposes than that I am connected with a paper that has a little sand. I never did like that half-breed hound.

Mr. Burnham, of the FOREST AND STREAM force, is the youngest man in the office, yet as shown in a late issue he was in at the largest seizure of illegal game ever made in the country. Mr. Burnham writes me June 6:

"Some of that illegal game that was seized here in New York a week ago Wednesday came from your stamping ground. In one room were fifteen or twenty saddles of venison, which for lack of time we did not seize. They bore the tag of [—— & ——], of — South Water street, Chicago."

Now, I hand this letter to our warden here, Mr. M. R. Bortree, and he keeps an eye on this firm. After a while he drops on them. A seizure is made. It is FOREST AND STREAM all the time, isn't it—FOREST AND STREAM working with the officers of the law? These other journals, where are they? Look out upon the bank, my son. Seek for them where you hear the swelling cry, "The public rights, they must and shall be maintained!"

A few seizures like the late one in New York, and capital will grow very timid about investing in illegal game. What has been done in New York can be done in Boston and Philadelphia. If man can cart ten-story stone buildings around on wheels, man can open cold storage houses.

The enviable record made in game protective matters by the State of Illinois in the past year was due largely to the active and unselfish labor of President Abner Price, of the State Sportsmen's Association. The new president, Mr. R. B. Organ, will be not less efficient, we all believe. The thought occurs that New York and Chicago could work well together on this cold storage question.

I notice with great pleasure the communication from our Chicago warden, Mr. Bortree. No one could state his position on the snipe-waterfowl question so well as he has done himself, and his suggestion to Col. Bond as to the test case is so simple and direct as to be pleasing. The test case is what we needed. Mr. Bortree will pardon the sportsmen for saying that he has sprung a perplexing question for them. Unquestionably he crosses the intention of the framers of the law, and the general understanding of the law held by sportsmen. As to this specific law, the matter is still one of construction, and the courts alone can construe. I can readily see, however, that if we should readjust our understanding and readjust the law, and finally go so far as to except no wild feathered thing whatever from protection, we should only be nearer the better purposes of sportsmanship. If we had a law in each State of the Union forbidding any man to carry a gun afield for any purpose from, say April 1 to Sept. 1 or Sept. 15, we would come far nearer to being protected. Legal and illegal birds often lie in the same cover, and many a one of the latter gets killed under pretense of search for the former.

Meantime Col. Bond writes again, with native persistence, as follows:

"I have a letter from Elliott Coues, of the Smithsonian Institution, in which he says that I am right and that snipe are not waterfowl in any sense of the word. With Baird, Coues and Jasper on my side I think I have Mr. Bortree to rights."

These two gentlemen are never going to agree, I fear. How about the test suit, gentlemen? A whole lot of us want to know what to do when one of those "scaipe" birds jumps up in front of us. Mr. Bortree is ready for the issue. Will some gentleman kindly step forward?

June 18.—Mr. J. W. Schultz, of Montana, again writes on an interesting topic as follows:

"An old she black bear and her two cubs were killed here recently. One of the cubs was coal black and the other a light brown, or cinnamon. Yet in spite of this some hunters—old bear-killers, too—will insist that the cinnamon is not the same species as the black-colored one!"

Mr. Schultz adds: "A large flock of Canada geese flew by here to-day (June 1) on their way North. Seems to me it is very late in the season for them to be migrating. The curlews, ducks and sharp-tail grouse here have already hatched their broods. Saw a mallard and eight ducklings in my irrigating ditch to-day."

Mr. A. R. Keating of Fond du Lac, Wis., superintendent of the Horicon Club, holding the preserve above the Diana Club or the great Horicon marsh, is in town this week. He says the ducks are breeding well so far as known, but that the prairie chickens have suffered. Horicon Club has increased its membership to sixty, and all shares but eighteen have been taken up. This club has but little Chicago membership as yet, I believe, and it would seem that some of our shooters might do worse than to look into it. Diana Club, the only other on this fine marsh, now has its list complete, I understand.

Italian Joe drifted through this week, and has departed in search of some new shooting grounds. Joe made a very bad spring of it this year. "I no tell whót come 'o de plov'," says Joe. Alas! Josefo, perhaps de plov' too is passing away. Look in de freez'!

Mr. R. S. Cox, of this city, will this fall make an extended trip for big game in eastern Washington, which he thinks the finest now in the country. He will carry a large Winchester and accessories, but will depend mainly upon his dazzling, glittering smile. Before Col. Cox's calcium light smile the most robust elk, the most facile sheep, or the most nimble-footed deer must feel itself powerless to resist. Col. Cox could spear fish or jack deer by the light of his smile, but he will not employ such expedients. He is said to be able to light a fire on a wet day with his smile. The fire just can't help it.

Last week, at Joliet, Ill., John Watson (not of Chicago), a boarder at the house of William Watson, was accidentally shot and killed by George Watson, who pointed a revolver at him in sport. George Watson says he didn't know it was loaded.

A letter lately received from Wm. French, from Loudoun county, Virginia, states that there was recently found in that county the shell of a terrapin on which was plainly visible the inscription "J. B. Hough, 1853." J. B. Hough, long since removed from Virginia, told me that he once found in Loudoun county a terrapin marked "Dan Reagan, 1828." Dan Reagan had since removed to Texas. In that country the boys used to thus brand every maverick terrapin they found, and turn it loose again. It was not thought that cutting the shell hurt the creatures any. I do not doubt that many interesting experiences of these quaint records could be told.

E. HOUGH,

FARMERS AND FARMERS.

Editor Forest and Stream:

It is a pity that "Podgers's" tender-heartedness is not broad enough to include with beasts and birds the most necessary and most abused class of people on earth.

He must have been very unfortunate in his intercourse with farmers to have formed such an opinion of them, more unfortunate than most sportsmen have been, for the columns of FOREST AND STREAM bear frequent testimony to the good feeling which prevails between the two classes, one of which is so often a part of the other.

But there are different kinds of sportsmen as there are different kinds of farmers, and judging from the tone of your commentator, there would seem to have been a contact of the most uncongenial elements of each class. In that case the estimate of either concerning the opposite class as a whole, is likely to be unfair.

I once heard a hoary-headed "true sportsman" boast of killing off a whole covey of quail that a farmer had wintered and summered at his barn and in his fields, and this after he had partaken of the farmer's hospitality and drawn from him the secret of the birds' whereabouts. That farmer could not be expected thereafter to entertain a very exalted idea of the honor of all sportsmen. And I heard a young farmer boast of wringing the necks of a brood of young partridges in sheer wantonsavagery, but I know that there is not one in a thousand of any class who would commit so brutal a deed as either of these cited.

Because there may be a very few dishonest lawyers, we should not condemn all of that most honorable profession, nor because there are among us too many who are selfish and illiberal is it just to characterize us all as being so.

As one of them I do not claim that farmers possess all the virtues any more than they do their rightful share of the material good things of earth but only that according to their means and opportunities, they are as unselfish, as liberal and as broad-minded as any other men. Also that it is not their common practice to poison harmless birds nor to commit the sin of going about without stockings. In witness whereof, I, being only an ordinary farmer, and the day warm, do testify that I am at this moment wearing a pair, under my cowhide boots.

AWAHSOOSE.

NEBRASKA PRAIRIE CHICKENS.

KEARNEY, Neb., June 16.—*Editor Forest and Stream:* A scarcity of game is reported from the Southern and Western States, owing to the late spring and heavy floods. High water along the Missouri River and its tributary streams has drowned out the quail and chicken, and Eastern sportsmen are beginning to ask themselves where they shall get their fall shooting this year. I have a little game pocket, perhaps not so good as Mr. Hough's, for I can boast of nothing but prairie chicken and quail, but such as it is its location will be made known by me to any parties inquiring (please inclose stamp for reply), the only requirements being that the inquirers shall reside where they cannot get shooting on this kind of game at home, and that they be sportsmen and not game hogs. I can probably give one hundred men locations where they will find the shooting a little above the average, where they will find pleasant people, good accommodations and reasonable prices. The rains and floods have not afflicted us. Young chickens are out of the shell and quail are breaking out this week. The country I have in mind is easily accessible and lies by rail, twenty to sixty miles from Kearney. Arrangements should be made to arrive on the grounds by Sept. 1 for chickens. The best hunting on quail will be found after Nov. 1, with some corn-field shooting at chicken.

I will make arrangements to accompany a few parties personally (for sport, not remuneration), and those who go with me can be assured that they will have some good dogs to shoot over. This country is practically unknown to sportsmen, as it has been reached by railroad only within the past two years. It is none too early to lay plans. I am through this country every week and will try to keep your readers posted on the outlook.

C. P. HUBBARD.

OBJECTIONS TO THE CANNON.

1. The weight. I am no baby, but I don't carry any 10 or 12lb. gun into the country that deer usually inhabit. I believe in being humane to myself. I won't stay at home, either. And what is more, I can walk all around any man that will load himself down thus, see more deer and get more shots.

2. The recoil. For the big loads it is unpleasant unless the gun weighs about 12lbs.

3. The danger. Bullets driven by from 70 to 120 grains of powder are dangerous to stock and persons anywhere within a mile of the shooter.

4. The butchery. Even a .38 bullet, unless carefully placed, will spoil half of a deer's meat. If you can't get a deer without smashing his hindquarters, better let him go, that is, unless you are just killing for the fun of it. To murder a deer of moderate size with a .50 caliber hollow or split pointed bullet is like shooting ducks with buckshot. If a .45 split point is "about the same as five .32-40's," why not use a "scatter-gun," and be done with it?

A .38 or .40 caliber bullet with from 40 to 65 grains of powder will make two holes in a deer's skin nine times out of ten. How much more penetration do you want? What is the use of penetrating somebody or something a mile on the other side? If you must shoot from behind try for the neck. Then it is either kill or miss. For a side or quartering shot the loads I have just mentioned are sufficient for any deer. What may be needed for grizzlies or moose is another matter. AZTEC.

SAN LUIS POTOSI, Mexico.

The Safety of Guns.

EAGLE ROCK, Pa., June 11.—I think the recent articles on "safety" devices on guns must be productive of much good in calling attention of sportsmen to the necessity of care in handling guns, loaded or unloaded. They have, at least, taught me a lesson. After reading the first article I couldn't rest till I had tested my gun by repeatedly raising the hammer to nearly full cock and letting it fall. I didn't succeed in breaking a primer, but I did succeed in breaking a mainspring.—MC.

A Stench From Mr. Jackson's Trunk.

STAMFORD, Conn., June 15.—*Editor Forest and Stream:* My attention having been called to an open and flagrant violation of the game laws of the State of Maine, perpetrated within the last ten days or so, by a resident of this town, I wish to inquire if there is no method by which the miscreant can still be made to suffer for his actions.

The only facts I have been able to gather are as follows: Yesterday a trunk arriving in the baggage on the N. Y. N, H, & H. R. R. from the East, excited such strong suspicions, on the part of the railroad people, because of the strong odor which it emitted, that it was held, pending an investigation of the deputy-sheriff.

It was claimed and opened in the presence of the deputy-sheriff, by a party of the name of Jackson, and was found to contain the hide and other portions of a large bull moose, which Jackson stated he had brought from Maine.

These remains were subsequently buried upon Jackson's premises, as they were so greatly decomposed as to be valueless. Jackson did not state whether he killed the animal himself or not. Can the State Game and Fish Commissioners of Maine do anything, at this late day, if notified? DRAGON.

[If the full name and address of the man who had the moose in his trunk shall be forwarded to Commissioner E. M. Stilwell, Bangor, Me., we presume that something may sometime happen to Mr. Jackson.]

This Must be that "Game Pocket."

GRAND RAPIDS, Minn., June 13.—*Editor Forest and Stream:* Thinkin that som of the sportin comunity would like to hear from this part of the country in regard to game & fish? I take the liberty in addressin you, & you can if you wish? publish this letter so they can get posted in regard to theas parts, I am a thourbreed sportesman myself & like to help out the sportin comunity in strikin a good place to hunt & fish. I hav ben over nearly all parts of the country in quest of game & fish? & I can assure them that this part of the States takes the cake. Deer, bear, moos, & careboo abound in countless numbers. Also ducks & geas in the fall owin to the emence wild rice fealds here. Fish? There is in the lakes & streems here pickrel-pike, bass-trout & muscalunge in great quantityes. 3 miles from this place is a lake called the Pocagmau Lake? literly swarmin with all of the above fish. The lake has 195 miles of shorage, and is a clear beautiful sheet of watter. There is lakes in every direction all swarmin with the abov fish. This place is now only 3 years old so you see this is a new country. If I can giv ena information to ena of the sportis fraternity? I will gladly do so on application. Also if you wish for ena score sheets on fish ketches I will furnish them. Respectfuly youres? J. W. GOUCHER, P. O. Box 7, Grand Rapids, Minn.

The Cold Storage Game Case.

THERE is a prospect that the case of the New York Refrigerating Warehouse Co., of 107 Murray street, this city, will soon come to trial. This is the concern in whose establishment Protector Brown recently seized 1,074 birds, the possession of which it is claimed was an offense under the game law. Papers have been given to the Sheriff, and action has formally been begun against the company. The amount of judgment demanded is $25,000, and the case for the prosecution is a particularly strong one. The refrigerating company have twenty days in which to file their demurrer, and the case will be put on the calender for the fall term. No expense or effort will be spared by the Commission and their attorney, E. J. Whitaker, to have the statutes fully vindicated. We understand that the Refrigerating Co. have made overtures for a settlement.

At a meeting of the American Association for the Protection of Game, Game Dealers and Consumers, last week, it was decided that a fund of $5,000 would be necessary to defend the suit against the New York Refrigerating Co. for having in possession game, and arrangements were made to raise the money.

ROD AND GUN AND CAMERA.

As a recognition of the important place of amateur photography n its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.'

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

Half Rates to Cincinnati, O., via Pennsylvania R. R.

For the benefit of delegates and visitors to the Prohibition National Convention at Cincinnati, O., on June 29 and 30, 1892, the Pennsylvania Railroad Company will sell excursion tickets to Cincinnati, O., from all principal stations on its lines, at a *single fare for the round trip*. The tickets will be sold June 27 and 28th, good going only on date of sale as stamped on back, but not later than for trains leaving initial point of ticket June 28th. The return coupons will be good to return on date stamped on back by agent at Cincinnati, but not good for return passage to initial point after July 6th.—*Adv.*

Sea and River Fishing.

Trout and Bass Fishing.

WE have secured, for the private information of the readers of FOREST AND STREAM, knowledge of a number of streams and lakes easily accessible from this city, where we believe that good fishing for trout and black bass may be had. The information we shall be glad to furnish without charge to any reader of FOREST AND STREAM who will apply for it, either personally or by letter.

THE SALE OF CULTIVATED TROUT.

Editor Forest and Stream:

In Mr. W. L. Gilbert's paper, read before the American Fisheries Society, he says: "Connecticut, Rhode Island and Maryland have modified their laws in relation to the sale of trout artificially raised."

Let us examine Connecticut's "modified" law: "Every person who shall catch any brook trout except with a hook and line, or shall sell, expose for sale, purchase, catch, or have in his possession any trout, except from the first day of April to the first day of July, shall be fined $7 or imprisoned not more than thirty days, or both; provided, that any person may take trout in waters owned by him, for the purpose of stocking other waters."

The proviso means this: "That any person may take live brook trout in waters actually owned by him, for the purpose of stocking other waters; or he may take and sell any live brook trout actually reared in such waters, for propagating purposes only."

My understanding of the law governing trout in Connecticut is that no one can legally sell dead brook trout from July first to April first. There can be but little consolation for fishculturists in Connecticut's "modified" law if they wish to "peddle" trout out of season.

Mr. Gilbert also states: "We pay a tax not only on our plant, but also on our trout as stock in trade, and the law declares them to be our absolute property. Under these conditions we feel that we are entitled to the same property rights in trout at all seasons of the year that every class of property that is useful to man."

Chief Justice Shaw, of the U. S. Supreme Court, says: "We think it is a settled principle, growing out of the nature of well-ordered society, that every holder of property, however absolute and unqualified may be his title, holds it under the implied liability that his use of it shall not be injurious to the equal enjoyment of others."

This is according to the maxim, *Sic utere tuo ut alienum non laedas* ("enjoy your own property in such manner as not to injure that of another").

An eminent judge says: "By the general police power of the State, persons and property are subjected to all kinds of restraints and burdens, in order to secure the general comfort, health and prosperity of the State."

Analogous to the question whether "artificially reared trout" can be sold at all seasons of the year or not: The State of Georgia had a law known as the "Local Option Law" which exempted from its provisions wines manufactured in that State. The Supreme Court of the United States held that it was not competent for a legislature thus to discriminate between wines made in Georgia and the wines of other States and foreign wines. Tiernan vs. Rinker, 102 U. S. 123—Weil vs. Calhoun, 25 Fed. Rep. 865. If it was not competent for a legislature to discriminate "between wines made in" its own State, how can a State discriminate between "artificially reared trout" and wild trout?

This quotation from Mr. Gilbert's paper is a gem—of its kind, it reads: "Our customers (for trout) and ourselves shall be the judge of when that time (to sell) is, not the State."

Chief Justice Bradley, of the Supreme Court of the United States, in giving the opinion in Coe vs. Errol, 116 U. S. 517, said: "A State has jurisdiction of all persons and things within its territory which do not belong to some other jurisdiction."

If Mr. Gilbert is right in his assumption that he can do as pleases with his property (trout) then Chief Justices Bradley and Shaw, of the Supreme Court of the United States, are wrong—their statement repudiates such a distinction.

The right to sell "artificially reared trout," at any time would embarrass, derange, and effectually destroy the law regulating wild brook trout.

Mr. Gilbert cites the Massachusetts Fish Commissioner's report of twenty-two years ago to strengthen his position. Persons' views sometimes change in less than twenty-two years. A. C. COLLINS.

HARTFORD, Conn., June 18.

Editor Forest and Stream:

I notice you have published my paper on the sale of artificially raised trout, which I read at the last meeting of the American Fisheries Society, and also Gov. Russell's veto message of the bill which passed both branches of our Legislature which provided for the sale of artificially reared trout from Jan. 15 to April 1. You also published an editorial criticising the paper and bill, which it would seem was not a courteous thing to do at this time. It should have been done at the meeting, at which time criticisms are invited.

It is evident that Gov. Russell and yourself have fallen in the same dilemma in regard to the public rights in the trout streams of Massachusetts. The Fishery Act of 1869 made the fish in every unnavigable stream in this State the absolute property of the riparian owner by simply posting it forbidding fishing therein. The same is also true of every pond not over 20 acres in area, and of every pond created by artificial flowage.

Trout cannot live in water above 65° in temperature, and therefore confined to the unnavigable streams of this State, and the small artificial ponds therein, and to-day almost every trout stream and trout pond from Provincetown on the east to the New York State line on the west is posted, forbidding any fishing under penalty of the law, and what few are open to the public can be closed up by simply posting them.

Under these conditions I ask where are the public rights in the trout streams of Massachusetts? They exist only in one's imagination. Previous to the passage of this law of 1869 the people had the right to fish in all the streams and ponds in the State over ten acres in area, subject only to an action of trespass, and on streams which run through wild woodland, no action of trespass can be maintained, and were open to the public to fish in during the open season. Why did the people consent to the passage of this law taking away their rights? The

answer to this question can be found in the report of the Commissioners of Inland Fisheries for the year ending Jan. 1, 1869, which is in substance as follows: That by so doing they would be a thousand times compensated by the large amount of food fishes which these private riparian owners would raise for the benefit of the general public. But how can they ever derive any benefit as long as the present laws remain debarring them the privilege of buying these trout during the most desirable part of the year, and the few establishments which are raising trout on an extensive scale, and have been true to the people, are thus handicapped so that they cannot do justice to the people for the great sacrifice which they made.

The law which was intended to encourage and establish the industry of raising trout and other food fishes on an extensive scale has been perverted, and wealthy men and clubs have bought the land bordering on nearly all the trout streams, and thus become riparian owners, and are now holding the streams, for their own pleasure and the public are deriving no benefit whatever. Fellow citizens, rise up and demand either the right to buy these trout, which we are raising, whenever they are in the best condition, and if that is denied you, as it now is, demand the repeal of the law of 1869 and these private waters again become public for you to fish in. You are entitled to one or the other.

I fully agree with you, Mr. Editor, that the sale of trout should be prohibited during the spawning season and development of eggs. If you were better posted on the habits of trout you would not have made the mistake of criticising the bill in that direction, as the bill did not allow the sale at that time.

Trout are all through spawning in New England and southeastern New York on the 15th of December, and the bill which you condemn provided for the sale after Jan. 15, thirty days after the spawning season is all passed. I ask why is the close season kept on trout until April 1, three and a half months after the spawning season is over, while on all other kind of fish the law is taken off within thirty days or less after the spawning is passed? Is it for the protection of the trout? Does it make any difference whether a trout is caught in February or April? In either case she has performed her office of reproduction and will do no more until the following October or November. No, Mr. Editor, the law is not held on until April for the protection of the trout, but rather to accommodate the angler and sportsmen, who do not care to fish until warm weather, and the law is made for their accommodation.

It would be far better for the protection of the trout to make the close season from July 1 to Feb. 1, for in July and August the eggs are developing very fast, while in February and March they have just passed the spawning season, and have no eggs in them. We are however perfectly willing to leave to the angler to say when the law shall come off of the wild trout if there are any, provided that a law can be passed to allow the sale of artificially raised trout after Jan. 15, thirty days after the spawning is all over. If this is still opposed as special legislation we shall go to have the law taken off of all trout after Jan. 15.

The question to be decided is, shall trout be raised for a food product for the benefit of all the people or only to furnish sport for a few exclusive sportsmen. If for the former then all laws which prevent the development of the industry should be repealed. If for the latter then the business is already overdone.

Gov. Russell vetoed a just bill, carefully drawn to guard all interest, public and private, did not interfere with the spawning season and restricted the sale of trout less than 9in. in length, and if it had become a law, the ultimate result would have been to make trout plenty and cheap. I think Gov. Russell will live to see his mistake. W. L. GILBERT.

PLYMOUTH, June 18.

"PODGERS'S" COMMENTARIES.

YOUR editorial on the subject of a national park for the preservation of salmon and trout is timely, as at the rate of the present destruction of salmon by the canneries there will follow, as you say, utter annihilation of this noble fish.

It is not an uncommon thing to see at San Francisco big ships loaded entirely with canned salmon. And when it is considered how many thousands and thousands of fish are required to constitute a cargo for a big ship, it is evident that the supply must soon be exhausted. Already the Columbia River, once swarming with them, now furnishes but a meagre supply, and soon those waters will know them no more.

Some legislation or the reservation of some portion of the northern Pacific coast has become a necessity to prevent the utter extinction of the salmon.

In the early days of California the Sacramento River was then considered as an almost inexhaustible source, and no one dreamed that in a few years the supply would fail, but the canneries are now all, if not quite all, closed for want of a sufficient supply to pay expenses, and this is but an example of what will soon follow the destruction going on in the rivers of Alaska.

In 1850 and for a long time subsequent the retail price of salmon in the San Francisco markets was two cents per pound, and the salmon was called "poor man's beef;" and I have seen cart loads carted off from the markets unsold and dumped into the bay. The price now is twenty-five cents, and will soon be higher.

Personally I have not so much sympathy for "Lo, the poor Indian" in the case, although I suppose he must be fed, as great a nuisance as he is, and in Alaska, as the agricultural resources and capabilities are "nil," there is little else for him to fall back on, so we must reserve the toothsome salmon for this epicure, or as a dernier resort we may have to "can" him to solve the question of what is to be done with him.

By all means agitate and advocate the subject proposed, of a reservation and prohibitory line beyond which the canneries shall not exist, and also restrict the "catch" in all rivers below the line. The entire coast of Alaska should be closed to the canneries. It would then furnish a prolific source of supply for propagation and restocking the rivers below. The time has come for the canneries to go. Let the FOREST AND STREAM continue the good work it has begun.

The wisdom manifested by the Fish and Game Commissioners of Maine in the appointment of Mr. J. Darling as game warden is too apparent to pass without commendation. His very sensible letter in last week's FOREST AND STREAM giving a history of what he has been able to accomplish, is evidence of the good results of the appointment, and all true sportsmen should have a good word for Mr. Darling and recognize his zeal and conscientious efforts in the cause and the prompt manner in which he is executing the duties intrusted to him. A few more such appointments will have a visible effect on the preservation of game and inspire a wholesome respect for the laws. If there are any more copies of this Mr. Darling let them be found and appointed game wardens.

"Cynic," in his "Dogmatics of Dogdom," last week, says, "The modesty of dogmen is their greatest virtue." Is this not a little rough on the dogmen, a little ironical, as it were? "Cynic" could not have read the dog columns of the FOREST AND STREAM, for it strikes me the modesty of many things they claim is open to criticism, and what they say of their dogs and their boasts hardly illustrate their claims as specimens of modesty. I have often wanted to ask a dog what his real opinion was of his master. That dogs have views and opinions of their own can hardly be denied; but they show more wisdom than do their masters by keeping them to themselves.

Boasting of a dog's qualities, however, is nothing compared to "horse talk." I was down on Long Island once of a Sunday morning, and half a dozen fellows were sitting on the top rail of the fence after breakfast talking about their horses in the stable just at hand. By their own account there was not a horse there that could not trot in 2:40. One old chap who did not own a horse but sat complacently chewing a straw finally remarked, "I say, you fellows, what sort of an opinion do you suppose those horses standing there have of you, listening to your infernal lies about their speed when there isn't a horse there that don't know he couldn't trot in four minutes to save his life." Just at that moment one horse stuck his head out of the open window in front and gave a tremendous long drawn out snort, looking at the man meanwhile with a comical expression perfectly human that plainly said, "Correct, old man!" There was not a fellow on the rail that did not fully believe the horses had heard every lie they had been telling. That snort busted up any further horse talk for that morning. PODGERS.

TOM'S CREEK.

LISTENING to the plaints which swell upon the air from Pike county, anent the failure of the trout streams of that famous region to yield their usual toll this spring, causes me to wonder if the most famous of all, Tom's Creek, of blessed memory, has also been found wanting. Perish the thought. That noble stream could never betray confidence. For many years Mac, John and I made annual pilgrimages thither, and never was our journey fruitless. Other streams might fail the angler, and in other waters the trout might sulk, but at Tom's Creek disappointment never lay in wait for us upon its banks. It mattered little to us what the weather might be, although the chill of winter "lingered in the lap of spring," or the waters ran swollen with snow or rain, the singing reel and fast filling creel afforded ample proof that Tom's Creek would not deceive.

Some years have sped since my last cast upon its sparkling rifts and deep solemn pools, but the heart ever beats quicker with the emotions the name awakens, as

"Fond memory brings the light
Of other days around me."

and I think of the stream, with its beauty and peace-giving rest, and see upon the banks the forms of my two loved companions of the years that have gone.

Not the least of the pleasures of our annual trips was that ride which never lost its charm, down the beautiful Delaware Valley from Port Jervis. Behind a good team we would bowl over a road of such rare smoothness that riding became truly a luxury, while dull indeed to the beauties of nature was the eye that drank not in with delight the loveliness of the scene. On the left, sparkling in the sunlight, ran the Delaware, deep-fringed with the dark green of the rich lowlands, on the right rose the mighty hills, reveling in the full glory of their spring foliage, whose varied hues were so thickly splashed with the luxuriant flowers of the dogwood as to present all the appearance of rifts of snow, which had blown in and nestled lovingly among the branches. The melody of many birds rang out upon the air, the fragrance of the flowers was borne upon the breeze, and ever and anon a graceful pair of doves flew gently by, the whole scene rendering the drive one of unalloyed delight. And then the dinners at Fouchère's! Such dinners as only a true angler is worthy to enjoy. Surely never man lived who could cook a trout as that old Frenchman would set before us in the days of auld lang syne. And last, but not least, when we had left the valley and climbed the hills, how merrily would we rattle up to the hospitable house of the good widow Depuy, who was always standing in the doorway, with smiles of hearty greeting dimpling her dear old face.

As yesterday do I remember that last day at Tom's Creek, when we three silently unjointed our rods and packed them away, then casting long lingering looks upon that stream so endeared to us all from the association of years, we sadly turned our backs upon the spot so pregnant with the memories of the happy past. We had troubled its limpid pools for the last time; no more should we wet our lines in its waters, and the stream which had been free to all lovers of the angle since first it came from the Creator's hand was to be evermore as a sealed book, save to the privileged few who had leased its waters. It was hard to realize that we were to be henceforth shut out from those familiar scenes. So long and regularly had been our visits that it seemed all nature regarded us with a friendly eye. The very birds appeared to chirp a cheery greeting at our annual coming; the scarlet tanager looked kindly on us; the red-headed woodpecker nodded recognition, and even that arrant poacher, the kingfisher, hung around us as if to say: "I'm glad you've come. You were long expected."

And thus we left Tom's Creek in the gloaming, and on other waters I now cast my flies, but no stream has ever displaced it in my affections, and oft in memory I again whip its surface, or with my old companion wend toward home with light hearts and heavy creels, when the hush of evening falls over the land and waters, unbroken save by the musical and gentle sound of Tom's Creek rippling among the boulders.

It has been said

"That the memory of the past will stay
And half our joys renew."

And yet that same jade memory also brings sad and bitter thoughts. As I sit to-night letting my mind run back to the past, the bitter and the sweet are strangely mingled. Gone for me is Tom's Creek, and gone also those true comrades with whom I whiled so many happy hours away. Increasing family cares and engrossment in a large practice have weaned John from stream and wildwood, and his rod lies neglected upon the shelf. Mac, in far off India dwells, and thus I am forced with other friends to seek other scenes when sport I wish. Tom's Creek and the friends of the past still live in memory, and always will, and I often take such pleasure as is now alone afforded by letting my thoughts run over the many enjoyable and frequently humorous incidents which occurred during those years when we three roamed together and merrily flogged the streams of grand old Pike. HARRY HUDSON.

CHAT BY THE WAY.

Landlocked Salmon in Connecticut Lakes.

CHARLESTOWN, N. H., June 11.—Your correspondent "Rob" is correct about my introduction of landlocked salmon in Connecticut lakes. I took them up in 1880, just twelve years ago, and have only heard of them once before this year. Capt. Tom Chester told me in '84 that one had been taken in the river between First and Second lakes. They were from eggs from Grand Stream, and have attained the full size of their parents—3 to 4lbs.

If they had landlocked smelt to feed on I have no doubt they would reach 12 to 15lbs., as those in Squam, Newfound and Sunapee have. I hope my friend Commissioner Hodge will plant smelt up there next year; but the difficulty is this, that when the smelt are spawning in Winnipesaukee and Sunapee the Connecticut Lakes are usually frozen solid.

Winninish vs. Ouananiche.

Let me say another word on the winninish vs. ouananiche question, and remind Mr. Chambers, who asserts the latter spelling to be correct because the Montagnais Indians use it, that the Montagnais have no written language of their own. They merely use the French interpretation of the vocal language of the old Algonquins, who had no alphabet and whose name for "fish" was written by the English "winne." The French having no "w" in their alphabet, used "ou" to express the sound. From the English mode of pronunciation comes Winnipeg and Winnepesaukee, the latter meaning "great fishing place," from "winne," fish, and "auke," place. From the latter word comes also "Moosilauke," or the place of moose, now properly spelt, but formerly called "Moosehillock"! It is anything but a "hillock."

This I got years ago from an old Penobscot Indian doctor, who also unravelled a name which had puzzled me for years. A couple of miles above this village, on the Vermont side of the river, rises for 300 or 400ft. a rocky precipice a mile or more long and almost perpendicular right up from the meadows, and the home of the only rattlesnakes known in this region.

It goes, locally, by the name of "Skitchewog," but nobody here could interpret it. I asked my old Indian friend one day if he could make it out, and after thinking of it over night he told me that the only interpretation he could give me was this, "Skitsi-wauke," "the place of swift waters." He had never seen the mountain, but his answer filled the bill exactly, for before the dam at Bellows Falls, 8 miles below, was built many years since, there was a long, shallow, gravelly rapid in the Connecticut for a mile at the base of this mountain. It is now checked by the back-water from the dam, but when the dam was made lower, 50 years ago, I well remember the swift water we struck, in rowing up the river, when opposite the mountain. Why we, an English-speaking people, should use a bastard French-Canadian etymolygy when we have a simpler one of our own, I do not see, and from the first it was only an interpretation of sound.

Over the Hills for Trout.

I had a delightful excursion yesterday with a friend from Boston, Mr. D., an old subscriber to FOREST AND STREAM. We went out eight miles over the hills for trout, but found very few, and those very small, but it was one of those perfect June days the poets sing of, and we enjoyed the drive out over the hills, the tramps through the woods and the meadows, the trees, the birds, and the flowers, and the longer but more level drive home at sunset, down the well-wooded and picturesque valley of Little Sugar River.

Our waters are fished to death, and nothing seems able to stop the "small-boy" and some of the bigger ones, from slaughtering the fingerlings. I cannot get my eyes or hands hold of any of these law breakers, but I hear of them every week, but always too late to act. It has got so now that the only one to get a "string" of trout in our brooks is the fellow who happens to be lucky enough to be the first one on the brook opening day, and he is very likely to be cheated of his sport by some boy who went the night before, or slept on the bank so as to start at daylight. I must get into the wilderness for a week if I can possibly manage it this year, for I cannot do it many years more. VON W.

Pitchforking Buffalo Fish in Pastures.

OTTAWA, Kan., June 9.—The late high water has greatly improved the fishing in the Marias des Cygnes and its branches, and a number of large catches have been made this week. Croppie fishing is good, and some bass may be caught, but the greatest interest centers in the catfish. A number of large ones have been taken here lately, and the river is lined with fishermen from morning till night, each one expecting to catch a small whale at least. A boy by the name of Ben Mott has the best record for an afternoon's fishing. He landed two last Monday, one of which weighed 44½lbs. and the other 52lbs. During the recent flood the farmers living along the river participated in the most novel method of fishing I ever heard of. The water had overflowed the meadows and pastures bordering on the river, and in the shallow places could be seen numbers of buffalo fish. These the farmers caught by riding in on horses and spearing the fish with pitchforks. F. B.

CALIFORNIA TROUT STREAMS.

SAN FRANCISCO, Cal., June 4.—*Editor Forest and Stream:* In the issue of your paper of April 7 is a communication headed "California Fishing," signed C. B. Willis, which does California a great injustice, especially that portion of it which refers to our trout fishing.

I am afraid Mr. Willis is not unlike some Americans we know of who have been to London, come back and write a history of England. I am quite sure this is so, if Mr. Willis bases his conclusions upon his experiences in the only portion of our State where there is scarcely any trout fishing, viz., Southern California. No one in this vicinity would ever think of going to the places he mentions for trout. Surely Mr. Willis did not fish the Santa Inez, in Santa Barbara county, where trout abound weighing as much as 4 or 5lbs.; nor the Carmel, in Monterey county, a beautiful wide, open stream; nor the San Lorenzo, in Santa Cruz county, where there is free fishing for twenty-five miles; nor the Gualala and Garcia rivers, in Mendocino county; nor Eel River, in Humboldt; nor the Klamath River. I have in my ice chest at this writing two rainbow trout sent me by a friend from that river, one weighing 3 and the other 2lbs.

One of the deputies of the Fish Commission while on a visit to the Klamath, within the last two weeks, in a few hours caught with fly 22 fish, the largest weighing 3½lbs. and the lot averaging 2lbs. Nor did your correspondent visit the Trinity, nor the Feather, nor the Sacramento, nor the McCloud, the home of the Dolly Varden, nor the Yuba, nor the American, nor the Stanislaus, nor the Merced, nor the Kern, nor the King—all grand big waters with big fish. In some of the streams I have mentioned trout are caught with fly weighing 8 and 10lbs. I don't believe Mr. Willis fished in any of the hundred or more streams north and east of San Francisco, nor in any of the many beautiful lakes in the Sierras, such as Gold Lake, Webber, Independence, Donner, Echo, Tahoe and the Gilmore lakes.

I am also quite sure that Mr. Willis did not visit any of the many lagoons at the mouths of our coast streams, when there was a run of grilse in, weighing from ¼lb. to 4 and 5lbs. I am equally certain that he never was in Monterey Bay when there was a run of salmon in, when with rod and line they can be taken weighing 25lbs. and upward. Nor did he go salmon fishing in the Salinas River, Paper Mill, Sonoma, Salmon Creek, Russian River, Humboldt, Eel or Navaro, in all of which from say November to March grand fishing is had with rod and line, with fish weighing from 2 to 15lbs., and often much larger. In fact I don't think Mr. Willis had any trout fishing at all in California, else he surely could not have reached the conclusion expressed in his letter.

Mr. Willis's advice that "the best rig for trout is a simple bamboo rod and Sproat hook No. 6," is, to say the least, very amusing to our anglers. This kind of a "rig" may do for Mr. Willis, but I assure our Eastern friends if they expect to do any trout fishing in California, they want to get as good tackle as, if not better than, they use at home. Bring your Catskill, your 7 or 8oz., and your salmon rod, you will find use for them all. Bring also your best Mills F and G lines. Except for salmon fishing you will need no bait hooks. No, you need not bring any of those things here, for our tackle shops are supplied with everything in that line which the world produces. Our fish want the best there is in the market, our anglers know it, and our shops can and do supply them. I do not exaggerate when as proof that we do not use No. 6 Sproat hooks I say that in the year 1891 not less than 3,000 gross of flies were sold by a few tackle shops in this city alone. If you come I will guarantee to direct you to a hundred streams in our State where you can fish day in and day out and never snag your fly in the cast. RAMON E. WILSON.

THE RED-EYED, GRAY BASS.

ST. PAUL, Minn., June 13.—*Editor Forest and Stream:* Mr. James Ridler being compelled to leave the city requested me to answer your favor of the 8th inst. in regard to the gray bass sent you on the 31st ult. The specimen sent you is identical with the small-mouthed, red-eyed, gray bass referred to in your issue of May 5.

You also request an account of our fishing trip. Messrs. H. S. Gilbert and J. Ridler had left on May 24, and Mr. T. H. Campbell and myself were to join them. Our destination was Alexandria, 142 miles from St. Paul on the Great Northern Railway. This is a very pretty town, in the famous "Park Region," encircled by the finest chain of lakes in this State, which is noted for its beautiful lakes. We arrived in Alexandria at 1 A.M. and should have driven out to Lake Ida at once, but Jupiter Pluvius was particularly busy and we preferred good accommodations at the Letson House to a six-mile drive in the rain. Next morning it cleared up beautifully and at 10 A.M. we started. The drive alone was enough to recompense one for the journey. After the heavy rainstorm the air was laden with fragrance and breathing the exhilarating Minnesota atmosphere made one feel that life was worth living after all. At high noon we arrived at Hotel Bedman, on the shores of Lake Ida, a log house whose exterior gave us evidence of the solid comfort within (even the mattresses were solid). This had been built for the benefit of disciples of Izaak Walton and is close by Charles Bedman's farmhouse, where meals are served. Here we found our friends.

In the afternoon we set out with two boats and oarsmen, and were just getting down to business when a heavy rainstorm set in and we were glad to take shelter on shore. This afternoon's catch was only twenty black bass averaging three pounds. Next morning, May 29, we were joined by Mr. W. D. Blake (who caught the gray bass sent you). This day we were more successful, being out a good portion of the day, as we had our lunch and frying pans to cook a fish dinner, along with us, the fishing grounds being about three miles from camp. This day's sport gave us sixty-five black bass, twenty silver croppies and three pickerel, one weighing ten pounds. These are called pike in the East, I think, and what Northeners call a pike is a pickerel in the East. The next day was very cold and stormy, but we got a string of fifty-five black bass, twelve croppies and two pickerel of seven and eight pounds respectively, but this is a despised fish in this locality, not being very game, and usually honored with the title of "snake." So our two days' sport resulted in 120 black bass, thirty-two croppies and five pickerel; the bass ran from 1½ to 4¾lbs., as we put all small bass back in the lake. This was a good catch under the circumstances, as the season was fully one month behind, owing to a cold and wet spring. For the same reason it was impossible to get the right kind of frogs, and they would not rise to flies, but we had fair success with minnows.

Last spring Messrs. Gilbert and Ridler fished in this section for ten days, from the 20th to the 30th of May, and under more favorable circumstances caught 139 black bass in one day's fishing in Lake Ida.

The principal lakes are Miltona, Ida, Carlos, L'Homme Dieu, Darling and Lake Mary. Then there are numbers of smaller lakes, but with just as good fishing, such as Lobster, Latoka, Andrews, Agnes, Winona, Geneva and Lake Victoria. Some are on the outskirts of the town and none more than six miles from town, except Lake Miltona, which is about ten miles out. This lake and L'Homme Dieu have the most gray bass, and it shares the honors for pike fishing with Lake Carlos. Lake Ida is celebrated for black bass. If anybody wants perch, they can get them in Lake L'Homme Dieu. H. S. Gilbert and J. D. Sawyer caught 400 in one day in 1890, with no bait except a strip from a red Cleveland bandanna. Mr. W. D. Blake caught a gray bass in Lake L'Homme Dieu in September, 1891, that weighed 5¾lbs., which is the largest one on record here. WM. H. KUHLMANN.

Editor Forest and Stream:

SAGINAW, East Side, Mich.—I inclose you a letter from Mr. Cristadoro, my friend in St. Paul with reference to the bass. I informed him of your decision as to the red-eyed, small-mouth, gray bass. Of course he did not see the specimen sent you. You are at liberty to publish the letter if you desire. However, the investigation will not drop yet, for my correspondent seems to know what he is talking about, and there yet may be a chance to discover a new game fish. I am trying to get away to-morrow for the Cascapedia for a week's salmon fishing.

W. B. MERSHON.

Mr. Cristadoro writes from St. Paul: "I did not send the fish referred to so I cannot tell regarding it. I know that in the Alexandrian Lakes are taken the large-mouth bass, as well as the gray bass. I have caught the Eastern small-mouth bass in Greenwood, N. Y., and Hopatcong Lakes, but I have never seen any bass there in any particular to resemble the gray bass of Alexandria. The color of the Alexandria bass is a very light brassy; the shoulders and back of the fish are narrower than our Eastern bass, and as to the red eye it is a distinctive mark that I never have seen in our Eastern fish.

"I go to Lake Ida, Alexandria, for a few days on the 4th, and I will mail a skin and head of a fish to you; it will speak and look for itself.

"In the Alexandria Lakes this fish haunts deep water, 10 to 15ft., and rarely is caught in shallow water with a fly. They take frog and minnow, and those most successful in taking them have done so by still-fishing. I have still-fished for them with 7oz. split-bamboo rod, and had no end of fun, striking them gently as I would a trout and then getting the play out of them. They run in pairs, when you catch one you catch a second; if you catch a third, nine times out of ten you will have found a school of them and will have your hands full. I have struck them so that for an hour or two there has been not a moment of let up, for I was striking, playing or landing a bass during every moment of the time.

"I do not desire to set myself up against such piscatorial authority as the FOREST AND STREAM, but I simply say that if the small-mouthed bass of Greenwood Lake, New York, are standards, and I think they are, then there seems to me a decided difference between the Alexandria small-mouthed bass and the above mentioned.

"CHAS. CRISTADORO."

BOSTON AND MAINE.

THE return of the trout sportsmen is now about as much in order as the departure. Most parties have been successful, and the members return fairly satisfied from the more distant trips, though early the weather was bad and the season very late. Bronzed faces and hands are now quite common and quite the thing among Boston business men; the talisman that one has been a-fishing. The Magee party of thirteen, the names of which the FOREST AND STREAM has already published, returned from Baynes Landing last week. Both ladies and gentlemen were fairly successful, though monster trout were not the rule this year.

Mr. Walter L. Hill, with John P. Squire & Co., is a lover of the angle. He has just returned from his annual trip to Moosehead. He took with him this year Mr. C. W. Wilder, of Lowell, Mass. This was Mr. Wilder's first angling trip, and he returns greatly pleased, and well he may under the tutorship of an expert like Mr. Hill. They had good sport, both with the fly and trolling. They took trout up to 2¾lbs. on the fly. But their most remarkable catch was after this wise: They were trolling well out into the lake when Mr. Hill observed what he took to be a boy's improvised fishpole floating on the water. One canoe had already passed the pole, but Mr. Hill is a close observer and concluded that he saw it move, and at once he thought that there must be a fish attached. He called his guide's attention to it, when the canoe was paddled up and the implement grabbed as it was floating quite rapidly away. It proved to be a large fish attached, and a rather stubborn fighter. At last he was brought to the net; a 6lb. lake trout. There was only about ten feet of ordinary line attached, with a rather ordinary hook—evidently it was a boy's rig. The fishpole and line were taken to the hotel at night, where among the guides the rig was recognized as belonging to a boy some five miles above, at the head of the lake. The pole had been carelessly left with baited hook in the water, hanging over a wharf. The bait had evidently been seized by the trout and the pole dragged into the water. The most remarkable feature is that the pole had been towed some five miles down the lake. But this is not the first instance of the same sort in the same lake. Almost the same kind of a rig was discovered floating in that lake last year with a fish attached, an account of which was published in the FOREST AND STREAM.

Mr. Hill and his friends met the Linder party several times. Mr. George Linder is a most enthusiastic lover of fishing with the fly, as already noted. His party is entirely composed of fly-fishermen. They are having great success at Moosehead. One day they had taken over 60 trout when Mr. Hill met them. Mr. Linder's cast, described in the FOREST AND STREAM last week, is as successful as ever.

Mr. C. Z. Bassett, of the firm of George B. Appleton & Co., with his friend, Mr. G. N. Smalley, have just returned from their fishing trip to Cupsuptic Lake, where they were the guests of the renowned Billy Soule at his Pleasant Island camps. They were very successful, though they struck very cold weather early in their trip. But later the fishing was good and the weather fine. They both made what are considered remarkable catches. Mr. Bassett took with a seven-ounce rod and with a fly, a trout weighing 4lbs. 10oz. This trout was taken almost in the middle of the lake, and nearly opposite Billy Soule's camps. His catch attracted a great deal of attention among the sportsmen, since it is a remarkable thing to take a trout in the middle of the lake, and especially so early in the season. But the next day Mr. Smalley took the mate to the first trout in the same way, weighing 4lbs. 8oz. To say that these two gentlemen are pleased with that catch would be putting it mildly. They brought the trout out with them in fine condition, and for four days they have delighted the eyes of the would-be anglers who have stood in crowds in front of Appleton's window on Washington street. The next day after the trout had been taken there was a big fleet of boats on the spot in Cupsuptic, with the sportsmen all throwing the fly, though without particular success. Some sounding has since been done, however, and there proves to be a reef of rocks in the lake in some places, and especially near where the trout were caught, coming near to the top of the water. It is likely that a new fly-fishing ground has been discovered at that point.

The members of the Inglewood Club, with invited guests, the departure of which for their spring fishing trip the FOREST AND STREAM has already been duly informed about, got back to Boston in two squads on Saturday. The invited guests especially speak in the highest terms of their entertainment and of the fishing. Mr. Harry B. Moore is delighted. The party took a large number of brook trout and a good many land-locked salmon. Mr. Harry Moore, who fished with his cousin, George C. Moore, was particularly successful in taking larger trout than the preserves of the Inglewood had previously been supposed to contain. They trolled after the Rangeley and Moosehead methods, with which both sportsmen are very familiar, and they took large trout. Mr. Moore took one monster, for those lakes, a brook trout weighing 3¾lbs. His cousin's line had become entangled, and the guide had backed the canoe in order to enable George to disengage his hook. Harry was not especially careful about reeling up his line, but instead he drew it through the rings of the rod and laid it in coils about his feet. He says such is a careless thing to do. When his line was nearly all in he found that he had a fish on, and a very obstinate one, too. There he was, with the line in his hands and the rod not of the slightest use. The trout became alarmed and began to fight, taking out several feet of line which had to be paid out to him, and then allowing a little slack to be drawn in. In this way the sportsman was obliged to bother with him till both fish and man were about tired out. At last, with a lucky pull, he was drawn where the net was put under him and he was in the boat in a trice. When in the boat it was found that the lower lobe or half of the tail fin of the trout had been completely bitten away. The guide suggested that it was the work of an otter. But for this disfigurement the trout must have weighed fully 4lbs. The natives and those familiar with the waters controlled by the Inglewood Club are greatly surprised and pleased at the capture of so large a brook trout in Sherwood Lake.

On Wednesday, June 1, the annual meeting of the Inglewood Club was held at their club house, and a successful organization was reported. After the business meeting the annual club dinner was sat down to by both members and invited guests. At the tables were seated Harry B. Moore, George C. Moore, Samuel Shaw, George Leonard, H. F. Sparrow, Albion H. Brown, E. Noyes Whitcomb, Leroy S. Brown, George E. Barnhill, Leonard B. Knight, James Wing, Henry P. Brigham and Andrew S. March. Seldom has a sportsman's dinner been more thoroughly enjoyed, the surroundings and the menu both contributing to the good will of the occasion. All the persons named made after dinner speeches, and a good deal of "latent talent" has been developed for such occasions. When Boston business men meet in camp there is sure to be lots of fun and good cheer.

Governor Russell is out from his spring fishing trip, with a browned visage and a good record of trout caught. Anglers in his own State are particularly grateful to him for his most reasonable veto of the Gilbert trout selling bill. Like the true angler that he is his veto message shows a thorough comprehension of the question, and Massachusetts anglers are fortunate that he happened to be in the executive chair when a measure so fraught with danger to the wild trout of the State had passed both branches of a legislature that is likely to go down into history more noted for bribery and chicanery than honest action.

Senator W. P. Frye, of Maine, has left his camps on Mooselucmaguntic, where he has been for a couple of weeks enjoying the fishing, with Mrs. Frye. He fished and fished, in spite of all the excitements of the Presidential convention at Minneapolis, and he caught a big trout. Accounts differ as to the exact weight of this fish, but it weighed at least 8lbs., since this is the lowest account of its weight. Then he was ready to go back to Washington.

The Pickard party has had a most enjoyable trip to the Rangeley Lakes. The party was made up of Edward L. Pickard, of the leather house of N. W. Rice & Co., one of the largest in the leather and hide trades; Mr. Roberts, of the same firm, with Mrs. Roberts, and Mr. and Mrs. Livermore and little daughter.

The Kineo Club left Boston Saturday for its annual fly-fishing trip to Moosehead Lake. This is the first time for many years that Commodore J. B. Thomas has not been with the club. This year he is about to sail for Europe, and hence does not go to Moosehead with his friends. He is one of the largest owners in the American Sugar Refinery and one of the officers of the company. But he is none the less a genial angler. The party is made up this year of Mr. and Mrs. Frank W. Wise, of the flour trade; Mr. and Mrs. Hunnewell, Mr. and Mrs. Woodbury, and Mr. and Mrs. W. S. Hills, and Mr. J. F. Nickerson.

There is something particularly pathetic about this trip in regard to Mr. Hills. He has become totally blind, and yet the love of the thrill of the trout at the end of the line has not left him. When blessed with his eyesight he was a most enthusiastic angler, and to-day, though he can see neither trout, line nor water, yet he says that "the thrill is there." Mr. Henry Litchfield, with Dame, Stoddard & Kendall, has fixed up his tackle in as convenient a form as possible for a blind man to handle, and he starts off with the party, apparently as happy as any one of them. Who shall say that there is not a genuine love for the angle as strong as life itself? Who dares make sport of the angler? Verily, there is more of genuine pathos in it than the scoffer can ever dream of.

SPECIAL.

WANE OF ADIRONDACKS FISHING.

ON the 7th of last month my friend H. and I left Albany for the spring fishing at the West Canadas, Adirondacks. A day's ride on train and stage brought us to Newton's Corners about sundown, and we were somewhat surprised to find ourselves the first party in the year. Here we met our guide, James Sturges, who informed us that everything was in readiness for the fishing. Louis Seymour, of whom Mr. Northrup has written in FOREST AND STREAM, had come out from the West Canadas that morning, and said that, with the exception of a few cakes floating around, the ice was out of the lakes. After a comfortable night at "Dave" Sturges's, we started in the following morning, passing the Sacondaga Fish Hatchery, the last habitation, two miles from the Corners, and arrived at Pillsbury Lake, twelve miles distant, that afternoon. Considerable snow and ice were encountered along the trail, especially ascending the Blue Ridge. We crossed the inlet to the lake on the ice in getting at the boats. Camping here over night, we continued our tramp next day under heavy packs to West Canadas Lake. No change in the trails from former years was noted until we neared Whitney Stream, the outlet of Pillsbury and Whitney lakes. Where previously it had been our custom to cross this brook and follow a trail to Mud Stream, half a mile beyond, descending this to Mud Lake, we now turned abruptly to the left and made our way a quarter of a mile along the bank of Whitney Stream, when we took to the boats and rowed down into Mud Lake. The stream was far above its natural level, the alders nearly submerged and the water extended several feet up the tree trunks on the banks. Mud Lake, heretofore a shallow pond in which a dozen or more deer might at any time have been seen feeding, presented a like appearance. Crossing the lake, we rowed up the outlet of West Canada—instead of going on the old trail—carried around the little falls, and after a second carry, of perhaps 500yds., were at West Canada Lake, saving in this way a tramp of one-half mile. South Lake is also flooded several feet. And what has effected this change? The same thing that has prevented the Adirondack wilderness from becoming a State park—lumbering interests.

The West Canadas, comprising South, West, Mud, Brook Trout, Northrup and the Twin lakes are included in the Moose River tract. This for the most part belonged to the Anson Blake estate, but during the past few years the greater portion of it has been bought up by the Adirondack League Club, for the avowed purpose of converting it into a park. The remaining lands and South, Mud and West lakes and West Creek—upper parts—are the property of Mr. A. C. Hall, lumberman of this city, who has likewise announced his intention of establishing a park. The flooding of Mud and South lakes, and surrounding lands is due to the erection of a dam at West Canada Creek, which drains all the lakes in this region—also Pillsbury, Whitney and Sampson—excepting Brook Trout and Northrup, which are the source of the South Fork of the South Branch of Moose River. Lumbering is now going on six miles below the dam, and it is expected that operations on South Lake will have begun by fall. While there may be some truth in the statements made by the parties controlling these lands, that their chief object is the founding of parks; the guides and sportsmen familar with the country attribute it to a desire to secure the lumber thereon. The Moose River tract is especially rich in spruce timber, and with the water supply at their command, the owners can float it to market at small expense. Concerning the effects of the presence of the dam may be mentioned a diminution in the number of deer in the immediate neighborhood of Mud Lake, and the driving of the trout from the dead waters into other lakes and streams. Where in past years it was no unusual thing to count between 50 and 100 deer during a two or three weeks stay here; last month we saw but two at Brook Trout Lake. The guides are of the opinion that they have gone to the Cedars, Twins and Moose river, and will return as soon as water is let out of Mud Lake. Thus the fall hunting will not be materially interfered with. The trout have probably gone into West and South lakes, and beyond the dead water in Mud and Whitney streams, and will be found in Mud Lake later in the summer. Notwithstanding the flooding, fishing remains good in South Lake.

On Brook Trout Lake and along Moose River notices forbidding hunting and fishing have been posted by the League Club. It is needless to remark that no effort is made to enforce them, and but little attention is paid them by guides or sportsmen. A muttered "lumbering bluff" conveys their opinion of these signs in the depths of the woods twenty miles from a house.

Heavy blasting to the west of us, Jimmy ascribed to the building of Webb's Railroad.

Lumbering is steadily approaching the Cedars up the Cedar River, and these beautiful lakes can likewise escape but for a year or two the greed of the lumberman.

The fishing we found poorer than ever before. Although we had no difficulty in securing an abundance of fish, they were small in comparison with those of other seasons. Owing to the cold weather the suckers had not come into the inlets, so we were obliged to use minnows trolling. We caught no lake trout exceeding 5½lbs., and the brook trout averaged but ½lb. The largest brooker, weighing 2lbs. 14oz, and measuring 20in., was killed on a spoon by Mr. Z. B. Whitney, of Gloversville, who, with Messrs. Burr and Steele, came in on the 15th of the month. Fly-fishing was good when the weather permitted it. Snow fell for three days successively from the 20th to the 22d. The ground and mountains were covered with it and bore a wintry look. H. went out on the 22d, but I remained a week longer, expecting better weather. However, it continued much the same.

I have written these lines in the hope that they may prove of interest to the sportsmen who have known the West Canadas under happier conditions. NATURA.

ALBANY, N. Y., June 7.

ANGLING NOTES.

Weight of Salmon.

IN a book upon the game fishes of America, recently published, Mr. Charles Hallock is made to say: "I once saw five salmon taken out of this river (the Cascapedia) with fly, by ex-President Arthur and Mr. R. G. Dun, which weighed 55lbs. each—all in one outing."

What he meant to say I have not the least idea, but I doubt if he really wrote what the types have credited him with writing. The largest salmon that ex-President Arthur killed in the Cascapedia weighed 50lbs., and that remained the largest taken from this river by any one until Mr. R. G. Dun, in June, 1886, the year of Gen. Arthur's death, killed a fish weighing 54lbs. This was said to have been the largest salmon ever killed with the fly in this country by any one. A drawing of the fish from a photograph was published in FOREST AND STREAM not long after its capture, with an article concerning it written as I now remember by Mr. Erastus Wiman.

Mr. Hallock introduces the five salmon weighing 55lbs. each, in these words: "There are other rivers on the Baie des Chaleurs besides the Restigouche which furnish giant salmon, and among these the grand Cascapedia." If one desires proof of this let him refer to Samuels's grand volume "With Fly-Rod and Camera," and facing page 158 will be found a reproduction of a photograph of thirty-five salmon from this stream averaging in weight 29½lbs. The fish were killed in three days by four rods.

Trout Spawning.

In the book first referred to a writer upon the subject of brook trout says: "There seems to be some uncertainty regarding the duration of the spawning season. In northern Michigan I have taken trout containing well-developed spawn in each of the summer months."

It is a common error, apparently, to consider the spawn found in the brook trout in the summer months "well developed," and within the past ten days three fishermen have informed me that they caught trout either in May or June, that were most ready to spawn. I assured two of them that if the trout had lived they would not have spawned until October at the earliest, but to the third I was able to show some ripe trout eggs in alcohol, and he was the most thoroughly convinced man that his mustard seed eggs were not ripe, or nearly ripe, that it is possible to imagine. Ripe trout eggs will vary in size with the individual fish and the water from which they are taken, but it is safe to say that five ripe eggs placed side by side in a line will measure an inch in length or about $\frac{1}{5}$ of an inch each. The eggs are not exactly round and eggs taken at random and measured through the largest diameter have measured $\frac{1}{7}$ of an inch. Eggs of the brown trout measured in the same way have measured as much as $\frac{1}{3}\frac{0}{2}$ of an inch in diameter. Fishermen bearing this in mind will not make the mistake of thinking the small eggs found in trout in early summer are well developed.

While fishermen will find eggs in trout from the first day of the open season, and before if they have a chance to examine them, I know of but two instances of trout producing ripe spawn before October. Both instances were related to me by Fish Commissioner Hodge, of New Hampshire, and the trout were stock fish in the State ponds at Plymouth, N. H. Without looking up the matter for the precise date I should say that in each case the discovery was made the last of July or the first of August—one fish one year and another the next. There was no ripe male fish found so the eggs came to nothing. Col. Hodge was of the opinion that the fish were barren for a year or more before, perhaps because of their changed conditions in confinement, and this had brought about a state contrary to nature.

P. T. Barnum's Big Trout.

The writer already quoted says further of the trout: "They rarely exceed 2 or 3lbs. in weight, except in a few favored localities. I remember long ago an offer of P. T. Barnum of a prize for a 4-pound spotted trout, but none was forthcoming." This is an apt illustration of the difficulty of correcting a misstatement once it gains circulation, for Barnum's trout is an old rounder, as quoted above. The great showman's offer was for a 4-pound trout delivered alive in New York, and he got it; and further, he could have got a ton of dead ones. I saw this live fish in the old Ann street museum in 1862 or '63, and there were several of about 4lbs. each in the same tank. This same question came up a few years ago, and I wrote Mr. Barnum about it and received the following reply in his own hand: "I have no record concerning the big speckled trout which swam in the aquarial department of my New York Museum in the sixties. Its weight, as I remember it, was 4lbs. 10oz. I mean the largest one. The others weighed a few ounces less than 4lbs. each."

A. N. CHENEY.

A Big Trout with Primitive Tackle.

MALONE, N. Y., June 11.—I send you photograph of my little daughter and the largest speckled trout taken from waters of the Northern Adirondacks this season. The trout was caught off the boat house dock at Hotel Ayers, on Lake Duane, during the first week in June, 1892. You will observe from the picture, taken on the piazza of the hotel, that a nail in the clapboards holds the "stringer," for the girl could not have held it. The trout weighed, immediately after being caught, on the hotel scales, which were first accurately balanced, 4½lbs. plump. It was brilliantly marked, there being several rows of red spots. Its length was 21in. and girth of body near the back fin 13in. The tail when spread measured 5in. A common light but withy pin-cherry pole was used, with about 8 or 10ft. of line and chub bait. There was no reserve line to let out, and you may judge that it was something of a job to get the fish in without reel or landing net. The hook was small and came out of the fray badly bent. Several witnessed me bring in the game and several saw it weighed. You will observe from the picture the width of trout and girl, and that the trout in length covers about 6½ clapboards. If there is any prize offered by the game associations I think I am entitled to it. H. D. STEVENS.

FISH IN THE WHEAT FIELDS.

Editor Forest and Stream:

I inclose a clipping from the paper here. It will give you an idea of our crops in the West. If we cannot raise wheat we can raise fish. We are a wonderful people out here, and our bottom lands the greatest in the world. Drouth, floods, cyclones or hard times make no difference, the people raise crops just the same.

S. P. BARTLETT.

QUINCY, Ill., June 9.

A FISH STORY.

Fish Commissioner Bartlett received a letter from a gentleman living at Collinsville, Madison county, in which he gives the following story:

A man named Tom Judy last week caught a shovel fish weighing 80lbs., and it came near drowning him. He is a short man, and he caught the fish in a wheat field covered by 6ft. of water. He tied it to a boat. It upset the boat and pulled it along as if it was as light as cork. The fish also pulled Judy under the water three times, and he would have been drowned had it not been for timely assistance rendered him by a friend. There are at present more fish than rabbits in our wheat fields.

[The great work in which Dr. Bartlett is engaged as agent of the U. S. Fish Commission and member of the Illinois Commission promises to be more extensive this season than ever before. With the steamer Lotus fitted for the safe and rapid transportation of living bass, pike-perch, crappie, red-eye perch, catfish and other valuable food fishes to the Government cars, in which they are distributed far and near, the Doctor has already saved from destruction many hundreds of thousands of adult fish, and stocked innumerable streams, and still the demand far exceeds the supply.]

AFTER CANADA BROOK TROUT.

TORONTO, June 13.—I visited the upper waters of the south branch of the Montreal River on June 1 in quest of brook trout. In about half a day I caught fifty-six of the *Salvelinus fontinalis*, the majority of which were 14in. long. They took ordinary bait, such as a piece of pork, or fish, also the artificial minnow, but the best bait of all was the Lake George fly. The other flies I had (red palmer and Abbey) failed to secure a rise. The water was so swift at the foot of the rapid that it was difficult for the fish to secure the deceitful lure. This stream has never been fished except by the Indians, from whom I learned its attractions, and the fishing was so good that I called a halt long before the day was over. The weather was unfavorable, being cold, wet and windy.

The upper waters of the Montreal River and its tributary streams seem destined to become famous for their speckled trout, and on the main stream the black bass fishing is remarkably good.

It is a pity the trip occupies so much time. From Mattawa on the C. P. R. it takes a day and a half by the steamer up Lake Tamiscamaugue, then a two days' travel by canoe to the point reached by us. But the scenery everywhere is grand. We returned by way of Lake Tamagamamingue and with a troll took forty-seven of the great lake trout (*Salmo namaycush*).

I also shot three bears, and taking it altogether the outing was most enjoyable. Going in on May 18 by way of the Sturgeon River, I started out of the woods on June 7, and on the latter day for the first time was pestered with the black flies. The weather up to that date had been so wet and cold that the insect pests were kept under. S. R. CLARKE.

CHICAGO AND THE WEST.

[*By a Staff Correspondent.*]

CHICAGO, Ill., June 18.—The anglers are still anxious. The situation improves but little. No fishing in the rivers, which are high and muddy. In the lakes the bass are biting. Heavy thunder storms and torrents of rain have marked nearly every day for the past week.

The Chicago Fly-Casting Club found one good day this week, or part of one, and had a pleasant meeting, about a dozen and a half present, at a small lake in Washington Park. One or two adventurous ones sought for a few minutes sport in the larger lake, which has plenty of bass in it, but a mounted policeman put a stop to their earliest efforts. The practice is making improvement in the work of the club.

On June 6, at Greenwood, McHenry county, Fish Warden F. L. Buck arrested eight men for seining in Nippersink Creek. The two who owned the seines were fined $20 each, the others $10 each, and the seines were destroyed by order of the court. Warden Buck has done good work this spring.

Two gentlemen of Mak-saw-ba saw a woodchuck on a leaning tree, and tried to punch him off into the river as they passed under the tree in a boat. Result, a genuine and thorough wetting for the men, and a hard time recovering their Meek reels and other valuable tools from the bottom of the Kankakee. I wonder why it is that a man always gets the worst of it when he goes against a woodchuck's game.

I have spoken about the very successful trip of the large party of Chicago anglers to the headwaters of the Little Oconto, and I could add some details of that. A little persuasion with one of the *particeps criminis*, however, has obtained the promise of a full story of the trip, which I think will be enjoyed by those who have never gone into that little frequented country.

A party of four will start early next week for a camping trip on Phantom Lake, Wisconsin. E. HOUGH.

My Best Bass.

IN 1888, when but ten years old, I caught a black bass in the Wabash at Vincennes under somewhat peculiar circumstances. With an ash rod, of rather unstable pedigree, but fortunately with a line of staying qualities, I had been waiting and wasting worms trying to get a fish. Of course we boys always catch small fry, and so are seldom if ever out of bait. I took one of my shiners, cut off the tail, leaving only a small portion of the body attached to it, and cast in. The hook hardly reached the water when there was a great rush, a fearful tug, and a sudden breaking of my rod tip; notwithstanding this misfortune I landed the fish—a good 3-pounder. On account of my age the ten-sion on my nerves during the struggle was something fearful.—AUDUBON.

A Trout "Haul."

THE Philadelphia *Record* of May 27 recorded: "Five hundred trout were caught yesterday in Snyder county by Felix Seiter, of Shamokin, being the largest haul made in that part of the State for a decade." We wrote to the address given and received the following reply:

SHAMOKIN, Pa., June 3.—*Editor Forest and Stream:* Your letter addressed to Felix Seiter, Shamokin, Pa., has reached me, and presume was intended for me. I saw the article in the Philadelphia *Record* in regard to the number of fish I should have caught, and am at a loss to know how the publishers have obtained such a record. About two weeks ago I was along with a fishing party in Union county, the party consisting of I. G. Seiler, D. K. Hass and myself of Shamokin, and B. F. Herman of Troxleville, Pa. We fished at what is called "the Buffalo Branch," about seven miles northwest from Mifflinburg, Pa., and the four of us caught 827 trout, and among them were some of 14in., and a good many from 8 to 10 inches. I have learned since that quite a number of Union county anglers are trying to dispute the fact, and are trying to set up the idea that we have caught the trout in an illegal manner. That we have caught them any other way than with the hook and line I positively deny, and can at any time bring witnesses to substantiate this fact.

FELIX G. SEILER.

Adirondack Trout.

NORTHWOOD, N. Y., June 18.—Few "outside" sportsmen have been in this region fishing this year. Local fishermen have had quite good luck, having caught numbers of trout of 2 or 2½lbs. weight. The logs that came down the West Canada changed the channel considerably, but did not injure many trout so far as known. All the trout except a few small ones are on the cold beds, where they refuse to take flies or bait. Earlier in the season the fish took the grizzly-king, queen-of-the-waters and brown hackle with yellow body.

RAYMOND S. SPEARS.

The Old Stagers Want Big Fish.

MY FISHING TRIP was not the most satisfactory I've known. "Old stagers" like myself, who have had cream, don't relish skim milk, and that's what most of the Eastern (Pennsylvania anyway) resorts furnish in the way of trouting. Streams are fished to death and lied about until its an exasperation to visit them. We got a few fish, mostly 6in. (perish the thought that we saved any less). Only one 10in. and two or three 8 and 9in. fell into the net. I did, honestly, throw back lots of little fellows which my eye said were less than 6in. or possibly 5½in. But some trout hog probably caught them the day afterward.—S.

Pere Marquette Club Waters.

EAST SAGINAW, Mich., June 6.—I have just come back from a day spent on the fishing grounds of the Pere Marquette Club, about 120 miles west of here. I took my private car the other night with a friend of mine and each of us took along our wives and children. Spent the day on the stream and I brought in 45 trout, none of them large, running from 8 to 12in. The women and children gathered wild flowers and loafed and had a good time generally.—M.

Asbury Park Striped Bass.

ASBURY PARK, N. J., June 18.—The largest striped bass, if not the first, caught in the surf anywhere along this coast, was captured to-day by Harry Comegys with rod and reel. The fish tipped the scales at 8¼lbs., and it was a beauty, too. A. L. L.

Chautauqua Lake Muscalonge.

MR. MUNROE GREEN took from Chautauqua Lake, last week, for stripping, a gravid female muscalonge 5ft. 3in. in length and weighing 53lbs. A lot of 50,000 muscalonge fry has been put into Oneida Lake.

Fishculture.

UNITED STATES FISH COMMISSION.

THE steam launch Petrel, under the command of Dr. John D. Battle, is now in Mobjack Bay, making a complete hydrographic survey of the region with a view to determining the present condition, extent and distribution of the oyster beds, as well as the extent of the bottom now unproductive, but which may be made valuable for oyster culture.

The steamer Fish Hawk, in command of Lieut. Robert Platt, U. S. N., was very successful at Gloucester City, N. J., during the shad season, having obtained over thirty millions of eggs. The vessel will sail to Pocomoke and Tangier Sounds, to carry on work similar to that being done in Mobjack Bay.

At the request of Gov. McKinney, of Virginia, the steam launch Canvas Back has been detailed for duty in connection with the location of the natural oyster beds of Virginia as a preliminary to leasing the bottoms to private parties, as provided for in recent acts of the Virginia Legislature. The surveying party will be under the charge of an officer to be detailed from the U. S. Coast and Geodetic Survey.

The schooner Grampus, after an exceedingly profitable winter in collecting cod, haddock and polluck eggs for the Commission's station at Gloucester, Mass., has gone to Woods Holl, and is being fitted up for continuing the investigation of marine problems connected with the migrations of food fishes, which has been carried on during the past two seasons.

The commission has been making special experiments in rearing black bass in ponds and has adapted for that purpose a portion of its station at the Monument Lot in Washington, D. C., where the undertaking so far has been very successful.

In the propagation of shad during the present year, operations have been confined, as usual, to the Potomac, Delaware and Susquehanna rivers. Owing to the extremely unfavorable season and low temperature the work on the Potomac was very unsatisfactory, the output of the station at Pryan's Point, Md., was only 12,500,000. On the Delaware 30,500,000 were secured, and on the Susquehanna, at Havre de Grace, 53,500,000; a total of 96,500,000.

The vacancy caused by the death of Mr. J. J. O'Connor, who was Chief Clerk of the Commission from the time Col. McDonald became Commissioner until May 4 last, has been filled by the appointment of Mr. Herbert A. Gill, who for the past fourteen years has been the disbursing officer. Mr. Gill's former office is now held by Mr. W. P. Titcomb, for many years Assistant Register of the Treasury, with which department he has been connected during the past twenty-seven years.

REARING FISH FOR DISTRIBUTION.

At the twentieth annual meeting of the American Fisheries Society Mr. Frank N. Clark, Superintendent of the Michigan Stations of the U. S. Fish Commission, read a paper on the rearing and distribution of trout at the Northville Station. In the discussion of this paper one of the arguments brought against the method was the greatly increased expense of planting yearlings in place of fry; another argument advanced was that trout accustomed to liver would not seek natural food. Mr. Clark at that time had no detailed statistics of the cost of the work, but at the twenty-first annual meeting, recently held, he showed the cost of the operations during 1890 and 1891. In these years 250,000 yearlings were reared and distributed, about one-half of them being lake trout, and the rest brook, Von Behr and Loch Leven trout. The lake trout, Mr. Clark observes, require at least one-half more food than the others. To quote from his paper: "The cost of the food for this lot of fish was $740, or $2.95 per thousand fish. The cost of labor, based on actual time, was $600, or $2.40 per thousand. For expressage, drayage and superintendence should be added about $3 per thousand, making a total cost, when ready for distribution, of $8.35 per thousand, or less than one cent each for yearling fish, and with facilities for rearing four times as many the cost of labor would be much less per thousand."

Mr. Clark states that the fry when planted must have food at once or they will perish, while the yearlings are in a condition to go without food for a considerable length of time. The destruction of fry by larger fish is much greater than in the case of yearlings. He placed 100 fry in a tank 8ft. long, 2ft. deep, and 18in. wide, containing twelve yearlings; in a similar tank he put twelve yearlings and six three-year-old trout, to ascertain how soon the smaller fish would be devoured. The fry were all gone in six hours. In the other tank only two of the yearlings had been eaten by the three-year-olds in two days. Mr. Clark finds yearlings as easy to transport as fry. In making fourteen trips with the car last year, and carrying 80,000 trout, from 2½ to 7in. long, the total loss was 1,738, and of these 938 were lost on one trip through some accident to the tanks.

In distributing yearlings "the fish are counted into the tanks when put aboard the cars and counted out when planted, the captain of the car receipting for the fish, and then having the applicant receipt to him for the actual number planted."

Concerning the objection against planting artificially fed fish, that they will naturally look for their accustomed food and that they will not readily take to the natural food of the streams, Mr. Clark asks if any fishculturist has ever cast a fly in a pond of large fish that have been fed artificially without getting a rise, or has ever thrown grasshoppers or any other live food that was not readily taken. He does not consider natural food indispensable to the rearing of yearlings, but states that under favorable circumstances natural food may be bred successfully and with far less expense than is involved in feeding liver; but for this large pond areas and ample water supply are essential. In taking the eggs of the *Salmonidæ* and hatching the fry the experimental stage has long since been passed and in trout rearing to-day the principal question for advanced fishculturists is, what should be used for food and how shall it be procured? Mr. Clark calls attention to the well known fact that hundreds of thousands of whitefish fry have been planted in lakes, and as a result only a few bodies of water have been stocked; he thinks it probable that if the whitefish be reared to the age of yearlings before distributing the area of stocked waters will be greatly increased. "One of the proposed improvements at the Northville Station is that of constructing a rearing pond for whitefish and furnishing them with natural food from the creek.

Mr. James Nevin, Superintendent of the Wisconsin hatchery at Madison, discussed the same subject under the title "Planting Fry vs. Planting Fingerlings." Mr. Nevin claims that the States of New York, Pennsylvania, Michigan and Wisconsin have successfully stocked numerous streams by the introduction of fry, and have accomplished this result more economically than they could have done by planting fingerlings. He believes that if the fry are carefully planted in the headwaters of streams instead of in places where they will be exposed to the attacks of larger fish, more of them will live and thrive than can be raised in hatching houses. He states that the fry will instinctively seek a hiding place, while the fingerlings, having lost the fear of enemies, become an easy prey to other fish. He cites a case in which 400 2-pound lake trout were deposited in a lake at Madison and on the following morning four of these fish were taken from the mouths of pickerel. Mr. Nevin believes that none of the fish lived twenty-four hours after they were deposited. He refers to the successful stocking of streams in the central part of Wisconsin by planting fry. Some of the finest trout streams of the country, he says, now exist there. According to a newspaper account one man took 7,000 brook trout out of a single stream last season. Another newspaper account is to the effect that 5,000 brook trout were taken in the vicinity of Sparta on the first day of the open season in 1892.

Mr. Nevin's paper was accompanied by a letter from the Hon. J. S. Bugh, County Judge of Waushara county, who states that the numerous streams of his county have been successfully stocked and are fished by people from all over the State and from as far east as Boston. The trout, he says, may be estimated in tons, but not in numbers. The Judge states also that these streams did not contain trout until they were planted. In conclusion he writes: "I wish to say to the Commission (Wisconsin) that no one thing has brought this county into notice and advertised it so much as our trout streams. Sportsmen who come here to fish all say that, taking all things into consideration, the advantages of civilization and freedom from the annoyance of flies and mosquitoes, it is excelled nowhere in the United States."

Mr. Fred Mather treated of this subject under the title "Planting Trout as Fry or Yearlings." Mr. Mather believes that the best results will be had from planting trout as fry. He thinks that the States cannot afford to distribute yearlings because of the greatly increased expense. Mr. Mather admits that one yearling is worth many fry, but the kingfisher can still destroy it. In January, 1892, he instructed his foreman to weigh and record the food of 16,300 brook and brown trout, which were hatched the previous spring. The record covered the months of January, February and March, 1892, a period of ninety-three days, on three of which they had no food. "If it be said that these fish, so near a year old, would consume more food in the last quarter the record shows that on twenty-three days the fish were not taking much food, ranging from 4 to 8lbs. of horse meat, against 15 to 20lbs. on other days."

Mr. Mather takes the last quarter of the year as a fair estimate of the consumption during the whole year. He did not consider the expense of preparing the meat and feeding fish, but merely the cost of food and transportation. After having tried hens' eggs, beef's liver, lungs and heart, maggots, mosquito larvæ, soft clams and salt water mussels, he experimented with horse meat, which he considers best adapted for feeding trout. It costs four cents a pound at the station, while beef livers cost seven cents. To use Mr. Mather's own words:

"During the quarter mentioned we fed 16,000 trout as follows:

January	328½lbs.
February	376½lbs.
March	435½lbs.
	1,140¼lbs.

"This, for ninety days, would equal 12.66lbs. per day, which at four cents per pound would cost a trifle over $5.06 per day, or $1,846.90 per year for the 16,000 fish.

"Divide this and it gives $115 per thousand fish, or eleven and one-half cents for each yearling."

To resume our own language, the above may be true according to Mr. Mather's arithmetic, but FOREST AND STREAM is convinced that 12.66lbs. at four cents per pound will cost only about 50 cents, and the cost of the food of a yearling will be little more than one cent. Thus Mr. Clark's figures are really not so much lower than Mr. Mather's would be according to our method of calculation.

The transportation of yearling fish, Mr. Mather says, is much more expensive than the carrying of fry. One man can take care of ten cans of fry for twenty-four hours, each can containing 5,000; the same can would accommodate only from thirty to forty yearlings. In his opinion the rearing and distribution of 300,000 yearlings would involve an outlay of about $30,000. Mr. Mather would produce and distribute fry in large numbers, making allowance for loss through enemies of fish, and would expect good results at less cost than by the method of planting yearlings. It is to be kept in mind, however, that the same error of multiplication has affected this amount, and a great reduction must be made to bring it within reason; this sum nearly equals the yearly cost of distributing all the eggs, fish and other aquatic animals sent out by the U. S. Fish Commission.

Public Trout for Private Waters.

ROCHESTER, N. Y., June 18.—The summer examinations of the public schools and educational institutions of the State have arrived on time. That fossilized body—the State regents—has set its conundrum machine going, and the students in the free academy are wrestling with them. Here is a specimen question: "Considering the rotation of the earth, upon which bank of the Rhine River would a body lodge first?" "Will ducks swim?" would have been fully as sensible a question to ask; "and if so, on which bank of the Rhine would they lodge first?" The other questions asked by the regents are on an equality for sense as the one cited above. If the regents had submitted the following question to the scholars they might have received some sensible answers: "What benefit is it to the taxpayers of the State of New York to expend thousands of dollars yearly for the propagation of fish at the State fish hatcheries and have the fry put into streams and waters that are private property and preserved, so that the public cannot fish in them, and, if the scholars do not find a profit for the taxpayers, would Governor Flower be acting sensibly in recommending larger appropriations for State fishculture?"—*Elmira (N. Y.) Telegram, June 19.*

Dec. 5.—Central Field Trials, at Lexington, N. C. Col. Odell, Sec'y.

FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—As the Dominion government had offered to pay the cost of feeding Canadian dogs at the World's Fair, the information contained in the "par." relating to this show in "Dog Chat" of FOREST AND STREAM of June 11 somewhat disarranged their plans. The secretary of the Canadian Kennel Club has written the Dominion commissioner regarding it, inclosing the clipping from FOREST AND STREAM and asking what course he proposed pursuing.

Mr. R. C. Kent, of Kingston, was in Toronto last week. He informed me that all the old officers of the Kingston Kennel Club had been re-elected at the annual meeting held a week or two ago. Mr. Corbett is not yet sure that time will permit of his accepting of the superintendency this year.

By the way, what does a city contemporary of yours mean by stating the Kingston show would conflict with that of New York? The date is in September, as announced in your columns last week, and not in February, 1893.

Dr. Wm. Mole, the well-known Hamilton veterinarian, has been down this week for examination by the commissioners appointed by the government to take evidence as to the feasibility, from both humanitarian and economic aspects, of the dehorning of cattle, which just now is a burning question with us. Mr. Richard Gibson, Delaware, as prominent as a breeder of short-horns as of collies, is a member of the commission.

Mr. Ben Davis, Toronto, is getting out a King Charles spaniel dog, and Mr. R. P. Forshaw has three on order to be shipped in August.

Mr. Forshaw is also getting over five beagles, three dogs and two bitches in whelp. Part of these go to Mr. J. Smillie, who already has a few good ones. They are to be shipped from Liverpool on the Mongolian, sailing June 23.

H. B. DONOVAN.

CENTRAL FIELD TRIAL CLUB'S DERBY ENTRIES

WE have received the following Derby entries from the secretary of the Central Field Trial Club. The total number of nominations is 107, comprising 61 English setters, 1 Irish setter and 45 pointers. These were all whelped in 1891.

POINTERS.

ONWARD (G. W. Amory), dog (Wise C.—Velce V.).
KENT ELGIN (G. G. Ashford), dog (King of Kent—Vera Vang).
LAD OF RUTH (R. L. Adams), dog (Ruth of Lad—Topsy L.).
DAISY SOCWELL (R. L. Adams), bitch (Ossian—Devonshire Jilt).
RIDGEWOOD BEPPO (J. L. Anthony), dog (Beppo III.—Revelation).
HUNT'S CROXIE (Bob Cooper), bitch (King of Kent—Croxie Wise).
CHIN CHIN (Charlottesville Kennels), bitch (Rip Rap—Fannie Bijou).
JOHN PAUL (Charlottesville Kennels), dog (Rip Rap—Petticoats).
RUFFLE (Charlottesville Kennels), bitch (Rip Rap—Dexter's Dolly).
CONSCRIPT (Charlottesville Kennels), dog (King of Kent—Hops).
COSETTE (Charlottesville Kennels), bitch (King of Kent—Hops).
SEARSPRING (Charlottesville Kennels), dog (Mainspring—Queenie).
JINGO (Charlottesville Kennels), dog (Mainspring—Queenie).
OSNELL (J. B. Castleman), dog (Rex—Nell).
VARRO (J. B. Castleman), bitch (Rex—Nell).
NELLOS (J. B Castleman), bitch (Rex—Nell).
MAINOS (J. B. Castleman), bitch (Rex—Nell).
LEDA (T. G. Davey), bitch (Devon Nero—Meg).
BESSIE RANGER (T. G. Davey), bitch (Major G.—Belle).
RIDGEVIEW PATCH (Drake-Sefton Kennels), bitch (Beppo III—Lady Norrish II.).
RIDGEVIEW DUKE (Drake-Sefton Kennels), dog (Beppo III.—Blithesome).
RIDGEVIEW (Drake-Sefton Kennels), bitch (Beppo III—Blithesome).
BANKRUPT (W. T. Hunter), dog (King of Kent—Lass of Bloomo).
LADY PEG (W. T. Hunter), bitch (King of Kent—Lass of Bloomo).
DENNIS (F. R. Hitchcock), dog (King of Kent—Croxie Wise).
HEMPSTEAD BLOSSOM (Hempstead Farm Kennels), bitch (Duke of Hessen—Woolton Game).
HEMPSTEAD GAME (Hempstead Farm Kennels), bitch (Duke of Kent—Woolton Game).
HEMPSTEAD DUCHESS (Hempstead Farm Kennels), bitch Duke of Hessen—Merry Legs).
LUCK OF HEMPSTEAD (Hempstead Farm Kennels), dog (Duke of Hessen—Merry Legs).
MANITOBA SHOT (T. Johnson), dog (Cotton—Psyche).
CROXIE KENT (W. N. Lipscomb), bitch (King of Kent—Croxie Wise).
FLORINE (C. H. Odell), bitch (Rip Pap—Dalgorouki).
TRIM (C. H. Odell), dog (Roger Williams—Ruby).
PETE (C. H. Odell), dog (Roger Williams—Ruby).
BRADLEY (G. H. Price), dog (King of Kent—Lass of Kent).
EARLY DAWN (Randolph Kennels, agent), dog (Duke of Beaufort—Mam'zelle).
KENT'S MAID (H. I. Regenald, agent), bitch (King of Kent—Galena).
CROXIE O'BANNON (R. L. Shannon), bitch (King of Kent Croxie Wise).
GINGER ALE (R. L. Shannon), bitch (Osborn Ale—Pearl's Dot).
DUCHESS OF HIGHLANDS (Elliott Smith), bitch (Beppo III.—Belle).
GRACEFUL II. (L. W. White), bitch (Duke of Hessen—Concave).
GRACE IV. (L. W. White), bitch (Duke of Hessen—Concave).
CLANCARTY (J. H. Winslow), bitch (Beppo III.—White Fawn).
REDEMPTION (J. H. Winslow), dog (Graphic—Vandalia).
ASPIRATION (J. H. Winslow), dog (Dick Swiveller—Bloomo III).

ENGLISH SETTERS.

CECILE H. (R. L. Adams), dog (Dr. Maclin—Cosette).
ROWDY DASH (R. L. Adams), dog (Rowdy Rod—Flame Gladstone).
SIR KENT (R. L. Adams), dog (Kent II.—Nicolette).
CHEVALIER (Avent & Thayer Kennels), dog (Jean Val Jean—Lucy Avent).
SHADOW (Avent & Thayer Kennels), bitch (Jean Val Jean—Lucy Avent).
MISS JUNO (Avent & Thayer Kennels), bitch (Roderigo—Juno A.).
BONIAR (Avent & Thayer Kennels), dog (Roderigo—Juno A.).
KINGSTON (Avent & Thayer Kennels), dog (Chance—Bessie Avent).
HAMLET (Avent & Thayer Kennels), dog (Chance—Bessie Avent).
LOCHINVAR (Avent & Thayer Kennels), dog (Chance—Bessie Avent).
LORIS (Avent & Thayer Kennels), dog (Chance—Haydee).
PROCTOR KNOTT (Blue Ridge Kennels), dog (Gath's Hope—Dashing Lady).
HOPE'S MINT (Blue Ridge Kennels), dog (Gath's Hope—Dashing Lady).
LANCIER (Blue Ridge Kennels), dog (Gath's Hope—Stocking).
DICK FOX (Blue Ridge Kennels), dog (Chance—Countess Rush).
LADY BROOKS (Blue Ridge Kennels), bitch (Chance—Countess Rush).
LOTTIE BEVAN (H. S. Bevan), bitch (Duke of Birmingham—Rowey B).
PAUL DOMBEY (H. S. Bevan), dog (Chance—Nettie Bevan).
ORSINO (E. W. Clark, Jr.), dog (Rod Gem—Winnie Davis).
FRA TURNER SUNFLOWER (C. S. Cross), bitch (Dick Turner—Babe Gladstone).
FLING (Bert Crane), bitch (Rowdy Rod—Maud).
BRIGHTON CLIP (T. G. Davey), bitch (Canadian Jester—Lassie).
GALE NOBLE (H. K. Devereux), bitch (Breeze Gladstone—Katie Noble).
SPOT CASH (H. K. Devereux), dog (Vanguard—Georgia Belle).
NAHMKE PHILLIP II. (E. W. Durkee), dog (Nahmke Phillip—Mercy).
NAHMKE ALICE (E. W. Durkee) bitch (Nahmke Phillip—Mercy).
EL REY DEL MONDO (El Grato Kennels), dog (Toledo Blade—Jessie Gladstone).
ROGER'S SPARK (L. Gardner), dog (Roger—Dora Deane).
HOPE'S TRAP (G. E. Gray), bitch (Gath's Hope—Trap, Jr.).
HOOSIER GIRL (Joe H. & J. A. Hunter), bitch (Dad Wilson—Daisy Hunter).
DUFF (W. T. Hunter), bitch (Toss—Pitti Sing).
GLADSTONE'S PET (W. T. Hunter), dog (Roderigo—Gladstone's Girl).
HOOSIER LADY (F. R. Hitchcock), bitch (Dad Wilson—Daisy Hunter).
CRICKET (F. R. Hitchcock), bitch (Roderigo—Juno A).
CHINAMAN (F. R. Hitchcock), dog (Chance—Bessie Avent).
PEER (F. R. Hitchcock), dog (Peg Bid—Tempest).
JUNO SMITH (N. T. Harris), bitch (Rowdy Rod—Flame Gladstone).
KY-KO (C. F. Joyce), dog (Tan—Ightfield Sophie).
WINNEPEG (Thos. Johnson), dog (Manitoba Toss—Pitti Sing).
NAT GOODWIN II. (Herbert Merriam), dog (Nat Goodwin—Royal Myrtle).
FAN (Herbert Merriam), bitch (Nat Goodwin—Royal Myrtle).
FLYAWAY (Herbert Merriam), bitch (Rowdy Rod—Eve).
SPEEDAWAY (Herbert Merriam), bitch (Rowdy Rod—Eve).
DESSIE HOPE (P. D. Madison), bitch (Gath's Hope—Stocking).
PRINCESS RAY (G. A. McLin, Agent), bitch (Prince Lucifer—Princess Lill).
FLIRT (Randolph Kennel), bitch (Dakota—Rose).
GAIETY (Royal Robinson), bitch (Lone Jack—Gay Phoebe).
CLEM GLADSTONE (J. L. Sneed), dog (Paul Gladstone—Latonia).
MECCA (T. E. Shreve), dog (Paul Gladstone—Latonia).
ALLEGRO (A. C. Shallenberger), dog (Roderigo—Nan Val Jean).
JEAN MIDA (W. Wilson), bitch (Jean Val Jean—Andromeda).
RAP-EYE-DAN (W. Wilson), dog (Ben Hill—Dolly S.).
ST. ANTHONY (J. H. Winslow), dog (Rowdy Rod—Celeste C.).
GUY'S LADY (G. T. Leach), bitch (Guy—Belle).
ROD'S SUE (P. Lorillard, Jr.), bitch (Roderigo—Gladstone's Girl).
DOT RODGERS (P. Lorillard, Jr.), bitch (Roderigo—Gladstone's Girl).
ADDIE T. (P. Lorillard, Jr.), bitch (Roderigo—Maggie Gladstone).
MAIDEN MINE (P. Lorillard, Jr.), bitch (Vanguard—Georgia Belle).
GLADEVIA (P. Lorillard, Jr.), bitch (Blade—Estelle).
SPIKER'S GIRL (P. Lorillard, Jr.), bitch (Chance—Spike).
LADY BELTON (T. M. Lawry), bitch (Tennessee Bob—Dixie Belton).

IRISH SETTER.

ERIN II. (E. B. Bishop), bitch (Tyrconnel—Kinvarra).

PACIFIC COAST FIELD TRIALS CLUB DERBY ENTRIES.

THE Derby closed with 43 nominations: 14 English setters, 4 Irish and 1 Gordon setter, 24 pointers. The trials will be run at Bakersfield, Cal., in January next. The entries are as follows, all whelped in 1891, except where otherwise stated:

ENGLISH SETTERS.

DAN ARDO (E. L. Craig), black, white and tan dog (Luke—Dido), June 28.
ESTRELLA (R. K. Gardiner), orange and white bitch (Monk of Furness—Minnie Noble), Oct. 6.
AL KI (R. K. Gardiner), black, white and tan dog (Major P.—Lucy), June 22.
DAISY (George Croker), white and orange bitch (Jim Phelan—Buck's Nellie), April 12.
MERCHANT OF VENICE (Wakeman & Handley), black and white dog (Monk of Furness—Knight's Belle), March 30.
COUNT KERN (Linville & Harvey), lemon and white dog (Donald Bane—Mia R. Mack), Jan. 11, 1892.
WOOFF (Edward Fay), black and white dog (Outlaw Dick—Montana Queen), July.
BOGIE (Frank Maskey), blue belton dog (Rover H.—Beasy), Oct. 1.
MOLLY STARK (H. M. Tonner), liver, white and tan bitch (Roy T.—Lilly C.), Jan. 20, 1892.
JACONET (California Kennel), black, white and tan bitch (Gladstone II.—Janet), July 25.
JOHANNA (California Kennel), black, white and tan bitch (Gladstone II.—Janet), July 25.
JAVELIN (California Kennel), black, white and tan dog (Gladstone II.—Janet), July 25.
MERCURY (California Kennel), orange and white dog (Dick Bondhu—Sunlit), Jan. 26, 1892.
——— (California Kennel), black, white and tan bitch (Dick Bondhu—Sunlit), Jan. 26, 1892.

IRISH SETTERS.

COE (A. H. Higgins) dog (ch. Elcho, Jr.—Kate IX.), June 18.
SIDNEY (C. S. Sargent), dog (Mike T.—Lady Elcho T.), June 6.
MISS MCGINTY (L. L. Campbell), bitch (Dan II.—Lady Jessie), Oct. 11.
DON'T CARE (F. L. Wooster), dog (Dan II.—Lady Josie), Oct. 11.

GORDON SETTERS.

VAN (Frank Lane), black and tan dog (Dan—Jess), Feb. 3.

POINTERS.

TAPADEROS (E. G. Schundell), white and lemon bitch (Duke of Vernon—Patti Croxteth T.), August.
FRANCISCA (Wm. Schreiber), white and lemon bitch (Rip Rap—Sall S.), July 3
LUCINDA (Wm. Schreiber), liver and white bitch (Rip Rap—Sall S.), July 3.
HONEST JOHN (C. A. Haight), liver and white dog (Dick H.—Lady Max), June 14.
CARMEL (Henry Huber), liver and white dog (Beppo III.—Sally Brass II), July 18.
SAN JUAN (Henry Huber), liver and white dog (Beppo III.—Sally Brass II.), July 18.
SPORTY BOY (Howard Black), liver and white dog (Duke of Vernon—Patti Croxteth T.).
HELTER SKELTER (Dr. A. DeMonco), liver and white bitch (Sergeant Glenn—Trot II.), March 17.
TRAMP (W. W. Foote), white and orange dog (Pat P.—Donna Blanks), May.
SAM WELLER (Geo. B. Sperry), liver and white dog (Beppo III.—Sally Brass II.), July 18.
PRINTER (Wm. C. Brown), liver and white dog (Professor—Lillie P.), June 26.
BILLY P. (Jas. E. Watson), black dog (Old Black Joe II.—Black Bess), Jan. 13.
GEORGE P. (Jas. E. Watson), black dog, same litter.
JIM P. (Jas. E. Watson), black dog, same litter.
DOCTOR P. (Jas. E. Watson), black dog, same litter.
BOOTH P. (L. Thibault), black dog, same litter.
FRA DIAVOLO (W. J. Golcher), lemon and white dog (Duke of Vernon—Vera), Aug. 28.
JILL (W. J. Golcher), liver and white bitch, same litter.
TOMMY TICKLER (J. M. Bassford), liver and white dog (Bismark—Beulah), July.
BROWN BETTY (H. M. Tonner), seal brown bitch (Bruner's Nig—Amaryllis), Jan. 18, 1892.
ZIP III. (J. F. Hughes), crushed strawberry dog (Banjo—Stella), Jan. 19.
EL REY (J. H. Yoell), liver and white dog (Beppo III.—Sally Brass II.), July.
KENT OF BLOSSOM (A. B. Truman), liver and white dog (King of Kent—Lass of Blossom), March.
SADDLEBAGS (A. R. Crowell), liver and white bitch (Duke of Vernon—Hornell Bess), Oct. 8.

I OFFER for sale my entire kennel of celebrated Clumber spaniels, with the exception of champion Johnny. F. H. F. MERCER ("Clumber") Spuyten Duyvil, New York City.—*Adv.*

POINTS AND FLUSHES.

CHICAGO, June 18.—Concerning the subject of retrieving at field trials, I present the following, taken from the personal letter of a friend who is thoroughly conversant in the matter in all its phases. It deals with the matter according to the facts as they exist at present. He writes as follows:

"I do not think that retrieving quail does much harm, because our dogs nearly always lose runners and really do not do trailing. In fact, they are no retrievers at all, as compared to English retrievers. I call their retrieving a useful trick and nothing more, nor would I wish them to do better.

"What I feel a good deal interested about is the ranging question. I agree with Mr. ——— about everything except that, but I think he is all wrong on that point. I think a dog has to be taught to range, and it takes a great deal of time to do it without making him cramp his width of range. Owing to the mania for what I call wild ranging, we have of late years been afraid (or, more correct, have thought that it would be waste of time to do so), to drill our dogs in ranging; but I am going back to my old plan and believe that, in spite of all the talk, it will work best.

"I trained a very good setter once for my own shooting in a pretty open country and he never gave me any trouble about finding him, as he always kept in sight, though ranging wide. If I did lose him I had only to think where I saw him last and he would certainly be on a point not far from that place. We have dogs now that take a header into the thickest covert they can find and will travel 400 or 500yds. without showing themselves sometimes. Men want to break too many dogs; that is the trouble and don't give enough time to each. Probably some of our judges that think so much of wild ranging never shot over one that ranged wide, but with consideration for the gun all the same."

There is a great deal of practical truth in the foregoing, which deserves the consideration of all interested in the field trials and sport with the dog and gun. The distinction pointed out between the performances of wide-ranging dogs is an important one, the absence of such knowledge in many instances leading to misunderstanding and sometimes to an unqualified condemnation of all wide ranging. A wild wide ranger is no standard by which to judge an educated wide ranger. The wild ranger goes from place to place with little or no judgment, is partially or wholly regardless of the gun, and is out of sight a greater part of the time. Other details of field work are executed in a heady, blundering way, with a disposition to as much disobedience as possible. Because such dogs have run in field trials and in a few instances have won, it has established a very general opinion, outside of the regular field trial supporters, that such style of dog is the approved one at field trials. The opinion is erroneous. A wide-ranging dog may sweep an open country right and left in a range of from 200 to 400yds., and still be working as faithfully and reliably in the interest of the gun as if he were working within gun shot all the while. On the other hand, a wild ranging dog even if confined to a close range is not necessarily working well. It is the thorough education in working reliably and earnestly for the gun which puts the proper finish on a dog's efforts whether the ranging be wide or close. A wide-ranging dog which conducts his range intelligently according to the character of the country, and works to the gun, is immeasurably superior to a close ranger, one which always ranges close regardless of whether the hunting grounds are open or otherwise.

A great deal depends on whether a dog is endeavoring to work to the gun or not. If truly working to the gun, the character of the grounds has little effect on the quality of his work, for he will range close in thickets or rough country, and will only widen his fling where it will be useful and produce better results. No better illustration of the dog's intelligence and efforts to further the interests of the gun can be mentioned than where a wide-ranging dog when on quail or chickens will voluntarily range close when hunting woodcock or ruffed grouse.

I believe that enough attention has not been given to the matter of wild or educated ranging at field trials in the past, and consequently there has not been the distinct discrimination there should be, although there never was the exaggerated preference for the wild, runaway dog which the ordinary-day's-shooting men insist on pushing forward as the standard field trial performer. Thus it will be plain to the readers that a wide ranger is desirable and the better performer, but the manner of ranging is of the utmost importance.

The season is approaching when trainers make a beginning on the rudimentary field training of their setters and pointers. In years past the chicken grounds of Iowa, Minnesota, Dakota and Nebraska were favorite training resorts of the trainers, but of late years, for various reasons, but few trainers visit the chicken grounds. The trip is very expensive, the crop of chickens of late years is very uncertain, and if good is soon almost destroyed by excessive slaughter, and the benefits which a dog derives theoretically from an experience on chickens are found to be very small or absent in practice, and that there were many undesirable features connected with it. For instance, the weather in the latter part of the season becomes quite cool in the chicken country, and, as the dogs have then become acclimated, a change to the hot climate of the Southern quail country affects them physically, and incidentally the quality of their work. The work in chicken hunting is very severe and dogs at the end of the season are in most instances in very thin condition in consequence. The work on chickens, moreover, is entirely different from that on quail. Because a dog will point and work well on chickens, it does not follow that they will do the like on quail. In fact, some dogs do not profit in work on quail from an experience on chickens. B. WATERS.

The American Field Trial Club.

COLUMBUS, Ind.—*Editor Forest and Stream:* The board of governors at a meeting to-day decided to change the date of the trials of the American Field Trials from Nov. 21 to the 15th of the same month. There were reasons which weighed in favor of the 21st, but after having received requests from many who were desirous of running in the Eastern and the American also, to change the date so that the two might not conflict, the board thought it best to make the change. This puts us now in direct line of march from the U. S. trials at Elizabethtown, Ky., to the Eastern at High Point. As it was before there was a gap of a week. —W. J. BECK, Sec'y.

Southern California Kennel Club.

LOS ANGELES, Cal.—*Editor Forest and Stream:* At a meeting held by the Southern California Kennel Club in Los Angeles, Tuesday June 7, the following officers were elected for the ensuing year: J. F. Holbrook, President; Tony Bright, J. H. Kiefer, Frank W. Ingalls, John Schumacher and T. J. Casey, Vice-Presidents; E. K. Benchley, Treasurer; C. A. Summer, Secretary and James Watson of Philadelphia Delegate to the A. K. C.—C. A. SUMNER, Sec'y S. C. K. C.

COPY FOR ADVERTISEMENTS MUST REACH THIS OFFICE NOT LATER THAN TUESDAY MORNING, AND SHOULD BE RECEIVED AS MUCH EARLIER AS PRACTICABLE.

HAMILTON AND ROCHESTER DATES CLASH

HAMILTON, Canada, June 16.—*Editor Forest and Stream:* I regret to have to inform you that our proposed bench show will not be held next September at the time of the regular Canadian Fall Circuit.

This is a very great disappointment to us and our plans and arrangements have all been upset at the eleventh hour by the action of a sister organization from whom we expected help and sympathy, instead of apparently determined and unnecessary opposition.

It is only fair to us that our position should be fully explained and I crave space in your valuable columns for this purpose, so that our friends may see just how the matter stands and judge for themselves whether we are right or not, and whether or not we have been generous ourselves in our efforts to arrive at an amicable understanding.

In the first place we announced publicly at the conclusion of our bench show last year, that we would thereafter give an annual show during the week immediately preceding the Toronto fixture.

In February of this year we made claim officially with the C. K. C. for our dates, Sept. 6 to 9.

In March (one month later) the Rochester Club claimed the same dates as those already chosen by us.

After much correspondence, which looked as if it was not likely to bring matters to a head, although we explained our position very fully, and showed the Rochester Club that our show must be held, if it was held at all, as a part of the Canadian Fall circuit, we offered in good faith, and in the hope that our offer would be considered a fair and generous one, to submit the matter at issue between us to arbitration, but to our surprise the Rochester Club finally answered us declining to alter its dates, in spite of our priority of claim, and refusing flatly to agree to the proposed arbitration.

This was not the treatment we expected at the hands of a body of brother sportsmen, but we feel that two large shows could not be carried out successfully, so close to one another on the same days, and therefore, rather than that both should be hurt, we have decided very much against our will, to withdraw from the field, although our Fall circuit will thereby be necessarily impaired and our own club injured in reputation.

I inclose copy of the correspondence which has passed between the two clubs in the matter above referred to, and ask you as a matter of fair play to us to publish it in full. A. D. STEWART, (Hon. Sec'y Hamilton Kennel Club.)

HAMILTON, Canada, May 7.—Harry Yates, Esq., Rochester, N. Y.: Dear Sir—I am instructed by my committee to ask you if the Rochester Kennel Club intends to give a bench show this year, and if so on what dates. Our club has claimed dates Sept. 6 to 9, and we understand that your club has settled upon the same dates. If this is the case I am instructed to ask your club if it will kindly choose other dates so as to avoid a clash which would certainly hurt both clubs. We cannot, unfortunately, alter our dates, as we form part of the Canadian fall circuit, and the dates all round us are claimed by other clubs. I presume your club can easily arrange dates to precede our show without hurt or inconvenience to yourselves and shall be glad to hear of this from you. I regret exceedingly that even an apparent clash should be threatened, and can assure you we would gladly change our dates if it were possible to do so to prevent it. We claimed our dates last October in due form with the C. K. C., and we leave it to you as brother sportsmen to try and so arrange matters as to make the best of the muddle for all concerned. Wishing you much prosperity, and assuring you of our sympathy. Yours truly, A. D. STEWART, Hon. Sec'y H. K. C.

ROCHESTER, May 12.—A. D. Stewart, Esq., Hon. Sec'y, Hamilton: Dear Sir—I have delayed answering your letter in regard to changing the date of the Rochester Kennel Club fall show, for the reason that our club has a meeting to-morrow, the 14th, and I cannot say what will be the action of the club until after that meeting. Personally, I will be very glad to have the show changed, as I understand the position you are in, but I cannot offer much encouragment from the rest of the club, as I do not think they will be willing to change; however, we will let you know the first of next week. Yours very truly, HARRY YATES, Sec'y.

ROCHESTER, May 20.—A. D. Stewart, Esq., Hamilton, Canada: Dear Sir—In reply to your favor of the 7th inst., addressed to Harry Yates, in which you refer to the clash in dates, I am instructed by the Rochester Kennel Club to communicate with you with the idea of arranging matters satisfactorily to both clubs. Owing to our warmer climate we are unable to make dates any earlier, even a week, and we suggest that as it is so early, it is quite possible you can yet arrange to follow the Toronto fixture instead of preceding it, by requesting London, Montreal and Ottawa to move their dates ahead one week, thus allowing us to come in line and complete a large fall circuit. This would seem the best solution of the problem, because we can draw dogs which you may not, and those would go direct from here to Toronto, from whence it ought to be an easy matter to get them to Hamilton; whereas, if you show before Toronto it is even money at least that you would not get these dogs, while if we were showing at the same time (just prior to Toronto) we would get these dogs on their way to Toronto, as the dog men in the States would surely give us the preference over Hamilton.

This is a much more lengthy document than I had intended writing, and as you will note by difference in color of ink, my pen has run out here this. The best of feeling prevails here toward our Canadia cousins, and we rely on their well-known reputation of sportsmanship and unselfishness to act on our suggestion and not only save the two clubs further trouble, but all dogmen and the fraternity at large. Hoping to hear from you soon, I am, yours etc., O. STEWART BAMBER, Sec'y Rochester Kennel Club.

HAMILTON, May 27, 1892.—O. Stewart Bamber, Sec'y Rochester Kennel Club: Dear Sir—Your letter of May 20 has been duly received and was read to my committee last night. In reply to it, I am now instructed to say that it is absolutely impossible for us to change our show dates for the reason before given to you that all the dates before and after us are already claimed by other clubs. Your suggestion that we should endeavor to get the other Canadian clubs to change their dates is also one which is unfortunately out of the question, for the reason that all these shows are held in connection with the fall industrial and agricultural exhibitions, and these last named institutions could not now change their dates except at a very large loss. Our climate here is almost identical with that enjoyed by our friends at Rochester and we do not think, from past experience, that any harm would come to dogs exhibited with you if your show was held a week earlier than you now propose. I am requested to remind you that we gave public notice at the close of our show last year to the effect that we should precede Toronto again this year and we officially claimed our dates with the C. K. C. in February, whereas your claim with the A. K. C. was not made until March. Under all these circumstances we think and feel that the priority rests with us and that your club should in no way disturb us. We will do all we can to help your show along later on, but we think that you will not be using us fairly if you persist in your present claim. While we feel this strongly, be assured that we have no ill-feeling in the matter and wish to be on the very best terms with your club; but this question is one of pure business and must be settled soon either one way or the other. It is nearly time that our judges were chosen and our premium lists prepared, and under the circumstances I shall be glad if you will call an early meeting of your committee to consider this matter afresh. Failing in our efforts to dissuade you from taking our dates, I am instructed to say that our club is quite willing to submit the matter between us to arbitration. Your club can name an arbitrator and we will choose one too, and the gentlemen thus selected will choose a third and decide between us. If their decision is given in our favor we will adhere to our dates and your club can get up its show a week earlier than you now propose. If the decision is against us we will drop gracefully out of the circuit for this year, as there are no other dates on which our show can be held, and we will then, being free, do all we can to help you on. But a clash of dates would only hurt both clubs and is not to be thought of. I may say to you further, to show that we are making our offer in good faith, that if your club consents to the arbitration we propose we will choose not only an American representative but a gentleman from your own State. Hoping to hear from you at once, and with renewed good wishes, yours faithfully, A. D. STEWART, Hon. Sec'y H. K. C.

HAMILTON, Canada, June 3.—Dr. C. S. Bamber: Dear Sir—I wrote you on May 27 on the matter of the show dates claimed by our respective clubs. Our committee, which meets weekly, was in session last night, but not having heard from you we were unable to decide upon any definite step. As I stated in my last letter, time is going on, and as it may take some further time yet to straighten out the unfortunate difficulty which has arisen between us, it is of the utmost importance that we should hear from you quickly.

Our meeting stands adjourned until next Thursday night (9th inst.), and I write now to urge you to be good enough to call your committee together (even though a special meeting should be required) to consider my late communication. Please let me know the result at once so that I may notify my committee thereof. I sincerely trust that our offer to submit the matter between us to arbitration will be approved by your committee, if you find it impossible to alter your dates as at present claimed.

It is most unfortunate that this clash should have arisen, and I think in future that the secretaries of the A. K. C. and the C. K. C. should interchange dates claimed by their various clubs so that such difficulties could be avoided. As it is, however, seeing that both our clubs have claimed the same dates, and that a deadlock is about to set in to the hurt of both our shows, it seems to us that an arbitration is in order, and that both parties should, like true sportsmen, embrace the opportunity of thus amicably settling the matter. As I told you in my last letter, if we are adjudged to be in the wrong, or if the recommendation of the arbitrators goes against us, we will willingly drop out of the circuit for this year and help you in every way we can, and we expect, of course, just as liberal treatment from you. If you desire to accept arbitration please send us the name of your representative and we will at once forward you the name of ours. Your representative will not, I presume, be a member of your own club, but some fair, impartial outsider—that is the sort of man, at least, that we intend to choose. Before closing I beg to notify you now officially, that the Hamilton Kennel Club claims for next year (1893) the week immediately preceding the Toronto show as the time for holding its annual bench show, and I have written to the secretaries of the A. K. C. and the C. K. C. to make this claim. Assuring you once again of our friendship and goodwill and hoping to hear from you at an early date. Yours very truly, A. D. STEWART, Hon. Sec. H. K. C.

ROCHESTER, June 2.—A. D. Stewart, Esq., Hon. Sec'y H. K. C., Hamilton, Can. My Dear Sir: Yours of the 27th ult. duly received and I regret very much that owing to temporary absence from town of some of our working members, I am still unable to give you a definite answer *re* the dates for bench show, but from those that I have seen I have gathered that we will either arbitrate or give up our dates altogether. We certainly do not wish to be the cause of Hamilton's dropping out of the "fall circuit," and if it really comes to that it is my personal opinion that Rochester will give up her fall show as she did her spring show, on account of a conflict in dates. Allow me to assure you of my kindest regards. Yours, etc., O. STEWART BAMBER, Sec'y R. K. C.

HAMILTON, June 3.—Dr. O. S. Bamber, Sec'y Rochester Kennel Club: Your letter of yesterday's date just received. Many thanks for it. By no means think of giving up your show altogether; that would be entirely too bad. We would have to give ours up, because there are no other dates on which we could hold it, but we hope that you may yet be able to change your dates without giving up your show entirely. At any rate do not throw up your show without arranging for an arbitration, for it might turn out that the award would go in your favor and not in ours. All we want is a solution of the unfortunate difficulty one way or the other, and you can depend, win or lose, upon our hearty help and co-operation every time. If you decide on arbitration please let me know name of your representative, and we will send you the name of ours at once. If possible let me hear from you definitely by Wednesday next, as our committee meets on Tuesday and will want to know results and time presses. Yours truly, A. D. STEWART, Hon. Sec'y H. K. C.

ROCHESTER, June 12.—A. D. Stewart, Esq., Hon. Sec'y H. K. C.: My Dear Sir—I am instructed to inform you that at a full meeting of the Rochester Kennel Club, it was decided that it would be utterly impossible for us to give up the dates Sept. 6 to 9 for our bench show. We regret being obliged to arrive at this decision, but under existing circumstances, over which we have no control, it is useless to think of other dates. We sincerely hope that our action will not engender hard feeling between the clubs, and extend our sympathy and best wishes. Yours, etc., O. STEWART BAMBER, Sec'y Rochester K. C.

[Note.—In the foregoing letter no mention was made of our proposal to arbitrate, and Dr. Bamber was at once wired to ask if the proposal had been discussed. To this the following reply was sent: Rochester, June 14.—Arbitration declined, useless to think of other dates.—O. S. BAMBER.]

HAMILTON, Canada, June 16.—Dr. O. S. Bamber, Secretary Rochester Kennel Club: Dear Sir—I am instructed by the Executive Committee of the Hamilton Kennel Club to acknowledge receipt of your letter of 12th inst., in which you notify us officially that your club positively refuses to alter its bench show dates. I am instructed also to acknowledge receipt of your telegraph message received on the 14th inst., stating that your club declined even to submit the matter at issue between us to arbitration.

I am instructed by my Committee to remind you again that our dates were claimed before yours and that we had in every sense the right of priority. Our offer to submit the question to arbitration was made in a broad spirit and it was expected your club would be willing to accept it. To our great disappointment now, we learn that your club ignores our priority, refuses to change its dates although assured that by adhering to them our show will be injured and the regular Canadian Fall circuit broken in upon, and declines flatly to allow a board of impartial gentlemen to decide between us.

Forgive me if I say plainly that this is not the treatment which we would have accorded to you, and that we feel mortified and hurt at the action taken by your club.

As I before stated to you in a previous letter we are of opinion that it would be exceedingly unwise to hold two large shows on the same date, and therefore, in consequence of your action, although very much to our regret and against our will, we have decided to give up our show this year. I am, dear sir, yours truly, A. D. STEWART, Hon. Sec. Hamilton Kennel Club.

BORZOIS—PSOVOIS.

LIEUT. POLTORATZKY writes the following letter to the English *Stock-Keeper*, and it may be of interest to Psovians in this country:

"SIR—The misadventures of Messrs. Hacke and Grimes with their Borzois expose their perfect ignorance of the subject. Who propagated the stupid idea that every Borzoi can kill a wolf, because he is called (only in England, by the by) wolfhound? In Russia, Borzois are generally run on hares and foxes. Only very few breeders own Borzois that will tackle a wolf. These Borzois are specially trained from their youth, and it would be a great mistake to think that every one of them becomes a good wolf catcher.

"And, finally, Borzois never hunt wolves in the manner that Mr. Hacke required of his unfortunate Zloeem. Upon an old wolf are always set two or three (*svara*) Borzois; they must seize him by the neck (and never by the hind legs or tail; that is an immense blunder, proving bad training). The collared wolf is held till the arrival of the hunter, who must kill him with his knife or with the end of his whip (*arspnik*), that has a leaden bullet in it.

"If the hunter does not come up instantly the wolf generally throws the Borzois off and resumes his progress.

"The single battle of an old wolf and a Borzoi is a thing unheard of in Russia. That is a task for a mastiff, but not for a Borzoi.

"Pittsburg *Press* writes: 'The Russian dogs that eat wild wolves in Siberia lose their appetites in Colorado,' etc.

"In Siberia we have no Borzoi (that is psovoi Borzoi); there are only flat-coated Kirghiz Borzois (*tasi*), who course only hares and foxes, and never tame wolves.

"If Mr. Hacke wanted a Russian dog to take a wolf single-handed, he must go to south Russia and buy a Russian *ovcharka* (sheepdog), a poweful creature that would possibly suit him. I repeat, Borzois are generally used to hunt hares and foxes: Borzois that hunt wolves (in the manner I described) are very rare in Russia. Public coursing with wolves in Russia is always very poorly attended. Only two or three kennels of Borzois venture upon this competition. Sometimes this wolf-coursing falls through *faute de combattants*.

"Wolf-coursing does take place in Russia very often, but not at trials, but as a home training for young Borzois. The wolf must be a young one or muzzled.

ALEXIS W. POLTORATZKY,
Chronicler of Nature and Sport.
(Russian, *Pripoda i Okhota.*)"

DOG CHAT.

THE secret of the practical downfall of the California Kennel Club is explained in the *Breeder and Sportsman* where Mr. Schell publishes his reasons for resigning as president of the California Kennel Club. He says: "I can no longer afford to be connected with a club, the ruling majority of which, though small, is led and controlled by so objectionable a person as A. B. Truman has proven himself to be. The outrageous and high-handed manner in which he has practically usurped and taken possession of the offices of secretary and treasurer of the club, calls for the highest and strongest condemnation possible, and presents an urgent cause for action on the part of the members of the club. In the face of protest after protest on my part he has unlawfully, wilfully and in a manner utterly disregarding the rights of the club, placed the moneys thereof to his separate account and has paid out the funds for the prizes of the club by his personal check, from moneys to which he had no right or color of right whatsoever. I decline longer to be even a silent witness to such unlawful, dangerous and questionable modes of procedure, and hereby demand of said A. B. Truman an accounting of all matters so unlawfully assumed, and that the funds be placed under the control of the club. Disregarding every principle of decency, he has forcibly taken possession of the office of secretary of the club, and in defiance of the will of that officer has taken upon himself the duty of custodian of all matters pertaining to that office, in consequence of which the records of that office have become practically valueless as such."

Fox-terriers seem to be a leading feature in the fancy on the Pacific slope. Mr. Deberham is importing two bitches from England. One is Partney Chip, by Partney Donovan out of Satchel; Partney Donovan is by Pitcher. The other bitch is Rose, by Tip out of Lill. This blood will materially strengthen Mr. Deberham's kennel.

The well-known bulldog Handsome Dan, owned by Mr. A. B. Graves, of Yale College, will be the Yale mascot this year in the place of champion Harper, in the coming boat race between Yale and Harvard. "Andy" Graves rows No. 7 in the Yale boat, and though Dan will hardly have a place in the crew he will occupy a prominent position on the bank decked out in the Yale blue.

Mrs. Foster, the leading Yorkshire terrier exhibitor in England, had her entries for the Kennel Club show returned, having sent them too late. She feels considerably put out over this, as this marks the first break as an exhibitor at the Kennel Club shows for the long period of thirty-six years, so says the *British Fancier*, though this must be a misprint, as the first show ever held in England was in the year 1859, at Newcastle.

In the Chicago *Tribune* we read of a Newfoundland, it is generally a Newfoundland because it's a black dog, running amuck in the streets the other day and more or less damaging fifty people. As he foamed at the mouth we presume he was not mad; worried and angry would probably be a correct diagnosis, especially as we read that he was chased by 200 men and boys armed with clubs, stones, etc. He was eventually pinned to the ground by a pitchfork and loaded with lead by the gallant crowd surrounding him. If people would only consider for a moment the feelings of such an animal, who finds every man's hand against him, there is a possibility that they would allow the dog a clear passage, when probably it would run into some quiet corner and quickly recover its equanimity, but there would be one "mad dog scare" less to chronicle. The Mayor of Chicago, the same day that the above happened, issued an order to muzzle all dogs in that city from June 15 to Oct. 1; also license tags must be procured, and whether a dog is muzzled or not, if found at large on the streets it is liable to be impounded or killed.

A correspondent to the London *Field* writes: "Mr. Cameron, Nairn, sent a collie by train to Inverness on Wednesday evening, and thence by steamer Cavalier on Thursday to Fort William. The dog returned to Nairn at 7 o'clock on Saturday morning, so that the distance of about eighty miles between Nairn and Fort William must have been made during Friday and Saturday morning."

An exchange says: "The Western Pennsylvania Society for Prevention to Cruelty to Animals has decided to prosecute Mr. Paul Hacke and Dr. J. B. Grimes for participating in the recent wolf hunt, on the stock farm of the first named, near Pittsburg."

Owners of dogs, and especially those having large kennels, should be doubly careful that the dogs are well supplied with fresh drinking water and shady spots to lie in during this hot weather. The kennel house is not always underdrawn, and if not will, when the sun shines on it, be as hot as an oven inside. If you have no trees in the kennel yard, a few boards covering a low frame, as low as possible, according to the height of the dogs, will answer every purpose for shade. Exercise only in the early morning and evening and feed sparingly of meat, unless well cooked, and corn meal. Give plenty of vegetables, soups with stale bread soaked in, etc. If you have no running water in the kennel troughs, replace the water frequently, especially with big dogs, as in hot weather the water becomes quickly fouled by saliva. Dogs can be refined as well as human beings.

The dog owners of Toronto, Can., do not altogether relish the idea of being compelled to register their dogs with the C. K. C. as well as pay a tax to the municipal authorities. There are many men who keep "just a dog" and do not care a rap for stud books, who should not be asked to contribute unnecessarily. These men are often more wrapped up in their dogs than the man who keeps a kennel of blue-bloods for his "fancy."

The English Kennel Club show has become a matter of history, having taken place June 8 and three following days. The total number of entries was 1,715, which is very nearly a banner entry. The list was made up of: Bloodhounds 23, mastiffs 27, St. Bernards 123, Newfoundlands 57, great Danes 38, Irish wolfhounds 7, deerhounds 30, Borzois 25, foreign dogs 20, greyhounds 16, pointers 60, setters 106, retrievers 87, spaniels 84, sheepdogs 107, beagles 33, Basset hounds 37, Dalmatians 19, poodles 24, bulldogs 42, bull-terriers 28, whippets 10, Airedales 26, fox-terriers 224, Welsh terriers 51, dachshunds 58, Bedlington terriers 16, Irish terriers 95, black and tan terriers 12, white English terriers 23, Scottish terriers 42, Dandie Dinmonts 49, Pomeranians 11, schipperkes 11, pugs 38, toy spaniels 39, Maltese 4, Italian greyhounds 8, toy terriers 5. Some of the well-known breeds that one would expect to be well represented there had to be abandoned owing to lack of entries; notably is this the case with Skye terriers, which breed was not represented at all at the show, and the "shipwrecks," *anglice* Schipperkes, could only boast eleven, not much better than we can do over here. The exhibition must be counted as a success and quite equal to former years in point of dogs actually benched, there being 1,333. We are told that though the arrangements were good in the main the arrangement of the catalogue was not up to date. The sporting classes were better represented than in former years, the presence of Mr. Heywood Lonsdale's dogs Ightfield Deuce and Ightfield Dick, both noted field dogs, adding interest to the display. Mr. Brailsford was there and again expressed

himself as well pleased with his treatment by American sportsmen. Mr. Mortimer has arrived in England all safe and was an interested spectator at the show. The sensation of the show was the sale of the collie Ormonde by Mr. Stretch for $3,500 in cash to Messrs. Holme and Holliday. That collie breeding pays when you have the right stuff is amply proved by Mr. Stretch's success.

Mr. Brailsford, in speaking of his American trip to the Editor of *Stock-Keeper*, remarked that "An American trial was a tremendous test and brings out what nose and pace and endurance there is in a dog, and the one to put down to win in a trial is the dog that works in a determined manner, has a good nose and knows the habits of the quail; a splendid little bird with more scent than the English partridge."

Mr. Heywood-Lonsdale will again run his dogs in our trials this year. He will send over among others the pointer Prawn. He is said to be a good one, and will be handled by Angus Cameron, who broke him and who is now with the Hempstead Farm Kennels. The others to cross have not yet been selected. It is not stated whether Mr. Brailsford himself will come over this year, but if he does he may expect a genuine welcome from those who made his acquaintance in 1890.

The Seminole Kennels have made a reduction in the stud fee of their Irish setter Jerry Jarvis. As Jerry is litter brother to Duke Elcho, the low fee brings this good blood within the reach of all.

The annual meeting of the Kingston Kennel Club was held the other evening when the following officers were elected: President, Mr. Joseph B. Walkem; First Vice-President, Mr. Robert E. Kent; Second Vice-President, Mr. George S. Oldrieve; Secretary, Mr. Harry Bates; Executive Committee, Dr. Charles H. Clark, Messrs. Peter C. McNiven, T. Carson, F. J. Lee and G. Allen.

Mr. Gosling, the noted St. Bernard breeder, is dispersing his kennel, and has sold the noted Angelo to a Mr. F. E. Harrison; Baron Dacre goes to Mr. Alfred Bousfield and Belinda III. to Mr. T. Little of Blackrod; Belinda is well known and has won first at a St. Bernard club show.

Further notes on the English Kennel Club show and other English news must lay over for another week as space is at a premium this week.

We do not think that the action of the Rochester Kennel Club in holding on to the dates, Sept. 6 to 9, in spite of the fact that the Hamilton Club had by publication claimed the same dates some months previously, will redound to the credit of the former club. Neither will they by such action be in a position to claim the good will of the unbiased exhibitors. The Hamilton people, as the letters which we publish in another column will show, have acted in a sportsmanlike manner, and the least the Rochester Club could have done would have been to submit the question to arbitration. We as well as others think the Hamilton Club rather hasty in giving up their dates, as it is well known that they would be in the stronger position of the two clubs. All roads do not lead to Rochester, and the Canadian Club could presumably count on a much larger entry than that of the Flour City. Their show, coming the week before that held in Toronto, which is only forty miles away, would no doubt get a large Canadian entry and stand just as good, if not a better, chance to secure entries from the States, and especially from the Western exhibitors. Exhibitors will not be likely to forget the way the Hamilton Club ran their first show last year, and these men would probably have been only too anxious to repeat their trip. Anyhow the Hamilton Club have lost nothing by their magnanimous conduct, and the exhibitors would be very likely to bear this in mind should they still see fit to hold a show this year or wait till next.

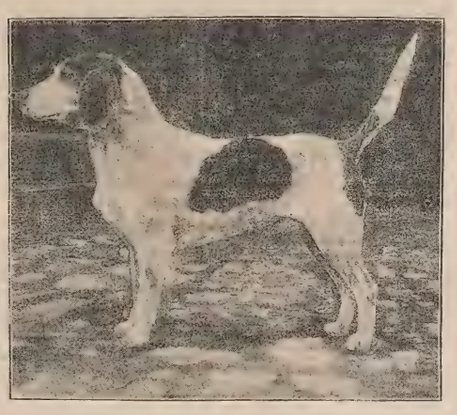
The Pacific Fox-Terrier Club already numbers twenty members and it is expected that before the next meeting the number will be increased to thirty.

Mr. "Inspiration" Winslow leaves for his usual fishing trip to the Oquossoc Angling Association, Indian Rock, Me., next Friday, and as he has promised to send FOREST AND STREAM some fishing notes, we shall expect this well known dog man to do full justice to the subject. Mr. Winslow's proverbial modesty prevented him telling us of the wonderful luck he had last year, but we trust that this year he will throw such scruples to the winds and give us the "whole truth and nothing but the truth."

Mr. F. B. Zimmer writes that the Mohawk Valley Poultry and Kennel Club have again secured Mr. C. H. Mason's services to judge their next show, which will be held at Gloversville, January, 1893.

Mr. A. D. Stewart, Hamilton, Canada, has changed the name of his fox-terrier kennel from "Bonaily" to "Silverhill," and in this connection has claimed the prefix "Silver," which he will use regularly hereafter in naming his stock.

Mr. H. M. Tonner, of North Ontario, Cal., in a letter says: "There is little in the doggy line here at present, but there is one matter I wish to write on. That is the scarcity of birds in the East as compared with this country. If some of the Eastern handlers would bring their dogs to this coast for the winter, they would find birds in abundance, and cover that is unsurpassed. It being low sage brush chiefly, a wide ranging dog can be seen at all times in the more favored localities. None of the land is posted, and were I to even guess at the size of our bevies you would put me down as the best of them all. Our quail are as game as they make them, and lie beautifully to a dog." Doubtless our handlers would like to avail themselves of such a country, but as it is largely a question of bread and butter with them, the expense of a long journey like that puts the idea out of the question.



Up to this month there have been 5,088 dogs licensed in New York city, as against a total of 4,644 last year. The police census shows that there are 21,910 dogs in the city, leaving 16,832 yet to be licensed. There is no dog pound now, as the old one was destroyed by fire last winter. A new pound is being erected on the same site, at the foot of Bridge street, and the plans have been approved of by the S. P. C. A. It will accommodate ninety dogs. The new pound will be open for business about July 15, so until then the curs will have the run of the city.

The National Greyhound Club have donated the following specials to be competed for at the Industrial Exhibition Association's dog show, to be held in Toronto, Canada: Club medal for best greyhound, club medal for best deerhound, and club medal for best Psovoi.

Mr. W. S. Hull, returning from England on the Alaska last Sunday, brought with him the fox-terrier Question, from Mr. Clarke's kennels. The dog will be taken to Grand Rapids, Mich., where we shall probably see him on the bench at that show next fall.

The regular meeting of the Pacific Kennel Club, held at 21 Kearney street, on Wednesday evening, was very well attended, some thirty members being present. After the reading of the minutes of the last meeting the following officers were elected: Ramon E. Wilson, President; Fred Webster, First Vice-President; E. P. Schell, Second Vice-President; Horace Orear, Recording Secretary; Clarence Haight, Financial Secretary and Treasurer. The committee on payment of poultry prize money reported progress. The following new members were admitted: Fred Farnsworth, Sycamore; S. E. Fischer, Haywards, Cal.; John A. Donahue, Jr., F. L. Wooster, W. A. H. Chenoweth. The committee on constitution and by-laws were instructed to have 500 copies printed. The meeting adjourned until the first Wednesday in July.

Mr. C. Steadman Hanks, who has lately imported so many Psovois, has nearly compleated a most picturesque kennel for his favorites. It is a two-storied building, lathed and plastered throughout, with office, kitchen and benching room on the first floor, and benching room and kennel man's room on the second floor. The design of the building is somewhat after the style of a Swiss chalet and must look very pretty. It will be remembered that Mr. Hanks shipped two fox-terriers as a present to Prince Galitzin, of Russia, but unfortunately they died on the way over, one, two days from Philadelphia and the other just before reaching Riga. Mr. Hanks has had more hard luck, as one of the Psovois

BEAGLE CHAMPION STORM.

Owned by the Somerset Kennels, Bernardsville, N. J.

which he supposed was shipped on the Connemaugh, and which had visited the stud dog of the Imperial Kennels, died in whelp on the journey from Gatchina to Riga. The old bitch was too heavy in whelp to stand the journey, the distance being 200 miles. The other two, however, were in good health when steamer sailed.

Among those who offer dogs for sale in our business columns this week we notice that Handsome Brook Kennels have cocker spaniels; J. Hope, two well-bred St. Bernards; R. D. Stocking, four English setter puppies, etc.; C. A. Parker, several pointers; J. A. Harwood, St. Bernard pups; Corktown Kennels, cocker spaniels; Dr. John R. Daniels, well bred pointer pups; Seminole Kennels, young Irish setter brood bitches; Chas. E. Glass, English setter pups. At stud: Melrose Kennels' Lord Melrose and New York St. Bernard Kennels' Refuge II., Kingston Regent and Prince Clifford. Wants: A. Gerald Hull, a registered bulldog pup.

The Pointer Club should have held a meeting last Monday, but a quorum failed to appear.

Mr. James Mortimer has been commissioned by Mr. Henry Huber, of San Francisco, Cal., to purchase for him the best pointer dog he can find in England. Mr. Huber already owns Duke of Vernon and Sally Brass II.

Mr. Harry Hulman, Jr., of Indianapolis, Ind., one of the proprietors of the Blue Ridge Kennels, is in New York this week. He thinks the purchase of Antonio one of the best moves the kennel ever made, and there are many others who share this belief. The Blue Ridge Kennels are in the fall Derbies this year for blood, but will be satisfied if they repeat their Hope's Mark—Bob Cooper victories of last year.

THE BEAGLE STANDARD.

Editor Forest and Stream:

In your issue of June 2 you publish a second interesting letter from Mr. Phoebus on the beagle standard. In it the gentleman states that "dogs which could not win in the 15in. class are now winners in the 13in. class." Other correspondents have made the same assertion. Let us look at the records for a moment. There have been two shows in which a 13in. class has been made, Boston and Lewiston, and none of the winners at Boston competed at Lewiston. Passing over the question whether a dog can become "a prominent winner" by carrying off one prize, let us look at the dogs themselves. Of the Boston winners Topsy S., in '91, won firsts in 15in. class at Boston and Lynn. Tony is a 12in. dog, but I am not familiar with her record; Forest Daisy is well under 12in. and was shown for the first time at Boston; Clyde won in 12in. class at Lynn in '91; Butterfly, the winner at Lewiston, is under 12in. and made her debut this year. So we find in the 13in. class up to the present time five winners. Two of these, both under 12in., made their first appearance this season; one had carried off two firsts in the 15in. class in hot competition and one had previously won in the 12in. class. Surely this second gives no foundation for the statement quoted above. All could have won as well under the old division of classes as under the new.

The statement in Mr. Phœbus' letter which particularly interested me was the rapid increase in size from Damper, 10in., to Ralph W. I have been at some little trouble to trace this dog and learn that he measures at the present time 17½in. He has sired only one litter and that out of a 14in. bitch. All the pups of this litter but one died when a few weeks old. This one lived for eight months and was then killed by the cars. At the time of the accident he "was 16½in. high and growing fast." What could be a better argument to prove that beagles can be easily bred to the size of foxhounds than the increase in height from Damper to this 16½in., eight months old pup.

It is also affirmed that the change from 12 to 13in. was made because beagles could not be bred true to the 12in. standard. The gentleman is mistaken. The field trial committee of the N. B. C. made a 13in. and a 15in. class so as to give every dog entered in the trials an opportunity to contest with those of his own size. The change on the bench was an afterthought and was made only to harmonize the bench show and field trial classes. The question of breeding to standard had nothing whatever to do with it. The 13in. was not asked by breeders but by sportsmen who were unwilling to see a 12½in. dog handicapped in the field by running against one 15in. in height.

I see that Mr. Phœbus has gathered an entirely wrong impression from a paragraph in a previous letter of mine. He says, "'Bradley' seems to think it commendable to keep good dogs out and thus keep the classes small." While I do think it commendable to preserve the standard which has placed the beagles of America far ahead of those of England, yet I do not support the old standard for the purpose of keeping the classes small, nor do I believe that 13 and 16in. classes would bring the club more entries for the trials than 13 and 15in. classes. Let me assure my friend that no one will be more pleased than I with a large entry list and sharp competition, and I am sure that even under the present standard, to which Mr. Phœbus objects, he will find "something to run against in the field." I hope his health will permit him to be present at Nanuet next October. He will receive a hearty welcome, and I have no doubt that among such dogs as Tony Weller, Frank Forest, Ring, Fairy's Lee, June Rose, Gypsy Forest, Nellie and others which could be mentioned, he will find worthy opponents for the best of his beagles, good as we know them to be.

BRADLEY.

THE MERCER CASE AND MR. WADE.

Editor Forest and Stream:

It is certainly rather inconsistent that a man who is notoriously the most emphatic, oracular, and I might add conceited, writer for the kennel press on either side of the Atlantic, should lecture me about "pedagoguing" dogmen. On what subject does Mr. Wade not venture to express an opinion, and on what does he express it in moderation? When I wish for instruction I like to go to men who can look at a subject dispassionately and discuss it calmly. This, Mr. Wade seems incapable of doing. He persists in keeping the real issue in the Mercer case out of sight. I have never set forth, nor has the Canadian Kennel Club, that only the wrong done Mr. Little was to be taken into account. Once more I lay before the readers of FOREST AND STREAM the plain facts of this case. A company in Ottawa formed for the purpose of holding shows, offered through its bench show committee, among other prizes, one for Clumbers, under certain conditions. Mr. Mercer by a false entry obtained this prize, and notwithstanding much writing and some "apologies," retained that which he obtained under false pretenses. Now, to my simple and "perverse" mind this is a clear case of dishonesty—call it by what name you will.

To me this is just as real a case of fraud as if the company had been swindled by a forged check. If others do not see it thus, I do not propose, however, to attempt to beat it into them with a club, nor do I wish any man to try to beat it out of me in the same fashion.

I claim the right to hold my own opinion on this and all other matters without being insulted by Mr. Wade or any one else, and such attempts I consider infinitely worse than that height of iniquity in Mr. Wade's estimation, "pedagoguing" dog men. It is natural to me to seek for and to give reasons for my opinions, and I have been in the habit of doing so in anything I have contributed to the kennel press, because I think that if this were more done we should learn to discuss and cease to wrangle. Mr. Wade writes as though I was personally responsible for Mr. Mercer's sentence. I knew nothing of the action of the Ottawa committee till after the meeting, and I was not present at the meeting of the C. K. C. executive that considered his case, but I fully believe that the case was considered on its merits apart from personal considerations.

We regret Mr. Mercer's course; we would prefer to see him a respected and useful member of our Canadian kennel world, and efforts have been made in that direction—efforts which have not resulted in success nor been repaid with gratitude, but the reverse. This, however, is aside quite from the main issue, though I may say that so far as I know Mr. Mercer's worst enemy has been himself.

I regret that Mr. Wade has seen fit to drag in the name of "Ashmont," whose writings, long known to me, I am probably in as good a position to appreciate as any one. I think, however, "Ashmont" is too much of a gentleman to relish having the names of others, especially of his own profession, brought into odious comparison with his own. Truly a man's friends may be his worst enemies. MOUNT ROYAL.

MONTREAL, Canada.

THE EVOLUTION OF DOG "JUDGES."

Editor Forest and Stream:

The process of matriculation here of many "anthorities" on dogs and not a few judges is pretty well understood, but I am somewhat surprised to find that the same conditions hold in doggy England. I had supposed that "who is who" in doggy matters there was so thoroughly settled that ephemera was not a known variety of insect there, and that "a member of the executive committee of the Bulldog Club of America, sir!" was distinctively an American product. The following letter from one of the oldest mastiff fanciers now living in England shows that the May-fly is born in the morning and dead at night in England as well as here:

"*Dear Mr. Wade:* Many thanks for copy of ——. I have not seen the standards to which your refer, but quite agree with you that the opinion of one individual could not be called a standard. Speaking of standards I often wonder of what use they are beyond giving a beginner an idea of what a breed should be like. There the usefulness of standards ends, for every judge seems to think it necessary for the good of the breed he adjudicates to have a standard of his own, and wishing to be original must introduce some crotchets, hence the curiosities in awards so often seen; nor is this state of things to be wondered at, when one considers the manner in which our judges are manufactured. Some one has said that 'judges are born,' but many people think they can get in front of nature and so strike out the natural aptitude part of the programme and commence the manufacturing process, which is generally worked in this manner. An individual, often possessing more money than sense, jumps into the fancy, joins a specialist club and spends money freely in buying winners (very often through the advice of a kennel man who has probably forgotten more about dogs than his employer will ever know). Then he starts to wholesale exhibiting, gives a few cups and specials to different shows and is soon asked to judge! with a result alike disastrous to his own sense of the fitness of things (if he has any, which is often doubtful) and the good of the breed. Sometimes a few appearances in the ring are sufficient to convince the individual that he is altogether out of place, and he gracefully retires, but unfortunately this seldom occurs, and such a man is more likely to get the idea into his head that if it were only possible to find another like himself the pair would be sufficient to fill a show, and considers himself ready and capable of judging anything in creation."

This pen picture is too vivid to need any addition, and I ought to say the writer sees no American papers, so his views were not suggested. W. WADE.

HULTON, Pa.

THE four full-page pictures, Young Mountain Sheep, American Elk, Group of Elk, and FOREST AND STREAM'S Grizzly, from the "*Forest and Stream Animal Series*," handsomely printed on heavy paper suitable for framing. The set of four (in tube) will be sent for ten cents (stamps will do).—*Adv.*

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

H. L. W., Adrian, Mich.—Write to Major J. M. Taylor, 12 Vesey street, New York city.

G. L. H.—Bethlehem, Pa.—We do not know where the Swiss Canine Genealogical Record for 1884 can be procured; nor the other book you mentioned. Mr. K. E. Hopf, Montrose, Cal., may have them.

M. C. B.—Would be very pleased to know the best food for beagle hounds in the summer months. Ans. Boiled mutton and the broth with stale bread, rice, table scraps, in fact anything which promises a variety of food and is not too heating in its nature. Dog biscuits soaked or dry will be found acceptable for a change.

C. C. D., Utica, N. Y.—The dogs were registered, as you say, in the English Kennel Gazette, but there is no mention of them in the Stud Book for 1891. You will require the pedigrees for three generations back, and if you have not got this we can find it for you. The fee for registering is $1, to be sent to A. P. Vredenburgh, 44 Broadway, New York city, who will also furnish blank register forms.

H. D. T.—Will you please state in your paper where I can send a young pointer puppy to be trained? Some place convenient to Chicago, Ill. Ans. There are no dog trainers in the vicinity of Chicago. J. H. Johnson, Carlisle, Ind.; Fred Erb, Jr., Indianapolis, Ind.; John A. Gude, Bruceville, Ind.; John Bolus, Wooster, Ohio and R. B. Morgan, Akron, Ohio, are the nearest trainers to Chicago of which we know.

A. S. W.—A owns a dog; B owns a bitch. B desires the use of A's dog with the understanding that A is to have one of the puppies for the service of his dog. There are two dog puppies in the resulting litter, and, according to usage, who has the right of first choice? Ans. We know of no rule in this connection, but, unless an arrangement is made to the contrary, the breeder of the litter is generally supposed to have first choice.

R. D. S., Lowell, Mich.—1. Are the following dogs registered? if so, please give numbers: Gladstone, Vell, imported Dashing Lion, Queen Anna, Dashing Novice, Queen Novice, Richard III., Royal Fly. 2. Also, has Dashing Novice any winnings to his credit, and is she the dam of any winners, and what ones if any? Ans. 1. Gladstone, 8,168, A.K.C.S.B., Vol. I.; Vell, 8,389, Vol. I.; Dashing Lion, 11,323, Vol. V.; Queen Anna, 11,428, Vol. V.; Dashing Novice, 1,929, Vol. II.; Queen Novice, no number; Richard III., 3,510, Vol. III.; Royal Fly, 25,104, Vol. VIII. 2. Yes, 1st, American Derby, Grand Junction, 1881; 1st, Pennsylvania Derby, Grand Junction, 1881; one-fifth of 3d, Fairmont, 1882. The latter part of your second question we cannot answer.

The Great Steam Yacht Race.

BOTH Vamoose and Norwood ran up to New London last week and were ready for the race on Saturday morning. The officials were ready in a tug at the line to start the race, a large party of credulous yachtsmen and spectators were at Milton Point to see the finish; and Vamoose, in charge of Engineer Heilbron, was at the line. Norwood ran out of the harbor of New London, and then ran back, her captain complaining that the water was too rough. As she would not start, the race was postponed to Monday; but it has since been postponed to July 2. On her return to New York Vamoose met with an accident to her engine which cannot be repaired under a month.

Every race which is not started promptly on time gives fresh proof of the necessity which we have several times pointed out for an additional starting signal; an "assembly," to precede the usual "preparatory." This signal, which may be a special red flag of large size, or a number of short, irregular blasts of a steam whistle, would be given when the regatta committee saw that the yachts were all out and the wind suitable for a start; and it would signify "Come to the starting line and look out for the preparatory signal." In cases where a race was started on the advertised time, it would be unnecessary, but it is frequently the case that calm or fog prevents a punctual start, and a delay of an hour or two occurs, in which some yachts are certain to get so far away that the ten-minute preparatory signal is not sufficient notice. In such races an "assembly" signal of this sort would enable the regatta committee to get the boats off more promptly, and would be fairer to the contestants, lessening the possibity of being caught far from the line, with a handicap as the result.

Hull Y. C., June 16.

HULL—BOSTON HARBOR.

The Hull Y. C. had a fine S.W. breeze for its first club race on Thursday, the small fellows nearly all starting with two reefs in, though they shook out as the wind lightened later on. The courses were triangular, two rounds each, as follows: for fourth, fifth and special classes around H. Y. C. barrel off Pig Rocks beacon on port; black can buoy on port; flagboat at starting line on port, and repeat; flagboat on port at finish; seven miles; limit, three hours. Sixth class around barrel off Harrie's Rocks on port, barrel off Bumkin Island on port, and repeat; flagboat on port at finish; six miles; limit, three hours.

The seven 21 ft. yachts were divided into three classes, centerboards, keels and cats, beside which was a class of 18 ft. cats. The larger boats jib and mainsail were started at 3:15, the large cats at 3:20, and the 18 ft. cats at 3:25. Vanessa, the Herreshoff fin keel, with three reefs in and a small jib, was over before the gun, and had to re cross. Catspaw, the Stewart & Binney centerboard, got the start, with Alpha, the Herreshoff centerboard, next, and R. D. and Asp, the Hunt circular segment fin keel following. Koorali led Magpie; and Marvel, the new Faxon boat, was first in her class.

The first leg was a beat, Alpha taking the lead with Catspaw second. R. D. sprung the end of her hollow bowsprit, which hindered her, and on the second round her hollow mast went some 10 ft. above the deck. Vanessa was but a poor third, and Asp withdrew. The final times were:

FOURTH CLASS.

	Elapsed	Corrected
Alpha, Brown, Dunne and Hunt	1 23 49	1 00 27
Catspaw, W. O. Gray	1 28 08	1 06 51

SPECIAL CLASS.

Vanessa, A. Bigelow, Jr.	1 32 34	1 09 32
R. D., James McIntyre	Disabled.	
Asp, F. T. Hunt	Withdrew.	

FIFTH CLASS.

Koorali, R. C. Robbins	1 29 35	1 05 48
Magpie, H. G. Otis	1 34 46	1 10 07

SIXTH CLASS.

Marvel, H. M. Faxon	1 16 38	53 48
Mab, John Shaw	1 20 13	54 24
Don, W. H Shaw	1 19 45	not meas

The judges were Messrs. J. R. Chadwick, E. C. North, Franklin Adams, John Stetson and J. J. Souther.

Commonwealth Y. C. June 17.

SOUTH BOSTON—BOSTON HARBOR.

THE first club race of the Commonwealth Y. C. was sailed in a strong two-reef breeze, with rain. The courses and classes were: First class, 25ft. and over, prizes $7, $5 and $3. Course from off the club house, leaving Black Can buoy 7 on starboard, Spectacle and Long islands on port, Rainsford's Island and Wilson's Rock buoy to starboard, Black Can buoy 5 off Fort Warren to port, returning through the Narrows, leaving Bell Buoy off Nix's Mate, Long and Spectacle islands on port to finish point, 12 miles.

Second class, 20ft. and less than 25ft., prizes of $6, $4 and $2.50. Course from starting point to Cow Pasture buoy 6, leaving it on port; Red Spar buoy 2, northeast, off Thompson's Island on starboard, Spectacle Island and Sculpin Ledge buoy on port, Red Can buoy 6, Lower Middle on port, back to finish, 9 miles.

Third class, 15ft. and less than 20ft., prizes $5, $3 and $2. Course from starting, leaving Red Spar buoy 6 on Cow Pasture bar on port, Rad Spar buoy 2 and Thompson's Island on starboard. Spectacle Island and Sculpin Ledge Red Spar buoy 2 on port; returning leaving Spectacle Island and Red Can buoy 7 to port, to finish, 7 miles.

Wahneta, 20ft. 9in., had no competitor in the second class keels, so went up into first class. The start was made at 2 P.M. Phantom, after working all the morning to replace a broken bowsprit, finally won in her class. Kitty, schooner, sprung her mast below deck and was finally protested for not properly rounding a mark. Coot was disabled but took second prize. The times were:

FIRST CLASS—KEELS.

	Length.	Elapsed.	Corrected.
Wahneta, Smith & Cobb	20.90	2 00 05	1 15 17
Kitty, Longmore & Co	25.11	2 00 18	1 23 00
Hope, Libby and Bossy	26.06	2 06 42	1 30 10
Petrel, G. Burridge	25.00	2 13 32	1 35 03

Favette, E. J. Potter	15.05	Did not finish.	

Savin Hill Y. C., June 17.

SAVIN HILL—DORCHESTER BAY.

THE first championship regatta of the Savin Hill Y. C. was sailed in a very light breeze, making a rather dull race. The classes were: Special class, jib and mainsail, 17 to 23ft.; first class, over 21ft.; second class, 18 and under 21ft.; third class, 15 and under 18ft. The courses were: From starting line, off club house, to Half-Tide Rock, leaving it on port to Old Harbor Buoy, on port to Cow Pasture Buoy, on starboard to the flagboat, on port to Half-Tide Rock, on port to Old Harbor Buoy, on port to Cow Pasture, on starboard to starting line; 7 miles, limit of time 3 hours. The times were:

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Fannie, E. T Sharp	22.02	1 45 37	1 20 49
Caprice, R. W. Bird	19.02	Withdrew.

Marchioness, C. H. Hodges	16.01	1 58 48	1 27 16

The judges were Messrs. J. H. Besarick, A. A. Swallow and L. A. Horton.

Massachusetts Y. C. Annual, June 17.

NAHANT, BOSTON BAY.

THE annual regatta of the Massachusetts Y. C., on Friday was quite a success in spite of the failure of the larger classes to fill, the 30 and 21ft. classes showing plenty of new boats, while there was a large entry of old boats in the 25ft. class. The courses were triangular, from off Nahant, around Half-Way Rock and the Graves Whistling Buoy, 20 miles, and around Winthrop Bar Buoy, Graves Buoy, and home, 10 miles, the first leg of the long course being off the wind, the second a beat, and the third a reach. The first leg of the short course was to windward, the second a beat and the third a close reach. Barbara was on hand, but had no antagonist; Alborak, sailing about with Gen. Paine on board, not being ready for racing. Though there were but three boats in the 30ft. class, all were good ones, Hawk, Handsel, the new fin-keel, and Chapoquoit, the big new Hanley cat-sloop. The start of the thirties was made at 11:30, the order being Hawk, Chapoquoit and Handsel. All set spinakers to starboard, the Cape boat soon out-running Hawk. The 21ft. class was started at 11:40, Alpha was first over, followed by Gadfly, Vanessa and Reaper, the others being slow in crossing. A large fleet of old boats started at 11:45 in the 25ft. class. The wind was rather light from S.W., the water smooth and the day clear. On the second windward leg Hawk left the other two, standing inshore; she passed the others, the times at the Graves being:

Hawk	2 50 50	Handsel	2 54 45
Chapoquoit	2 52 52		

As they reached rapidly for the finish a very heavy squall swept over the bay from N.W., all being obliged to lower away with a run. Handsel managed to keep going after a little time under a few feet of sail, and later on finished under reefed canvas in spite of a second squall. A calm followed, in which Chapoquoit finally managed to reach the line, but Hawk withdrew, having no wind to bring her up. The 21-footers were timed at Winthrop Buoy:

Alpha	12 27 35	Reaper	12 30 22
Gadfly	12 28 20	Korali	12 31 43
Exile	12 30 22	Catspaw	12 37 30
Vanessa	12 29 27	Thrush	12 39 35

The leaders turned the Graves as follows:

Alpha	1 05 15	Vanessa	1 07 04
Gadfly	1 06 35	Exile	1 06 11

The little ones finished before the squalls, Exile passing Alpha on the last leg and leading over the line, though losing on allowance. The full times were:

THIRD CLASS—30-FOOTERS.

	Length.	Elapsed.	Corrected.
Handsel, J. R. Hooper	33.04	4 39 48	3 50 42
Chapoquoit, C. H. Jones	37.10	4 58 48	. . . .
Hawk, Gordon Dexter		Did not finish.	

SPECIAL CLASS—21-FOOTERS.

Alpha, Dunne, Brown & Hunt	23.10	1 49 10	1 15 47
Vanessa, A. Bigelow, Jr.	24.03	1 51 13	1 18 13
Exile, J. F. Small	26.03	1 49 00	1 18 40
Gadfly, A. Hemenway		1 50 50	Not meas'd
Reaper, H. P. Benson	24 03	1 55 32	1 22 37

Helen, G. J. Collins	2 14 00	Not meas'd
Julia, A. H. McLeod	2 21 14	Not meas'd
Clover Leaf, Bassett Bros.	2 23 34	Not meas'd
Wapiti, J. Bertram		Withdrew.

The winners are Handsel and Chapoquoit, Alpha, Vanessa and Gadfly, and White Fawn, Black Cloud and Sea Bird. Nearly all of the fleet require to be measured. Exile made an excellent showing and promises to bring credit to her amateur designer.

Williamsburgh Y. C., June 18.

WILLIAMSBURGH N. Y., LONG ISLAND SOUND.

THE Williamsburgh Y. C. found all the wind it wanted on Saturday for its annual regatta, a half gale blowing through the Sound from N.E. The course for the classes from A to H was around Sands Point Light, the smaller classes sailing around the Stepping Stone Light. The start was made off Bowery Bay, the steamer Crystal Stream being present with a large number of guests. The full times were:

CLASS A—CABIN SLOOPS, 32FT. AND OVER.

	Length.	Start.	Finish.	Elapsed.
C. Van Voorhis	34.06	12 33 32	4 00 00	3 26 28

Regatta Committee, O. I. Allen, Edwin Thorne, A. De F. Sanford and W. H. Thomas.

Atlantic Y. C. Catboat Race.

The special race of catboats for the Banks cup was sailed off the station of the Atlantic Y. C. at Bay Ridge on Saturday, with six starters. Marguerite was first in 1.54.49; Wilmerdad second, in 1.55.31; Acorn third, 2.23.00; Spray, 2.58; Oconee and Stranger not timed.

Corinthian Y. C. of Philadelphia, June 16.

ESSINGTON—DELAWARE RIVER.

THE first annual regatta of the new Corinthian Y. C. of Philadelphia, was sailed on Thursday. Out of 20 entries 12 started, 4 completed the course, the others withdrew. At the hour set for starting there was not enough wind to give steerageway. At 10:30 the committee signaled for first and second class schooners and sloops to sail course No. 2, 20 miles instead of the 30 mile course. At 11:11 a slight breeze coming in from the southward the preparatory signal was given, and five minutes later the starting signal for first and second class schooners and sloops; being quite a distance from the starting line all were handicapped from 5 to 10 minutes. At 11:26 the starting signal for the third class was given, and at 11:31 for the sixth class. The 18ft. club boat, Curlew, was the only one of the starters to cross within the limit, all of the others being handicapped. Curlew finished at 5:41:45, Narounya at 6:51:36, Narina at 10:20:41, the others being withdrawn. The yachts not having been measured the corrected time is not given. The summary is as follows:

Tide at start, ebb; weather cloudy and misty; wind very light, almost a calm; wind at start S., changing to S.W. in the afternoon.

FIRST CLASS—SCHOONERS.

	Start.	Finish.	Elapsed.
Speranza, O. D. Wilkinson	11 31 00	Withdrew.	

SECOND CLASS—SCHOONERS.

Telfer, Wm. A. Parry	11 21 00	Withdrew.	
Lydia, O. D. Wilkinson	11 21 00	Withdrew.	

FIRST CLASS—SLOOPS.

Venitzia, A. Colburn	11 21 00	Withdrew.	

SECOND CLASS—SLOOPS.

Narounya, R. P. White	11 21 00	6 51 36	7 30 36

THIRD CLASS—SLOOPS, CUTTERS AND YAWLS.

Rosalind, H. P. Smith	11 31 00	Withdrew.	
Alice, C. H. Brock	11 31 00	Withdrew.	
Narina, W. B. Henry	11 31 00	10 20 41	10 49 41
Mermaid, H. N. Almy	11 31 00	Withdrew.	

SIXTH CLASS—SLOOPS.

Roamer, H. C. Boyer	11 36 00	Withdrew.	
Teal, Club	11 36 00	12 30 00	
Curlew, Club	11 33 35	5 41 45	6 08 10

Corinthian Y. C., June 18.

MARBLEHEAD—BOSTON BAY.

THE opening race of the Corinthian Y. C., of Marblehead, for the 21-footers, both jib and mainsail and cats, in two classes, was sailed on Saturday off Marblehead in a light and variable east wind, the course being from off the club house around the bell buoy off the Pigs, around Halfway Rock and home, 10 miles. Nine new boats and one old one started in the sloop class at 2:05 and five boats in the cat class at 2:10. There was a little roll to the sea through the race, the wind being very paltry and uneven. The first mark was timed, unofficially:

Alpha	2 40 50	Reaper	2 44 30
Vanessa	2 42 25	Thrush	2 44 32
Catspaw	2 43 30	Sirocco	2 46 15
Exile	2 44 25	Gadfly	2 47 10

The second mark was timed:

Alpha	4 00 30	Exile	4 13 10
Vanessa	4 02 45	Sorocco	4 15 10
Catspaw	4 04 45	Gadfly	4 33 10
Reaper	4 07 25	Thrush	4 27 20

The full times were:

CLASS A—21-FOOTERS.

	Length.	Elapsed.	Corrected.
Alpha, Dunne, Brown & Hunt	23.05	2 45 35	2 42 12
Vanessa, A. Bigelow, Jr.	24.08	2 49 15	2 46 50
Catspaw, W. O. Gray	26.06	2 50 35	2 50 35
Reaper, H. P. Benson	24.03	2 54 30	2 52 05
Exile, J. F. Small		2 59 15	Not meas.
Sirocco, W. P. Fowle	29.06	3 07 25	3 07 25
Gadfly, A. Hemenway	25.04	3 14 30	3 13 18
Thrush, Dr. J. Bryant		3 22 15	Not meas.

CLASS B—21FT. CATS.

Magpie, H. G. Otis	22.04	3 22 25	
Koorali, R. C. Robbins		3 36 00	Not meas.
Madge, W. H. Thayer	22.09	Disabled.	
Arab	21.08	Withdrew.	
Delphine, C. M. Barker		Withdrew.	

Eastern Y. C. Handicap.

MARBLEHEAD, BOSTON BAY.

ONLY four starters came to the line at 10:55 A. M. on Saturday for the special handicap of the Eastern Y. C., the 46ft. class not being represented. The thirties however made up a good test fleet, two of Mr. Burgess's best boats, the keel Fancy and centerboard Hawk, starting against the Herreshoff fin-keel Handsel and the Hanley Cape cat Chapoquoit. The course was the twenty-four mile club triangle, to the Graves, almost free, a beat to the Sea Mark, and a reach back to the starting line at Marblehead Rock. The wind was quite light from the eastward, with little sea.

The start was timed as follows:

Fancy	10 55 22	Hawk	10 55 39
Chapoquoit	10 55 24	Handsel	10 55 43

Handsel was at a serious disadvantage through her pole mast and absence of light kites aloft; the other three carrying club topsail and balloon jib topsails, while she could only set a spinaker. The Cape boat soon took the lead, the work on the first leg being shown by the following times at the Graves:

Chapoquoit	12 06 33	Fancy	12 16 34
Hawk	12 16 38	Handsel	12 22 57

To windward there was not wind enough for Handsel; Hawk went hunting for a breeze out to sea, and when the fleet came together after, being scattered for nearly three hours, she had a long lead, as follows:

Hawk	3 20 34	Chapoquoit	3 42 05
Handsel	3 25 27	Fancy	3 46 24

On the last leg, a reach, Hawk and Chapoquoit both gained on Handsel, the final timing being:

	Start.	Finish.	Actual.
Hawk, Gordon Dexter	10 55	4 48 03	5 53 03
Handsel, J. R. Hooper	10 55	4 59 58	6 04 58
Chapoquoit, C. H. Jones	10 55	5 00 52	6 05 52
Fancy, C. F. Lyman	10 55	5 15 43	6 20 43

Hawk and Fancy each received 6m. from the new boats.

The judges were Messrs. H. H. Buck, W. S. Eaton, Jr., P. T. Jack son of the regatta committee.

Winthrop Y. C., June 17.

GREAT HEAD—BOSTON HARBOR.

THE first championship race of the Winthrop Y. C. was sailed on June 17, at 4:30 P. M., just after a very violent storm, which kept some of the racers away from the start. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Pilgrim, Edward S. Dixon		2 30 46	
Nimbus, J. S. Cushing		Withdrew.	
Naiad, McConnell		Withdrew.	

THIRD CLASS.

Magpie, H. G. Otis	23.03	2 05 52	1 41 08
Harriet, L. T. Harrington	22.09	2 08 08	1 43 53
Marion, Chesterton & Devereaux	22.00	2 13 04	1 43 07
Magpie, C. A. Pike	20.02	2 09 29	1 43 49
Eclipse, Wm. Myrick	21.09	2 09 46	1 44 35
Perdita, Milton & Cheever	23.05	2 07 15	1 43 52

FOURTH CLASS.

Cadet, C. L. Smith	18.09	1 55 24	Not taken
Scud, L. S. Meston	17.05	Not timed.	

The judges were Messrs. Harry Hutchinson and C. C. Hutchinson. The ladies' race announced for June 18 was postponed for lack of wind.

Lynn Y. C. Expert Cup, June 18.

LYNN, MASS.—BOSTON BAY.

THE distance sailed was six miles, with a light east wind:

	Length.	Elapsed.	Corrected.
Black Cloud, E. H. Taylor	30.04	1 37 32	1 21 32
Irene, H. P. Armstead	28.02	1 48 40	1 31 21
Helen, Geo. Collins	26.11	1 53 00	1 34 57
Nellie Farley, E. C. Smith	25.01½	Did not finish.	
Clover, Leaf, F. Basset	26.04	1 50 26	1 32 02
Tyrant, C. Wilson	22.09¾	Did not finish.	

SPECIAL CLASS—COURSE, 3 MILES.

Alpine, C. J. Blethen	20.10		0 39 10
Spray, Geo. Putnam	14.07	0 57 46	
Cuckoo, Arthur Larrabee	15.00	0 56 20	

Regatta committee, W. A. Estes, F. E. Newhall, C. H. Crowell, Geo. F. Putnam. Judges, W. A. Estes, F. W. Ingalls.

Jersey City Y. C., June 15.

COMMUNIPAW, N. J.—NEW YORK BAY.

THE thirty-fourth annual regatta of the Jersey City Y. C. was sailed on Wednesday in a very light breeze, the course being around Buoy 11, Lower Bay, for all but Class G, which sailed time around Robbins Reef Buoy. The times were:

CLASS C—SLOOPS, CUTTERS AND YAWLS, 29 TO 36FT.

	Start.	Finish.	Elapsed.	Corrected.
Forsythe	11 48 50	3 51 15	4 02 25	3 58 37
Bessie	11 46 15	4 12 01	4 25 46	4 25 40

CLASS D—SLOOPS AND CUTTERS UNDER 29FT.

Triton	11 30 30	3 59 12	4 28 42	4 25 16
Psyche	11 32 50	4 02 00	4 29 10	4 29 10

CLASS E—CABIN CATBOATS 20 TO 27FT.

Greta	11 31 35	4 04 07	4 32 32	4 32 32
Fleetwing	11 31 25	4 28 55	4 57 30	4 56 00

CLASS F—CATBOATS OVER 19FT.

Eureka	11 37 40	3 43 30	4 05 50	4 05 50
Lizzie B.	11 41 45	4 04 42	4 22 57	4 20 59

CLASS G—CATBOATS UNDER 19FT.

Ges' So	11 37 25	3 04 20	3 26 55	3 26 55
H. & R. Lee	11 39 40	Withdrew.		

A dinner at the club house followed the race.

Dorchester Y. C., June 18.

DORCHESTER—DORCHESTER BAY.

THE first championship regatta of the Dorchester Y. C. was sailed on Saturday in a very light S.E. breeze. In the first class the only entry was Montezuma, and by an error Phenomenon went up from the second class to sail with her. Egeria, who had intended to sail against Phenomenon, did not start, as she had no antagonist. The times were:

FIRST CLASS, 21 TO 28FT. SAILING LENGTH.

	Length.	Elap-ed.	Corrected.
Montezuma, G. Curry	22.03	2 25 15	1 51 41
Phenomenon, Whittemore	19.01	2 23 05	1 45 16

THIRD CLASS, 18FT. SAILING LENGTH.

Flora Lee, C. D. Lanning	16.11	1 51 22	1 20 56
Scamp, H. N. Nute	18.04	1 44 17	1 15 34
Nonpareil, Collyer & Mason	17.06	Withdrew.	

Phenomenon wins in first class and Scamp, subject to measurement, in third. The judges were Vice.-Com. Hartford Davenport, Walter S. Fox and Coolidge Bernard.

Quincy Y. C., June 18.

QUINCY, BOSTON HARBOR.

THE second championship regatta of the Quincy Y. C. was sailed on Saturday in a fresh S.E. wind, the elapsed times being as follows, no corrected times being computed, as the yachts had not been measured:

FIRST CLASS.

Moondyne, A. J. Shaw	2 45 30
Gypsy, H. R. Drinkwater	2 43 01

SECOND CLASS.

Vision, George Crane	2 40 33
Opechee, H. L. Barker	2 41 38
Smoke, H. L. Rice	2 43 01
Nereid, Charles Brackett	2 44 22

THIRD CLASS.

Mab, John Shaw	2 40 10
Marvel, H. M. Faxon	2 38 32
Imp, George Mayhury	2 42 02
Dandelion, Arthur Adams	2 44 46
Elsie, Gordon Keating	2 54 55
Don, W. H. Shaw	not timed.

The judges were George E. Pfaffman and Fred L. Rhodes.

Racing at Atlantic City.

On June 13 the Corinthian Club, of Atlantic City, sailed over a 6-mile course, half windward and half leeward. The winning boat was sailed by J. Showell, and the second by Talbot Reed.

On June 14 a race of the Atlantic City Mosquito Fleet took place over a 9-mile course in a fresh breeze that fell as the race advanced. The times were:

	Start.	Finish.	Corrected.
Ida, Wooten	3 00 30	4 46 49	1 46 19
Ivie, McGuire	3 02 03	4 54 15	1 52 12
Spray, Bartlett	3 02 21	4 51 03	1 48 42
Alberta, Leeds	3 02 59	4 47 53	1 44 54
Alpha, Johnson	3 03 40	4 54 02	1 60 22
Lillias, E. L. Reed	3 03 53	4 50 46	1 46 53
Helen, Shinn	3 04 25	4 49 32	1 45 07
Ruth, E. S. Reed	3 04 47	4 57 53	1 52 56
Jessie, Willetts	3 05 36	4 52 58	1 47 08
Valkyre, C. S. Reed	3 05 57	4 54 25	1 48 28

Alberta wins first prize, Helen second and Ida third. The judges were Harry Albertson, William H. Bartlett and William Fleming.

Mosquito Fleet Y. C., June 17-18.

SOUTH BOSTON—BOSTON HARBOR.

The first club championship race of the Mosquito Fleet Y. C. was sailed on Friday in a light east wind, the course being 5 miles. The times were:

	Length.	Elapsed.	Corrected.
Tantrum, F. D. Perkins	15.00	1 23 25	1 23 25
Escort, W. H. Ransom	14.11	1 24 29	1 24 24
Bother, L. P. Keiser	14.10	1 28 00	1 27 50
Iota, James T. Powers	14.00	1 30 00	1 29 00
Bunty, J. F. Cooper	12.11	1 37 00	1 35 25

The judges were Edward J. Powers, James F. Barry and T. A. Maguire.

On Saturday the first club race was sailed with but five entries, owing to the S.W. breeze and hard squalls. The times were:

	Elapsed.	Corrected.
Tantrum, F. L. Perkins	1 27 03	1 27 03
Annie, E. H. Rich	1 30 35	1 30 05
Bother, L. P. Keiser	2 49 15	2 46 10
Bunty, J. F. Cooper	Withdrew.	
Icuraz, H. Jackson	Withdrew.	

The judges were the same as on Friday.

Corinthian Navy—June 18.

THE annual regatta of the Corinthian Navy was sailed on Saturday on Long Island Sound from off the new house of the Hempstead Harbor Club, the courses being seven and three miles. The wind blew so heavily from the east and the sea was so heavy on the Sound that but few of the thirty odd entries reached the start. The times were:

CLASS 1—CABIN SLOOPS.

	Length.	Start.	Finish.	Elapsed.	Cor'cted.
Chippewa, Thos. Clapham	24.00	2 30 45	3 55 03	1 24 18	1 23 31½

CLASS 2—CABIN SLOOPS

Sadie, H. G. O. Durham	21.06	2 21 05	4 21 07	1 50 02	1 43 42
Willada, W. R. Newman	19.02	2 31 45	4 15 23	1 43 48	1 41 36
Florence, J. B. Embury	18.06	2 32 13	4 24 25	1 52 12	1 50 14

CLASS 3—OPEN CATS AND SLOOPS.

Vitka, Thos. Clapham	16 03	2 40 45	3 06 21	0 25 36	0 23 10
Go, R. Vincent	15.00	2 40 30	3 13 42	0 32 02	0 29 21

The judges were Com. Connolly, Com. Hull and Mr. W. R. Stainsbury.

Cape Cod Y. C., June 17.

EAST DENNIS—CAPE COD BAY.

THE second bay race of the Cape Cod Y. C. series was sailed in a strong S.W. breeze over a 10 mile triangular course. The City of Chicago lost her bowsprit and could not start. The times were:

	Length.	Elapsed.	Corrected.
Nobscussett, Hall	24.00	2 04 59	2 31 57
Ariel, H. H. Sears	21.06	2 08 39	2 32 20
Madge, Cummings	23.05	2 07 11	2 33 18

The Conqueror Case.

ON June 21 United States Commissioner Samuel H. Lyman filed with the United States District Court his report, as master, awarding Frederick W. Vanderbilt $20,854.47 damages against ex-Collector of the Port J. Sloat Fassett, for the seizure of Mr. Vanderbilt's English-built yacht Conqueror, on Aug. 27 last.

The detailed items of the report, which we are unable to publish this week, foot up to $20,854.47. The amount will be paid by the Government, and not by ex-Collector Fassett.

Beverly Y. C., 183d Race, June 17.

MONUMENT BEACH, BUZZARD'S BAY.

The 183d race of the Beverly Y. C., the first open sweepstakes, was sailed off Monument Beach on June 17. The wind was a good double reef southwester at the start, and rapidly increased till the boats were under three or four reefs.

The weather was very thick and foggy at the start, and it soon shut in so thick one could not see fifty yards, and the boats, especially the leaders, lost much time in hunting for the marks.

Only Hector in first class, and Kitten in fourth, appeared, and race was confined to second and third classes.

Tigress in second, and Hanley's new Doris in third, proved to be several inches over the class limit. Both took out ballast to get into the class, and neither was able to do herself justice.

The old Gymnote, altered over with a long overhanging full bow, is much improved, and did very well until she opened a seam in her bow and filled up with water, after which only vigorous bailing kept her afloat, and she was beached after the finish.

Mist, which started last, had gained on all and looked like a winner when her tiller broke. Course for second class, 10¼ miles; for third class, 8¼ miles.

SECOND CLASS.

	Length.	Actual.	Corrected.
Tigress, W. W. Phinney, Mon. Beach	27 04	2 03 24	1 53 40
Gymnote, W. E. C. Eustis, B. Y. C.	27.02	2 07 53	1 57 58
Wildcat, Norcross, Mon. Beach	26 04	2 09 01	1 58 15
Lestris (late Crawl), J. Crane, Jr., B. Y. C.	26.04	2 09 58	1 59 12
Mist, G. W. Lyman, B. Y. C.	27.04		

THIRD CLASS.

Puzzle, Wm. Amory, B. Y. C.	22.09	1 51 15	1 39 16
Tycoon, J. L. Stackpole, Jr., B. Y. C.	23.01	1 51 23	1 39 44
Elna, J. Parkinson, B. Y. C.	22.10	1 55 49	1 43 55
Daisy, H. Stsckton, B. Y. C.	19.03	2 00 42	1 44 43
Doris, J. Parkinson, B. Y. C.	23.03	Withdrew.	
Hermione, R. L. Barstow, B. Y. C.	23.00	Withdrew.	

Three prizes in each class. The judges were F. E. Cabot and W. Lloyd Jeffries.

Royal Canadian Y. C., June 11.

CRUISING RACE TO PORT DALHOUSIE.

THE first race of the Royal Canadian Y. C., a cruising run from Toronto to Port Dalhousie, was made on June 11, the starters including two new yachts, Zelma, just built from Mr. Fife's designs, and Aggie, an old craft that has been recently rebuilt, with new ends of the Gloriana cut, making practically a new boat. The wind was light, there being barely enough to start at 2:30 P. M., and it was from the east, making a heat.

The start was made inside of Toronto Bay, off the city club house, from east to west, the yachts then rounding a buoy off the Island club house and then into the lake. In this way the fleet was somewhat strung out before reaching the narrow eastern channel, while all spinakers were barred within the bay in order to avoid danger of fouling with the many working craft.

Aggie cut out Vreda at the line and took the start, securing a good lead, Zelma being third and Condor fourth. Aileen was in company, but not racing.

Aggie gained a long lead in the early part of the race, Vreda and Zelma keeping close together in second place. After a time the wind fell, to come up later about 7 P. M., quite fresh offshore. The yachts were timed at Port Dalhousie:

	Finish.	Corrected.
Aggie	8 05 10	5 14 15
Zelma	8 17 05	5 34 55
Vreda	8 30 00	6 00 00
Aileen (not racing)	8 30 00	6 08 36
Condor	8 46 00	

The evening was spent on board of Aileen, she and Vreda finally getting under way about 11 P. M. for Hamilton, leaving the others at anchor. All returned to Toronto next day.

Shackamaxon Y. C., June 13.

PHILADELPHIA—DELAWARE RIVER.

The sixth annual regatta of the Shackamaxon Y. C., of Philadelphia, was sailed on June 13, over a 35-mile course, from Shackamaxon street wharf around Wheatsheaf Buoy. There was a strong west wind, too much for of the small craft, all duckers and tuckups, Nana capsized, but righted and won in her class. The winners were:

First class, Emma. Time, 4h. 7m. Lucy, second, 4h. 12m.

Second class, Nana. Time, 4h. 23m.; Ellen second, 4h. 41m. 30s.

Third class, S. A. Marriner. Time, 4h. 12m. Emma second, 4h. 13m.

Rochester Y. C., June 16.

CHARLOTTE, N. Y.—LAKE ONTARIO.

The Rochester Y. C. enjoyed its first Ladies Day on Thursday, eight yachts making up the fleet, Cinderella, Choctaw, Madge, Majel, Nox, Onward, Priscilla and Ramola. All carried ladies, the fleet sailing out into the lake, and on the return passing in review before Vice Com. Walbridge, on Choctaw.

YACHT NEWS NOTES.

Sagamore, steam yacht, Mr. W. A. Slater, arrived at New London June 17 after a long cruise across the Atlantic. She left New London on Dec. 29, calling at Norfolk, then sailed for Bermuda, Madeira, Gibraltar, Melange, Oran, Algiers, Tunis, Malta, Smyrna and Constantinople, and passed through the Bosphorus into the Black Sea, returning to Athens, Palermo, Naples, Cannes, Nice and Marseilles and thence to Bermuda. Sagamore is a three-masted schooner, built at Bath, Me., in 1888 from designs by W. P. Pattee, and is 180ft. over all, 160ft. l.w.l., 26ft. beam, 12ft. draft, with engines 15, 24 and 37½ and 30in.

The annual regatta of the Eastern Y. C. will be sailed on Monday next off Marblehead, all entries closing on Saturday with Mr. W. S. Eaton, Jr., 281 Franklin St., Boston. Prizes will be given for two classes of schooners, over and under 75ft., and for seven classes of cutters and sloops. The Puritan cup will be awarded to the yacht of the Eastern Y. C. making the best corrected time over the longer course. The race is open to yachts of all clubs.

A private match has been made between Pyxie and El Chico, to be sailed off Larchmont on Saturday, the loser to pay for a cup. Pyxie is now at Wood's yard, where her mast has been hollowed out, her chahnels replaced by smaller ones, and her ironwork replaced by phosphor bronze castings, lessening the top weight. The sails are the same, but the rig has been simplified. The bottom has been put in fine shape for racing.

The Lynn Y. C. has chosen the following dates for the Expert Cup race, open to yachts belonging to Lynn, West Lynn and Volunteer Y. C. Saturday, July 16, second race; Saturday, July 30, third race; Saturday, Aug. 13, fourth race; Saturday, Aug. 27, fifth race. Races will be held for a special class of boats, 19ft. and under, on same dates, with cash prizes.

The fifth annual regatta of the Kill von Kill Yacht Club will be sailed over the club's ten-mile course in Newark Bay on Monday, July 4. Prizes will be awarded the winning boat in each class and a special prize to the boat making the best corrected time over the course. Entries should be sent to George Swartmout, Secretary of the regatta committee, Port Richmond, S. I.

The new station of the New York Y. C., No. 7, at Vineyard Haven, is completed, and is under the charge of Dr. H. A. Tucker, of Cottage City, with Frank C. Tripp as keeper. The building has a good float and is comfortably fitted within, with telegraph and telephone service.

The annual cruise of the Eastern Y. C. will commence on July 8 the rendezvous being as usual Marblehead, Vice-Com. Gardner schr. Mayflower, will be in command in the absence of the commodore. Mr. George H. Richards has been appointed fleet captain.

"Well, Uncle Reuben, that's a fine pair of oxen you have." "Ya-as." "What have you named them?" "Nigh one's Pilot an' th' off one's Rudder." "Strange names, aren't they?" "Not fur steers."—*Puck.*

Sayonara, Mr. Bayard Thayer's 46-footer, is now at New London in charge of Capt. Henry Thompson, Mr. T. H. Barber, of New York, a brother-in-law of Mr. Thayer, having taken the boat for the season.

In the shop at Wood's yard is the Gardner fin-keel, now partly planked. She is much like El Chico in general design. Her planking will be double, inside of white cedar and outside of mahogany.

The Essex Y. C., of Newark, N. J., has secured the new basin at the foot of W. Thirty-ninth street, Bayonne, on Newark Bay, and built a small club house.

The second annual regatta of the Olympic Yacht Club of Brooklyn will be sailed on the 26th inst. The start will be from the Long Dock, Erie Basin.

Mineola, Mr. Belmont's 46-footer, is now nearly ready to go in com-

mission, Capt. Harry Haff having fitted her out at Wintringham's basin.

Peerless, schooner, carried away her rudder in the Atlantic Y. C. race last week, and was towed to Bay Ridge.

Ilderim, 46 footer, has finished fitting out at Lawley's and sailed for Newport.

Mischief, schooner, has been sold to Rev. W. H. Scott, of Queenstown, Md.

Freak, the Paine fin-keel, is sailing about Marblehead, but has not raced yet.

Canoeing.

FIXTURES.

JUNE.

25. Rochester, Spring Regatta, Irondequoit Bay.

JULY.

2. Springfield, Cup, Springfield.
9. Toronto, Regatta and Paddling Cup, Toronto.
9. Rochester, 2d Trophy Race, Irondequoit Bay.
9-23. W. C. A. Meet, Oshkosh, Wis.
15-30. Northern Div. A. C. A. Meet, Lake Couchiching, Can
23. Rochester, 3d Trophy Race, Irondequoit Bay.

AUGUST.

4-25. A. C. A. Meet, Willsborough Pt
6. Springfield, Cup, Springfield.
15-20. A. C. A. Meet, race week, Willsborough Point.
27. Rochester, 4th Trophy Race, Irondequoit Bay.

SEPTEMBER.

3. Springfield, Cup, Springfield.
3. Brooklyn, Visiting Cruise, Passaic River.
3. Orange, Ann., Arlington, N.J.
5. Ianthe, Annual Regatta.
8. Rochester, Fall Regatta, Irondequoit Bay.

OCTOBER.

1. Springfield, Cup, Springfield.

NEITHER the Atlantic nor the Eastern Division of the A. C. A. will hold a division meet this year, so that but one division meet, that of the Northern, will take place. Lake Champlain is so accessible from New York, Lowell, Springfield and Boston, the points that would be mainly benefitted by division meets, that the general A. C. A. meet in August will take the place of them, to the advantage of all concerned, with very few exceptions, the division meets thus far have not been successful, and a concentration of the attendance on the general meet, at least for a year or two, seems to be the best course.

THE year book of the A. C. A. for 1892 has just been issued, uniform in size and style with that of last year. The entire work of obtaining advertisements and preparing the book has been done by Com. Winne and Secty Treas. Wackerhagen, and with the result that the Association will be under no expense, on the contrary a profit of $50 to $60 seems probable.

THE necessity for an additional starting signal both in canoe and yacht races is demonstrated afresh in every race in which for any reason a start is not made punctually on the time announced. We have alluded to the subject in the yachting columns.

Marine and Field Club Canoe Regatta, June 18.

BATH BEACH, GRAVESEND BAY.

Those guests of the Marine and Field Club who stayed away from Bath Beach on Saturday on account of the bad weather missed some of the finest canoe racing that has been seen about New York in some time; and those canoeists who were absent missed one of the pleasantest reunions of A. C. A. men which has ever taken place here; a reunion that in one day combined many of the pleasantest features of the annual meeting in November and of the race week of the August camp. The assemblage of canoeists, about a hundred in all, was a representative one; among them being Com. Winne, Vice Com Seavey, Messrs. Lawson, Butler, Goddard, Walsh, Ford Jones, Quick, Oxholm, Whitlock, Ward, Vaux, Stephens, Burchard, Douglas, Capt. Ruggles and other old A. C. A. men, with many local club men from the Hudson and Passaic. The character of the assemblage was the more remarkable from the fact that the Marine and Field Club is in no sense a canoeing organization, and merely stood in the position of host for the day, a role in which it has acquitted itself most admirably for four successive years.

The special events on this occasion were the senior sailing race, the tandem paddling, a club "representative" race, the race for the Marine and Field Club cup, held by Mr. David S. Goddard from last year; and a paddling race in war canoes; the latter a complete novelty. The entry list included many of the leading racing men of the A. C. A., as follows:

Canuck	Ford Jones	Brockville, Ont.
Tornado	F. C. Moore	Knickerbocker.
Alpha	D. Goodsell	Yonkers.
*Felicity	Everett Masten	Yonkers.
Hudson	H. Lansing Quick	Yonkers.
Glenwood	T. S. Oxholm	Yonkers.
*Seabright	W. T. Wintringham	Marine and Field.
*Truant	W. S. Elliott	Marine and Field.
Torment	H. H. Smythe	New York.
Bubble	William Whitlock	New York.
Toltec	T. H. Barrington	New York.
*Kismet	C. J. Stevens	New York.
Wasp	Paul Butler	Vesper, Lowell.
Bee	D. S. Goddard	Vesper, Lowell.
*Scout	W. H. Smiley	Orange.
Jonah	John L. Collins	Bayonne.
*Wraith	Fred B. Collins	Bayonne.

*Did not start.

While the fleet included the leading racing canoes, there were but few new boats. Mr. Jones, who is in New York for the purpose of racing for the third time for the International challenge cup of the New York C. C., has not built again, as he intended last year, but had with him Canuck, older, but different in no other respect from what she was in her first season, 1889, the hull and rig being unaltered. Mr. Quick was present as captain of the Yonkers war canoe, and had no canoe with him; but as his old racer, Uno, was at the club house, he sailed her in two races. Glenwood, the new Ruggles racer that has replaced Beta for Mr. Oxholm, is a very handsome canoe, much like all the Ruggles craft, but rather fuller than Uno and Beta, on about the same midship section. She has, however, a bucket cockpit with a trunk coming but a few inches above the waterline, and when she heels considerably nearly all the water that it will hold runs out through the trunk, making her practically self-bailing. Her centerboard is of heavier brass than in the older Ruggles canoes, at least than those of two years back, and when raised stands well above the deck. She has a 48in. slide, strongly made, the usual Ruggles steering gear, and a 48in. Butler tiller. Mr. Smythe entered Torment, another new Ruggles canoe, which, with Mr. Elliott's new Truant, is fitted with a sheet brass centerboard having a thick lump of lead, some 18lbs., fastened to the lower edge, the trunk being made wide at the after end.

Captain Whitlock sailed his new-old canoe, Hornet, a remarkable craft. Since last season she has been in the hands of her builder, Capt. Ruggles, who removed the old stem and sternpost and replaced them with thinner ones, fairing out the lines at the extreme ends. At the same time he removed all the timbers except those for a space of 4ft, amidships, replacing them with new ones of rounder form, filling out the line of the boat. The new nails were driven through the old nail holes. The sheer was necessarily altered somewhat, a new deck was laid, with a small cockpit and a high floor, all the water emptying through the well, and an after board was put in. Toltec, Wasp and Bee are all old canoes and well known. The latter two carried the usual Butler reefing rig, nearly all the others carrying standing sails.

Apart from the few new canoes, the two heavy boards that have not yet been tested, and some immaterial details of seat construction, there was nothing in model, construction, fittings or sails that has not been seen before, in fact two or three years ago. Capt. Ruggles had on Truant a very good seat, the ways being two parallel strips bolted across the deck just abaft the cockpit, with a bracket under the outer ends, on the side deck at the gunwale. The seat was a single piece of oak, with a couple of guide strips on the lower side, and held to the ways by a light brass casting on each side. Attached to the seat at each end, and about ½in. from the after side, so as to clear one of the brass clamps, was a round piece of oak forming a sort of handle for the seat,

Saturday was a most unpleasant day, close and muggy, with a damp easterly wind and threatening sky, the sun being invisible. At the same time the wind, though light at times, was sufficient to permit the sailing off of the whole programme; and the rain which threatened did not fall. The course, a triangle with half-mile sides, was well buoyed, just in front of the club house in Gravesend Bay; painted barrels being used to mark the turns, making excellent marks. The handsome little cabin naphtha launch Erna was placed by her owner, Mr. Greenfield, at the disposal of the judges, Messrs. Winne, Lawson, Seavey and Stephens; while Mr. Vaux started and timed the races from another boat.

The first race was called at 11:30, the orders being three rounds, 4½ miles, all buoys to starboard, making a reach off, a freer reach on the second leg, and a beat over the third. Uno and Hornet cut the line nearly together, both being beautifully timed. Canuck came next, followed by Bee, then Toltec, Wasp, Tornado and Wraith. On the first leg, sailed very quickly with booms to starboard and sheets eased off, the positions were unchanged, save that Wasp passed Toltec, so that the first four came to the mark in a bunch. In the jibe at the mark Hornet was crowded off by the others, and lost her place as a close second. When the preparatory signal was given, after some delay in getting the fleet launched and rigged, Glenwood was well out on the course trying the wind and did not notice the signal. By the time that Mr. Oxholm realized that the start was on and had beat up to the line the whistle had been blown for three minutes, and he started with that handicap.

Bee was sailing as fast as any on the reach of the second leg, and when they came to the wind she ran into first place, the fleet scattering on port and starboard tacks. When they all came together at the end of the round, Uno slipped into first place at the turn, followed by Bee, while Wasp cut in ahead of Hornet. For some time the old rivals Jones and Barrington had been ding-donging together, but at the turn Canuck came out ahead.

There was pretty work on the next leg, as Uno took the lead from Bee, only to be passed to windward by the latter near the end of the leg; while just at the jibe Uno very cleverly cut inside again and took first place. At the end of the second round Bee had a clear lead, with Uno second, Hornet third and Wasp fourth, but Wasp ran quickly outside of Hornet at the turn and headed her again. Toltec had the best of Canuck now, and the positions were unchanged on the last round, Bee winning, with Uno, Wasp, Hornet, Toltec and Canuck in order. Glenwood never was fairly in the race, but sailed pluckily in the wake of the fleet; her elapsed time being almost the same as Uno. The full times were:

SENIOR SAILING RACE—4 MILES.

	Start.	1st.	2d.	Finish.
Bee, Goddard, Vesper	5	2	1	38 50
Uno, Quick, Yonkers	1	1	2	39 25
Wasp, Butler, Vesper	6	3	3	40 13
Hornet, Whitlock, M. & F	2	4	4	41 03
Toltec, Barrington, New York	4	6	5	41 55
Glenwood, Oxholm, Yonkers	10	9	8	42 33
Canuck, Jones, Brockville	3	5	6	43 38
Torment, Smythe, New York	8	9	9	46 00
Wraith, Collins, Bayonne	9	10	10	.....

After a lunch at the club house the tandem race was called at 1:20, but two crews starting:

Paddle	Barrington & Plummer, New York.
Jonah	Collins Bros, Bayonne.

The course was a measured mile, from above the New York C. C. house at Bensonhurst to a finish off the Marine and Field Club grounds. The New York crew led from the start and won easily, the time being 9m. 4s.

The club representative race, limited to local clubs, had as entries Glenwood, Hornet, Toltec, Tornado and Wraith. The wind was light N.E. when it started at 3:25. Hornet had a good start, with Glenwood second and Toltec third. The distance was three rounds, as before, but sailed in the contrary direction. The race was between Glenwood and Hornet, the former taking the lead on the second round and finally winning. The times were:

	Start.	1st.	2d.	Finish.
Glenwood, Oxholm, Yonkers	2	1	1	35 10
Hornet, Whitlock, Marine and Field	1	2	2	37 02
Toltec, Barrington, New York	3	3	3	38 00
Tornado, Moore, K. C C	4	4	4	39 47
Wraith, Collins, Bayonne	5	5	5	....

The principal event, the race for the Marine and Field Club cup, was called at 5 o'clock, the wind being moderate, with puffs at times. The course was three rounds, leaving all marks to port. The order at the line was Canuck, Glenwood, Wasp, Bee, Toltec, Alpha. Hornet was very close to the buoy at the start, and in trying to clear it she jibed and capsized. Captain Whitlock righted her and regained his seat, and making a sweep around came for the line a second time, but again capsized, this time withdrawing. Torment also capsized on the line and withdrew. Glenwood soon took the lead, with Bee second and Wasp third, while Canuck dropped back until alongside of Toltec again. The race between Glenwood and Bee was very close and exciting up to the last leg, when Bee ran ahead and finished 5s. before Glenwood, giving Mr. Goddard the permanent ownership of the cup.

MARINE AND FIELD CUP.

	Start.	1st.	2d.	Finish.
Bee, Goddard, Vesper	4	2	2	34 17
Glenwood, Oxholm, Yonkers	3	1	1	34 22
Wasp, Butler, Vesper	3	3	3	35 15
Canuck, Jones, Brockville	1	4	4	36 17
Toltec, Barrington, New York	5	5	5	37 55
Alpha, Goodsell, Yonkers	6	5	6	41 30

Moore, Smythe and Whitlock started, but upset or retired.

The final race was between the three war canoes Ko-Ko-Ko-Ho, of Yonkers; Ti-Hi-Ki-Qi Siss, of the Crescent Athletic Club, and Wa-Wa, of the Orange C. C. The Yonkers canoe, under Captain Quick, had a crew of nineteen, but the other two were under-manned, carrying about a dozen men each. The course was the same as in the tandem race. The Yonkers took the lead at the start and held it to the finish, winning by a clear length. The race was picturesque in the extreme, the three great canoes with flashing paddles making a fine appearance.

The crew of the Ko-Ko-Ko-Ho was made up as follows:

Captain and steersman, H. Lansing Quick.

Port.	*Starboard.*
P. B. Rossire, stroke,	J. W. Simpson, stroke,
Fritz Von Bernuth, Jr.,	George P. Steele,
Young,	Brown,
F. B. Collins,	G. Collins,
J. T. Plummer,	T. H. B. Barrington,
F. C. Moore,	R. O. Kirkwood,
E. Sanford,	D. G. Holbrook,
Dexter,	Everett Masten,
Connor.	George Douglass.

After the races the canoeists were entertained at dinner in the club house, the evening passing very pleasantly with songs and speeches. The prizes were presented, a pair of silver-mounted brushes to Mr. Goddard for the first race; a timing watch to Mr. Quick, second; a silver loving cup for the tandem, a handsome silver water pitcher, salver and cup for the club race, the Marine and Field Club cup to Mr. Goddard and a handsome banner to the Yonkers Club for the war canoe race. Many of the visitors slept at the club, the three of Mr. Wilkin the reading of minutes of previous meeting was dispensed with. Moved by Mr. Lake, that there shall be no meet of the Atlantic Division this year. Carried. The following was entered upon the minutes, after which the meeting adjourned. "For the first time in the history of the A. C. A., the Atlantic Division is called upon to record the death, by drowning, of one of our beloved companion, the commodore of the Brooklyn C. C., Charles Parker Weekes, who, during the delightful excitement of a glorious cruise, met death without an instant's warning, by being capsized from his own canoe, in running the shute at Lackawaxen Dam, on the Delaware River. Mr. Weekes has been a member of the A. C. A. for the last six years, and by his death we lose a companion and friend, dear to all who knew him. His beautiful character, judicious conduct, his firm bearing and thoughtful mind, commanded our fullest confidence, together with our love and honor. His manner was all gentleness, his reverence most firm and his heart tender and true. While enjoying the sport he loved best, he was taken from us, and we can but in a small way appreciate the blow to his bereaved widow and heart-broken relatives. To them we offer our sincerest sympathy. 'What I do, thou knowest not now, but thou shalt know hereafter.'"

F. L. DUNNELL, Purser, A. D.
L. W. SEAVEY, Vice-Com, A. D.
BATH BEACH, June 18.

Atlantic Division, A. C. A.

A MEETING of the Atlantic Division, A. C. A., was held at the Marine and Field Club on June 18 at 5 o'clock P. M., Vice-Com. L. W. Seavey presiding. R. J. Wilkin, proxy for Rear-Com. Palmer, James R. Lake, W. S. Elliott and F. L. Dunnell were present. On motion of Mr. Wilkin the reading of minutes of previous meeting was dispensed with. Moved by Mr. Lake, that there shall be no meet of the Atlantic Division this year. Carried. The following was entered upon the minutes, after which the meeting adjourned. "For the first time in the history of the A. C. A., the Atlantic Division is called upon to record the death, by drowning, of one of our beloved companion, the commodore of the Brooklyn C. C., Charles Parker Weekes, who, during the delightful excitement of a glorious cruise, met death without an instant's warning, by being capsized from his own canoe, in running the shute at Lackawaxen Dam, on the Delaware River. Mr. Weekes has been a member of the A. C. A. for the last six years, and by his death we lose a companion and friend, dear to all who knew him. His beautiful character, judicious conduct, his firm bearing and thoughtful mind, commanded our fullest confidence, together with our love and honor. His manner was all gentleness, his reverence most firm and his heart tender and true. While enjoying the sport he loved best, he was taken from us, and we can but in a small way appreciate the blow to his bereaved widow and heart-broken relatives. L. W. SEAVEY, Vice-Com, A. D.
BATH BEACH, June 18.

New York C. C. Cup, June 21.

BENSONHURST—GRAVESEND BAY.

THE second trial race on Tuesday, June 14, resulted in a victory for Mr. T. S. Oxholm, of Yonkers, and he was chosen to represent the New York C. C. under the conditions recently published. The first race was set for Tuesday last at 4:30, the start being made 20 minutes after that hour. The challenger, Mr. Ford Jones, of Brockville, Can., brought his old canoe Canuck, in which he has twice before sailed for the New York C. C. cup, the boat and rig being in all details precisely the same as in her first season, 1889. Her lines and rig were described and illustrated in the FOREST AND STREAM of Sept. 18, Oct. 16 and Dec. 26, 1890. Mr. Oxholm's canoe is described elsewhere.

The day was very warm, with a light S.W. wind and smooth water. The triangular course, with one-mile sides, was laid out very carefully by crossbearings, and is believed to be quite accurate. Three rounds, 9 miles, were sailed, the first leg of each being to windward, the second and third reaching.

The two canoes crossed close together within ten seconds of the gun, Glenwood being close under Canuck's lee. She at once ran ahead and across Canuck's bows out to windward. The two started on starboard tack, but after a minute Canuck tacked and stood to the westward, Glenwood not attempting to follow. When they met again Glenwood was still well ahead and she continued to gain on every one of the nine legs. The second leg was run with booms to starboard, then a jibe at the second mark and a reach with a beam wind to the starting line. At the end of the first round Glenwood led by 2m. 14s., doubling this on the second. On the third the wind fell lighter as a heavy thunder storm threatened in the N.W., but it passed over without reaching Bensonhurst. The story of the race is told in the following figures:

Preparatory 4:49, Start 4:50.

	1st leg.	2d leg.	3d leg.	
FIRST ROUND.				
Glenwood	5 04 10	5 12 00	5 18 32	28 32
Canuck	5 05 05	5 13 37	5 20 46	30 46
				2 14
SECOND ROUND.				
Glenwood	5 31 20	5 39 39	5 47 50	29 18
Canuck	5 34 47	5 43 39	5 52 31	31 42
				2 27
THIRD ROUND.				
Glenwood	6 00 41	6 08 35	6 17 21	29 31
Canuck	6 06 31	6 16 03	6 27 19	34 48
			9 58	5 17

The following table shows the elapsed time over each leg, with Glenwood's corresponding gain:

	First Round.			Second Round.			Third Round.		
	1 leg.	2 leg.	3 leg.	1 leg.	2 leg.	3 leg.	1 leg.	2 leg.	3 leg.
Glenwood	14 10	7 50	6 32	12 48	8 19	6 11	12 51	7 54	8 46
Canuck	15 05	8 32	7 09	14 01	8 52	8 52	14 00	9 32	11 16
	55	42	37	1 13	33	3 41	1 09	8	2 30

The second race is being sailed as we go to press, Wednesday afternoon, and barring accident will in all probability have the same result, the weather conditions being about the same. Glenwood carried 120ft. in two standing sails and Canuck 115ft.

The Butler Seat in England.

THE following items from the *Field* show that the Butler deckseat has become a permanent institution in British canoeing, and that although prohibited in the Royal C. C. by rules, which cannot be changed during the racing season, it will be used in many races outside the club, or even in club races under penalty of disqualification:

"Racing and sailing in the south of England during the Whitsuntide holidays has, as might be expected, given out one or two lessons in canoeing which will probably bear fruit when clubs meet at the end of the year to legislate for the next season. The experiences gained, however, only amount to proof of the opinions of experts, which we published in the *Field* months ago; such as the decline, if not the death of the 'second class' in the R. C. C.; the advisability of allowing sliding deck-seats; and that canoes should be allowed to form their area plan under the 'rating' rule.

"Sliding deck seats have now been very generally adopted in the Royal Canoe Club; Lassie, Hermion, Vanessa, Nautilus, Beaver and Battledore are thus fitted; and three only, including Stella, have thus far kept clear of the allurement—that is of the racing team. The result of the sailing last week and this week is that those who use the sliding seat are nearly in open mutiny against the club for wasting this season's enjoyment of racing. To go back from the sliding seat to the ordinary wet deck break-back position, apart from the question of management of the canoe, is such a marked discomfort that it is openly suggested by "sliders" to sail for the challenge cup with these seats, and be disqualified under the rule. The sliding seat, of the pattern fitted to the Nautilus, can be put on to any, or nearly any, form of deck and size of well, and costs, built in the best seasoned mahogany, only £1. Our experience of using the sliding seat is that in rough water sprays fly over the boat and into the well, but the canoe-man's body is out to the windward all clear and dry, the power over the boat is quite of a high order compared to sitting on the side deck, and the strains to one's back and legs is almost nil, and these facts are universally admitted. The addition of the seat does not constitute any alteration of the boat or her sail plan, but enables the utmost to be got out of her. Even now, though Stella has won all her races, except two, it is very generally thought that Battledore can beat Stella any time if sliding seats are on. Battledore was not sailing in the sliding seat race on Saturday, but it was a day of most peculiar winds and shifts. Stella picked up a long slant during the troublous rouud, and was an easy winner. Nautilus, hitherto supposed to be somewhat ticklish owing to her round bottom, proved quite a different boat under sliding-seat, and, weathering all the squall, came in second."

Who Is He?

Editor Forest and Stream:

In looking over an account in an evening paper of the regatta of the Marine and Field Club (slip inclosed), I notice among the names of officers one which has a familiar look and yet is decidedly puzzling. I should have thought it was intended for our old friend C. Bowyer Vaux had it not stated that "T. Bowyerkaux" was a member of the "New York Canal Club." Is this a club that sails canal boats? Ah! a light breaks in upon me—it is—it must be that the same Bowyer has changed his club, and now that he has finally fetched up in a "Canal Club," he is trying to conceal his identity; but it won't do, C. B., we are on to your little game. If I am not right, Mr. Editor, will you kindly correct me and oblige. SHELL BACK.

NEW YORK, June 19.

[The article in question from the *Evening Post* reads as follows: "The officers of the day were: Referee, Commodore G. B. Winne; Judges, David Raic, Jr., Marine and Field Club; L. W. Seavey, Knickerbocker Canoe Club; W. P. Stephens, New York Canoe Club; Walter N. Lawson, Restero Boat Club and T. Bowyerkaux, New York Canal Club." Another daily paper made the announcement that Mr. Oxholm had been selected to *row* Mr. Barrington next week.]

A. C. A. Membership.

THE following gentlemen have applied for membership in the A. C. A.: Eastern Division: John Erving, Lowell, Mass; Arthur O. Knight, Arthur A. Prichard, W. B. Walworth, Arthur D. Putnam, J. Walter Flagg, Wilbur F. Boswell, Geo. D. Putnam, Edwin S. Clark, Wm. E. Fairbanks, Arthur E. Davis, T. H. Blood, Fred H. Clark, William N. Brooks, Geo. A. Butler and Fred A. McClure, Worcester, Mass; F. H. Hills and L. S. Hickmott, Hartford, Conn. Northern Division: J. R. Clancy, Montreal; C. Gay Shannon, Kingston. Atlantic Division: Edgar E. Booze, W. P. Rickey, Jr., and Joseph O. Rickey, Trenton, N. J.

CANOE NEWS NOTES.

The Brooklyn C. C. has cancelled all its racing fixtures for the season, and will leave the office of Commodore vacant until next year out of respect for the late Commodore Weeks.

Our list of prize flags published last week contained an error, the flags being promised *through* Com. Winne, instead of the first being promised *by* him, as stated.

On next Saturday and Sunday Com. Winne, with Mr. Huntington of the site committee and a number of other A. C. A men, will visit Willsborough Point to make the final arrangements for locating the camp.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Rifle Range and Gallery.

THE REVOLVER CHAMPIONSHIP.

THE announcement of results in the opening shoot for the Winans Trophy, in the FOREST AND STREAM, closed up a long and interesting contest. Figures and scores were given with the report. Herewith are given diagrams of the cartridges and bullets used, shown full size. The majority used the round bullet, G, fired from the short cartridge case, 8. When the .32cal. was used bullet F was the favorite with shell 4. Yost and Dr. Gardner, of Philadelphia, used the Colt revolver with cartridge No. 5, firing the bullet E. This is the only cartridge showing the bullet projecting from the shell. All the others with the low powder charges employed had the bullet seated low down in the shell. Bullet A was fired from shell No. 1 by Jantzer and Hoffman; bullet C was selected by Roundsman Petty and was fired from shell No. 2; bullet B was the choice of Chas. Wellinger, of Cincinnati, while D in the bullet line came from one of the shells used by Frank Speth, also of Cincinnati. It is a mark of great confidence in the factory-loaded ammunition that so many of the shooters used it in preference to any loaded by themselves. All of them are careful experimenters, and their choice of factory loads was made only after conviction that private loading would bring no better results.

As to the prizes, Mr. Bell takes possession of the trophy and also receives an order on Smith & Wesson for "any model of revolver that may be selected, handsomely gotten up, with morrocco case, etc."

Messrs. H. S. Burley, of Chicago; Geo. E. Jantzer, of New York, and Sumner Paine, of Boston, receive from the FOREST AND STREAM prize of $100 the sums of $50, $30 and $20 respectively, and checks for said amounts have been sent.

Geo. E. Jantzer, who took third place in the revolver contest, is the first challenger for the possession of the trophy. His challenge came in within two days of the publication of the scores.

St. Louis Sharpshooters.

As the South St. Louis Sharpshooters have been unable to use their park on account of the high water, the St. Louis Club kindly offered them the use of their range at Creve Coeur Lake. The offer was accepted with thanks, and their first shoot this season was held there to-day. All the St. Louis clubs were represented at the shoot, also two Illinois clubs, Belleville and Highland. The weather was intensely hot. Scores:

Man Target—L. Sicher 92, H. Zubar 92, V. Rapp 91, N. Burd 89, L. Frank 88, F. Kurka 87, F. Burkel 86, J Morf 85, M. Kaer 85, S. G. Dorman 85, D. Schneidewind 83, A. Yunge 81, C. Fritz 81, T. Schneider 81, A. Vogel 81, G. Alexander 80, C. Meisbach 80, F. Etling 79, C. Mueller 79, R. Bethman 79.

Ring Target.—Martin Kaer 66, Louis Schwinghorfer 66, C. Meisbach 65, D. Wiget 61, Wm. Bauer 61, L. Sicher 61, D. Schneidervind 59, F. Linde 58, C. Mueller 58, C. Schroeder 57, Ed. Fritz 57, Aug. Yunge 55, Nic. Burd 55, T. Frank 54, V. Rapp 53, W. Tell 53, Aug. Vogel 53, S. G. Dorman 53, R. Bethman 51, C. Merz 49.

Point Target.—D. Schneidervind won $12.80, V. Rapp 10.70, S. G. Dorman 9.80, W. Bauer 8.50, L. Schwinghoefer 6.70, N. Burd 5.40, C. Fritz 4.70, D. Wigel 4.50, F. Eungle 3.90, C. Reinecker 3.00, J. Morf 2.95, M. Baur 2.75, L. Frank 2.60, L. Sicher 2.45, F. Kurka 2.35, C. Schroeder 1.70, R. Vogel 1.60, F. Linde 1.80, W. Tell 1.50, C. Baptie 1.60, F. Burckel 1.60, C. Mueller 1.40, W. Mackevitz 1.40, L. Priester 1.35, A. Mende 1.00. RAMROD.

The Massachusetts Spring Meeting.

BOSTON, June 18.—The big spring meeting of the Massachusetts Rifle Association closed this afternoon after a very interesting three days' tournament for rifle and pistol. Riflemen were present from New York, Hartford, Gardner, Worcester, Lawrence, Leominster, Haverhill, Wakefield, Portland, Me., and Philadelphia. On the whole it was a very pleasant gathering. Many fine scores were made with both rifle and pistol. Below will be found the prize winners and their scores, in the reentry events with match conditions.

No. 1, off-hand match, open to all comers, 200yds. standing, rounds 7, standard American target, any rifle within the rules. Five scores to count, entries unlimited at 50 cents each, 30 prizes aggregate $394.50:

J Busfield	309	F E Mayberry	285
H E Tuck	305	H S Harris	284
O M Jewell	303	C F Brooks	282
C H Eastman	301	A Matthews	280
C S Sydney	301	H A Harson	276
H L Lee	300	S Paine	274
W Charles	293	J E Winter	267
A C White	292	J H Jenkins	266
H M Pope	291	I B Thomas	264
G F Ellsworth	285	G F Prevear	264
C A Joslin	263		
J W Bean	253		
A Law	248		
E H Foote	245		
S Gleason	244		
E E Partridge	243		
P H George	235		
E J Crapo	193		
W Williams	189		

No. 2, rest match, open to all comers, 200yds., 7 rounds, standard American target with rest bullseye, any rifle, without restrictions in regard to weight, sights or trigger pull, except that hair-triggers must be provided with safety lock, and rifles with telescope sights will be handicapped 10 points on the aggregate of 5 scores. Any position or rest allowed, provided the rifle be shot from the shoulder. Five scores to count. Entries unlimited at 50 cents each:

F Daniels	397	L R Avay	375
J Francis	394	H A Parsons	366
S Wilder	387	J French	361
W P Thompson	378	I B Thomas	361
H L Willard	359		
W C Prescott	334		
W Williams	334		
J N Eames	321		

No. 3, military match, open to all comers, 200yds., standing, 7 rounds, Creedmoor target, 6lb. trigger pull, Springfield and Lee rifles as issued by the State, and .50cal. Remington rifle as issued by the State of New York. No cleaning except between scores. Five scores to count. Entries unlimited at 50 cents each, 12 prizes, aggregate $66:

E J Carpo	162	B Dimock	158
W C Merrill	162	W G Hussey	157
C E Horton	161	W D Huddleson	157
W O Burnite	159	G L Marshall	154
H N Sweet	154		
F J Lounsbury	154		
J P Hickey	150		
C T Hilleker	150		

No. 4, pistol match, open to all, 50yds., 7 round 200yds. 5A target, M. R. A. rules to govern except that revolvers will be allowed five points on the aggregate of five scores, 2lb. trigger pull, blowing in barrel and any ammunition allowed. Signts must be on barrel and not more than 10in. apart; 12 prizes, aggregate $122:

E E Partridge	331	Louis Bell	322
F B Crownshield	326	W Charles	318
Sumner Paine	322	N D Allen	315
B Dimock	322	W O Burnite	314
H D Martin	307		
J C Winter	300		
L R Avay	296		
O Howard	293		

The events of the opening day were the new championship individual matches of Massachusetts for pistol and rifle. The conditions and leading scores were:

M. R. A. Championship Rifle Match, for the State of Massachusetts. Prize, elegant gold medal. Open to all persons residing in the State. All matches to be shot on the range of the Massachusetts Rifle Association, 200yds., off-hand; rounds, 20; target, Standard American; entry fee, 50 cents. Any number of competitors can enter each match by entering before the match begins. The holder of the medal must defend the championship title against all comers within one month after being challenged or forfeit the medal, and must give the Association at least ten days' notice of the date on which he will shoot the match; and must deliver the medal to the Association two days before the match; and he shall leave a deposit with the Association while the medal is in his possession. Any competitor winning the medal ten times, or five consecutive times, or holding it continuously for one year, shall become sole owner of the medal. A bronze medal will be presented to the winner of this medal for his first victory, and a bronze bar for each victory thereafter.

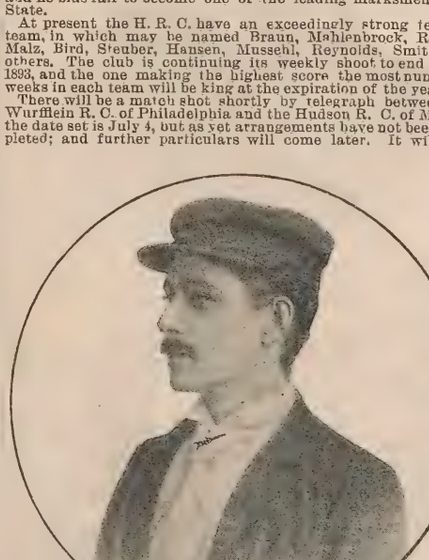
C. E. Bird to the Front.



THE accompanying target is one made by Mr. C. E. Bird, of the Hudson Rifle Club, Marion, N. J., Monday evening, June 6. It is the highest ever made by any member on score nights and only once was it ever beaten on the H. R. C. ranges and then it was a practice target. Mr. Bird is secretary of the club and is an en-

thusiastic rifleman. He is generally interested in all athletic sports, but his principal favorite is the rifle. He has steadily increased from fourth class a year ago to first class at the present time. Mr. Bird is possessed of exceedingly good eyesight and is a left-handed shooter. His opinion is decisive on disputed shots, and has given shots that could hardly be detected without the aid of a glass. The 200yds. range is another favorite distance for him and he bids fair to become one of the leading marksmen of the State.

At present the H. R. C. have an exceedingly strong ten-men team, in which may be named Braun, Mahlenbrock, Rebhan, Malz, Bird, Steuber, Hansen, Mussehl, Reynolds, Smith and others. The club is continuing its weekly shoot to end May 1, 1893, and the one making the highest score the most number of weeks in each team will be king at the expiration of the year.

There will be a match shot shortly by telegraph between the Wurfflein R. C. of Philadelphia and the Hudson R. C. of Marion, the date set is July 4, but as yet arrangements have not been completed; and further particulars will come later. It will be a

MR. C. E. BIRD.

novelty, as it is the first that has been attempted in this city. As soon as a score is made it will be telegraphed to the opposing club, and when the match is over targets will be mailed to each club for inspection and verification. The FOREST AND STREAM representative is kindly invited to act as one of the judges at the Marion ranges, and all in all it will be very exciting.

Below will be found scores made by the H. R. C. members on June 6, at 25yds.:

First Team.

C E Bird	25	25	23	25	25	24	23	24	25	24—247
J Rebhan	25	25	25	23	25	25	24	23	23	23—243
H Mahlenbrock	25	24	24	22	22	20	20	20	19	18—216

Second Team.

W Mussehl	25	25	24	24	24	24	24	23	21	—238
T Reynolds	25	25	25	24	23	23	23	22	22	21—233
J Smith	25	25	25	25	24	23	22	22	22	17—228

Third Team.

S Middleton	25	24	24	24	23	22	22	20	19	24—227
A Heidorf	25	24	24	23	23	22	22	22	21	20—226
Jos Busch	25	25	22	22	22	21	21	20	20	14—225

HUDSON RIFLE CLUB.

Secretary Bird writes:

June 17.—The challenge to the Wurfflein Rifle Club which was issued last Saturday, found its way to that club, but in the words of their genial secretary, Mr. J. J. Montjoy, "they connot get the stuff together," and regret very much being unable to accept our proposition to shoot July 4.

Empire Rifle Club.

NEW YORK.—The following scores were made by members of the Empire Rifle Club at their weekly shoot at their headquarters, 12 St. Mark's Place, June 14: C. Zettler, Jr., 236, W. Meisenholder 235, A. Rosenstraus 234, H. Zettler retired.

Creedmoor Crowded Out.

THE old range where nineteen years ago the first shot of modern rifle practice in America was fired is there yet, but the men who made it, those who gave time and money and effort to build up the art of rifle shooting have been pushed off the range, forced from their position by youngsters upon whom gold lace and authority had been placed by political sponsors. The militia authorities of the State took away the chance of summer practice matches, which were so popular with the guardsmen and which enabled the Association to gather in enough funds to keep itself together and pay in part the expenses of the fall meeting. With this deprivation there was nothing for the Association to do but seek hospitable, decent treatment elsewhere, and on Thursday last the Directors decided as follows:

NEW YORK, June 16, 1892.—At a special meeting of the board of directors of the National Rifle Association the following resolution was adopted:

Whereas, The assignments of Creedmoor for practice by the National Guard during the present year leave no time available in September during which the annual meeting of the National Rifle Association can be held, and

Whereas, If such orders should be changed, the refusal of the General Inspector of Rifle Practice S. N. Y. to permit the scores made in the sharp shooter matches of the National Rifle Association to be counted as qualifications (as has heretofore been the case) has broken up these matches and thereby deprived the Association of the revenue by which alone it was enabled to provide the prizes and meet the other expenses of its annual meeting, and to maintain its office, and

Whereas, The General Inspector of Rifle Practice of the State of New Jersey and the Rifle Association of that State have offered to provide for all the matches of the National Rifle Association at Sea Girt during the annual meeting of the New Jersey Rifle Association, it is therefore

Resolved, That the officers of the Association be authorized and directed to arrange that the competitions for the Hilton Shield, the Interstate Trophy, and such other matches as in their judgment may be practicable, be held at Sea Girt in connection with the matches of the New Jersey Rifle Association in September next, instead of at Creedmoor.

Resolved, That the closing of the office of the Association and the settling of its affairs be left to the officers of the Association, with power.

Rensselaerwyck.

ALBANY, June 18.—The following scores were made at Rensselaerwyck range to-day, shooting at Creedmoor target, 600yds.:

L Geiger	5	5	5	5	5	5	5	5	5	5	5—50
Wm T Mayer	5	5	4	5	5	5	4	5	5	5	5—48
Major Chas H Gaus	4	4	5	5	5	5	5	5	5	5	5—48
Charles P Frey	5	4	5	4	5	4	5	5	3	5	5—45
Wm O Gomph	5	5	4	4	4	5	5	5	4	5	5—46
Geo Zantner	2	3	3	3	0	3	2	2	0	3	3—21
											F.

Garden City Rifle Team.

THE Garden City Rifle Team met for their weekly contest Tuesday evening, June 14, at George McCune's shooting gallery, 146 South Halsted street, Chicago. Conditions were 25yds., 25 shoots each, open sights, free off-hand position, Massachusetts paper target, possible 300 points:

H S Burley	270	R McBean	262
C A Hankle	266	Jos Hosir	261
W J Gibbs	264	Geo McCune	256
Mrs L Thornton	235		
F Erickson	253		
J Politre	251		

New Jersey Rifle Shooting.

[Specially Reported for Forest and Stream.]

LADY MILLER RIFLE CLUB, Hoboken, N. J., Thursday, June 9.—The scores made in the regular weekly shoot are below. The conditions were 10 shots, rest, 25-ring target, possible 250:

Mrs. H. Stadler	242	Miss K. Born	234	Mrs. D. Miller	225
Miss M. Miller	242	Miss Sina	231	Miss L. Fruen	225
Mrs. A. Cordts	241	Mrs. H. Meyer	229	Miss Schneider	224
Mrs. J. Vogel	240	Mrs. E. Petry	228	Miss Miller	220

Palisade Rifle Club, Jersey City Heights, Captain John C. Reinhardt, Thursday, June 9.—The scores made in the several classes tonight are appended below. Conditions were 10 shots off-hand, 25-ring target, possible 250:

First Class.

G W Graf	238	C E Bird	235	A Malz	228
Capt Reinhardt	237	T A Reynolds	233	H Boddy	228

Second Class.

C Burk	221	H Rosenthal	218	J Kerwait	205
A Rossy	219	H Fischer	206	G Russ	200

The medal shoot, which was only open to members of the club, closed Sunday, the 12th inst. A medal was offered for competition among both the first and second class men. The closing day showed a large attendance, and interest was centered upon a half dozen shooters who were trying to come out ahead at the end of the shoot. This availed them nothing, however, as the men who have led from the commencing held it to the end. The first class medal was won by Henry E. Boddey, with scores of 73, 73, 73; total, 219. Herman Rosenthal won the second class medal with scores of 69, 70, 72; total, 211.

On Friday, June 10, the Newark Shooting Society and the Excelsior Rifle Club of Jersey City engaged in a regular semi-monthly match at the latter's 200yd. range in Armbruster's Greenville Schuetzen Park. The Excelsiors were defeated. The scores made were: Newark Shooting Society, J. Coppersmith, 226, F. C. Ross, 225, B. Walther, 215, H. Bergerow, 202, G. Wiegman, 193; Excelsior Rifle Club, William Weber, 211, L. P. Hansen, 209, Thomas Hughes, 198, John Speicher, 186. In the bullseye shooting the result was:

Newark Shooting Society.	Red.	White.	Blue.	Excelsior Rifle Club.	Red.	White.	Blue.
Wiegman	5	2	15	Hughes	7	16	21
Coppersmith	10	14	21	Speicher	9	5	11
Bergerow	2	9	15	Weber	2	4	6
Walther	3	13	23	Hansen	3	9	8
Ross	9	11	17				

These matches will continue until close of outdoor season, alternating in Greenville and Newark. Those having the highest average at the end will be the recipients of handsome gold medals.

The return match arranged between Messrs. Erskine and Hedden, of the North Ward Rifle Club, of Newark, and Captain Henry L. Hansen and John Rebhan, of the Hudson Rifle Club, Marion, takes place at the North Ward headquarters, Newark, Tuesday, June 21. The Hudson men were the victors in the first match, by a score of 4,705 to 4,617, each man firing a hundred shots. Hansen and Rebhan are the favorites in the betting on the result of the coming match.

Greenville Rifle Club, Friday, June 10. The scores of to-night are below. Conditions, 10 shots, off-hand, 25-ring target, possible 250:

Capt Robidoux	228	W C Collins	224	F Dodds	221
C Boag	227	H Gotthardt	227		
George Purkess	224	H Spohn	227		

The Friday Night Rifle Club, of Hoboken, President August Guerber, has completed all details necessary to their annual fishing excursion.

The Miller Rifle Club's victorious team will shortly appear in FOREST AND STREAM, a reproduction of a photo, taken last Sunday. Their shooting histories will also be given.

Hoboken Rifle Club, Hoboken, N. J., Captain John H. Yeck. Friday night's scores are below. The conditions were 10 shots, off-hand, 25 ring target, possible 250:

J H Kruse	236	M Roedeger	217	Jos Schauer	208
W Dilger	225	John Stein	216	C Kenneddy	208
H Wirth	217	F W Kroeger	208		

A team match followed, between teams captained by Fred. Kroeger and "Christy" Kennedy. The result was: Kennedy's team, 1,564; Kroeger's team, 1,520.

Messrs. Burbige and Willey Accept.

HARTFORD, Conn., June 20.—*Editor Forest and Stream:* Replying to the challenge which appeared in your issue of June 16, I desire to say that the challenge is accepted, and I inclose you my check for $25 to cover Mr. Bates' forfeit. We name July 1 as the day, between the hours of 3 and 6 P. M.; the grounds of the Willimantic Rod and Gud Club as the place, American Shooting Association rules, at targets thrown at known angles the style of shooting, referee and judges to be selected on the grounds. As we are personally and individually challenged to shoot two unknowns, we further stipulate, that unless the two unknowns are named prior to July 1, that on the arrival of the contesting parties, the match shall commence at once without preliminary shooting either by Burbige and Willey or by the two selected to make good the challenge issued by Mr Bates. Respectfully yours,

ALLEN WILLEY,
(For C. H. Burbige and Allen Willey.)

[Check for $25 received.]

Trap Shooting.

All ties divided unless otherwise reported.

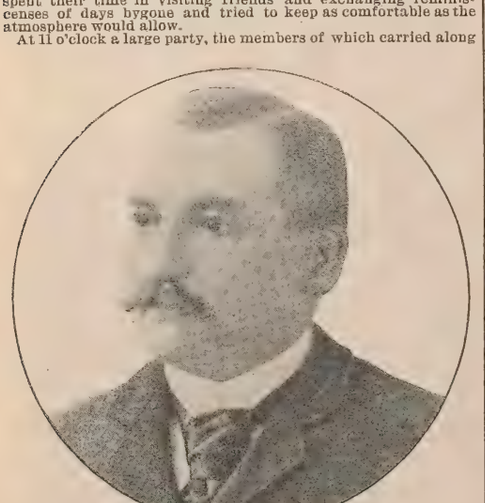
July 4-6.—Louisiana Gun Club tournament, Louisiana, Mo.
July 4-7.—Atlantic City Gun Club's tournament, at Atlantic City, N. J.

NEW YORK STATE SHOOT.



On the Shores of Onondaga Lake.

SYRACUSE, N. Y., June 13, 1892.—"The sun rose this morning." The above is given solely for the purpose of proving to the world at large that the sun rises over other cities than those in the West.

If on this particular morning it rose any more forcibly in the West than in the effete East our Western relatives are to be pitied. It was hardly 5:30 when the famous General Hugh M. Idity began to hold high carnival and it was Thursday noon before he let go his grip. Natives of the town and visitors alike sweltered and perspired and tried to devise schemes for keeping cool but all to no purpose. Until 4 o'clock there was scarcely a breath of air and even after that hour the air that was stirring felt as if it was a breath from a furnace. During Sunday night and Monday visitors kept thronging into the town and the faces of each and every one told the tale of hot and dusty rides. The hotel corridors were like ovens, the rooms more so, while the sidewalks were hot and the atmosphere sultry and sticky.

Despite all these drawbacks the thirty-fourth annual convention of the New York State Association for the Protection of Fish and Game opened under flattering auspices. During the morning the shooters and delegates from clubs in various parts of the State spent their time in visiting friends and exchanging reminiscenses of days bygone and tried to keep as comfortable as the atmosphere would allow.

At 11 o'clock a large party, the members of which carried along

CORRESPONDING SECRETARY C. H. MOWRY.

their shooting paraphernalia, boarded a train and proceeded to Maple Bay, to the shooting grounds of the Onondaga County Sportsmen's Club, where the trap, rifle and fly-casting tournaments were to be held. These grounds, which are leased from Proprietor W. S. Barnum, are considered the finest in the State, and as for location, they cannot be excelled. Maple Bay is seven miles from the city of Syracuse, and can be reached by rail or water. The property comprises some eighty acres, with a one-mile frontage on Onondaga Lake, one of the loveliest bodies of water in the State. The grounds extend from the lake to the railroad. About 75yds. from the entrance is the shooting house of the Syracuse Rifle Club; a frame building 20×30ft. The rifle range is 200yds. in length, with six targets, which work on the sash principle. Fifty yards further down the road is the picturesque house of the Onondaga County Sportsmen's Club, a picture of which is given in connection with this article. To the left of the club house is a grand stand capable of seating 1,200 people. Between this and the club house are tents pitched for the use of the various gun clubs. In rear of these is a big refreshment tent run by Mr. Barnum. Beyond this is a big barn, the upper portion of which is utilized as a pigeon loft on occasion. Still further beyond is a long strip of woods through which one catches a glimpse of the glittering waters of Onondaga Lake, a body of water which is rich in legends of old Indian days and dear to the heart of the Syracusan. About seven miles long by one-quarter to three-quarters of a mile in width, this lake presents a diversity of scenery that would delight the heart of an artist. In places the water is fully 100ft. deep, and it affords good sport to the angler, abounding as it does with bass, pickerel, pike and other fish. A long pier extends out into the lake and affords a landing for the steamers which touch here every half hour. Immediately in rear of the pier is a big barroom, in front of which is a verandah 30ft. wide extending the whole length of the building. In the rear are bowling alleys and rifle ranges. To the left of this is a good-sized dancing pavilion, and in the rear of this is a cage wherein are a lot of performing bears. A little further up the beach is the Maple Bay Hotel, with a well-stocked bar, cool and well-ventilated dining room, and about 75 comfortable bedrooms. The entire property belongs to W. S. Barnum, who has made for it an enviable reputation as a summer resort, and one which is patronized by all the better class of people of Syracuse.

And this W. S. Barnum, by the way, has not only a reputation as a boniface, but as an old-time, all-round sportsman as well he is known all over the country. In the use of the rifle and shotgun he is an adept, and although business has engrossed his attention for the last three years, his hand and eye are still in form for good work. He has shot all over the country and can tell some interesting stories of his experiences among the Rockies. He was one of the founders of the New York State Association and is as enthusiastic as of old in all matters pertaining to its interests.

The work at the traps on Monday was merely preliminary, the real programme opening on Tuesday. The grounds were in admirable condition, all the traps being in position ready for use, In front of the club house were the regular club traps, ten in number, these being provided with a permanent box screen. About 5yds. to the left of these were another set of 5 traps used for the open to all events. These two sets were provided with temporary screens. Behind each set was a cashier's office and scorer's box, the business of each set being run independently of the others. The open to all events were shot from bluerock expert traps, all the others being shot from the kingbird target traps. Will Cruttenden, inventor of the kingbird target and trap and of Cruttenden's automatic pull, had put in a couple of days' work getting his traps in order, the result being that they worked to perfection. The traps for the open events had been arranged by Paul North and they also worked finely. During the afternoon the following events were shot:

No. 1, 10 singles; Tee Kay 9, Courtney 9, Lyon 7, E. Hudson 9, Mann 10, Holloway 9, Duguid 10, Strange 10, Williams 9, Mosher 9, Greiff 8, Walters 9, Mowry 8, Starr 8, McIntyre 8. The scores in the other events follow:

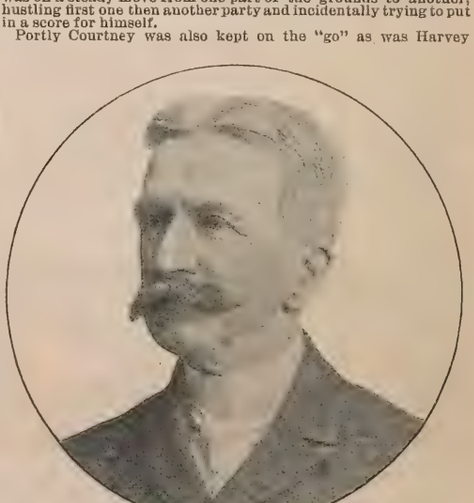
Tuesday, Second Day.

opened close and murky with scarcely a breath of air, and a look on the face of Old King Sol that boded well for a scorching day. The 8:20 train took about fifty shooters to the grounds and the 11 o'clock train took the same number out. It was 9 o'clock when the first shots were fired in the opening events, but from that time until train there was a steady fusilade over the forty traps. The first big event of the day was a merchandise shoot at 20

W. S. BARNUM.



kingbird targets per man, $5 entry, for 88 prizes. There were 110 entries in this, these comprising members of at least forty gun clubs of the State, the event being open to members only. After 10 o'clock a breeze came in from the lake, toward noon it came from the north and in the later hours blew from the west. The targets took an erratic flight at times, but nevertheless the average of the shooting was high.

Among those who were on hand during the day was Frank Courtney, of the Johnstown Gun Club; J. H. Richmond, W. R. Simpson, R. G. Moore and Louis H. Schortemeir, of the Emerald Gun Club, Brooklyn; George Mosher, of Fulton; "Uncle Sammy" Goggin, of Troy; L. H. Devitt, Chas. W. Tuttle, Wm. Whyte and W. S. Brigden, of the Auburn Gun Club; H. L. Gates, Gustav Decker and J. L. Hunter, of the Oneida County Sportsmen's Association, of Utica; Max B. Richardson, of the Leather Stocking Gun Club, of Oswego; "Uncle Ben" Catchpole, of the North Wayne Gun Club, of Rose; J. L. Leving and O. M. Paddock, of the Watertown Gun Club; McVean, Stewart and Schmidt, of the Rochester Rod and Gun Club; Harry Whitney, of Phelps; Kelsey, Koch and Andrews, of Buffalo; G. L. Knowlton, of the Fountain Gun Club, of Brooklyn; S. W. Lyon, of the North Side Gun Club, of Maspeth, L. I.; Gus Grieff, of the Emerald Gun Club, of Brooklyn; J. J. Blauvelt and J. R. Blauvelt (15 years old), of Pearl River; Gardner Skinner, of Clayton; E. Collins, of Hoboken, N. J.; Frank Post, of Park Ridge, N. J.; Wm. R. Hobart, of Newark, of N. J.; Thos. H. Keller, of Plainfield, N. J.; Paul North, of Cleveland, O.; W. K. Park and J. S. Kniskern, of Wilkesbarre, Pa.; Charles O. Barrett, of Boston, Mass.; and Geo. Corning, of the Auburn Gun Club.

The local club was represented by nearly its full shooting strength, including, among others, Harvey McMurchy, he with the handsome face and winning smile and irresistible penchant for practical joking; Al. Spangler, the semi-auburn Adonis; Charley Mowry, all around hustler and general manager of the shoot; Ed. Hudson, Sr., and also the junior E. H., the former an old-timer and the latter a worthy chip from the old block; George Holloway, expert with the gun or the pestle and mortar; Wm. E. Hookway, who loves traps as well as field shooting and is equally fond of a good horse; George Luther, who shoots well enough at all times to keep the boys guessing; Harry Becker, who is kept so busy loading shells for his friends that his own gun is idle; six foot and over A. C. Ginty, who recently lost his handsome moustache; H. B. White, President of the State Association; "Uncle Dan" Lefever, who is continually thinking out new gun improvements; and A. G. Courtney, fat, fair and forty (at least).

From early morn until the last gun was fired Charley Mowry was on a steady move from one part of the grounds to another, hustling first one then another party and incidentally trying to put in a score for himself.

Portly Courtney was also kept on the "go" as was Harvey

RECORDING SECRETARY JOHN B. SAGE.

"MacDuff," these two being engaged to assist Mowry in his labors.

Down around the open to the world traps could be heard the melodious voice of "Tee Kay" who did his great "hustle act" to perfection in getting entries for the open events.

Just in rear of the grand stand was a fly-tent under which stood a "fakir" with the "Flower City Races." "Step up and buy a chance on No. 5, gentlemen! You are sure to make eight to one for all the money you put in. Come and try your luck." This was the only objectionable feature on the grounds, and another year it should be omitted.

The grand stand was well patronized during the afternoon, when no admission was charged. Between this and the "fakir's" stand was a large wall tent wherein the Rochester Rod and Gun Club kept open house, and dispensed several hundreds of bottles of "Rochester Rod and Gun Club Special." It was "come all and stay as long as you like" under this canvas. The Emeralds also kept open canvas and Dr. Knowlton exerted himself to entertain all callers.

The shooting was kept up steadily until six o'clock, the shooters being kept on the jump during the interim. Both kingbird and bluerock traps worked in excellent shape.

Merchandise event No. 1 was finished about 2:30 and immediately after No. 2 was started, the conditions being the same as in No. 1. This was not completed until the following day.

Below are found the scores in full of merchandise event No. 1, and a summary of the totals in the other events:

The Fourth Day

opened with the same hot sun and the same lack of air as the preceding ones, and as usual a breeze started about 11 o'clock. At 2:30 a heavy shower came up and this lasting as it did for the best part of an hour cleared the air considerably. Several new faces were seen on the grounds, among them being: Milton F. Lindsley of Hoboken, N. J.; W. Fred Quimby of New York; L. J. Alston of Atlanta, Ga.; Ed. Hankins of New York; J. R. Peck of Rutherford, N. J. and Frank Logan, a full-blooded Onondaga Indian.

The shooting was very spirited from start to finish except when Harvey MacDuff, "Tee Kay" and Quimby would get into a wrangle about a disputed shot. These wrangles however did not result in any blood-letting. During the day the management decided to reduce the price of targets in the open to all events from four cents down to three cents each, which fact was appreciated by the shooters. The general sentiment among the shooters during the entire week was that three cents was enough to charge

CLUB HOUSE AND SHOOTING STAND.

The Third Day.

Another hot one with scarcely a breath of air until after eleven o'clock. This did not keep people away, however, as the early train took down a big crowd, which was increased by each train and boat thereafter. After eleven o'clock a lake breeze enabled the people to keep fairly comfortable. The shooting was much more rapid than on the previous day.

Several new comers were seen on the ground, among them being R. H. Breintnall, of Newark, N. J.; Dicky Schaeffer, the auburn-hued Bostonian; E. Doenick, Dr. Leverage, Louis Gehring, and Col. Voss, of New York.

During the afternoon fully 500 spectators were on the ground and every good shot was generously applauded. Merchandise shoot No. 2, begun yesterday, was finished to-day. In this event sixteen tied for the third class of prizes. On the shoot-off Hadley won first choice, Andrews second, Richmond third and Tuttle fourth. Below are the day's scores:

THE FLY-CASTING TOURNAMENT.

The fly-casting tournament began in the morning at about 9 o'clock and lasted until 5 in the afternoon. Among the prizes offered were a patent twisted split-bamboo fish rod, a set of flies and a fly hook, a Kosmic rod, an aluminum and rubber reel, a Leonard split-bamboo rod and a 4oz. split-bamboo fishing rod. It would seem that this array of prizes would have filled the fly-casting events well, but the shooters could not be prevailed upon, even by a tempting display of presents, to leave the traps. Only three men were entered in class A and five in class B. The expert class was postponed. The tournament was managed by George B. Wood, and the following rules prevailed:

The contest shall be, as to distance, the number of points according to the number of feet obtained, and 25 points for accuracy, as follows:

Lane Cast—The line to reach a distance of not less than 50ft. When the contestant announces ready, five casts in succession shall be made inside the 24in. space, the lane to be bounded by the two buoy lines, each cast counting one point. Should one-half the line be outside and one-half inside, the count will be registered as one-half.

Buoy Cast—Five casts in succession shall be made as soon as the contestant announces ready, at a 12in. buoy at a distance of 50ft.; the leader or any part thereof crossing or striking any part of said buoy shall count as one.

Space Cast—Five casts in succession shall be made in a space of 4ft. between two objects or bushes, at a distance of 50ft.; each cast shall count as one. The stretcher fly must pass at least 2ft. beyond the said line, between the bushes.

Left Bush Cast—Five casts in succession shall be made at a row of bushes or construction, representing same on the left, at a distance of 40ft. Any part of the leader passing underneath the outside line of the bush shall count as one, as in the other contest.

for targets in any of the events. All the targets used in the regular State events were given to the Association by Cruttenden & Card, and thus it would seem that three cents per target clean profit should be enough to clear. However, this is a matter that can best be regulated by the State Association. The Association has heretofore allowed the charging of any price not exceeding four cents per target, and if at the meeting the delegates do not discuss a reduction they can not blame clubs for exacting the limit.

Great work was done all around to-day and the number of targets thrown exceeded that of any previous day. The scores are here shown:

Event No. 4, 20 singles, $3 entry:

THE FOREST AND STREAM.

Right Bush Cast—Five casts in succession shall be made in like manner, the counts to be as in the left hand bush contest.

Judges and Referee—Two judges and a referee shall be appointed by the president of the Association. The referee's decision shall be final.

The judges were Capt. H. Catley and Geo. P. Hier. Robert F. Lewis acted as referee. The full scores follow:

THE RIFLE TOURNAMENT.

The rifle shooting tournament under the auspices of the Syracuse Rifle Club closed to-night, after three days of shooting. On Tuesday the attendance was small, the light poor and the wind fishy. On the second and third days the conditions were better, those of to-day being the best. The battle for first honors was warm between some half dozen of the shooters. During the three days there were twenty prizes offered on the ring target, but only seventeen shooters took part in the affair. Dr. Stillman and R. Robotham were the moving spirits in the affair and to their efforts is due the success of the shoot. The scores of the winner along with the prizes follow. First three prizes in each match awarded for the best three tickets, all others for the best two tickets.

Off-hand match, 25-ring target, possible score on three tickets of three shots each, 225; two tickets, 150: L. N. Mogg, 70, 71, 68—209, first prize, $40; A. A. Stillman, 69, 69, 70—208, second prize, $30; A. C. Gates, 70, 69, 68—207, third prize, $25; C. J. Dally and Mr. Barker divided fourth and fifth prizes, $17.50; F. Schwikert, sixth prize, $12; Dr. Eggleston, H. J. Leighton and A. I. Woodward divided seventh, eighth and ninth, $9 37; F. A. M. Ball, L. Eggleston, A. O. Zischange, R. E. Smith, H. Raymond, W. A. Koehler and G. F. Grossman tenth to sixteenth prizes respectively.

Rest match, standard American target, possible on three tickets of five shots each, 150; on two tickets 120: H. J. Leighton, 54, 54, 55—163, first prize, $7 80; A. A. Stillman, 55, 54, 46—163, handicap ½ point, 162½, second prize, $5.20; R. M. Baker, 52, 53, 51—156, handicap 1½ points, 157½, third prize, $4.15; D. Eggleston, R. Robotham, D. Eggleston, A. O. Zischang and T. Schwickert, fourth to eighth prizes respectively.

Special $1 prizes for first and last centers each day in the off-hand match: First center Tuesday, Stillman; last center, Mogg. First center Wednesday, Stillman; Last center, Gates. First center Thursday, Woodward; last center, Stillman.

Friday, the Fifth Day,

was delightfully pleasant and hundreds of people took advantage of this fact and went out to see the big contests for the Dean Richmond trophy, the Lefever medal and for the State team championship. The first event was the State championship, open to club teams of four men each, 20 single kingbird targets per man, entrance fee $10. The first prize was 25 per cent. of the entrance money and a silver pitcher and tray presented by Dey Brothers, of Syracuse; second prize was 25, third was 20, fourth and fifth 15 per cent. each of the entrance money. While it was expected that a big list of entries would be made only ten teams materialized. The event was shot under the 10-trap, rapid-firing system and was quickly finished. There was a tie between the teams of the Emerald Gun Club, of Brooklyn, and the Union Gun Club, of Western New York, for the first prize. The Oneida County Sportsmen's Association, of Utica, and the Onondaga County Sportsmen's Club tied for third place, as did the Auburn Gun Club, Watertown Gun Club and the Syracuse Gun Club for fourth prize. These ties were shot off at three targets per man, the Emerald Gun Club winning first prize and the Onondagas the third. In the shoot-off for fourth place all the teams made another tie on the first attempt. On the second shoot-off the Watertown and Syracuse teams divided the pot. The scores of this event follow:

THE LEFEVER MEDAL SHOOT.

While the above shoot was in progress the individual contest for the diamond medal presented by the Lefever Arms Company was being shot on the center set of traps. The conditions were 20 single and 5 pairs of kingbird targets per man, there being 44 entries. The winner was O. M. Paddock, of the Watertown Gun Club, with a total of 29 breaks. Last year the medal was won by W. S. Simpson, of New York, on 30. The scores follow:

THE DEAN RICHMOND TROPHY.

Shortly after dinner the extra sets of target traps were removed and the live bird traps were adjusted in readiness for the Dean Richmond Trophy match, open to teams of three men each from any gun club in the State, 15 live birds per man; first prize the Dean Richmond Silver Trophy, valued at $1,150, and 60 per cent. of the entrance money; second prize, 40 per cent. of the entrance money. The winning team was that of the Union Gun Club of Western New York, on a clean score. Last year this same team won the match, also on a clean score. The birds were an indifferent lot, some being veritable "peepers," some very fast, but the majority only medium. They were far superior, however, to those used at Rome last year. They were furnished by Robert Cox, of New York, who spent two weeks in the West trying to secure the supply. The shooting was done in squads, each shooter knowing his trap. As it was after 7 P. M. when the match ended the tie for second place was not shot off, the teams dividing. The scores follow:

Rochester Rod and Gun Club, of Rochester, N. Y.		Emerald Gun Club of New York City.

Ten grand average prizes were offered for the best averages in the first six contests. These contests were at 20 single king birds each. The first prize, $50, was won by F. D. Kelsey of the Union Gun Club of Western New York, who dropped only six out of 120 birds, giving him an average of 95 per cent. For the second prizes Richmond, Hammond and McMurchy were tied at 112 out of 120, an average of 93¾ per cent. The full score is:

Grand Average.			
Kelsey	95	Andrews	90½
Hammond	93⅓	Koch	90
J. H. Richmond	93⅓	Livingston	90
McMurchy	93⅓	Paddock	89⅙
Hicks	92½	H. M. Stewart	89⅙
Tallett	92½	Whyte	88⅓
Walrath	92½	Hadley	87½
Whitney	92½	Buck	86⅔
Mowry	91⅔	Simpson	86⅔

Saturday, the Final Day.

Saturday was one of the most pleasant days of the week, a cool northwest wind tempering the rays of the sun so that everybody felt comfortable. A large number of shooters had left for home on the previous evening but still there were enough left to keep the live bird traps in use until after 6 P.M. The scores are appended:

No. 1, 5 live birds, $5:			
Cannon	11100—3	Mosher	10110—3
J H Richmond	21111—5	Hunter	21111—5
Leslie	11120—4	Mowry	11111—5
McMurchy	11121—5	Quimby	22121—5
Hobart	11211—5	Hadley	2 112—5

C. H. TOWNSEND.

Pennsylvania State Sportsmen's Association.

To the Sportsmen of Pennsylvania:

I beg leave to call your attention to a few of the reasons why every shooting organization should become a member of the above-named organization, which will be found upon the back of this sheet, together with a blank form of application. It is our desire to make this both a strong and useful organization, one which will prove a lasting benefit to all, and, believing you to be interested in the work, you will readily understand that we need your aid, and I would, therefore, ask of you to bring this before your organization at your earliest possible convenience, that your club may be placed upon the State's roster, which now numbers over 900, prior to July 1, in order that you may be eligible to compete for prizes, and be represented at our annual meet at Reading in August.

The organization is formed for the purpose of combining to secure proper legislation for the propagation and protection of our game birds and animals.

The consolidation of the shooters of the State means a power, and through it there is no reason why we should not receive an appropriation annually equal to that received by the State Fishery Commission for stocking our State with game.

It makes every individual member of a club joining the association a member of the organization, eligible to compete for any and all of the valuable prizes donated and contested for annually, and a police officer or game warden who will report to the officers of the association any unlawful hunting or trapping; thus it will be seen that we have thousands of men who will, through their aid, see that game is protected in accordance with the laws of this commonwealth.

It only costs, if you are a club or an association, $5 to join, and your annual dues thereafter are $1. If an individual, $1, and annual dues 50 cents. The expense to a club is but a trifle, and the benefits to every true sportsman are incalculable, and your children's children will thank their grandfather that he was and ever may remain a member of the Pennsylvania State Sportsmen's Association. Send along the required fee, and let us by union of thought and action make the association an honor to the State whose name it bears.

Yours fraternally,

JAMES H. WORDEN, Secretary, (Harrisburg, Pa.)

The Passaic City Gun Club.

THE Passaic (N. J.) *News* of June 3 has the following anent the dedication of the new rooms of the local gun club:

The new rooms of the Passaic City Gun Club on the third floor of the Postoffice building were appropriately dedicated last night in the presence of the members, their wives and a limited number of friends. The ceremony consisted of a musical and literay entertainment and a collation. The hall includes all of one floor of the building and is therefore roomy. Those who entered it for the first time, especially the ladies, paused at the door in blank astonishment. The decorations were odd and decidedly startling. In every nook and corner, pinned to the walls and suspended from the ceiling, where the heads, hides and stuffed remains of the birds and beasts that attract the sportsman in every land in the face of the globe.

Bald eagles and wide-winged swans hung suspended by invisible cords from the ceiling; owls, hawks, ducks and doves perched on the window sills and mantels. The black hide of a grizzly bear hung in front of the door, with the blazing eyeballs and gaping mouth pointed toward the door. Protruding from the walls in every direction were trophies of the chase captured on the plains of the West, in South America, Africa and India. The collection includes lions, tigers, boars, buffaloes and even chipmunks and squirrels. It was an amazing array, and its oddness was enhanced by the glare of many electric lights.

Visitors were received in the hallway by A. W. Shaw, B. F. Abbott and C. F. Lenone, composing the committee of arrangements. The half hour from 8:30 to 9 was spent billiard playing and sightseeing, and then Mr. Lenone as master of ceremonies introduced "Bob" Burdette, the celebrated humorist, who, like the other artists in the company, came as the guests of Mr. Lenone and other members of the club. Mr. Burdette opened with one of Rev. Dr. Talmage's characteristic sermons on the manner of bringing up children. It brought down the house. A quartette came next, it was made up of Harry Stringer, an Englishman, late of Carlisle and Lincoln Cathedrals and Kings College Church choirs; Arthur R. Hartington, of the Casino Opera Company; Harry Pepper, the celebrated ballad singer, and Thomas Matthews, of Passaic. They appeared twice and were encored each time. Mrs. Minnie Hollis-Wandell, of Brooklyn, who, before her marriage was noted as one of the best choir singers in Brooklyn, delighted everybody with her rich and finely modulated soprano voice.

But the artist who ranked next to Burdette, as an entertainer, was Harry Pepper, the celebrated ballad singer. He opened with "Dreaming," his favorite, and responded to several encores. After him came Harry Lechler, a noted zither player. All the artists were so persistently encored that it was late when the collation was served. The caterer was Samuel J. Ternune, of 176 West Tenth street, New York, who is well and favorably known here. He added to his reputation last night. While the audience dined Mr. Burdette continued to tell funny stories and recite comic pieces.

There are fifty-eight members in the gun club, and as the organization is generally admitted to be the most powerful and popular in the city, it may be well to know who they are. The officers are:

W. R. Evans, President; J. J. Slater, Vice-President; H. K. Beatty, Secretary; C. R. Wise, Treasurer; W. F. Gaston, Attorney, and B. F. Abbott, Field Captain.

Trustees: A. W. Shaw, J. H. Hall, M. Coman, J. J. Bowes and D. Campbell, Jr.

The other membere are: John Jelleme, J. H. Getchius, J. E. Ackerman, W. T. Magee, E. R. Hearn, James J. Reid, E. T. Ivimy, W. R. Brown, W. H. Beam, John Hemion, A. E. Palmer, L. M. Stone, G. H. Ackerman, S. T. Zabriskie, Richard Morrell, Ira A. Cadmus, H. F. Stevens, W. E. Shult, A. T. Zabriskie, W. Kip, A. McAllister, Thomas Matthews, L. Kick, A. Totten, Frank Kastell, F. E. Aldrich, Dr. E. A. Terhune, J. H. Remig, H. P. Doremus, E. N. Kevitt, George G. Farnham, I. Van Winkle, John H. Bogert, George B. Waterhouse, Charles Kelley, F. A. Wells, A. Norman, W. H. Hornbeck, Dr. G. T. Welch, A. Ferguson, D. D. Naugle, C. F. Lenone, N. G. Palmer, Charles Vermerel, D. P. Smock, H. E. Patterson, John A. Willett.

Among the ladies present last night were Mrs. A. W. Shaw, Mrs. Stevens, Mrs. Aldrich, Mrs. Slater, Mrs. Ivimy and the Misses Ivimy, Mrs. Beatty, Mrs. Wise, Mrs. Jelleme, Mrs. Totten, Mrs. Hemion, Mrs. Matthews, Mrs. Farnham, Mrs. Norman, Mrs. Coman, Mrs. Lenone, Mrs. Evans, Mrs. Kevitt, Mrs. Kelley and Miss Kelley, Mrs. McGee, Mrs. McAllister, Mrs. Naugle, Miss Abbott and Mrs. Zabriskie.

The Connecticut League.

THE sixth shoot of the Connecticut League took place at Ansonia on Wednesday, June 15. Ansonia is a small town in the southeastern part of Connecticut and this is the first shoot they have ever held. Taking the bad, threatening weather into consideration the shoot was a grand success. After arriving in town the shooters took carriages and drove to the gun club grounds which were located in a beautiful valley a mile and a half from the depot. On arriving there they met the president, Geo. E. Clark (who is the champion one-armed shot of the State), also Mr. Moore, Secretary Sperry and other members of the club. Two sets of traps were arranged, one for known angles and one for unknown angles, directly in front of their new club house. At 9 o'clock sharp the shooting commenced and continued throughout the day. The attendance would have been much larger if it had not been raining very hard in the different parts of the State early in the morning of the 15th. Inclosed are scores of the shoot:

State Team shoot, 30 targets per man:

SWEEPSTAKE EVENTS.

Ten birds: Cowee 8, Bristol 8, Potter 9, Savage 7, Bates 10, Gould 8, Webb 7, Nickles 0, Jordan 4, Mack 8, Currie 3, Albert 9, Cowles 5, Stone 8, Penn 10, Ridge 5, Clark 4, Edgarton 9, Capron 8, Strong 6, Penrose 6, Cady 8, Langdon 8, Sterry 10.

Ten birds: Savage 9, Bates 10, Edgerton 6, Webb 8, Bristol 8, Hubbard 8, Cowee 4, Potter 8, Gordon 6, Penrose 6, Wheeler 9, Currie 3, Gould 9, Albert 10, Langdon 7, Stone 5 Clark 6 Penn 7.

Fifteen birds: Hubbard 10, Penrose 11, Edgerton 12, Sterry 13, Jordan 7, Cowee 12, Langdon 9, Bristol 12, Mack 11, Albert 14, Savage 13, Bates 15, Strong 13, Wheeler 14, Merrie 13, Cady 12, Nickles 6, Clark 9, Gould 13, Potter 14, Webb 11, Currie 3, Cowles 4, Gardner 5.

Extra at 10 singles, known traps, Keystone system: Cowee 5, Albert 10, Potter 8, Savage 9, Bates 9, Bristol 6, Gould 7, Webb 8, Edgerton 9, Mack 8, Penn 6, Merril 3.

Extra at 10 singles, expert rules: Cowee 6, Currie 9, Bristol 8, Albert 9, Edgerton 6, Bates 8 Savage 6, Potter 7, Mark 7, Capron 6, Gould 7, Ridge 5, Stone 7, Penn 9, Merril 5, Webb 8.

Extra at 9 singles, expert rules: Bristol 6, Cady 6, Longdon 8, Bates 8, Strong 7, Savage 9, Potter 9, Cowee 9, Mack 7, Webb 8, Albert 9, Gould 6, Currie 6, Sterry 7, Penrose 6 Ridge 7, Stone 5, Edgerton 9, Clark 5, Gardner 3, Hubbard 8, Wheeler 8, Capron 7, Phelps 6.

Extra at 12 singles, expert rules: Edgerton 7, Hubbard 7, Penrose 12, Bates 10, Savage 11, Albert 11, Mack 9, Bristol 9, Cowee 11, Clark 5, Wheeler 9, Gould 9, Strong 11, Sterry 11, Cady 9, Longdon 12, Curry 9, Cowles 1, Potter 11, Webb 8.

Extra at 10 singles, known traps: Phelps 4, Odell 4, Albert 9, Cowee 8, Capron 8, Bristol 7, Bates 8, Savage 8, Edgerton 8, Gould 7, Potter 7, Mack 8.

Extra at 10 singles, Keystone system: Odell 5, Phelps 7, Currie 6, Cowee 9, Bristol 6, Albert 9, Gould 5 Edgerton 6, Potter 9, Savage 8, Bates 9, Webb 8, Mack 5, Stone 6, Ridge 4, Capron 4, Clark 7, Merril 6.

A Pleasant Letter from Chicago.

CHICAGO, May 7.—On arriving here some two weeks ago I introduced myself to Mr Wm. Mussey and found him a very fine gentleman in every sense of the word. I was not here long before I was made acquainted with a great many of the prominent shooters. Mr. Mussey's billiard rooms seem to be the headquarters for all the Western shooters. I have also seen the famous safe, the doors of which are said to open from force of habit whenever an Eastern man talks shoot. The Chicago Club held their monthly shoot yesterday at Watson's Park, which is managed by Mr. John Watson, or Uncle John, as he is more familiarly called. The ground itself has no advantage over John Erb's ground at Newark, but the traps and appurtenances are finest I have ever seen. There is a continuous gale of wind blowing over the ground, which with their mode of flushing the birds the moment the trap is sprung makes them very hard. There seems to be considerable contention here regarding the quality of the birds used in the East compared with the birds used here. I have been asked several times about it. I am of the opinion that there is not much difference taking them as they come, but Mr. Watson probably keeps a larger supply on hand than any one else in the country, so it is not difficult for them to pick out enough hard birds for a match or sweep at any time, which they claim he does, using nothing but strong birds. Mr. Fulford, it seems, has got them all worked up by telling them that the birds he and Mr. Brewer shot at in their match were twenty per cent. harder than any he had shot at here. They won't have that, it don't go. The birds used yesterday, some 220, were good birds; have seen just as good East, but with their traps and the wind it makes them harder to get. They were shooting Illinois rules, 50yds. fall, and a bird must be shot quick or the wind would carry it over and out of bounds. The birds are all gathered by boys. I think Kleinmans are the best shots they have here and the hardest men to beat. As a field shot Geo. Kleinman is simply great. I was out with him two days shooting jacksnipe and had a good chance to find out.

Mr. Mussey seems quite anxious to arrange a team match between Illinois and New Jersey, which would be a tight race. They have some very strong shooters here and can furnish ten good men. Still I think I know of ten men who belong to clubs that shoot in New Jersey who could hold them down. The State shoot comes off next month, when they expect to use up six thousand birds. I shall probably locate here in this Windy City, but shall always have a kind regard for the shooters that I know in the East. FRANK LAWRENCE.

The Tournament at Windsor.

WINDSOR, June 13.—I herewith enclose you copy of principal scores made at the second annual shooting tournament of the Windsor Keystone Gun Club, held at Windsor, Ont., on May 24, 25 and 26. I am sorry to say that the tourney was not a crowning success owing to the continuous rain, it raining every day during the shoot. Many of the shooters becoming disgusted, and not being prepared for such weather, left for home, which will account for the programme not having all been shot.

ALBERT DROUILLARD.

Twenty singles: White and Crowell 20 each, Easton, Montgomery, Pope and Anderson 19 each.

Twenty-five singles: Spross 25; Crowell, Sanford, Bangham, Drew and Easton 24 each, Andrews, Peice and Hamilton 23 each.

Fifteen singles: Andrews, White, Crowell, Hamilton, Glover and Sandford 15 each, Drew, Easton, James and Price 14 each.

Twenty singles: Crowell, Spross and Sanford 19 each, Andrews, Easton and Drew 18 each.

Fifteen singles: Spross, Glover, Donaldson, Andrews and Cale 18 each, Osborn, Sanford, White and Harris 14 each.

Twenty singles: White, Easton and Sandford 20 each, Cole, Glover, Spross and Bram 19 each.

Twenty-five singles: Sandford and Donaldson 25 each, Spross and White 24 each, Price and Purser 23 each, Glover, Cole, James and Easton 22 each.

Ten live birds, $10 entry, American Association rules, 30yds. rise:

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. E. H., Boston.—What shooting do you want?

J. W. C., New York.—Will you kindly inform me through the correspondents columns what kind of tackle, bait and time of tide is the best for weak fishing, also for striped bass; how to fish for same, also any information you can give me regarding them? Ans. A great deal has been published on these fish in the FOREST AND STREAM. On the striped bass see Vol. 33, p. 492, and Vol. 34, p. 212 and p. 495. On the weak fish consult Vol. XXXIII, p. 489, and Vol. XXXIV, p. 312. These articles cover all the points you mention and many others.

DRIVERS AND TWISTERS.

NEXT Tuesday's match at Woodlawn between Frank Class, of Pine Brook, N. J., and Wm. Tell Mitchell, of Lynch Station, Va., should be worth witnessing. Both men are in good form and if the birds are good some fine work will be shown. The shoot will begin at 2 P. M rain or shine. Open sweepstakes will precede and follow the match.

* * *

The Syracuse Gun Club has erected a fine club house near the Syracuse University. The club shoots twice each week at bluerock targets which are thrown from ten expert traps by the North electric pull. In the sweet by and by the club will practice live bird shooting, of which some of the members are sadly in need. Harvey McMurchy is president of the club.

* * *

The South Side Gun Club, of South Norwalk, expects to have a big time on July 4, when they will engineer the eighth contest for the Keystone trophy, open to teams of three men each from any club in Connecticut. A fine programme of sweepstake events has also been arranged, and everybody will be accorded a warm welcome.

* * *

The photographs of the teams of the Emerald and Union Gun Clubs, and of the Maple Bay shooting grounds were taken by L. A. Grant of 322 South Salina street, Syracuse, and are excellent pieces of work. Copies of them on a 10×12 card may be procured at fifty cents each.

* * *

Lou Davitt, one of the Auburn "Big Four," was in great form during the State shoot. "But what a difference in the morning" would there have been had Parker, Cosgrove and Travis reached Syracuse on Friday as per promise.

* * *

In four consecutive team matches Charles H. Mowry, of the Onondaga County Sporting Club, has scored 25, 25, 25 and 20, a clean run of 95 targets. He is the most reliable team man in the club.

* * *

Gus Grieff and "Tee Kay" Keller came down very gracefully when the straws were pulled for shooting caps. Cheap caps, eh, Courtney? And how comfortable!

* * *

Mr. Webb, of the Syracuse *Standard*, was on the shooting grounds from the first to the last gun each day. The *Standard* is the best trap paper in the city.

* * *

One German, one native of Great Britain and two natives of the United States comprised the team of the Emerald Gun Club which won the State championship at Syracuse.

* * *

The Eastern New York League tournament will be held at Philmont on June 28, under the auspices of the Philmont Gun Club, and a great big time is looked for.

* * *

There will be a big shoot at Slater, Mo., on July 4, both live birds and targets to be used. The live birds will cost 25 cents and the targets 2½ cents each.

* * *

George Corning was in a big hurry on Thursday night and went down to Syracuse with his shooting blouse and cap. Was it a telegram?

* * *

H. L. Gates is looking for the man who first asserted that he (Gates) knew how to shoot. He says it was a base and cruel libel.

* * *

Dicky Schaefer ran down from Boston to see the boys at Maple Bay, and could not tear himself away until the last gun was fired.

* * *

Frank Courtney wants to know why he broke 20 singles and only 4 doubles in the Lefever medal shoot.

* * *

George Atwater has gone out of the newspaper business and has assumed charge of the Banker Cycle Co.

* * *

W. S. Barnum served an elegant dinner at the Maple Bay Hotel during the State shoot.

* * *

"Uncle Sammy" Goggin, of Troy, was as full of fun as a two year-old last week.

* * *

"Uncle Dan" Lefever was as jolly as a kitten during the State shoot.

* * *

Auburn-hued Eddy Hankins, of this city, did some great work at Syracuse.

* * *

The mercury ran from 87° to 93° during the first four days of the State shoot.

* * *

Harvey McMurchy says, George Luther's "D. O. M." is all right.

* * *

Al Spangler would like to find his glasses. Go round to McDuff!

* * *

L. J. Alston is going to Canada to push the Lefever guns.

* * *

"Crutty" says his new automatic pull will beat the world.

* * *

Harry Palmer was at the State shoot for a couple of days.

* * *

The fourth annual tournament of the R. M. S. A. has been postponed until the early part of September. C. H. TOWNSEND.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible

A GUIDE WITH A GLASS EYE.

GOV. FLOWER brought home from the North Woods last week a brand-new fish story, as follows: "In order to make the events in my story possible, I must go back three years before my visit to Dannemora. An old guide hooked a salmon in a lake, the name of which I can't remember, three years ago. In the boat with him were a man and his young wife. The latter persisted in carrying a parasol. When the guide got the salmon in the boat the woman became frightened, and with her parasol jabbed one of the fish's eyes out.

"As she did so the fish became unhooked and was overboard in a twinkling. The guide made a spring for the fish, but the unlucky parasol ferrule penetrated his eye and destroyed its sight. The guide wore a glass eye afterward, and when I went fishing Tuesday this same guide took me to the lake spoken of. By some accident the guide dropped his glass eye overboard. When I turned my gaze from him he had two eyes, when I returned it he had but one. The guide bewailed his lot and I promised to send him a bushel of glass eyes if he would only take me where we could get some big fish.

"Wednesday we went back to the lake. My line jerked and my pole bent almost double. The guide cast his one eye on my pole and line and exclaimed: 'Something big, Gov'n'r.' I knew that from the way the object at the other end acted. Together we hauled the fish—I should say fishes—out. One was a large salmon and the other a good-sized trout. The trout was hanging to the eye of the salmon with his mouth. The guide pulled the fishes apart, and with an exclamation of joy said: 'There's my eye.'

"The eye that he had dropped overboard the day before was in the head of the salmon, which was the same fish that the guide had lost three years ago after the young woman had poked its eye out. The trout was just in the act of putting the eye in the salmon when the latter was caught.

"Funny coincidence, wasn't it?" And the Governor bent over his work again, while the correspondent went out into the fresh cool air.—*New York Times.*

We are all familiar with the disappointed exhibitor, but happily there are very few of our exhibitors who would be guilty of such an action as that of one of the directors of the late horse show in Philadelphia who, not getting the blue ribbon, but winning second prize, drove his horses to the stables, returned to the judging ring and threw the red ribbon at the judges' feet. For this he was very properly banished from the show as an exhibitor, although he had been one of the main organizers of the exhibition. A show was held recently in Munich, Bavaria, where the show committee displayed just about as much weakness as the Quaker City officials were firm. A splendid show of great Danes took place and one of the exhibitors had the audacity to not only decline the vhc. tendered him but had "refused" inserted in the prize list. This sounds like an echo from Chicago. Writing of great Danes reminds us that a gathering of gentlemen interested in this breed took place at the Hoffman House a few evenings since. The idea, fostered by Mr. A. H. Heppner, is to get a sufficient number of men interested in the breed around New York so that Chicago will not be said to be altogether the headquarters of the breed. Mr. Heppner's articles in the *Kennel Gazette* are very interesting and should help the great Dane cause along.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen The Editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States Canada and Great Britain.

Foreign Subscription and Sales Agents—London: Davies & Co.; Brentano's; Sampson Low & Co. Paris: Brentano's. Foreign terms: $5 per year, $2.50 for six months.

ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three six and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices $1.00 per line. Only advertisements of an approved character inserted.

Address all communications:

TROUSERS HOOKS AND PULLS.

WHEN Jefferson Davis was Secretary of War, and showing himself to be a decided martinet, a witty lieutenant once had the audacity to suggest that there should be added to the equipment of every soldier a stout, long-shanked hook, made fast to the seat of his trousers. This hook, it was pointed out, might be used in camp for a stool, or the coffee-pot might be suspended from it while the wearer stood with his back to the fire; and on foraging expeditions the hook might be employed for "toting" chickens and ducks and rabbits. But the chief value of the hook, its inventor argued, would be as a discourager of recklessness. When a foolhardy soldier dashed ahead into the face of the enemy his cooler comrades could yank him by a rope attached to the hook, back out of danger and into the ranks again. The War Department records do not show that the lieutenant's device was ever adopted; but there is some color for believing that the trousers hook as a discourager of precipitancy has a place in modern life; and its effectiveness when attached to the pantaloons of district attorneys is presumably well understood by restaurant purveyors of unlawful game birds.

The trousers hook theory explains beautifully some of the earlier phases of the notorious Delmonico woodcock case.

In July of 1890 Game Protector Kidd secured evidence that Delmonico's restaurant, on Fifth avenue, New York, was serving woodcock, contrary to the game law; and he brought suit against the concern in Westchester county. District Attorney Platt, of Westchester, was for a prompt, immediate, uncompromising prosecution; never was soldier on the field of battle more eager to fly into the face of the enemy. But somebody pulled District Attorney Platt's hook, and all of a sudden he fell back. His assistant, Mr. Verplank, was then for action; but his hook too was pulled; and he collapsed. Next came Judge Nelson H. Baker, engaged as outside counsel. Judge Baker outdid Mr. Platt in alacrity and impatience, and in telling what he was going to do, and how soon he was going to do it. He set out instanter to storm the breastworks. Somebody pulled his trousers hook. Back he tumbled.

Protector Kidd brought the case down to New York and handed it over to District Attorney Nicoll. In Mr. Nicoll the protector found at last a district attorney unhampered by a trousers hook. Time has demonstrated that when he is charged with the prosecution of a wealthy and fashionable restaurant proprietor for violating the game laws the District Attorney of New York requires no trousers hook attachment to discourage precipitancy of prosecution. Mr. Nicoll is no rattle-brained recruit, rushing headlong on to the bayonets of the foe. He does not get excited just because a game protector has a clear case; he does not, as did Messrs. Platt and Baker, declaim for immediate action. When he gets such a case against Delmonico for July woodcock, he just puts the papers away in a pigeon-hole, permits himself to be annoyed as little as possible by the importunities of the protector, and at the expiration of eleven months tells us that he hopes to have the case disposed of "in a few weeks." When the few weeks have rolled away he loses track of the calendar, and reposes in blissful ignorance as to when the case may be called by the court. Manifestly no trousers hooks are necessary to restrain the ardor of an in-a-few-weeks and don't-know-when district attorney.

Two years have elapsed since this Delmonico case was brought by Protector Kidd. On one flimsy pretext and another it has been postponed by the officials whose duty it is to enforce the laws without favor. The conduct of this matter by District Attorney Nicoll has been scandalous. There is no prospect that Delmonico will be tried for months to come.

We have heard much of late about the "pull" which the law breakers of this city are reputed to have with the public officers who are charged with enforcing the laws. When an offender, whose guilt is unquestioned, goes unpunished, the customary explanation is that he has a "pull" with those whose business it is to see to his punishment. A "pull" then must be a very desirable essential in the outfit of a restaurant where illicit game is served; and some folks might assume that Delmonico would be benefitted by a "pull" with District Attorney Nicoll. But if without a "pull" Delmonico can violate the game laws and go unpunished, as in this case, what in the world would he want of a "pull" if he could have it?

HUMBLE ACQUAINTANCES.—II.

AS THE woodchuck sleeps away the bitterness of cold, so in his narrower chamber sleeps the chipmunk, happy little hermit, lover of the sun, mate of the song sparrow and the butterflies, what a goodly and hopeful token of the earth's renewed life is he, verifying the promises of his own chalices, the squirrel cups, set in the warmest corners of the woodside, with libations of dew and shower drops, of the bluebird's carol, the sparrow's song of spring.

Now he comes forth from his long night into the fullness of sunlit day, to proclaim his awakening to his summer comrades, a gay recluse, clad all in the motley, a jester, maybe, yet no fool.

His voice, for all its monotony, is inspiring of gladness and contentment, whether he utters his thin, sharp chip or full-mouthed cluck or laughs a chittering mockery as he scurries in to his narrow door.

He winds along his crooked pathway of the fence rails and forages for half-forgotten nuts in the familiar grounds, brown with strewn leaves or dun with dead grass. Sometimes he ventures to the top rail and climbs to a giddy 10ft. height on a tree, whence he looks abroad, wondering on the wide expanse of an acre.

Music hath charms for him and you may entrance him with a softly whistled tune and entice him to frolic with a herds-grass head gently moved before him.

When the fairies have made the white curd of mallow's blossoms into cheeses for the children and the chipmunk, it is a pretty sight to see him gathering his share, handily and toothily stripping off the green covers, filling his cheek pouches with the dainty disks and scampering away to his cellar with his ungrudged portion. Alack the day, when the sweets of the sprouting corn tempt him to turn rogue, for then he becomes a banned outlaw and the sudden thunder of the gun knolls his tragic fate. He keeps well the secret of constructing his cunning house, without a show of heaped or scattered soil at its entrance. Bearing himself honestly, and escaping his enemies, the cat, the hawk and the boy, he lives a long day of happy inoffensive life. Then when the filmy curtain of the Indian summer falls upon the year, he bids us a long good night.

WE have printed, several times, the conditions of the photography competition, and yet it seems they are not clearly understood by every one, for we have had many letters asking whether more than one picture could be submitted by an individual. A careful reading of our announcement will show that there is no limit to the number of pictures which may be sent in by a single person.

SNAP SHOTS.

A CORRESPONDENT, who is now in the Northwest, mentions incidentally that a prominent member of the Pickwick Club of New Orleans is authority for the statement that he found in September, 1891, Indians and French Canadians in the Nepigon country with 100 barrels (!) of albumen, obtained from the eggs of wildfowl, gathered for shipment to the Eastman Company, photographers, of Rochester, N. Y. We hope, however, that this is a mistake. If such a traffic is in order, where will the birds be in a year or two hence?

We have received from Mr. J. Ridler a fine specimen of the small-mouthed black bass of Lake Ida, Alexandria, Minn., where it is commonly called "the gray or Oswego bass." The fish is 16in. long and 4½in. deep. Owing to the careful method of packing it came through in perfect condition. If this is the same fish as the small-mouthed, red-eyed gray bass of our correspondent Mr. Mershon, he may rest assured that it does not differ at all from the small-mouthed bass of the East. We shall know more about the subject when Mr. Cristadoro's specimen, referred to in our columns last week, arrives from Lake Ida.

The promise of a boneless shad, to be evolved through experiments by the U. S. Fish Commission with a shad, a flounder and a jellyfish, it seems almost needless to say, was never intended to deceive the intelligent reader. The Fish Commission has no employe named D. Elburke Crawford; it has never attempted the introduction of a jellyfish from Japan nor contemplated the impossible task of crossing a back-boned animal with an invertebrate. As well might one attempt to hybridize a goose and a butterfly or a monkey and a clam. For the present we must accept the shad, bones and all, or adopt Senator Vance's fish-eating machine described in our columns Jan. 21, 1892; and even this will prove dangerous for a left-handed person.

History repeats itself. The game dealers of this city held a meeting the other day to provide for making a test case of the suit against a refrigerating concern for having in possession game out of season, and the members of the dealers' association expressed an opinion that the law forbidding possession and sale of game killed in other States was unconstitutional. A meeting of like character, with expressions of substantially the same tenor, was held by the game dealers in this city on Jan. 3, 1859. It was then pointed out with force that the game laws were an infringement of constitutional rights, and could not stand a test of the courts. They have now stood that test for forty years, however, and there is no reason to think that they will not stand it for forty years to come.

The permanent Board of Fish and Game Commissioners to which is given charge of the fish and game interests of the Province of Ontario, consists of Dr. George McCallum, President; A. D. Stewart, Hamilton, Secretary; J. H. Wilmott, Beaumaris, Muskoka; W. B. Wells, Chatham; H. P. Dwight, Toronto; W. G. Parish, Athens, county Leeds. The intrusting of these interests to such a commission is full of promise that they will be well taken care of. One by one the States and Provinces of this continent are coming to recognize that the natural resources of the fields and forests and waters are too valuable to be left to shift for themselves or to be cared for in a half-hearted way at helter-skelter.

The Jekyl Island Club has abandoned its pheasant breeding enterprise on its preserves on Jekyl Island, Ga. The game bred and multiplied and increased amazingly, but could not withstand the vermin. The wild hogs, the snakes, the coons, the minks, the fleas, the ticks, the red bugs and the thousand and one other pests have proved too much for the birds; and Jekyl Island pheasants are things of the past. It is reported that the club will confine its efforts to stocking the island with quail. The deer supply is constant, for while no hounding is permitted on the island, it is practiced in the neighborhood, and the deer, fleeing from the dogs, swim over to Jekyl.

We publish to-day the first one of a series of reproductions from photographs sent in for the FOREST AND STREAM Amateur Photography Competition. From time to time others will be selected for illustration.

The Sportsman Tourist.

CAMPS OF THE KINGFISHERS.—II.

GREEN LAKE, MICHIGAN.

THE rain was over, and the sun, struggling up through a bank of low-lying, ragged clouds over at the head of the lake, gave promise of a fair day for fishing when we were ready to "joint up;" but now another backset awaited us—we hadn't enough boats for the party.

Mason said he had hired three boats of a man living at the foot of the lake, but when he went after them, the day before we arrived, the old Ananias had gone back on the contract and he couldn't get them. Harry and Gooder had, however, provided for an emergency by shipping over from Traverse City a finely-modeled 18ft. boat, which was now on the way from the station on a wagon hired at the mill, and the son-in-law said he knew of a good "skift" above the dam at the mill that he could hire, for which he was at once dispatched with the wagon; and these, with the Osgood folder ready to be taken from its box and put together, about settled the boat question, and we felt better.

But the camp was first to be finished up and turned over to the keeper of the fryin' pans before any fishing could be done.

The other tent was put up, the straw divided around and the beds made to suit the notions and convenience of those that were to use them. The Colonel's bed was soon ready. A layer of straw was spread in one corner of the "Kingfisher's nest" and the Colonel, as old Sam said, "jest blowed into the mouthpiece of a big rubber bed-tick till it swelled up like a bullfrog when he's gittin' ready to sing a bass solo." The inflated tick was laid on the straw, the blankets spread, a few pats given to the pillow, and the job was done; a bed worth a ten-acre field full of the $1.49 affair at the hotel that had collapsed under him and doubled him up into the shape of a half-closed jack-knife.

A table 3ft. wide and 12ft. long was made, supported by six stout posts driven in the ground and leveled up with a pan of water—the oldtime woods method; and a fly 15×18ft. was stretched over it, one edge of the ridge pole spiked 8½ft. from the ground to a convenient pine tree, the other resting in the crotch of a sapling cut for the purpose; and we were prepared for sun or rain.

Meantime Barney had constructed for himself a kitchen table between two trees back of his tent; driven some wire nails in the trees on which to hang his fryin'-pans, tinware, etc.; contrived a fireplace with a couple of short lengths cut from a big green sapling, on which he laid the two iron bars, 4ft. long by ⅝in. square, finishing up his arrangements with the time-honored forked stakes and green pole laid across, on which to hang the camp kettles for making soup, "bilin' 'tators an' sich." [All these details of camp making may not "remind the old camper of anything," but they may be of interest to the younger fry.]

Everything was finished to our pleasement, and it only remained to hoist the old flag, without which the camp never seems to look just right. There's a power o' cheer and comfort and company in the blessed old rag; its starry folds have lightened many a weary tramp and march for the old boys in blue, and even in a peaceful camp in the woods there is a sense of rest and security under it that nothing else can give. Returning in the evening after a day out on the water, pulling against a disheartening head wind it may be, fagged out and hungry, and out of humor over a day of poor luck, a sight of Old Glory as you round a point, its stars and stripes fluttering and whipping in the breeze, revives the flagging spirits and puts new strength in the muscles, the oars fall with sturdier stroke and a "Hooray, there's the old flag!" goes a good way toward shortening the distance to camp.

God bless the old flag; may its stars never grow dim.

The Colonel and I decided to stay in and hunt up a pole, hoist the flag and finish up a few probably forgotten trifles about the camp, while the others got ready to hunt up a mess of fish for supper.

Rods were jointed, minnow tackle rigged, Charley's bucket of "home grown Kentucky fish worms" overhauled for minnow bait, and when the wagon came back shortly after with the "skift" they were off. Harry, Gooder and Kelpie in the Traverse City boat and Snake-root and Frigid in the skiff, leaving the Colonel and Hickory standing looking down on them from the top of the bank with such a wistful expression that old Sam was moved to shout back, "Never mind boys, we'll leave a few o' the little fellers fur ye."

Baker and Mason left for home, the latter promising to come back in the morning and put us on to the lurking places of the bass around the lake, which if I remember proved a great help to the bass.

We found a flag pole after a deal of hunting through the bresh up shore, and when we had carried it to camp on our shoulders and got it up and well braced, first trying on a small iron pulley near the top and reeving the halliards, I toggled on the flag and ran it up while the Colonel fired a salute of five guns from his big revolver to give a patriotic tone to the proceedings, and as the light breeze swung it out in lazy folds from the staff we gave a rousing cheer, helped out by the keeper of the fryin' pans, that brought an answering yell from the boys in the boat a half-mile across the lake, and the camp of the Kingfishers for 1891 was ready to extend the hospitalities of the season to any stray brother of the craft that might happen along hungry and athirst.

We busied ourselves around the camp during the afternoon making a trifling alteration here and there that might add to the general comfort, and wondering the while if the boys were finding any work for their rods.

Mason had shown Barney a "fine spring" at the foot of the bank, a tiny stream running out of an old barrel sunk in the sand by loggers, as he said, very clear and cool, but if it were the "beautiful spring" he had written us about it might be safely set down as a failure and a big disappointment as compared with a few hundred other springs and other frigid streams at which we had slaked our thirst in the past dozen years in northern Michigan. "Bunkoed agin," had been old Sam's only comment, as he moistened his thrapple with a cup of it before getting in the boat. While down at the spring some time during the afternoon for a fresh drink, we had a good view of the upper part of the lake. Up to the left was the head, less than a quarter of a mile away, while to the further shore, looking straight across, was perhaps three-quarters of a mile, narrowing for a mile or more below to where it made a sharp turn to the left and was lost to sight behind a long, low, wooded point, where Mason said we would find some good bass fishing. As far as we could see the shores were wooded to the water, and on the whole it was a pleasant picture to look on, but not one that would have moved a landscape artist to any alarming symptoms of enthusiasm. Mason said that from the camp to the lower end of the lake was about four miles, the outlet of which was the Betsy River, flowing into Lake Michigan at Frankfort. This was the lake of promise; the waters we had dreamed about for many moons.

The boys came back before sundown and sneaked quietly in to the landing without the fog-horn accompaniment, with which old Sam usually heralds his return from a successful foray on the bronze-backs; but we thought this a ruse to "fool us" as to the number and size of the fish they had brought in, towing, it might be at the sterns of the boats on a couple of well-filled stringers. We waited patiently while they pulled the boats up on the beach, climbed laboriously up the steep bank and "stacked rods" against the lower limbs of a handy tree, and then it needed no questioning as to the results of the day's fishing.

The unusual length of old Sam's honest countenance—of a good average "longness" at all times—would have made a funeral procession look cheerful by comparison, while Charley's disappointment had struck in on him so deeply that he looked blue and shriveled. Harry, the bright, good-natured youngster of the party, looked as disconsolate as a girl that had mislaid her wad of chewing gum, and Brother Gooder might have been taken for a fugitive cashier who had slipped up and struck the bottom of a "wheat deal" with the funds of the bank.

Kelpie, of them all, climbed the bank to the level of the camp, calm and unruffled, placing his feet carefully in the loose sand and against an occasional friendly root where they would be surest of a "toe holt," serene as a summer morning and looking at peace with himself and all the world. Leaning his rod in the crotch of a projecting limb near the break of the bank, he turned, and in his deliberate, hesitating manner of speech, said, "Well, Hickory, I've had a very pleasant and enjoyable time to-day, and I'm only glad there are some blue gills left in Green Lake. There may be some bass in it, but we didn't find them. I guess we'll have to start you and the Colonel out in the morning to hunt them up for us;" and then, with the same deliberation of movement that had marked his speech, he removed the dead grass hnnting coat in which he had sweltered all day, replaced his boots with a pair of low shoes, wriggled himself into a knit jacket, lighted his pipe with the same careful deliberation, and planting himself in one of the folding armchairs—chief among the comforts of the camp—he sat with legs outstretched and hands locked back of his neck, gazing dreamily out on the placid lake, a picture of perfect content that was good to look upon.

Rare old Kelpie! An earthquake would not disturb his poise or relax the tension of his nerves. Gentle mannered and kind to every living thing, even tempered and unselfish always with the comrades of the camp, and a keen and conscientious sportsman in every fiber of his frail body, there are few like him. Would there were more; the denizens of the waters and the wild things of the forests would have rare friends. That's Brother Kelpie as we knew him when the camp broke up some three weeks or more later.

Old Sam was not in such an amiable frame of mind. A day of poor fishing generally has the effect of elongating his face to the extent that he is liable at every step to stumble over his chin, and at times it takes a turn that moves him to sulk and want to break camp and go "some'rs else," a defect in Samwell's constitution that we have striven much with him to overcome.

When he had relieved himself of his rod and tackle box hanging over his shoulder by a strap, he made a bee line for the table and poured from a "vial" bearing the legend "O. F. C.," what the Colonel called a "germ destroyer," and as the graduated medicine glass containing it took an upward slant in the direction of the top branches of the neighboring hemlock, we knew by the glint in his eye that he was "histin' in a consoler" to take the wire edge off his disappointment over the day's experience. The dose seemed to reach the spot and take effect with commendable celerity; the crow's feet at the corners of his eyes relaxed, and as his face broadened under the mellowing influence of the "pasifier"—"What luck, Sam?" was timidly ventured, with a view of giving him a chance to relieve his overburdened mind.

"Luck? No luck at all, 'less ye call it luck to set an' snake out a passel o' wurthless red-eyes an' bluegills, tho ef I must say it, a bluegill kin jest knock the spots off'n a trout a hustlin' an' a cavortin' 'round when he finds out he's swallered a fish worm with a hook in it.

"This is the lake, I believe," a smile disturbing the sou'west corner of his mouth as he glanced furtively at me; "that's a swarmin' with 4 an' 5lb. bass an' 20lb. pickerel, an' 'muskylong' that kin swaller a shoat without greasin'; splendid campin' place an' a beautiful spring—30ft. bank o' loose sand to slide down," waving his hand toward the bank, "an' a little water dribblin' out of an ole bar'l fur a spring—best lake fur bass in the State o' Mishigan," with a spasmodic wink at Charley, "and so fourth etsetery. Jeems Mackerel you've a heap o' sins an' lies to anser fur, ye hev."

And then, the crowd restored to good humor, old Sam broke forth into one of his periodical fits of impromptu doggerel, which he had doubtless been concocting all the afternoon, sung to the melody (?) of "Old Grimes" in a crow-toned, rasping voice that would have made a tuneful accompaniment to a saw-filing match:

THE DOGGEREL.

Air—"Grimesy, Old Boy."

Five anguliars went out to fish
Along Green Lake's wild shore;
They fished an' fished, an' fished an' fished,
An' then they fished some more.

They fished for bass and pickerel,
But didn't git a smell,
They didn't ketch a single bass
Nor nary pick-er-el.

Here the proceedings came to a standstill to give Sam time to get on the trail of the next verse and oil the machine, when touching the belt shifter the buzz saw started again:

The bass he is a cunnin' cuss,
An' mighty smart and sly,
He stole the bait from off the'r hooks
And winked the other eye.

The muskylong's a mighty fish,
As long as a small boat.
Jeems Mackerel says—ole truthful Jeems—
He kin swaller a small shoat—

"Without greasin'," he added, "a sort of a codicil," as he explained to the Colonel.

At this point a discussion arose as to the merits of a verse of poetry with a codicil tacked on to it, old Sam admitting that it was not perhaps as good poetry as some of Br'er Starbuck's quoted poetry with which he fills up the gaps in his fish an' wolf stories in FOREST AND STREAM, but claiming it was equally appropriate to "the occasion an' surroundin's, an' good enough, for the Joneses never wus used to the very best o' poetry nohow."

When the hilarity had subsided the blessed old sinner was clearing his throat preliminary to inflicting another verse on Kelpie and me, who were not in the festivities, "tetchin' on the proper fightin' weight of the trout an' the bluegill," as he said, when fortunately Postmaster Colbjornson drove up in an ancient buggy, the body of which was a cross between a flat car and a wood scow, with our supplies which he had promised the evening before to bring out some time during the day—a sack of flour, a big ham, salt pork, onions, eggs, etc., a crock of butter that Harry said had a surprisingly similar smell to the axle grease they had enjoyed at the hotel, a can of coal oil for the lantern, and a can of pure maple syrup with a hickory bark flavor to it that stamped it as "the genuine article from the backwoods of Vermont." This meant flapjacks for breakfast.

Barney dressed and fried about a score of the goggle-eyes and bluegills, and we had our first fish for supper, after which came the camp-fire and a history of the day's fishing.

They had fished around the head of the lake, around a long rush-grown point of sand lying six or eight feet under water that reached a matter of forty or fifty rods down the lake, the bottom covered with "mus'rat" grass, where the water began to deepen—just such water and bottom as a lazy pickerel would hunt up for a summer resort—and from this point around into a deep bay, rush-lined and grass-grown, over many nooks of "bassy" looking water, on down to and around the long point at the elbow of the lake, where Sam and Charley crossed over to the mouth of the little stream connecting the two lakes to fish awhile and catch some minnows; fishing slowly along and carefully with the cunning and patience of old bass fishers—all without a solitary sign or symptom of a nibble from bass, pickerel or "muskylong." Not much wonder that old Sam's chin hung down in the way of his feet as he climbed the bank at camp.

They stopped at the sandy point opposite the camp on their way back, and tying on smaller hooks took with worms forty or fifty bluegills and goggle-eyes, which saved them a "shut-out," in baseball parlance, and the ignominy of a fishless supper after a whole day in camp.

Green Lake stock went down like the temperature in a Dakota blizzard, but it would have been hardly fair to condemn it utterly without a further investigation. May be the fish were off their feed and would bite next day, or the next after, and we took heart from the hope that was in us.

Charley said, "Hickory, I'm not going to kick nor worry my brains over a lot of poor doggerel like old Sam because we didn't get any bass; I'll say nothing and wait till you and the Colonel take a turn at the lake and see if you get any."

The Colonel, however, said he would stay in camp and take it easy and not wet a line till some one else brought in a bass, and I was to have the canvas boat, and with Mason make a trip of exploration and investigation clear around the lake on the morrow by sundown if possible to study the water, locate the likely places and bring in some bass, if they were to be found. KINGFISHER.

A SPORTSMAN'S DILEMMA.

Editor Forest and Stream:

The problem of how and where to spend one's summer vacation has, no doubt, presented itself to nearly every reader of FOREST AND STREAM. Probably few of my brother sportsmen, however, have ever been confronted with such a problem as presents itself for my consideration to-day. Our courts recognize the month of August as that portion of the year set apart by common consent for legitimate pleasure and recreation. So the month of August is at my disposal. And since the first day of September, 1891, I have quietly but diligently figured, planned and arranged to put in the thirty-one days of the month of August, 1892, to the best possible advantage. The whole month of July and at least half of the month of June are still before me, in which to perfect my plans, but an inventory to-day of plans already perfected shows the following anomalous condition of affairs:

In the first place, Harry Beal and I have completed our plans for a two weeks' outing about the lake at the source of the Elokomon in Wahkiakum county, Wash. This trip we must take, for we have contracted with a guide to meet us at Cathlamet on the first day of August, and besides it is doubtless one of the most lovely places on earth for the sportsman during the summer vacation.

Two months ago I promised Grant Patton that I would go with him for two weeks in August to the country about the ice caves of Mt. St. Helens. This trip I am particularly anxious to take, as I have never as yet seen those wonderful caves, carved out of the pure, solid ice. Neither have I killed any of the elk or bear that herd about the pretty lakes of that country. Wonderful stories, too, are told of the trout of those lakes. Grant asked me to-day if I would be ready.

Not long since a surveying party returned from the headwaters of Gray's River in Pacific county, Washington. Thrilling stories they brought of the big game and big fish of that country, and Harry and I at once set about cleaning up our Winchesters and Colts for a two weeks' trip to that region in August. It must be a great

country, and I am sure that we will have a delightful time.

Bob Hibbs of McMinnville was in town last week and reminded me of my last spring's promise to go with him in August to the lake in the Coast Range at the headwaters of the Nestuckee River in Tillamook county, for a couple of weeks. He and a friend were out there recently and caught 685 fine trout in one day. It is absolutely necessary that I should take this trip, for it savors of business. The outlet of the lake is through a very narrow rocky gorge, and a dam 70ft. high can be constructed at small expense, and we intend to organize a company to secure the lake and adjacent country and convert the same into a magnificent mountain resort where pleasure parties will be able to find boating and berries, and an abundance of game and fish.

My friend Judge Sheppard of Alsea Bay, Benton county, was in town two weeks ago and exacted my promise (which was freely and gladly given) to come over and camp with him for a couple of weeks in August. This will be a most delightful trip, for he informs me that he cannot keep pigs on account of the bears, and the very day that he started for Portland he observed two deer feeding with his cow near the house. He says we can take a rowboat and in a short time pull up to the head of tide water right into elk country, and as for monster trout—well, you know what the Coast Range is for trout, and this particular part of it has not been fished. The Judge says that he thinks very strongly of getting a gun.

John Brigham came over from Tillamook Heads the other day, and during my absence exacted and received a promise from my wife that we would go over there about the middle of August and enjoy a couple of weeks' vacation at his ranch. It seems that John told her that she could have the most delightful sea bathing, while a hundred acres of smooth, level grassy ground were at our disposal for camping purposes, with a fine trout stream on one side and a herd of elk on the other. It is a fact that a neighbor of his killed seven elk in less than an hour one day last winter, but I do not feel bound to consider this arrangement, as it was made without consulting me.

As for the trip up the Mackenzie with Cap. Riley along toward the last of August, I think I shall try and persuade Cap. to postpone that delightful trip until next year.

Lastly, but not leastly, my wife informs me that our promise to go to the Molalla country for four weeks some time during the month of August must be kept sacred. In fact she recently received a letter from our old friends out there that reads as follows: "Be at the Falls August first. Gottlieb will be there.—KATRINA FYRER."

I might add that there are a few interior precincts yet to hear from. S. H. GREENE.

PORTLAND, Oregon, June 12.

EUTOPIA.

Historical.

THE Revolution had driven into exile before it among others the Royal American Fencibles, and strange company to be in such close proximity, a band of Quakers who, landing on the shores of the Bay of Fundy about 1783, had determined to found there at a spot which they named Pennfield, a colony in which negro slavery should find no place. It was at Beaver Harbor that their landing was effected; with them came their surveyor, sturdy Jacob Buffington.

Now the men of the Royal American Fencibles who were to be fed by the British Government for two years in consideration of their loyalty, were also given land bounding on the shores of the River Magaguadaric, not far distant from Pennfield, and Jacob was authorized to make the survey. Using the river as a base he laid out the lots on either side, the fronts were measured and boundaries placed on the river bank alone.

Not long after, Captain Clinch, an officer of the English army, was employed to survey the side lines of these lots. He and his party had extended one of these lines a distance of less than a mile when they found their course suddenly impeded by the waters of a lake five miles long; this lovely lake was surrounded by forest-covered hills, and never did autumn leaves in Valombrosa fall faster and thicker than they did on the shores, when the scarlet of the maple and golden of the white birch had faded brown and sere before the cruel breath of Autumn.

"Eutopia!" exclaimed Clinch, and Eutopia has been the name ever since, for honest Jacob Buffington had allotted as land to the members of the Royal American Fencibles, Philip Bailey commanding, a territory which was half water. Now the staid old Quaker would never have done such an act wilfully, he had erred like other mortals in assuming to be land what really was water, or, at least, water covered an Eutopian assumption.

Eutopia was always a favorite resting place of the Abenakis, but people were there before the Abenakis saw it. Many years since there was a stone mason residing not far from the point where the Magaguadaric, by a magnificent fall like Arethusa of old, jumps into old ocean.

One day when this mason, who was not a member of a trades union and who knew nothing whatever about strikes, was looking over the broken pieces of granite lying on the hill side on the west shore of Eutopia, to obtain for the uses of his business, his eye fell on an oval piece 21in. in length by 18in. breadth; when he had turned this over he saw to his amazement sculptured on it in low relief, the head and profile of a man whose hair was bound with a fillet, the face, which was perfect with the exception of one lip, was that of a stern man. It was as smoothly carved as if executed by the hand of some sculptor whose work had been done in historic times; the features were those of one who had thought deeply, and determination was written on that granite brow. The mason took his prize to the shore of the lake and rowed home with it. When he arrived there he placed his treasure troye in front of his cottage, but his wife refused to allow it to remain, saying that "it glowered at her," good proof of the ancient unknown sculptor's skill. The mason was, I think, Scotch, which may account for the fact that instead of doing as the crafty Arabs did with the Moabite stone, that is to say, break it in pieces, he took it to Saint George and for the consideration of $4 sold it to Mr. A. I. Wetmore, collector of that port.

Philosophers and antiquaries, ye who love so much to deal in theories and hypothesis, take a look at that face and tell me what race gave birth to the artist who has left the impress of his genius in indelible characters on the granite? I might safely offer you all the gold that has ever rendered so many generations of men miserable as a reward for the solution of this question without fear of either loss or gain.

Eutopia Fishing.

Having introduced Eutopia historically to the readers of FOREST AND STREAM, the writer will proceed to describe this lake and its surroundings as well as memory permits, for he is not sitting, pencil in hand, by its well-loved shores, listening to the murmurs of incipient billows which gently break in softest cadence on the white and glittering sand, so gently indeed that their cooling sound would not disturb an infant's rest.

For eight miles from its falls, at the little town of St. George, the Magaguadaric runs very tranquilly between low banks fringed by meadows. It is navigable for that distance for boats and canoes. About three miles above St. George it is joined by the outlet of Eutopia, a deep, silent, tree-overshadowed stream more than a mile long. This is also navigable for boats and canoes, and thus the sportsman who desires an outing can take his tent and the supplies, which he can get at the village of St. George, along with him in his craft; no portages need be made. When the water in the Magaguadaric is high its surplus passes into Lake Eutopia. This finds its way out of that natural reservoir again when the river falls during summer's heat. The stream which connects Eutopia with the Magaguadaric is called by the fitting name of the "canal."

Where the canal leaves the lake there is a long, low point formed from finest sand, the result of the decomposition of the granite of the surrounding hills; there are no pebbles among it nor impurities of any kind, and here if one wishes he can bathe in the pure and cool waters of Eutopia, or if he wishes to camp, he can find no better place. Rose Bay, so called from the fragrant single rose which grows wild in abundance along its gracefully curving, sandy shore, lies close to the mouth of the canal. Above the canal, and on the west side, the granite hills covered by woods rise to an elevation of perhaps 500ft. Between two of these there nestles a small pond named Otter Lake. It is not known to contain trout. The shore north of the canal is also indented by numerous little coves, forming deep recesses in the shore; boats or canoes can land here, and here also among the woods one finds boughs for bedding and wood for fuel. The water of the lake is so pure that one needs not to look for brook or spring. Eutopia formerly abounded with trout of the finest flavor, and even now a fairly good sportsman can secure all the fish he requires for the wants of his party either from Eutopia or from its surrounding lakes.

Smelts abound in Eutopia, and are taken at their season of migration. There are two kinds, the large from 6 to 8in. long. These early in May ascend into Mill Lake, a large tributary to Eutopia, from which it is less than a quarter of a mile distant.

The smaller smelt, which is but 2 or 3in. long, in early summer ascends several small brooks to spawn. Their migration is done by night, and by means of a birch bark torch I have seen countless myriads of them struggling hard against the adverse current, so anxious, indeed, to reach the upper waters of these little brooks that thousands of them were stranded on their shores. They could be taken from the stream in handfuls, so thickly were they packed.

The mouths of these brooks were famous places for catching the largest and finest trout, for they gather here in the evening, ravenously greedy after their favorite food, the smelt. Canoes and boats were laid off at anchor a short distance from the shore, and fishing was continued long into the night. Smelt of course was the bait used. Part of the company remained on shore preparing meals for the fishermen.

The blaze from their camp-fires, as night advanced, threw out in relief boats and fishermen. Often, when an unfortunate fisherman was struggling with a large trout, wood was piled on the fire to get more light on the struggle, and many a joke passed from shore to lake as the disappointed man drew his line toward him to replace the bait which had disappeared with the trout; which, exhausted, but yet a victor, had receded to darker and deeper waters.

The quality of these trout was excellent, and so good indeed that some of them soon found their way from the lake into the frying-pan. On the east side of Lake Eutopia at the distance of less than half a mile lies Trout Lake; this was once one of the most famous fishing grounds in New Brunswick. At its inlet, where a large, clear and intensely cold stream emptied into it, large trout loved to disport themselves and were taken in great quantities around the "rush bed;" fishing was here done by wading or from boats or canoes.

A famous place for fishing was "the Bluff," on the shore of Lake Eutopia, near where Trout Brook emptied into it. I have seen many large trout taken here. The view of Eutopia from its center is very fine; there are hills all around it, those on the west side being the highest, the contours of the whole being very varied and beautiful. There are but few habitations on the shores of the lake, the country being nearly all in a state of nature.

Eutopia is about seven miles from the Bay of Fundy, and those fogs which render that bay so gloomy bring a refreshing coolness to the lake, which they very seldom invade, rarely extending any distance from the ocean into the interior.

Eutopia is conveniently reached from St. John or St. Stephens, New Brunswick, by rail, the distance from either place being a little over forty miles.

To him who wishes a cool and pleasant spot in which to camp when the cities to the west are parched by fervent heat and when also he will have a fair chance of "deluding some of the spotted fry," Eutopia offers as many advantages as any place I know of.

EDWARD JACK.

FREDERICTON, N. B.

THE four full-page pictures, Young Mountain Sheep, American Elk, Group of Elk, and FOREST AND STREAM'S Grizzly, from the "*Forest and Stream Animal Series*," handsomely printed on heavy paper suitable for framing. The set of four (in tube) will be sent for ten cents (stamps will do).—*Adv.*

"PODGERS'S" COMMENTARIES.

WELL, I put my foot in it the other day. I am always doing it as every other man does when he meddles with women's fads, fashions and idiosyncrasies. Women may not be always loyal to each other, but when you trench on their preserves, and especially when you attempt to criticise their fads and their follies, they will make common cause against you, and in the emphatic language of slang, "go for you." One of them has gone for me, and all about what I said of their persisting in encouraging the destruction of song birds by wearing feathers in their hats. She says they do not, and that my remarks are a libel on women; and if I would take pains to observe I would see that feathers and birds are not worn now, for they have gone out of fashion. I saw several hats to-day adorned with both birds and feathers, but as she says they are not wearing them, of course what I saw goes for nothing, and I am squelched. The question of consideration for the birds don't seem to figure much in the argument, but if birds and feathers have "gone out," that settles it, and there is hope for the birds, and we are glad to know it. May it never come in again. May the woman who undertakes to revive it never have an offer, but be condemned to perpetual single blessedness.

In a former chapter I believe I rather disparaged grangers as friends of the sportsman, and accused them of begrudging the birds that fractional part of the grain crop they consumed, and now I see that "Awahsoose" goes for my scalp.

All rules have an exception, and I am free to admit that there are grangers and grangers, or farmers, whichever name they prefer to be called, who are friendly to sportsmen and do not poison birds. I spoke of them as a class and do not abate one jot of my assertion that many do deny the sportsman the privilege of shooting over their lands and do poison birds. I know this from personal observation.

I cannot blame a farmer for driving off a sportsman who comes shooting around his house or barn. A person who would do it is not entitled to be called a sportsman. The simple fact of his carrying a gun does not make him one. In "Awahsoose" we seem to have the combination of sportsman and farmer, a very happy one, and being the former, he is necessarily an exception to the rule so often governing the latter.

From the perusal of the very interesting contributions to the FOREST AND STREAM by "Awahsoose," it is evident that he is an accomplished sportsman, whatever his rank as a granger. His admission of the fact that he wears socks will, I fear, exclude him from the Jerry Simpson ideal of the granger proper. To that fractional portion of his make-up that remains granger after deducting what seems to be a preponderance of sportsman, I apologize as an exception to the rule, but am sorry I can't do the same to the rank and file. "Scissors."

Mr. Ramon E. Wilson, I see, comes out in defense of California as a trout-fishing State, in reply to Mr. C. B. Willis, who appears not to have had any great knowledge of its resources.

What Mr. Wilson states I can fully verify from personal familiarity with most of the lakes and streams he quotes. He omitted mention of one stream, the best of all, in my opinion, the Hope Valley, a tributary to the Carson River, where I have caught more trout in a day than on any waters I ever cast a fly upon. It is about sixteen miles over the range, back of Lake Tahoe. It was over the grade leading down into this beautiful valley that Hank Monk drove Horace Greeley when the few hairs on the philosopher's head stood straight up. It was this valley that Gen. Fremont struck on his first expedition to California when Kit Carson acted as guide. The party camped on the high ridge overlooking the valley, and on a large tree shading the camp the names of the party were cut, which were still discernible the last time I crossed the range.

Happening to mention one day to Gen. Fremont that I had lunched on the site of his old camp *en route* to the trout stream, he remarked: "What a godsend it would have been to us to have known there were fish in that stream, as at the time we camped under that old tree we were almost reduced to a diet of boot-legs."

Mr. Wilson is right. There is plenty of good fishing in California, and what a climate for camping out! No drizzling rainstorms to interfere—bright, cloudless days and cool nights. It is simply glorious. PODGERS.

Natural History.

PETS IN FEATHERS AND FUR.

I AM the property of a little hundred-pound wife, a parrot, two hunting dogs with hammerless gun attachments, a trio of quail, a Brazilian grosbeak, a green canary who sings in "G," a tailless fox-squirrel, a flock of white leghorn hens, a cote of pigeons, a bluejay, a redbird, and a few other domineers, some at home and some at the office.

As to the characteristics and handling of the above assortment, perhaps I can give your readers "a pointer" or two, and then probably I cannot, but I will try hard.

If necessary to manage a hundred-pound wife, take the advice of the big Scotch blacksmith, whose better half was accustomed to hammer him, and who said in reply to inquiry, "It pleases she and it don't hurt I."

You have dumb pets, helpless and dependent upon you; put yourself in their places for one week and see if you, situated as they are, wouldn't appreciate a minute's care each morning, a little seed, water, sand and fruit. Better let your little companions go free than neglect them. But remember that after you have changed their wild instincts to caged, domestic habits they are no longer able to hold their own against their wild-wood brethren, and you should help them out.

Don't attempt raising pigeons; accept the fact that you must raise half a dozen for every strolling gun that goes by to one that you have to yourself. I speak from sad experience; rats, cats, skunks and kids will leave you stranded; of course those cheap rifles in the hands of ten-year-old boys are not particularly dangerous, excepting to

the last thing the boy is aiming at, but the noise excites your pigeons, and you are liable to have them seek more sequestered quarters.

Now as to parrots. I bought a little pin-feathered squab in New Orleans two years ago, guaranteed a double yellow-head; he turned out a single, is half the size of the former, but talks and whistles cavalry calls as much as I can stand without being driven from home. Should you think he was ignorant of what was being said, try him once. He has never been caged, but has lived on an open perch; hates children and darkies, loves my wife and tolerates me. I cut every third or fourth feather from one wing, but not too short. He sits on his perch by the table and eats with us as orderly as a deacon, and drops his scraps to my Irish setter dog beneath him, and they rub noses like a pair of love birds. He eats anything I do, but I avoid giving him fatty meats, as they induce his pulling his feathers. His great preference is the bone of a chicken, which he dissects very artistically.

My quail are fed on wild hemp seed, apples, cracked black walnuts, crackers, with plenty of fresh water and coarse sand. Any other granivorous birds, so far as I have had experience, will thrive on the same diet. To this I give my jay a little meat, raw or cooked, occasionally, and he sings the sweetest little wild-bird song imaginable. The squirrel lives on nuts, apples, green bark and sand, while the canary passes his time in singing and gorging on the orthodox hemp, millet, rape and canary seed mixed, with an occasional piece of fruit and a little bread and cracker, or hard-boiled egg. They all like celery.

I care for the entire outfit in about ten minutes daily, and it is a labor of love, but nobody should attempt any such undertaking who is not prepared to think of his pets before himself.

I have had a few other oddities, past and gone, about which I might be able to give an amateur hints, but I guess this will suffice for the present. I must get home and plant some flower seeds, for this seems the first day of spring. WILD WOODS FRIEND.

Rattlesnakes and Their Ways.

GIBBON, Neb.—I had quite an experience with the "rattlers" several years ago, while capturing young animals for the zoölogical gardens of the East. During my rambles myself and companion captured a few good specimens with the aid of a forked stick and a sack. In the majority of cases the snake would attempt to escape, and only once did one show fight and coil itself for a strike, until we attempted to capture them. I think there is no ground for the assertion that the snake expectorates venom as a means of defense, for in my experience with them I have yet to find a single case where the snake acted in the manner stated. BARKER.

A Domesticated Rail and Some Other Birds.

WHILE at Pembina, Dak., a fortnight ago, I happened upon a full-grown rail (*Rallus virginianus*) which had been six weeks in captivity, and was quite tame, taking bits of meats readily from the hand and allowing itself to be easily caught after being set at liberty in a closed room. It was very vigorous, hearty and wide awake. The person who owned it is a Mrs. George Hunting, an amateur taxidermist. She has a specimen of cormorant taken in the vicinity. At the same place there is an all white egret which runs at liberty among the fowl in the barnyard. It stands about 30in.; legs blue, about 14in.; bill 3¼in., yellow; iris yellow. At Winnipeg I saw a flock of tame white wavies, or snow geese, and also stuffed specimens of Bohemian waxwings, which flock there in winter, and are popularly known as cherry birds, in distinction from the common cedar birds, which closely resemble them, but are not more than half the size, flocking in winter at the South, especially in the eastern counties of North Carolina. Flying squirrels are said to be very common in the locality of Winnipeg. In St. Paul suburbs I found red-breasted grosbeaks, two kinds of bluejays, golden-winged woodpeckers, robins, orioles, phœbes, red-headed woodpeckers, wrens and blackbirds, all in sight at once among the treees of a gentleman's yard. There was a marked absence of English sparrows.—CHARLES HALLOCK.

Camp-Fire Flickerings.

"That reminds me."

WHILE on an antelope hunt in northwest Texas two years ago, a member of our party played a prank on another that created a good deal of laughter. M. was exceedingly uneasy about the skunks. They were abundant in the vicinity of the camp, attracted by the viscera of the antelopes and turkeys, which had been thrown at some distance from the tent. I had seen five at one sight prowling around among the wagons, and even sniffing the ashes of the dead camp fire. The cowboys are thoroughly of the opinion that their bite will cause hydrophobia. M. would fasten the tent down all around, place the lighted lanterns in a row in front, and annoy the whole party by getting up to shoot the skunks at all hours of the night. One day in exploring an old dugout that had once been occupied by a cattleman and his family, W. came across a wooden clothespin that had a steel spring, and quietly slipped it into his pocket. That night M., as was his wont, made all things as snug as possible against the skunks. He was lying flat on his back sound asleep at about one o'clock, snoring sonorously. W. slipped the clothespin out of his pocket, put out the lights and fastened the vise-like grip of the horrible pin over M.'s nose, and shouted, "Look out for the skunk! There's one in here!" In the one-hundredth part of a second M. was knocking, squalling, bucking, pitching and yelling. He ran all over everybody else in the tent, planting his foot plump into the face of one of the party, and crying out at the rate of sixty words a second. When the hubbub subsided and M. found out that it was only one of W.'s practical jokes, he was too glad that it was not a genuine skunk to get angry with W., and promised that if the boys would not play any more such jokes on him he would not annoy them any more crawling over them at all hours of the night to shoot skunks. J. C. WINGO.

Game Bag and Gun.

15. Niagara, Erie and Chautauqua Counties.—Protector, Charles Ripson, Youngstown.

16. Ulster, Greene, Albany and Schoharie Counties.—Protector, James McMillan, Broadhead Bridge.

17. Warren, Washington and Saratoga Counties.—Protector, C. H. Barber, Greenwich.

18. Otsego, Chenango and Oneida Counties.—Protector, Ephraim Burnside, Cooperstown.

19. Chemung, Steuben, Cattaraugus and Allegany Counties.—Protector, Cameron Cotton, Bath.

IS THE SNIPE A WATERFOWL?

Editor Forest and Stream:

The question, "Is the snipe a waterfowl?" is one likely to excite the interest of all sportsmen as an abstract question, without reference to the controversy between Col. E. S. Bond and the game wardens. I for one say emphatically that he is not, and I think most sportsmen will agree with me. Reference is of course only made to Wilson's snipe, commonly called jacksnipe, or, I would suggest, more properly chape snipe, from the cry he utters on being flushed.

It strikes me that the decision of the court is obviously wrong that places the snipe in the category of waterfowl. The snipe is neither a wader nor a swimmer. He does not seek his food in the water but in the ground. The occasional presence of water in his haunts is merely incidental. He seeks soft ground in search of food simply because it is easier for his bill to penetrate than hard ground. Snipe are frequently found feeding where there is no water at all, but where the ground is soft enough to be penetrated by their bills.

The woodcock, which feeds in the same way, has the same claim to classification as a waterfowl.

I am in favor of protecting all game at proper times, whether it be "waders," "runners," "swimmers" or "flyers," but cannot subscribe to the doctrine that snipe are waterfowl, the courts to the contrary notwithstanding. What does your able correspondent and very perspicuous writer, Mr. E. Hough, think about it himself?

We have had plenty of water in the Mississippi bottom this spring and a fair supply of waterfowl, but not a snipe. COAHOMA.

JUNE 22.

ED. WILSON.

YELLOWSTONE NATIONAL PARK, June 14.—*Editor Forest and Stream:* The season is very backward yet. The transportation company have been unable to take tourists to the lake, and only very lately to the Grand Cañon. Some of the roads are in very bad condition, but a few days' work will repair them as soon as the ground dries enough to be handled.

The soldiers and parties traveling through the Alum Creek country report a great many dead elk. Bunches of ten to fifteen are often seen in one small space. The game was so weakened by starvation that when the green grass started it killed many of the poorer animals off like so much poison.

On Sunday, the 13th, while the night watch and a little girl were walking along the old wagon road to Cinnabar, and only a short distance from the Hot Springs, the little girl turned off to pick flowers. The man followed, and when near a quaking aspen grove he found a skull of a man. Investigating a bit he found the body in the grove. It was at once reported to the hotel and to Fort Yellowstone. By papers, a watch and other articles found, the remains were identified as those of the Government Scout Edward Wilson, who mysteriously disappeared last summer. A bottle containing morphine, found about 20yds. below the body—where it had been washed by rain and melted snow—shows that he died by his own hand. The papers found on him have not been examined as yet further than to identify him.

On May 30 Capt. Scott with Troop D, 6th U. S. Cavalry, came to the Park to be stationed at the Lower Geyser Basin. They will look after the southern section of the reservation during the summer.

On the 8th Scout Tansey captured two poachers with young elk. He had quite an exciting chase, but by hard riding and a shot ahead of them captured both and took them to Fort Yellowstone, where they gave up their horses and outfit. A few days later they were escorted to the Park boundary and turned loose, but their stock goes to increase the herd of confiscated animals.

There have been captured for the National Zoölogical Park, so far this season, five antelope and one elk. These animals are at the Mammoth Hot Springs, where they will be cared for until sent to Washington. H.

"Old Acquaintances."

"OLD ACQUAINTANCES" in the last FOREST AND STREAM, carried me back twenty-five years to my old home in the Berkshire Hills, and the many lively times that I had when a boy with the self-same woodchuck. And many times the boy came out second best in the encounter.

My first experience was catching them with a steel trap, when I could get the hired man to set it for me, as I was not strong enough to master the springs.

I well remember one afternoon seeing a woodchuck standing in an oat field down in the meadow. I got my trap and went down there. There was an almost perpendicular bank from the edge of the oats, down for about 15ft., and the hole was within 2ft. of the top. There was no woodchuck in sight when I arrived, and taking it for granted that he was inside, I got the trap ready and carefully crawled on my hands and knees up to the hole. I put in the trap, but the position did not suit, so taking it out I laid it beside me and commenced scraping out the loose dirt with my hands.

While busily engaged at this, I thought I heard a slight rustle in the oats, and upon raising my head I saw my woodchuck standing on the edge of the bank above me with a puzzled expression on his face, and his nose not over 6in. from mine.

It was the finest opportunity I ever had to catch a woodchuck. But for some reason, probably because I had been making different arrangements, I failed to grasp, either the opportunity or the woodchuck. What I did do was to fall over backwards, and the last I remember seeing as I rolled to the bottom of the bank, was the end of the woodchuck's tail disappear in the hole.

That FOREST AND STREAM is *the* paper, will not even admit of discussion. It stands alone in bringing out new facts, figures and faces, far in advance of all others.

Your wide awake representative in Chicago says the sun rose the morning of the Illinois State shoot.

Judging from the report I think he must have seen the sun rise and the moon too. And while he sat on the fence and whistled, he must have been using his Kodak. NAMROD.

Texas Wild Turkeys.

NORRIS, Texas.—A couple of years ago two German boys were gathering pecans on Devil's River. They had frequently asked me to come down and stay a few days with them to fish and shoot turkeys. I went down one afternoon, and getting up before breakfast next morning started off from the camp, and had gone only a short distance when I ran into a big bunch of gobblers that had just come off the roost. I had them hemmed in at the foot of a bluff and their only way of escape was to fly up the bluff on to the side of the mountain. The brush was very heavy, which interfered with their taking wing, only two of them getting up at a time. Almost without moving out of my tracks I got four with as many shots, stopping then and not trying to shoot any more. While sitting on the bank of the river drawing them a short time afterward, my attention was attracted by the excited *peet-peet* of one on the side of the mountain, and looking up I saw a very large eagle trying to catch a turkey that had taken refuge in a pin oak thicket. The turkey rose and started for the bottom with the eagle a close second. The turkey tried to light in a sycamore tree near me, but was so badly frightened that it missed connections and fell through to the ground, then ran off in the brush and escaped. I could have shot both turkey and eagle, as they came directly over me, but I had all the turkeys that I cared for, and besides I wanted to see how the chase would terminate.—RIO DIABLO.

That "Game Pocket."

Editor Forest and Stream:

The offer of Mr. Hubbard in last week's FOREST AND STREAM is just simply staggering. Never heard anything like it. Here is a man who knows of a "lone rock in a weary land," a truly "game pocket," and with a big heart he tells about it and offers to accompany several parties—parties, mind you—and show them all about it, "for sport, not remuneration." And he can "probably give one hundred men" good locations, and "those who go with me can be assured they will have good dogs to shoot over." He furnishes dogs, too; good dogs. And he will "try to keep your readers posted." Such a perfectly sublime offer as that just takes the cake and my breath. Just hold that good deed up to a naughty world, please, and let all those sportsmen who have a little preserve of their own with two quail and a rabbit in it, which they wouldn't talk about out loud even to themselves, rest their exclusive eyes on Mr. Hubbard's offer. I'd like mightily to go out to that "pocket" and take a handful out of it, but I'd like better to grip Mr. Hubbard's hand and thank him for such a refreshing exhibition. This is one of the rare cases where big heart and free pocket travel together. May none but the whitest kind of men go near him.—O. O. S.

"Bull-Head" Deer Killers.

TICONDEROGA, New York, June 24.—*To Game Wardens of the Adirondacks:* Keep your eyes on the marshes for deer slaughterers under the disguise of bull-head fishermen, etc.—WILL HOULDCROFT.

"SPORT" IN FRANCE.—III.

AMONG the European quadrupeds that I should like to see naturalized in America is the little roebuck. It is a very small deer and has, so far as my observations go, much the habits of a hare. It lies in a form all day, and will permit one to pass close to it without stirring. When put up it goes off with rapid low ziz-zagging flight, not bounding off high and birdlike, as do most of its relatives. When pursued it baffles the dogs by doubling, retracing its steps, and other foxy tricks, but not by taking to the water. Thus the ordinary methods of hounding pursued in America would not succeed very well with this species, so that it might maintain itself in some of our Eastern wildernesses. I first made the acquaintance of this little deer in the great forest of—well, never mind. I was on a sketching expedition, and I put up at a small inn in the little village of—it doesn't matter, just on the edge of the forest. My daily work kept me all day in the woods, and I found that there were plenty of deer and other large game there. Ere long I had the opportunity of proving that cervine nature is much the same in Europe as in America, for I discovered a pair of red deer, a buck and a doe, away out on an open plain feeding, and although a French companion said it was quite impossible to get any nearer than we were I thought I would try. I was 400yds. from them, in the edge of the woods, yet by running straight toward them whenever I saw both their heads down feeding, I got rapidly nearer, although there was no cover whatever. Of course the moment I saw one of their heads raised I froze into a statue and waited till both were down again. In this way I managed to come within 60yds. of them without having been detected, as I had their wind, when a dog ran across the plain half a mile away. The deer were not alarmed, but it made them watchful, and never after that were both their heads down at the same time. Meanwhile I was keeping my position like a Muybridge photograph, one foot just raised to step, head advanced; it seemed easy enough at first, but soon became painful, and at length finding that there was no prospect of a further stalk, I abandoned all caution and walked toward them. Instantly they flung out their white shirt-tails to the wind, and taking wing they flew over the landscape in long undulations, like a woodpecker's flight, and disappeared in the woods.

The large room of the little inn was a regular resort for a number of the villagers, especially two or three cronies of the host. At first they looked askance at the stranger and kept to themselves, but they became more at ease and loquacious on realizing that I was only a harmless artist in no way connected with game guardians, though, as already seen, much interested in game. It did not take very long to find out that they were all poachers, and I, Mr. Editor, must confess that though when at home a rabid upholder of the game laws, I am at heart a bit of a poacher myself, and soon found myself on brotherly terms with these French peasants. Once the ice was broken it became our usual habit to spend the evenings in swapping yarns of the chase, and thereby I got what I wanted, viz., an insight into the French idea of sport. One of the company was a dude sportsman from Paris, bran new breech-loader, cartridge belt, cork helmet, pointer, leggings, and hunting knife. His daily round was along the hedgerows outside of the forest, where he potted a few sparrows, thrushes, and on rare occasions a rabbit. When I asked why he did not go into the forest, I learned that it was most rigidly preserved, and the fine for illegal shooting therein was very heavy, with the possibility of imprisonment.

"And how do you account for all these?" said I, indicating the red deer antlers that hung about the wall.

"Oh," said my host, with a wink, "it is all right when the deer come out of the forest on our crops. Then we are free to shoot, and if one escapes wounded we are free to follow into the forest with a dog, but not with a gun."

Then in a further conversation I learned of a plan they have for getting hares and other small denizens of the woods that come out on the fields at nights to feed. By pre-arrangement a dozen peasants sally forth stealthily about 3 in the morning, each carries a bundle of sharpened sticks, and on the end of each stick is a little white flag. One of these is planted every 5 or 6ft. along the edge of the woods, so that any creature already out feeding is afraid to approach this line of fluttering white, as the dawn breaks and is found to hide in the hedgerows and small covers, where the sportsmen find it n the morning.

I listened to various tales of exploits in the capture of small game with the flag barrier, and of large game on rare occasions by lying out all night in the turnips, till I was thoroughly aroused. Satan entered into my heart, and—well, as I said before, I am a poacher at bottom and I am weak—my paleolithic instincts lie very near the surface, and at length, referring to the right of killing deer on the fields I said, "But why don't you decoy them out of the woods, at this season it should be easy?"

But they had never heard of such a thing, and were quite incredulous, so much so that when I volunteered to go out and try, neither my host nor any of his poaching friends were willing to accompany me. However, the hostess, a buxom dame in the prime of life, announced her intention of seeing whatever sport might turn up. Her example influenced another young woman,

"IS THIS GOOD TO EAT?"

FROM A PHOTOGRAPH BY MR. C. E. H. BRELSFORD.

(Forest and Stream Amateur Photography Competition.—No. 1.)

whereupon the dude sportsman volunteered as escort, and of course I was accompanied by my own friend Christy, who had been with me on the prairies of Manitoba. We sallied forth about 10 o'clock at night, and at once realized that unfortunately there was no moon. My armament consisted of the pointed pike of my sketching umbrella and a long glass lamp chimney borrowed from the hostess. Of course they were very curious to know the purpose of the chimney, however, I, with a well known human weakness for making a mystery of trifles, did not tell them, but when at length well into the forest, I put it to my lips and poured through it a perfectly blood-curdling roar, beginning in a low bellow, rising into a scream, as the end of the extemporized horn described an elegant figure 8 in air, breaking the voice in the waist of the 8 and rumbling away into a prolonged guttural growl as the horn described the last curve upward to a finish. It was charming. I knew I had hit it all right—and after a little while, from away off on a dark hillside, came a rolling answer to my challenge that was nearly as artistic as my own.

This was a little victory for me already, and my friends chuckled over the success. After waiting then for the proper interval prescribed by cervine etiquette, I bellowed again in a manner worthy of ten-point antlers, There could be no mistake about it. I was in for a fight, for the answering roars came rapidly nearer and nearer, and there was a vicious twang in them now that was suggestive of a duel to the finish. In the meantime my French friends, discoursing in low tones, related sundry incidents of how such and such were maimed for life or had met their death at the horns of a stag, at this very season and close to this very place. Their uncanny tales, together with the blackness of the moonless night and the horrid effect of that roaring voice, only 200yds. away now, began to make us feel rather nervous, for we were quite unarmed, and there can be no doubt that a stag at this season and in the night, is not to be trifled with. Nevertheless I continued to bugle, and now began to intersperse a few angry snorts, for I did want to see the beast if possible. Besides, the dude now informed us that he had his revolver with him and this gave us fresh courage. So I slashed the near shrubbery with my horns and snorted and dared the other fellow to come on. But he would not leave the shelter of a wood a hundred yards away at the other side of a small plain, although he seemed to be now in a screaming rage, if one might judge by his snorts and roars. At length it occurred to me that he might have our wind, although there was scarcely any, so I changed to a different side of the plain and sent another challenge reverberating across the open. It was instantly answered and now we knew he was coming on. We prepared to receive him, but not getting any fresh signs for a minute or two, I snorted, and immediately afterward there was a trampling of heavy feet close to; and out of the darkness not 30ft. ahead came a roar that sent a chill down my back. It was too much for us, we all got badly rattled. One of the women, however, lit a candle that with female forethought she had brought, and the dude emptied his revolver rapidly at the place whence came the roar. But the stag was not to be frightened so easily, he moved off a little way, certainly, but not very far, and there renewed his screaming and bellowing. Then he came to the scratch again in evident fury, the tones of his voice saying plainly that he had come there on the distinct understanding that there was to be a fight, and a fight he meant to have. We began to feel very uneasy, when we heard him again coming after our retreating army, for the revolver was empty now and the night seemed darker than ever. However, our retreat proved more rapid than his advance, and as I bugled no more he soon was left behind, and the only near sound we heard was the clatter of madame's wooden shoes when a stick or stone chanced to lie in her path.

When at length we regained one of the larger main roads our buxom hostess surprised us no little by suddenly breaking forth into one of the most ribald versions of "John Brown's Body" that I ever heard. She had innocently learned it from "an American student who stayed there last summer." However, no one but myself and friend understood a word of it, and her pronunciation was so droll that the song became simply laughable.

As we entered the village, I, at the suggestion of madame, bugled up the main street and snorted a few times. Next morning we learned that within ten minutes after half the gunners of the place had been out after me with all sorts of arms and ammunition.

We also learned from the paper of the day after that a man had just been killed and two others mortally wounded by a rutting stag in another well known forest.

In the evening following I went out again with one companion and a pitch-fork. This time I bugled up two stags and held my place when I got them answering each other. I heard them fighting about 300yds. away but the night was so dark that there was no chance of seeing them. About a week after this there was a good moon, and I went out now in hopes of seeing the creatures, but all in vain my screaming and bellowing in elegantly rounded figures of 8. I got not a single response, and had to give it up. The rut was over for the season.

ERNEST E. THOMPSON.

A Wild Turkey's Fate.

NORRIS, Tex.—Some of my friends, in hunting last fall, found an immense turkey gobbler that had met his death in a strange and tragic manner. He was found with his head fast in the fork of a live-oak bush, his feet being about a foot from the ground. When found he seemed to have been dead not more than a day or two. My friends supposed that he had jumped up to get an acorn, and in doing so had got caught. It was a violent death, as was evident by the way in which the surrounding brush, also his wings, were torn up.—RIO DIABLO.

CANADIAN DUTY ON GUNS AND RODS.

THE following memoranda fully set forth the requirements as to duties on guns, rods and camping outfits of Americans visiting Canada:

MEMORANDUM. No. 416 B.

CUSTOMS DEPARTMENT, Ottawa, 17th Oct., 1890.—*Collector of Customs:* You are hereby instructed to require entry and duty, as provided by tariff, on all guns and other hunters' equipments brought in by hunting parties, without any conditions for refund of the same, unless under special permission by this Department.
J. JOHNSON, Commissioner of Customs.

MEMORANDUM. No 492 B.

CUSTOM'S DEPARTMENT, Ottawa, July 4, 1891.—*Collector of Customs:* Referring to Memo. No. 416 B of the 17th October last, I am now instructed by the Honorable the Minister of Customs to authorize you to accept entry and duty on the guns, fishing rods and other equipments of parties visiting Canada for sporting purposes, with the condition that the duty so paid will be refunded on proof of exportation of the same within a period of two months from the date of entry. The said Memo. No. 416 B is hereby cancelled. J. JOHNSON, Commissioner of Customs.

MEMORANDUM. No. 556 B.

CUSTOMS DEPARTMENT, Ottawa, June 14, 1892.—*Collector of Customs:* Referring to Memo. No. 492 B, of July 4, 1891, *re* sportsmen's guns, etc., I have to direct that whenever any entry is made under the provisions of such memorandum or whenever any enquiry is made as to the conditions under which sportsmen's outfits can be brought into Canada for temporary use, you are to inform the parties bringing in such outfits or making such enquiries that they will be held strictly to the observance of the fish and game laws in force in the Province where they may propose to shoot or fish. In the case of parties entering at any port in Ontario or proposing to shoot in Ontario, you will call special attention to a recent enactment of the Legislature of that Province which, among other things, provides that:

"No person not a resident and domiciled in the Provinces of Ontario or Quebec shall be entitled to hunt, take, kill, wound or destroy any moose, elk, reindeer, caribou or other deer, mink, otter, fisher, sable, beaver or any other game animal or bird referred to in this act, without having first obtained a license in that behalf; every such license shall be signed by the chief fish and game warden, and countersigned by the Provincial Secretary or his deputy, and shall be in force for one season only, and shall be subject to the provisions of the game laws in force in the Province at the time the said license was granted; the fee to be paid therefor shall be $25, and shall be payable to the Provincial Treasurer to be applied toward the expenses incurred in carrying out the provisions of the game laws.

(2). "Every such person shall, on request by any person whomsoever within the Province, at all times, and as often as requested, produce and show to the person making the request, such license; and if he shall fail or refuse to do so he shall forfeit any such license he may possess, and shall if found hunting, taking, pursuing, killing, wounding or destroying any such animal or bird, or if on proof of the facts mentioned in the first sub-section hereof, and upon proof of such request and failure, or of refusal, be deemed to have violated the provisions of this section.

(3). "The Provincial secretary, any member of the Board of Fish and Game Commissioners, the chief fish and game warden or any of the wardens may grant a permit to a guest of a resident of the Province free of charge for a term not exceeding one week."

You will also inform all entering their outfits that if they expect under the terms of the memorandum a refund of the duty paid, it can only be granted on condition that the claim bears a Canadian customs officer's certificate of identification and the usual evidence of exportation.
W. G. PARMELEE, Commissioner of Customs.

Wants a Gun Store.

LINCOLN, Neb., June 20.—Our game is prairie chickens and prospects for next September are better than for years. We have good duck shooting and a fair crop of quail. Snipe shooting was very good last spring. Lincoln has a gun club of twenty members, and as we have no gun store in town we have to send off for everything. Lincoln with its population of over 50,000 has the best opening for a gun store of any town west. The writer will gladly give all information to a business man who could invest from $1,000 to 2,000 in cartridges etc.—B. R. B.

ROD AND GUN AND CAMERA.

AS a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.'

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

From time to time we shall reproduce by the half-tone process samples of the work submitted, and should the interest in FOREST AND STREAM'S Amateur Photography Collection prove to be what is anticipated, we may ask for an expression of opinion by a vote of all our readers after the manner of the successful and famous "Camp-Fire Flickering Vote." Such popular vote will be quite distinct from the award by the committee.

Additional Fast Express to the Southwest via Pennsylvania Railroad.

IN order to better accommodate the increasing traffic to the Southwest, the Pennsylvania Railroad Company will, on and after June 12, place in service a new fast train to Cincinnati and St. Louis. The train, to be known as the Southwestern Express, will leave New York at 8:30 P. M. daily; Newark, to take on passengers for the West, 8:56, Trenton at 10 03, Philadelphia at 11:10 P. M., Washington 9:40, Baltimore, 10:40, P. M., Harrisburg 2:05 A. M., Altoona 5:40, Johnstown 6:53, arriving at Pittsburgh 9:15 A. M., Cincinnati 6:15 P. M., and St. Louis 7:00 A. M. the second morning after leaving New York. It will be completely equipped with Pullman sleeping cars to Pittsburgh, St. Louis and Memphis via Cincinnati, and coaches to Pittsburgh. A dining car will also be attached at Altoona, from which all necessary meals will be served. The Southwestern Express is the fastest and best equipped train to the Southwestern territory, and will prove a great convenience to travelers to the Mississippi River and beyond.—*Adv.*

Sea and River Fishing.

Trout and Bass Fishing.

WE have secured, for the private information of the readers of FOREST AND STREAM, knowledge of a number of streams and lakes easily accessible from this city, where we believe that good fishing for trout and black bass may be had. The information we shall be glad to furnish without charge to any reader of FOREST AND STREAM who will apply for it, either personally or by letter.

CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

CHICAGO, Ill., June 20.—Still we have rainy weather, but of a jerky, squally sort, which leaves intervals for hope. This must be the new year of which the poet wrote:

"His childhood shall be froward, wild and thwart,
Full of sweet joys and stormy pleasures."

If these early days, set for peace and sunshine, are so wild and thwart, what shall we expect for the harsh days of fall and winter in this *annus iræ?*

The fishing situation shows improvement. The bass are well done spawning in some of the warmer waters and are beginning to bite quite well all over northern Illinois and southern Wisconsin. The Madison lakes have sent down some fine baskets of large bass, and Messrs. Willard, Bingham and Heikes, who have mingled trap shooting and bass fishing so successfully, are disposed to think that Wisconsin is the greatest place on earth. Mr. Bingham told me they caught seventy-five small-mouths in a day.

Of trout not so much can be said. I do not know of any catch of l rge trout this season yet, though many heavy catches of small ones have come in from the midway waters of Wisconsin. The logging drive is now in progress on some of the best streams of that State and of the north peninsula of Michigan. The second drive is now passing Stager, on the Brulé.

From now on we have every right to hope for improvement in our fishing, but for bass we must still go to the lakes, for our rivers continue irritated.

MUKWANAGO, Wis., June 22.—This morning, from the top of the lofty bluff where we are encamped, we saw the spirit of Phantom Lake, in form a wild, harsh-laughing loon. Thrice it circled the silver sheet of water, thrice it called aloud and then departed, knowing all was well.

All is indeed well. If there be a lovelier spot in all Wisconsin than this I have not found it, and if there be on earth a prettier camp than ours I fain would look upon it. Our hill is so high that we overlook the tallest trees that line the beach and catch a vista beyond the water of rolling, timbered hills. The lake itself, as I write, lies flawless as any perfect mirror, and all about its edge, a mile from our point of view, the shadows of the trees are as sharp cut in the water as the trees themselves are in the air. There is not yet a human habitation on these shores, saving our two Proteantents and the wider canvas of a party of enthusiastic youths who belong up Waukesha way. Where the blue grass meets the woods on the old Indian lookout hill our camp is set, half in sunshine this morning and half in shadow. We have a Nessmuk fireplace, enough wood for our modest fire, and at the foot of our bluff we have choice of two springs of living, bubbling water, one of iron tonic and one of pure sweet water, clear as air. A bowshot from either spring we can, on half an hour's notice, catch half a dozen little bass, half to three-quarters of a pound each, just right for broiling, and hard and sweet as any bass that ever grew. We can take a boat through the outlet and row down to town for supplies of tobacco, sugar, coffee and the side meat of commerce, or we can cross the lake to a certain farmhouse, with a red barn, and there obtain butter, eggs and cream. If we wish wild sport there be big bass in the mill pond to our right and also in the winding creek above it.

If we wish exploration, we can in the season of high water go by boat up Mukwanago Creek to the forks above the bridge, and thence as we wish to Lake Beulah or Eagle Lake. Among the islands of the latter water we can find temporary camping places enough, and thence make forage after trout; for there are trout in Waukesha county if you know where to find them, and we do know where. On the marshes between here and there is many a cackling rail bird, if we cared to shoot them now; and below the little village where you get your tobacco and bacon runs the Fox River, wherein you may obtain wall-eyes and small-mouths if you like. We have rush fish for frog, clear water for minnow, and gravel bottom for fly-fishing in the lake. We have pretty scenery on every hand, and water so good that it is shipped to all the world. There may be better places for a week's stay out of doors for tired folks, but just where those places are remains in doubt. J. B. H. and myself, who were here last year, dared not try to find a better, and so came back to Phantom Lake. This year our party numbers four, including also T. B. W., known as the Chief-with-Two-Stomachs, and A. H. H., who was with us for part of the time last year. Here endeth the first chapter. We need a few bass in this camp.

Second Chapter.—We have the bass, five of them, bright, clean little fellows. I wonder why it is people say the fishing is not good here. Probably they don't know how to fish. I wonder also how it is that four men can eat as much as we do. We shall need more side meat, more bass, more bread, and more everything else, if this keeps up.

June 23.—Yesterday afternoon was one of wild weather and wild sport, the latter much in the way of a surprise, though as for the weather we are used to two or three thunderstorms in one afternoon. It came on to rain as we entered the mill-pond, whither we went in search of big bass, and it rained so hard that we had to go ashore. Then there arose a high wind and lashed the little sea into a stretch of white waves. We knew enough of big bass to know that now was our time, and so set forth among the islands along the hidden channel. These "islands" are only floating bogs, held together by grass roots and rushes, but along the square banks where the channel cuts through you can look down in ten or twelve feet of water and see great cavernous holes, washed out and running far back under the protecting mass of roots. In these caverns there have dwelt, for how many years no one knows, bass larger than any inhabitant of the little village of Mukwanago or even any alien angler ever knew before. Last summer we did not thoroughly explore this singular country, but this afternoon we did, and to our exploration was due an evening of such sport at bass fishing as I confess I never saw before, nor do I expect soon to see such another.

Harryman pulled the boat with J. B. H., and I rowed for the redoubtable chief with the double alimentary appliance. Harryman did not know the channel very thoroughly, and for some time his boat did not do very well. The Chief and I found out the secret of the caves under the islands, and at the edge of these he cast his frog. I never saw bass strike so savagely, run so far, or fight as hard as these did, though I suppose this was largely due to their great size. They averaged heavier than any I ever saw taken in one boat. In two hours the Chief took ten bass, of which one weighed 5½lbs. on our pocket scales, three weighed 4lbs. each, and one weighed 3½lbs. Seven fish of the lot weighed 26lbs. I do not think so many heavy bass are often taken in so short a time. As sport this was simply grand, for the country was difficult, what with the rushes, the lily pads, and the caves under the banks, and each bass in the boat meant a stubborn fight, or more than one.

At length the Chief absolutely refused to fish any longer, and insisted on my taking the rod. We had now come upon grassier water, and here the bass had a lot of fun with me. I had six strikes in rapid succession, and only got one of the six. We thought that these bass were also very large, from the way they acted. It was impossible to stop them on their runs for the lily pads, and once there they smashed things. Meantime Harryman had taken up the rod in the other boat, and was meeting similar misfortune, only landing two bass out of a number of savage strikes. It was a wild afternoon. All the big bass in the country seemed to be out, and in full war paint at that.

After this no one need tell us very much about the bass fishing here. The trouble is with a great many fishers after bass that they do not understand the habits of bass, and are not familiar with the projectile power of a well-built casting rod. The black bass is a very shy bird, but if you pitch a frog to him from a boat thirty or forty yards away, he has no suspicions to trouble him, and, barring selfish suspicions, a black bass is quite unscrupulous about a frog. This is not the first time that the frog and the casting rod have demonstrated themselves for our party in waters where the residents thought there were no bass. To-day the Chief had to return to the city, and he took with him some of the heaviest bass. The mayor and the Town Council of Mukwanago tendered him the freedom of the city, and an admiring multitude followed him to the train. "I'd like to know what them Beulah Lake fellers would say if they saw this string," said one leading citizen. It seems there is rivalry among these hills.

June 24.—We are expecting company in our camp, and so we needed some more bass. For eating purposes we prefer the smaller bass out of the deep and cold waters of Phantom Lake. We took a boat and in a short time caught four nice fellows by casting among the rushes in the shallow water. Our party of neighbors do not understand why they cannot catch bass. This evening, for experiment, I put my fly-rod together, and casting fly from the boat while Harryman was casting frog, I caught a fine strawberry bass, and a moment later caught a strawberry bass and a black bass at the same cast, which gave the little rod all it wanted to do. It seems probable that we could have some fly-fishing here if we cared to work for it. We are not working, but trying to forget about work. As a camp of rest and comfort, with everything needful near at hand, we would need journey far to find a more fortunate location. J. B. H. came here sick, but is already mending. There is no medicine like that of the woods. E. HOUGH.

POTOMAC NOTES.

FOR the past two weeks the Potomac has been muddy. Last records of bass fishing in it are for May 30, when some fish were taken in the eddies formed at the junction of the Shenandoah and Potomac. There are plenty of bass in the river, and in the Monocacy, too. In fact, all the tributaries, the South Branch and Shenandoah, will furnish good sport as soon as the water clears sufficiently. Tappan, on the avenue, informs anglers as to the condition of the water by means of a bulletin board, on which is recorded the state of the water at different points within easy reach, and tells whether the bass are biting.

Cleve, of Union Bridge, Md., under date of June 15, writes: "Hammon Dern says come up; he will take you out fishing; was out yesterday and caught 14, weighing from ¾ to 1½lbs. each. A month ago Dern caught one weighing 5½lbs., and last Monday, the 13th, he took 11 nice ones. The fish are biting. How is a 5½-pounder for Big Pipe Creek?" Certainly a large fish for that stream, which is a tributary of the Monocacy. And I'll be there just as soon as the cares of business will permit.

That old veteran fisherman, J. T. Bare, writes from Bainbridge, Pa., under date of May 30: "Susquehanna high; water muddy. Plenty of bass in the river; lots of 'salmon,' too. You may safely lay out for a good outing here this summer, and I shall be glad to let you know when the fish are biting."

Our anglers here are very bitter toward the German carp, which has become so abundant in the Potomac. They claim that these fish (they are often called hogs) roll or swim and plow over the nests of the bass and devour many of the eggs. Their tough leathery sides, it is said, protect the carp from the plucky bass, and taken all through the carp is pretty roundly denounced here. I was asked some time ago by an old gunner if it is not highly probable that these fish are destroying the haunts of the ducks. I advised him to investigate the matter fully and report results to FOREST AND STREAM.

The carp will stand most anything that a human being will. Mr. Horan says that "The first year they cleaned out the carp ponds the fish were all removed. I caught a half dozen scale carp and threw them out on the bank, securing them by passing a willow stringer through their gills. The fish were left there on the bank from noon until evening, when I threw them into a fish-can and carried them home. Then I put them

into a tub of water merely to keep them fresh. In the morning when I went to the tub for the fish they were all alive and swimming around. It seemed impossible after what those carp had passed through that they should still be alive, but there they were."

In a large tank, measuring 10ft. by 12ft., kept on the roof of the west range of the Smithsonian years ago, for the purpose of supplying the lower rooms with running water, I once put a few gold-fish. The fish were quite forgotten and had been overlooked for several years, when I happened to examine the tank and found that not only were the old fish there but that the tank was full of younger fish. They had multiplied wonderfully.

May 30 I had a talk with one of our oldest handlers of fish, Mr. Samuel Birch, who says that fifty years ago large numbers of rock fish or striped bass were taken in the Potomac just below Washington. Boat loads were brought up to the city and often could not be disposed of at any price. The fish would weigh from 5lbs. to 100lbs. each, and sell at 10 cents apiece when plentiful. Shad and herring were caught in great quantities right over at the Virginia end of the Long Bridge, and a great many white perch were netted between the bridge and Georgetown. The perch of course ran much larger in size than they do nowadays. Then they sold for 16 cents a bunch, the bunches being several times larger than they are now.

Mr. Birch continued: This (1892) has been one of the worst seasons for shad and herring on the Potomac known. Just think of shad, hardly running half roes, wholesaling for $18 per hundred and herring 50 cents a hundred, in the height of the season, when there should be a good supply of both of these fish.

On the evening of the 15th I made a trip to the Four Mile Run, Va., between here and Alexandria. There has been some fair perch fishing there this spring. The water is alive with minnows of all kinds. While there a fallfish was taken with live minnow as bait. It is wonderful how game these little toothless-jawed fish are. In Maryland and especially in Virginia among the mountains the fallfish reaches a very large size—as much as 22in. in length.

Mr. E. S. Young, of Baltimore, made several trips to West Virginia trout waters last month, but has nothing to report except high and muddy water.

The following clipped from the *National Medical Review* for May is rather good: "That fish is especially a brain food is no more true than that frogs' legs should always be eaten before going to a hop." B. A. BEAN.

WASHINGTON, D. C., June 17.

THREE BISHOPS AND A JUDGE.

SELDOM does such a reverend and venerable party take to tarpon fishing as the distinguished quartette which visited Charlotte Harbor, in Florida, last spring. The narrative, as we find it in the Red Wing (Minn.) *Republican*, is told by the principal actor, Judge E. T. Wilder, himself already eighty years old. Bishop Whipple, of Minnesota, widely known on both hemispheres, who is credited with a 124-pound tarpon, is seventy years old. The two other clergymen, of distinguished reputation, make up in energy what they lack in age. The event is altogether so worthy of mention and remembrance that we are fain to reprint it in FOREST AND STREAM, especially that the narration comes from such high judicial authority. Judge Wilder writes:

"Our party consisted of Bishops Whipple and Gilbert and the Rev. Dr. Kedney and myself. The field was the Caloosahatchie River, near Fort Myers, where, at the Henry House, we had very comfortable quarters. This point is 150 miles north of Key West. The fishing is done in boats, each sportsman having a boat and a guide. My guide was a Spanish boy of eighteen years, Philip Bylaski, a bright, reliable and plucky fellow.

"The tackle required is a short, strong and slightly elastic rod, a large reel holding at least 600ft. of No. 18 or 21 linen line, a large hook with snood 2½ft. long, made of wire in links, or what is better, of woollen cord 'double and twisted,' with one strand of flexible wire twined around and fitting into the groove of the cord as thus made. The bait is the tail end of a mullet and weighing a pound more or less. This is thrown far out and left to rest upon the bottom of the stream. The fish picks it up, not when in a horizontal position, but standing perpendicularly upon his head. His mouth and throat are so hard and tough that he cannot be hooked unless the bait is swallowed. He is permitted to run 20 to 50ft. before 'striking.' Whether hooked or not, the strike is instantly followed by a leap high into the air in a vigorous effort to disgorge the bait and the hook, often times successful.

"If hooked, the fight is on. The result depends upon tackle and skill. Self-possession and nerve are indispensable. He runs like—well, for a comparison say—like a current of electricity, four, five, six hundred feet. Your reel literally smokes from the rapidity of its revolutions. You can no more hold him than you can hold a tornado. The first thing to be done after he makes this break is for the guide to raise the anchor, seize the oars and follow him. You press your thumb (properly protected) upon the line on the reel to prevent its overrunning when the fish stops and to make all the resistance to his flight that the exigencies of the struggle will justify. Here, perhaps, is the most difficult part of the game. If overdone, your line parts, and if you give him 'slack,' the outcome is likely to be the same.

"As a rule the leap into and struggle in air for liberty is repeated several times, the oftener the better, for your fish is not brought to gaff until he is completely exhausted.

"The largest tarpon ever taken by rod and line was hooked and landed last year upon this ground by a lady—weight 205lbs.—time, two hours plus. Her husband, who was in the boat with her, proposed after a little to relieve her. The reply was suggestive: 'No, sir; you touch this rod and I'll apply for a divorce.'

"Even under favorable circumstances the virtue of patience in this field becomes an active virtue. A gentleman told us that last year he labored nineteen days before securing his reward. We were about a month in advance of the best portion of the season.

"The campaign opened with us on Thursday, Feb. 25. Bishop Gilbert and I were armed with beautiful split-bamboo poles designed for this particular sport, kindly furnished us by a valued friend. They proved to be utterly worthless. The Bishop broke his in casting. We had not been upon the water two hours, when with a whirr my line went out 50ft. Philip, who at the moment held the rod, struck, and the pole broke square off like a pipe stem. He seized the tip and tried to make that available, but failing, grasped the line in his bare hands. In the meantime I had lifted the anchor. At this disadvantage the boy played our fish nearly or quite a half hour (giving us a ride of nearly a mile), when the line parted. Those who are familiar with these fish and who saw this fellow as he threw himself out of the water, said he would weigh 125 to 150lbs.

"Having implicit confidence in the intelligent discrimination of the fraternity of anglers, I respectfully submit to them this grave question. What in all human probability was the character of the compliments just then showered upon the head of the manufacturer of that rod?

"The time of Bishop Gilbert being limited, on Monday morning he, accompanied by Dr. Kedney, left empty handed, save that the Bishop had suspended from his belt the scalp of a shark.

"On Monday, after a vigorous fight of forty minutes and five leaps in the air, I captured my fish, weighing 63lbs. and 5ft. 5in. in length. In beauty and symmetry of form he is superior to the larger and heavier specimens, still everybody is ambitous to take a big one. Having secured my game I referred the question of further time to Bishop Whipple, who named Thursday of that week as our limit.

"Thursday morning came, bright and sunny, but with a cloud upon the brow of our venerable friend, for this was our last day and as yet his creel was empty.

"At about 11 o'clock the cloud lifted. The whir of his reel told the story. For a good hour up and down and across the river a battle royal was raging, at the conclusion of which a silver king of 124lbs. weight and 6ft. 8in. in length rounded out for the present the Bishop's sporting life. Please do not think me extravagant if I say the hats of two old men went well nigh out of sight.

"We left Fort Myers on Friday morning by steamer down the river and on to Naples, thence up the gulf to Fort Tampa and thence by rail to the Bishop's Florida home.

"Blessed with life and health and strength, the writer will some day take his second lesson in this unparalleled sport. E. T. WILDER."

DEEP LAKE FISH AND GAME CLUB.

HANNIBAL, Mo.—Deep Lake is a beautiful body of water, covering about twelve acres and of unusual depth, directly opposite the northern part of this city, in the State of Illinois. It is separated from the Mississippi River by a narrow strip of uncultivated bottom land, containing the Sui E'Carte Levee, which protects over 100,000 acres of very fertile lowlands from the annual overflow of the Father of Waters. The bursting of this embankment at this point about ten years ago caused the formation of our lake, and a more recent crevasse has formed "Sand Pond," a very similar body of water about one-third of a mile north, which promises to be equally famous for angling.

Both lakes are connected with the Mississippi River for from one to two months every spring, during which they are naturally stocked with indigenous fish, consisting chiefly of the different breeds of bass, crappie, sunfish, perch, catfish, pike, also buffalo, carp, dogfish and gar.

During the remainder of the year they are fed by rain and springs, and being in very sandy soil are remarkably clear and cool compared with our neighboring fishing waters.

For this reason we are considering the question of introducing some northern varieties of fish that are not common to our warm streams. Some old anglers advise us that they will soon drive out our present stock; but my experience is that our black bass, dogfish, salmon or pike are as voracious as any fresh-water fish.

We are doing all we can to protect and propagate our fish. Early last year we deposited ten hay-rack loads of green brush in Deep Lake, which were immediately used for spawning as well as for protection. Last winter we employed five men and a span of big mules for three days in felling green trees, hauling them out on the ice, filling them with brush, wiring them together, and weighting them down with rock, so that they would sink into the deep part of the lakes.

The chief mistake of most of our Western clubs is that they spend all their money in club houses and other conveniences for their members and leave the fish to take care of themselves.

Our lakes contain mud and rock as well as sandy bottom, also aquatic plants, so you can see they are excellently fitted for growing a variety of game fish. They contain considerable common fish, whose young supply abundant food for the valuable breeds.

With all these natural and artificial advantages we expect to have the finest sport in this part of the country. The spring floods fill the levee barrow pits with young game fish, which we catch in seines for stocking our lakes.

Our deep water gives us large fish—last month we caught, with a spoon, a 7lb. black bass, and last season I caught a grass pike 37in. long, weighing 13½lbs. As the latter was the largest ever taken in this section, I have had it mounted and hung in my office. By the way, the taxidermist found in the pike's stomach a toothed herring 8¾in. long.

Our crappie and sunfish also average considerably larger than those in our neighboring shallower waters.

Our club, which was formed a year ago, only contains a limited membership, so it is easily managed. Any sportsman is always welcome to fish or hunt with us, but they must be accompanied by a member. Our preserve is entirely inclosed in a 1,000-acre bottom farm, owned by our president, Mr. R. H. Stillwell, about one-half of which is under cultivation, the remainder is covered with timber or wild prairie grass, and is pretty well supplied with duck, quail, snipe, etc.

An uncle of mine, an expert angler, initiated me into the pleasure of fishing when I was a boy of eight years—nearly forty years ago—those good old times when fish were so plentiful and accommodating.

I only angle for recreation, and am confident that at least one-half day's fishing per week will improve any one—physically, mentally, morally and financially, especially those who are subject to excessive brain work.

I have always thought that ordinary boats were very uncomfortable for this purpose, and therefore designed my boat and outfit last year just for my own use. Hundreds of my friends used it during the season, all delighted with its convenience for fishing and hunting, and a number insisted on my building them copies, all of which are giving the best of satisfaction.

I think I shall make one more invention in this line for the purpose of ridding our lakes of turtles. I am satisfied they are our worst spawn destroyers. The obstructions and depth of our water prevents their removal by seines, so I have designed a trap which I am confident will do the work. I shall test this apparatus in a few weeks and post you as to the results, also shall probably send a drawing of it. S. E. WORRELL.

TROUT OF THE "SOO."

SAULT STE. MARIE, Mich., June 21.—I have been here a week now and during that time all sorts of weather has prevailed, particularly cold, rainy and disagreeable. The sun came out quite warm this morning as if it intended to give us some sweltering weather. It would really be very welcome, as I am quite tired of wearing an overcoat so late in the season. The small boy also sighs for it, as its continuance for a few days will bring the shad fly and the herring simultaneously, the latter of which affords him a world of pleasure. When the season is on the banks of the canal are lined with the youthful anglers, and it is no uncommon sight to see at one and the same time a dozen of the little silver sides glistening in the sun as they are describing an arc at the end of a line so vigorously manipulated by the ruddy-faced urchins.

There have been some very good catches of brook trout made this season at the "Soo" Falls, but the bait and spoon hook did the murderous work. The time for the artist angler has not yet fully arrived, for the cream of fly-fishing on the great lake and the rivers that flow therein is between the middle of July and August, though some mediocre catches are made both before and after that period of time.

The violation of the law here is more flagrant than ever, for trout are caught and sold in and out of season without any attempt whatever at concealment. Last year there was a game warden who made one or two arrests for gross infraction of the law, but so disagreeable was it made for him that he resigned his position and no one seems to care anything about it, though there are several very ardent and expert fly-fishers here, but like the resigned game warden, they don't care to arouse animosity for reasons best known to themselves. So the poetic trout with his rainbow garments is speared through the ice in the winter and trapped with the gill net in the summer. There is no one to protest, and therefore the pot-hunter and purveyor of the market hold high carnival and the indiscriminate slaughter goes boldly on as if the beautiful tenants of the crystal water were numberless. I never come to this place but what my cheeks are made to glow with indignation at the audacious violation of law. One day last week walking along the dock I saw a sprightly young lad boxing up some twenty or thirty fine trout where some fish dealer was actually engaged in packing whitefish for shipment. Inquiring relative to the disposal of the trout I was informed that they were to be given to their patrons. "Don't you ever sell them?" I asked. "Oh, no; that's agin the law," the cunning lad responded, and then he smiled in derision at my interrogation. Next day I had offered me for sale a couple of magnificent trout by the same lad, I thought, but declined purchasing, telling him that the sale of them was illegal. "Well, everybody sells 'em and I'll do the same, law or no law," was the defiant response that came from his frowning lips and then he strode away like a dime novel hero.

And so the work of decimation goes on, not only on American but the Canadian side also.

ALEX. STARBUCK.

THE SUSQUEHANNA AT SUNBURY.

IN response to our letter Mr. A. F. Clapp, of the Sunbury (Pa.) *American*, has informed us that the quinnat salmon which came ashore at Sunbury after the mighty flood of June, 1889, was especially fat and elegant in appearance, but too much decomposed for preservation. He is well acquainted with the Atlantic salmon and recognized the differences in the fins and shape of body. Mr. Clapp notes that no other specimen of the California salmon has been recorded from the Susquehanna, although great efforts were made to introduce the fish, and the upper waters are entirely suitable for trout and salmon. Five dams and 200 miles from the sea made a combination which even the quinnat—famous traveler that he is—could not overcome, and failure followed all the attempts to acclimatize this handsome salmon. Concerning the local fishing Mr. Clapp wrote as follows:

"Small-mouth black bass and pike perch are our principal game fish, and it is not an unusual thing for a single fisherman to take, in September and October, from off and below the Shamokin dam in the river at this place, from 25 to 75lbs. in a day's fishing, while one fishing party, in August of last year, caught 90lbs. of Susquehanna salmon (pike perch) in one day in some deep water about a mile below the dam. Our river is especially adapted to the perches as indicated, the sunfish and the smaller species of bass now being introduced more plentifully are all thriving and affording fine sport to the rod and fly fisherman, besides furnishing a welcome addition to the food supply. Upon these fishes we shall have to depend both for food and sport. I have abandoned the idea that we shall ever restore the shad and striped bass fishing in our upper waters in any material measure. Even if we get approximately efficient fishways, the greed of the fishermen below the dams will prevent the passage of the fish in any large numbers. Perhaps a sufficient number may pass the obstructions and reach the upper waters to supplement artificial hatching, but we shall have to rely mainly on the latter for the supply of fish. The three varieties of carp are becoming quite a factor in the river; they weigh from 2 to 15lbs. and many were caught in the spring with line and seine. It is a great shame and outrage that our river fishing is being destroyed so rapidly by pollution, more particularly by the coal miners, as indicated in my paper read before the Fisheries Society. We look for some steps to be taken ere long to remedy this evil as far as possible, and probably our legislature may be asked to help us next winter."

SUNBURY, Pa. A. F. CLAPP.

NEW ENGLAND ANGLERS.

The Salmon Anglers' Petition.

MR. D. H. BLANCHARD, well known to the readers of the FOREST AND STREAM through his efforts to secure better protection for the salmon in Canadian waters, feels much encouraged from late reports. He finds that the Minister is very much in earnest in regard to strictly enforcing the regulations as they now exist. It is also pretty certain that some of the worst nets may be abolished altogether, since they are entirely contrary to the regulations. The work done by Mr. Blanchard is yet to be fruitful of greater rewards. The Minister of Fisheries is determined to watch the results of better enforced regulations, and the chances are that still more stringent regulations may be made. Attention has been called to the matter by the celebrated Salmon Anglers' Petition in a manner that could not have been done by any other means. It may safely be regarded as but the first step, and a very powerful one, in the direction of a good work. Mr. Blanchard left Boston last Tuesday for his salmon preserves on the St. Marguerite, where he will spend several weeks enjoying the salmon fishing he has so richly earned. He is accompanied by his daughter. Mr. Richard O. Harding, the faithful secretary of the Massachusetts Fish and Game Protective Association, also goes with him as a guest. Mr. Harding is with Geo. B. Appleton & Co., and in that position he has rendered Mr. Blanchard a great deal of assistance in getting up the Salmon Anglers' Petition. It was to that house in fact that the most of the correspondence was directed, since it was a central point, and Mr. Blanchard in his modesty did not desire to receive it personally. This work has brought Mr. Harding and Mr. Blanchard into very close relations of friendship, and now they have gone to try the salmon together. The only drawback they have met so far as heard from, was a delay in Quebec for some days by the breaking down of a steamer.

Boston Anglers in Maine.

A party of sportsmen left Boston Saturday, June 18, for Camp Stewart, Richardson Lake. They were not going direct to camp, however, for they are members of the Taylor Club, then under an invitation to visit Poland Springs, to remain over the Sabbath. On Monday they were to proceed to camp. The names of the party are C. S. Robertson, auditor of the city of Somerville, J. F. Wellington, John Viall and James S. Murphy. They are enthusiasts in fly-fishing, and they make their trip late in the season in order to enjoy that sport to the best advantage. They are to be absent about a couple of weeks.

The Kineo Fishing Club returned to Boston on Friday from its annual fishing trip to Moosehead. The FOREST AND STREAM has already had an account of the departure of the club. As usual they found a plenty of trout—a plenty because the members are all reasonable anglers, and are satisfied with a few trout caught on the fly. It is probable that there are as many experts in fly-casting in that organization as can be found in any other club that visits the Maine waters. The club has lately adopted as its ensign an enormous fish that was sent them from Japan by the Rev. George L. Perrin, formerly a well-known Boston clergyman, now a missionary in Japan. The fish is of unique design, made of silk, sixteen feet long. It is open at head and tail, and designed to float in the breeze at the top of a flagstaff, where it attracts a good deal of attention. In the absence of the commodore of the club, Mr. J. B. Thomas, of the Standard Sugar Refinery, who has lately sailed for Europe, the duties of manager devolved upon Mr. J. R. Hunnewell, vice-commodore. The larder was taken care of by Mr. J. F. Nickerson, the secretary of the club. This club is composed of down-town merchants, the party this year being made up of John P. Woodbury and wife, John F. Nickerson and wife, Frank W. Wise and wife, John Woodbury and wife, W. S. Hills and wife, E. R. Hunnewell and J. M. Quimby.

The headquarters of the club were, as usual, at the Kineo House, where Mr. Dennen did all in his power to make the visit of the club an enjoyable one. From the Kineo House the club made its fishing trips with a steamer, with canoes and guides on board. The ladies enjoyed the excursions very much. Not the usual amount of trouble was experienced from black flies. Anglers are hoping that these pests are growing beautifully less season by season. As usual, Mr. Nickerson heads the list with the largest brook trout, one weighing 4¾lbs. The total catch of the club from ten days' fishing was slightly over 400 trout.

Enchanted Pond.

One of the party of Boston sportsmen to visit Enchanted Pond, mention of which visit has already been made in the FOREST AND STREAM, writes of that visit as follows:

"Saturday, May 21, a party consisting of the following gentlemen, Jesse A. Dill, L. Frank Hinckley, F. A. Merrill, J. H. Powers, A. V. Peabody and H. A. Skinner, started for Enchanted Pond, situated in the northern part of Maine. We left Boston at 9 A. M., reached Oakland, on the Maine Central Railroad, at 4:10 in the afternoon, where we waited forty minutes. Thence we proceeded by the Somerset Railroad to Bingham, where we arrived at 6:20. This completed the railroad part of our journey. The night was very stormy and we retired early, after a good supper at Washburn's Hotel. Breakfast was served at 6 o'clock the next morning, and we were soon on our journey, by means of a three-seated mountain wagon. About noon we reached that town in the wilderness known as The Forks of the Kennebec. Dinner at The Forks, we pushed on to Pat Murphy's at West Forks, which famous hostelry we reached at about 4 o'clock in the afternoon. Here we remained over night. Murphy is a noted character in the hotel line, well known to everybody who travels that section. Fat, jolly and always full of kindness and fun, he is a favorite with all who know him.

"But Monday morning the rain was falling in torrents and we were obliged to stop with Murphy another day, a task not so bad, though we were going a-fishing, considering that it was Murphy and his house. Tuesday morning Murphy hitched up a couple of buckboards for us and we started on a drive of nine miles over a road rough and rocky, through a genuine ancient forest of black growth trees. It took us till 2 in the afternoon to reach the shores of the pond, so bad was the road. Here we met Mr. Forsythe, who has charge of the camps. He is a veteran of the civil war, and a leader in the Grand Army. The camps are two miles below, and we were taken down in Mr. Forsythe's boat. Well may this body of water be called Enchanted. The scenery is truly grand. The water has been sounded to a depth, we were told, of 365ft. in several places. The pond lies between ledges on either side anywhere from 100 to 600ft. high. It looks as though in some past age this mountain region had been cleft by an earthquake shock or some volcanic disturbance and a deep basin had been left for this lake. At the outlet is a natural dam with the sides from 50 to 60ft. high, and here the lumbermen have put in a gate, forming a sluiceway for the purpose of driving logs in the stream below.

"At last we were comfortably housed at Enchanted Pond, and full of 'great expectations' concerning the trout we should take and also take to friends at home. But alas, we were doomed to disappointment. We caught a few stray fair-sized trout around the shores of the pond, but nothing equaling former experiences. Some of these we caught after dark, and this, we were told, was one of the peculiarities of the lake. Whether this feeding of the trout in the dark is due to the deep and dark water, those skilled in trout science have not yet made plain to us.

"It seems the pond abounds in handsome trout about the middle of June. We being early and the season somewhat late, we came sadly near being left.

"Two of our party, Messrs. Peabody and Powers, made an excursion to a brook above camp to view a beavers' dam, where beavers are said to exist at the present time. We saw only signs, however. On Thursday morning we left camp for good, and proceeded at once to Murphy's. After dinner, at 12 o'clock, we started for Jackman, 24 miles away, on the Canada Road. The scenery along this road, Benedict Arnold's route to Quebec, is wild in the extreme. But most of the beauties of the ride were lost to the party, with the exception of Peabody, who is an enthusiast on the subject. Tired and hungry, we were more interested in reaching Jackman and a good supper. We reached the Newton House, Jackman, at about 8 o'clock P. M., thoroughly tired and disgusted with the rain.

"The next morning Mr. Hinckley, with the writer, left the rest of the party at Jackman, to follow a day or two later. We took the 4 A. M. train on the Canadian Pacific for Greenville, Moosehead Lake, and thence to Bangor, where we caught the 12:45 train for Boston. We reached home safely, and feeling well paid for the trip, but still we are too tired to have the least desire for such another excursion till a little later another season. The cost of the trip was small compared with other routes in the same State, the round trip to Bingham and return to Boston being only $11, while the cost of board at Enchanted Pond is only $1 per day. They tell us that deer and caribou are very plenty in the fall, and judging by the 'signs' we are inclined to believe them. Small game is also reported to be abundant.—P." SPECIAL.

A KENTUCKY FISH PRESERVE.

Editor Forest and Stream:

Our impounding water works reservoir was completed fifteen months ago. It covers forty-three acres, with greatest depth of 17ft., is fed by a small creek and number of springs, and the water runs about nine months in the year. A galvanized wire screen, ¼in. mesh, across the 60ft. overflow, prevents the fish from going below; luxuriant meadow lands surround the lake. The minnow food supply is almost unlimited; large numbers were caught in the lake above when the valves in the outlet pipes were closed. With each rain and rise of the creek many come up and are stopped by the dam; the keeper catches these with a small minnow seine and puts them in the lake—as many as twenty-five gallons sometimes; the natural increase in the creek above the lake is large. No grass or moss is allowed to grow or remain in the lake, but covering an old creek bed there are several natural beds of gravel and it is being constantly washed in. During the construction of the dam I had abundant hiding places built along a bluff at one side of the lake. When the valves were closed I commenced to stock the lake with a view to having fishing throughout the season. Many sunfish (*Lepomis gibbosus*) were caught in the creek above the dam, but no other varieties except minnows.

The following varieties were put in last year, being chiefly fingerlings, with a few large fish of each variety: 3,000 yellow perch, 520 black bass (both large and small-mouthed), 8,000 crappie (both *Pomoxys sparoides* and *P. annularis*), 24 striped bass, 100 redbreast (*Lepomis auritus*), 800 bream (*Lepomis pollidus*) and 400 red-eye (*Ambloplites rupestris*). The excess of crappie and yellow perch was due to the fact that I could get those and could not the others. This being my first experience in stocking with fish, I would be pleased to receive suggestions from any one familiar with the subject as to the best management, what kinds, if any, should be added; what varieties should be increased; what varieties will prey on the young of the others, and on all other points germane to the subject. I would think that such information would be useful and entertaining to many readers of FOREST AND STREAM. Should any brother angler come this way I would be pleased to have him stop and "go afishing" with me.

In conclusion, why don't you give us each week, at least, one specimen from the amateur photographic contest? C. S. P.

[In our opinion the black bass, crappie, red-eye and striped bass are the best of the fish in your list. Bream, red-breast and yellow perch are inferior, and all of them are destroyers of eggs and young fish. You will probably find it necessary to make a rearing pond or ponds for your bass in order to keep a good stock in the reservoir, and from the rearing pond you should remove even the adult bass as soon as the young have learned to forage for themselves. The bass is the most voracious of all the species named, but its young fall an easy prey to perch, bream and red-breast. If your lake becomes overstocked with shiners (or minnows) the bass may refuse to take live bait. On general principles our advice is: Increase the number of bass and striped bass; the crappies will soon multiply beyond expectation if the conditions are favorable for their development, which is highly probable.]

FISHERY ABUSES ON THE DELAWARE.

IN his address published in your issue of April 7, Mr. Ford, President of the Pennsylvania Fish Commission, states that every fish weir has been removed from the Delaware and the river is patrolled by fish wardens constantly. He says, also, that the shad production has increased from $80,000 in 1881 to nearly $700,000 in 1890, as a result of propagating the spawning fish and enforcing the laws. He further states that uniform laws have been secured by New Jersey and Pennsylvania for preventing illegal fishing.

It is true that the fish baskets have been removed, but the deadly set-cord (outline) is still in operation from the time shad fishing closes, and even earlier. From Trenton to Easton, and further up, the river is full of them. Each line is provided with from 40 to 100 hooks, which are kept baited all night and part of the day, and their destruction of black bass and striped bass is simply enormous.

The temporary dams across the river at Bull's Island, Lambertville and Scudder's Falls, above Trenton, are greater destroyers of shad than the fish baskets. When the river is low in the summer and fall, these dams are put in to supply the feeder at Bull's Island and to raise the water at Lambertville for the ferry, or to maintain the water for the Trenton water power. The young shad or rockfish, which go down the river in the fall, are forced into the feeder to be killed in the gratings in front of the mills or pass on through never to return. As many young shad are killed every year in the Trenton water power as the Fish Commission put in the river.

Fyke nets also are still set with impunity; in Well's Falls, below Lambertville, dozens of fykes are set as soon as the fish commence their upward journey in the spring, although there is a fish warden on each side of the river at this place.

The credit of increasing the shad does not all belong to the Fish Commission, for circumstances over which they had no control contributed to make the years from 1887 to 1890 successful shad years. These were wet years, and the Delaware was high from September to December of each year and no dams were built for a part of the time at the above mentioned places, and even when they were built the water was so high as to enable the fish to go down the river. Doubtless we would have had the old shad fishing in 1891 but for a new terror, which has sprung up in the last few years. An unusually large run started up in 1891 but was met by a volume of inky black water, thick and heavy with coal dirt, or culm, and this drove the small fish into the mouths of crecks and turned the shad back; 1892 promises to be a repetition of 1891. For the last two or three years every rise in the river has been accompanied by a flood of coal dirt from the Lehigh, which if not stopped at once, combined with the causes above mentioned, will soon undo all the work of the Fish Commission, and practically end shad fishing in the Delaware.

Uniform laws have been secured to prevent illegal fishing, yet fishermen use small-meshed nets in New Jersey and not in Pennsylvania, and the size of the mesh above Trenton is not up to the standard in most of the nets used. Bunches of "jiffins" (small shad) may be seen strung together for sale for little or nothing on the fishing shores. As to the wardens, few if any of them do their full duty, because there is nothing in it for them if they do but the ill will and enmity of every set-cord, fyke-net and illegal net fisherman on the river. If the Fish Commission and the Fish Protective Association will join hands these evils may be remedied to a great extent and the beautiful Delaware will again become a fisherman's paradise. CHUBB.

ANGLING NOTES.

Canadian Salmon.

EVERY one who has read Dr. T. H. Bean's excellent report on the "Salmon and Salmon Rivers of Alaska," the result of an investigation made in 1889 under authority of Congress, will recall his graphic description of the enormous waste of eggs and young salmon, and the destruction of trout by seiners who fish for the canneries, and flagrant abuses generally calling for a rigid enforcement of laws to protect the salmon and trout from utter extinction in the waters of that far-away territory. Dr. Bean's investigation of the matter is just now bearing fruit in the form of a bill in Congress (Senate bill 3280) to provide for the enforcement of the provisions of an act of Congress for the protection of the salmon fisheries of Alaska. During the discussion of the bill Senator Dolph said: "It is true that the salmon fisheries of Alaska are more valuable than the seal fisheries, and they are in imminent danger of being destroyed. I saw last year with my own eyes, dams built across and nets stretched across the small inlets and fresh-water streams up which the salmon are accustomed to go, which entirely prevented them from reaching their spawning ground; and I saw thousands upon thousands of salmon that had been taken by nets and other appliances and were not canned, but thrown back dead, floating upon the waters of the various inlets in Alaska." Thus Dr. Bean's report was backed by a friend at court, and the bill was promptly reported favorably.

The Vermont Hatchery.

The *Congressional Record* is sometimes rather dry, but it may be called wet when it contains an item, as it did June 16, stating that the Senate Committee on Fisheries reported favorably a bill providing for a United States fish hatching station in Vermont, and moved its reference to the Committee on Appropriations. This station is to be a salmon and trout hatching station, and it is one in which anglers will be particularly interested, for salmon and trout cannot be propagated to increase the food supply without at the same time providing more fish to be captured for sport.

That Lake Bomaseen "Bass."

I presume that readers of FOREST AND STREAM will remember that a few years ago a fish was found on the surface of Lake Bomaseen, or on the shore, dead and in a more or less decomposed condition. After much discussion in the newspapers as to its identity, it was allowed to fill a rather uncertain position in fish history as a large-mouthed black bass of over 20lbs. in weight. Within the past year I have heard that the giant bigmouth bass was nothing but a sheepshead or fresh-water drum. Last evening Mr. Charles Pike, of the J. T. Buel Trolling Spoon Co., confirmed what I had previously

heard as to the species of the fish. He said that Mr. J. T. Buel introduced the fresh-water drum into Lake Bomaseen from Lake Champlain. Mr. Pike said the weight was remarkable although it was a drum; but as they grow to upward of 50lbs., there is nothing remarkable about one of twenty odd pounds.

A College Story.

My friend Col. J. L. Cunningham, president of the Glens Falls Insurance Company, told me that at a meeting of insurance men he heard a story which from that moment he kept specially for me, but it is too good to keep in private stock. A professor in a certain college became greatly interested in two young men whom he had picked out to graduate first and second in their class. There was no question about their ability to do all he had planned, but they were a trifle shy on application. Together they were missing from class on certain kinds of days with a regularity that promised conditions, and the professor was in despair. Brought to judgment, the men confessed that the time they were absent was spent in fishing, which pastime was denounced in unmeasured terms as likely to ruin their whole future. Asked if he had ever fished, the professor said no, as it was an occupation for fools. It was suggested that before condemning it utterly he should try it, which he consented to do. He was taken out for his first lesson, placed in the shade on the bank of a pool, his hook baited, and he was left with his rod and a book. The young men turned from him to seek their own fishing places with the parting injunction to keep his eye on the float, the going down of which would indicate a bite. Before they reached their own stations up stream they heard a yell of triumph. "Whoop, whoopee!" and turning back they met the professor; hatless, almost breathless, he was running toward them, his face beaming with pleasure and his eyes flashing with intense excitement as he fairly gasped out: "The cork is down, the cork is down—tell me quickly, what shall I do next?"

The Season of Trout Spawning.

I notice that Mr. Gilbert thinks that if you were better posted you would not make the mistake of criticising his bill as to the time that trout spawn. That at least is the implication. Really I find in your comment no cause for stricture on his part, for you simply say, with truth, that trout should be protected during the spawning season. It is Mr. Gilbert who fixes the time of swawning—not FOREST AND STREAM. He says trout are through spawning in New England and southeastern New York on Dec. 15. I believe that fishculturists admit that the colder the water the earlier trout will spawn. Seth Green once put it, "The colder the climate, the earlier trout will spawn." At my request John Danforth, the prince of woodsmen and guides, and one who understands the habits of wild animals far better than some closet naturalists, examined into the time that trout spawn in the Parmachenee Lake region in Maine, near the Boundary Mountains of Canada. On Dec. 23 he examined a large spawning bed in Black Pond close to the Canadian border. He saw hundreds of trout on the bed, "and to all appearances their labor had just commenced;" but he was not satisfied with this but caught a female, and found that under pressure the eggs would come from her, and judged that it would require two weeks more to finish the work of spawning. Seth Green said that the trout at Caledonia spawned up to March 1, and on Long Island trout spawn after Dec. 15, as the State reports will show. The brown trout, now so generally introduced, spawn even later than the native brook trout.

Every fisherman knows that our season for trout fishing opens now too soon for wild trout to be in good condition, and even in April they are stupid bottom feeders, resembling a sucker in action, and quite unlike the sleek, well-fed fish of a month or six weeks later, after a diet of insect food, which comes with the disappearance of ice and snow. A. N. CHENEY.

CANADIAN ANGLING NOTES.

QUEBEC, June 23.—From reports so far received from the various salmon streams, it would appear that better sport is attending the anglers' efforts this year than many of them experienced last season. Lord Mount Stephen has already killed a number of fine fish on the Metapedia, and several of the spoils of his rod have been received by friends in Montreal. On the St. Anne des Monts River in Gaspé, Mr. Hogan of Montreal and a party of friends are having good sport. The Restigouche, the Moisie, the Godbout and the Romaine are all now being whipped by enthusiastic American and Canadian anglers, from whom very little has yet been heard here. Mr. Walter Brackett and party of Boston went down on Tuesday to the Marguerite, and the Governor-General of Canada, Lord Stanley, is still fishing the Cascapedia.

All through the month of June, the trout in the various lakes and streams north of Quebec have been biting freely, and so have the flies. From Lake Edward come reports of magnificent catches of very large trout, sometimes running to 4 and 5lbs. each.

American anglers returning from their various club lakes along the line of the Quebec and Lake St. John railway report splendid sport. Among those who have passed through Quebec lately, literally laden down with the spoils of their recent victories, are Dr. and Mrs. Porter of Bridgeport, and Messrs. Wilcox and A. Chamberlain of Meriden, Conn., all members of the Metabetchouan fishing and game club.

I have not heard within the last few days of any large catches of ouananiche in Lake St. John or its tributary streams, the fish being now en route for the Grande Discharge. They are at present in large numbers about the commencement of the lake's outlet, and may be freely taken in the immediate vicinity of the Island House for the next ten or fifteen days. They are already making their appearance too, in the favorite pools among the rapids of the Grande Discharge. The riparian owner of the fishing rights on the south side of the first pool below the first chute in the Discharge, is now demanding $8 a day per rod for the right of fishing his pool, but the hundreds of other pools about and below Scott's Camp for miles and miles about both sides of the Discharge are as free to anglers who are guests at the Roberval Hotel or Island House, as they have been for the last four or five years. E. T. D. CHAMBERS.

VERMONT FISHING.

THERE are still a good many fair trout streams in this State. Windham county is one of the best regions for wild native trout. Sherwin Brook, in the vicinity of Grafton, is a good stream. There is also a nice pond on Stratton Mountain, about twenty miles west of Brattleboro. In recalling these places where I roamed forty years and more ago, many pleasant adventures come to mind. With a strong line, a small, straight sapling for the rod, and a bait of meadow earthworm or white grub, it was an easy and pleasant task to take as many trout as one could use, then, too, of a good size. While those good old days are no more, nor yet can be, there are places now, if one can find them, where good trout fishing is to be had.

Speaking of trout recalls to mind a circumstance that happened to me in about the year 1853 when living in Keene, N. H. One Sunday morning I took a walk down the turnpike, and in passing over a little bridge noticed in the stream below a beautiful trout—an immense fellow. Surely here was a dilemma. It being Sunday I had no tackle with me. "Necessity is the mother of invention," we were all taught at an early age, so I took from my pocket a piece of string (have you ever seen a boy's pocket stringless? I haven't met with one yet), and making a pin hook, which I baited with a white grub, I was soon flat upon my stomach gently pulling the tempting morsel to and fro near the trout's nose. Pretty soon the fish commenced to work its gills, and I was getting very anxious, when all of a sudden it struck and without any play I landed my fish, which weighed exactly 1¼lbs. This, under the circumstances, was my best trout.

We used to have good pike fishing, and some largh fish were taken. I remember one of 18lbs., that was taken at the mouth of William's River. This was ten years ago. It was the largest I have heard of from that section. Bellows Falls at the foot of the locks was a famous place years ago. From Ludlow clear up to Plymouth and on up to Pittsfield there are a great many ponds of large size. These contain lots of perch, pickerel and horn pouts. In Londonderry there is also a pond full of fish. Another old stamping ground was Minard's Pond, west of Bellows Falls. Pike and perch were plentiful, and besides the many days of good fishing here I had one of the experiences that a man will never forget. An old tree had fallen right out into the pond, and not being wholly submerged made a capital hiding place for pike and a good way for one to get on the pond without a boat. I walked out upon the trunk upon this occasion and cast my line when, all of a sudden, I had a tremendous strike, a violent pull, and off I went into the water. When I got out and looked around my rod was some distance from shore, being towed away with all the tackle I had brought with me, by the pike. He was a big one, no doubt.

W. B. K.

FLY-FISHING IN NEW BRUNSWICK.

LAST summer I spent my vacation in New Brunswick, and had a chance to enjoy good fly-fishing. I boarded at the house of a Mr. Davis, in Brockway, about thirty-five miles from St. Andrews. Mr. Davis is a famous bear-trapper and hunter, and can throw a fly to perfection.

We planned a trouting trip to two lakes, the nearest situated about five miles from the house; and we four, Mr. Davis ("Mister"), Jimmy, Billy and I, started off Tuesday morning, going down the river two miles in a boat. From the river it was then about three miles through the woods, and up hill most of the way. As it was a hot day, you can imagine how we suffered, each carrying a heavy load of the necessaries of camp life, such as guns, rifles and fishing tackle, potatoes and other eatables. We passed several beech trees on the way that the bears had worked on the fall before, breaking the branches off and spoiling the tree generally. We also saw fresh tracks of deer.

We arrived at the first lake, where our log camp was situated, about noon, and were greeted by the discordant cries of several loons. Our camp was on a small island in the lake, to be out of harm's way in case of a forest fire. By means of a small raft one of us went out to the island and brought back one of the boats which was stored in the cabin.

After dinner we decided to spend the rest of the day about the big lake, and to start early in the morning for the grand fishing place. Jimmy and Billy went across the lake to where two brooks met, running from two lakes near by, while "Mister" and myself went down the lake to the dam, errected for logging purposes. We here took quite a number of trout with the flies, but as the water was low they did not rise very briskly. By patient fishing we succeeded in getting enough for supper and then went back up the lake. On returning we saw the tracks of several deer on a sand point, but did not see any of the deer. The others had had fair luck and lots of sport.

Next morning after an early breakfast in camp we started for the second lake. After two miles of hard walking through swamps and over fallen trees we came suddenly out of the woods and before us stretched the waters of Little Kedron. What a beautiful sight was the lake, with its waters pure as crystal, surrounded by the fir and spruce forests which characterize New Brunswick.

We bailed out the old boat which we found there, much the worse from age and porcupines. The prickly "hogs" had eaten a hole through the bow, and nearly all the seats were serrated by their teeth. We started up the lake a short distance and anchored just in good casting distance from a bunch of lily pads near shore, and then the sport began. I made the first cast, and hardly had the flies touched the water when up came a trout and was soon landed. Then for two hours we caught trout of all sizes. I gave an exhibition of fancy fishing by hooking a two-pounder near the tail as he rose for a fly. Such pulling and tugging my little fly-rod had never experienced before, but I finally landed him.

We had a very exciting time, for every large trout we struck would invariably make for the lily pads, and it was "nip and tuck" to keep them out. Soon after they found they could not get to the pads, they would make for the boat, where another struggle would take place. We allowed all the small ones to go, and some that we called small would have gladdened the heart of many a New England brook fisher. We got all we wanted in two hours, having between twenty and twenty-five pounds of trout. They were beautiful fish, too, white like silver with spots of gold. We reached camp early in the afternoon and had a trout supper, and retired to our bunks early in the evening well satisfied with our trip to Little Kedron. Next morning after more trout were cooked and eaten with a relish known only to campers, we started for home.

We had, when we reached home, fourteen trout that weighed 16½lbs, and the largest was 19¼in. in length—this twenty-four hours after taking, and of course they had shrunk some. I had many trouting trips after that but none as successful as that one. WEB.

THE GOLDEN TROUT OF MT. WHITNEY.

STATE OF NEVADA FISH COMMISSION, Carson City, June 21.—*Editor Forest and Stream:* In your issue of Nov. 5, 1885, there appeared a letter entitled "Fishing about Mt. Whitney," in which are described the "golden trout." Now, after many years and through the courtesy of Mr. A. E. Harvey, of Lone Pine, Inyo county, California, I have been able to procure three specimens. They were brought from the Mountain over a narrow trail on horseback, packed in snow. I then encased them in a block of ice and shipped by express to W. H. Shockley, at San Francisco, and they were by him forwarded to Prof. Jordan. They were seven days in transit.

The result of Prof. Jordan's investigations is given in the inclosed copy of his letter to Mr. Shockley.

GEO. T. MILLS, Com. for Nevada.

OFFICE OF THE PRESIDENT LELAND STANFORD JUNIOR UNIVERSITY, Palo Alto, California.—Menlo Park, Cal., June 18.—*Mr. W. H. Shockley, Bohemian Club, San Francisco, Cal.:* DEAR SIR—The three specimens of trout from Mt. Whitney were extremely acceptable. They are the famous golden trout of Mt. Whitney and the Upper Kern River, which has attracted the attention of anglers for some little time, but which has not yet, so far as I know, received any adequate notice in print.

The trout were first brought to my notice by Lieut. Wheeler's geological survey, which brought me specimens in 1877. These were not in very good condition. I regarded them as of the same kind as the trout in the headwaters of the Colorado, at the same time calling attention to the remarkable distribution of species on both sides of the desert and the mountains. Later I received other small specimens, but still in such poor condition that I could do nothing more with them. The three received from you were in perfect condition, and I have had a colored painting made of them.

The fish is really a distinct species of trout, entirely different from any found elsewhere either in the Rocky Mountains or Sierra Nevadas. The very small size of its scale, the lack of teeth on the hyoid bones, and the peculiar color markings are all distinctive of this trout, which will in time receive a name of its own, thanks to your kind thoughtfulness.

It seems evident, so far as one can judge of such matters, that this trout is descended from the trout of Western Colorado, which abound in the tributaries of the Clear River, the Green River and the Grand River and the Gunnison district. But in being separated from these trout it has undergone considerable change, and one would think this separation must have occurred before the Sierra Nevadas were elevated. It has already been claimed by geologists that the Kern Valley, although on the California side of the Sierras, is geologically a part of the Great Basin. Its trout at any rate are wholly different from the rainbow trout of California.

DAVID S. JORDAN.

PIKE PERCH IN NEW HAMPSHIRE.

Editor Forest and Stream:

As I learn, the circumstances of the capture were about as follows: The boy was fishing the Wells River for any small fry that came his way, especially suckers. His hook becoming caught in the shallow water he waded out to detach it rather than lose the hook, to him quite valuable. Arriving at the end of the line he found his hook attached to this large pike, being hooked under one of the forward fins.

The fish being heavy with spawn, and, I guess, in the very act of spawning, and the water very cold, made no effort to escape and was seized by the boy by the gills and dragged ashore. It was a pure accident, though the next day two smaller ones of 6 or 7lbs. were taken at the same place by some of those people who think fish are the product of spontaneous development and don't lay eggs. Some of the authorities in Vermont after considerable urging finally put a stop to it.

Ten or a dozen of the same fish were afterward seen near by during the week, evidently in the same business, but none as large as the first? Is not this (11½lbs.) a very unusual size?

The weather has been simply frightful for a week or more, but has warmed up the fish so that some very good strings of small trout have been brought in, both from local brooks and some of the streams near Fabyans and Mr. Washington. Also the bass began to bite well the day the law was off—the 15th. Two were taken in the village limits of 3½lbs. each by a local fisherman, and several smaller ones. C. S. GRISWOLD.

WOODSVILLE, N. H., June 20.

[The pike perch reaches a large size; specimens weighing 40lbs. are mentioned in the books. If spawning fish are found in April, that month should be added to the close season. The penalty of $10 which the law now provides for each fish taken in May or June would doubtless deter the pot-fisherman from snatching them off their spawning beds.]

Colorado Trout.

DENVER, June 22.—The *Republican* this morning reports: "Muddy waters have made the supply of fish and fish stories backward this year, but P. M. Lessley starts the ball rolling with the biggest trout thus far killed. He caught it yesterday in the Mile Gulch, eight miles above Platte Cañon, twenty miles from Denver. Mr. Lessley brought the trout with him to the *Republican* office, where it was found to measure 23½in. in length and weigh 5½lbs." This is authentic, as I saw the fish. It was a native trout, silver-sides with black spots.—BANKS.

FISHING OFF PELEE ISLAND.

Editor Forest and Stream:

When I read in FOREST AND STREAM of June 9 the communication from the gentleman of Pittsburg taking issue with my statements regarding the date of opening the black bass season off Pelee Island and in the other waters of Lake Erie north of the international boundary, I was a good deal perplexed. But when I came to the editor's footnote sustaining the point of order made by the member from the Smoky City, I felt dazed. My sensations were very similar to those of the citizen who was arrested and locked up on a charge of having committed a certain offense against the law. His lawyer when summoned, protested: "My dear sir! they can't lock you up for that!" and the answer was, "Perhaps they can't—but here I am."

For several years we had been in the habit of opening the bass fishing in the Canadian waters of Lake Erie on May 15. We always opened it punctually, faithfully, scrupulously on that date, rain or shine, and were invariably assisted by a large representation of the famous Chicago Club, and a sufficient contingent of boatmen, baitmen, guides and helpers generally. Nothing that we did was done in secret, and all the Canadian officials looked on approvingly. And now comes the gentleman from Pittsburg, and decrees that what we have so repeatedly and conscientiously done can't be did. And the editor of FOREST AND STREAM remarks approvingly in the language of "Pinafore," "Yes I know; that is so." Well! well!

It occurred to me in thinking the matter over, that possibly Pelee Island might be a separate principality, and not subject to the laws of the Dominion. Thereupon I wrote to the Collector of Customs on Pelee, and told him that my reputation was blighted (at least temporarily) and implored him to help me dispose of the Scoffer from Pittsburg, and the—the other man. He has accordingly written me the appended letter, (received this morning) which is respectfully submitted for publication:

DEAR SIR—In regard to the statements made by you in FOREST AND STREAM, relative to angling for black bass at Pelee on May 15 in former years, and on May 10 this season, I would say, from and with an entire knowledge of the subject that your statements are perfectly correct.

Formerly, and for many years, the close season for black bass ended May 15. Some years ago this close season by "order in council" was extended to June 15.

As I had been for over twenty years closely identified with angling at Pelee, the Department of Fisheries at Ottawa kindly sent me a copy of this order. I at once took strong ground against it, and with the strenuous and able aid of some friends, Members of Parliament, a special exception was made in favor of angling at Pelee. For years since, the influence and earnest efforts of the Pelee (Chicago) and the Dayton Pelee Clubs have been exerted in the same direction, and each year, after strenuous exertion, the privilege has been obtained. The change to an earlier date (viz., May 10) this year was owing to a visit and experience gained last year by Charles Wilmot, Esq., Superintendent Fish Hatcheries for the Dominion of Canada, who was convinced by actual touch as well as ocular demonstration that the black bass does not spawn before June 25 to July 15 in and around the islands of Lake Erie.

This assertion I had never ceased to make in urging the department to change the close season, and it was found to be correct by the very courteous and capable gentleman sent on to investigate the question.

I have not Mr. Wilmot's report before me, but I have reason to believe that during the present season a commission will issue and the whole subject of the proper seasons for angling in different localities will be carefully entered into, with a change in so far as bass fishing is concerned, to about the 10th to the 25th of May.

Finally, I may say that the Ontario Legislature passed an act the past session, restricting fishing in the small lakes and streams of this Province. This act does not in any way affect the angling in the Great Lakes, over whose waters the Dominion Government maintains the old national right of "eminent domain."

I beg to remain, my dear sir, faithfully yours,

F. B. MCCORMICK.

SOUTHPORT, Pelee Island, June 20, 1892.

Seriously, Dr. McCormick's letter gives a very full and clear explanation of the bass fishing situation at the west end of Lake Erie in Canada waters. Practically, we know the spring bass fishing is virtually ended by June 15, and does not begin again in the lake till September. JAY BEEBE.

TOLEDO, O., June 21, 1892.

Sale of Trout in Close Season.

Editor Forest and Stream:

If Mr. Gilbert had read FOREST AND STREAM more attentively he would know that brook trout containing free eggs have been caught in Cape Cod streams and contiguous waters as late as the middle of April. Just refer him to the numbers for May 16, June 13 and Oct. 3, 1889, for information on this subject. He should also bear in mind the fact that the name trout is now applied to the introduced brown and rainbow species, the former extending its spawning season into January, and the latter as late as March and even April. You are right in insisting that the most important period of trout life is the reproductive season, and no sounder basis exists for protective laws than the necessities of this critical epoch. The existence of the trout is threatened from many sides; and all anglers desire to aid in sheltering and fostering it by every honorable means at command.—CAMBRIDGE.

New Hampshire.

CONNECTICUT LAKES, June 18.—Hunting here this fall surely will be first-class. The lakes have been lowered quite a little already, and the water will be drawn still lower. Game is plentiful now, and the open season will surely bring many sportsmen. Fishing has been put back by the many rains of late. The best of it remains for those coming late. Still, few have gone away, if any, dissatisfied with their take.—HALFORDE.

The Juniata.

ON Tuesday of last week Mr. Joseph A. Keister captured in the waters of the Juniata, at Tuscarora Station, a black bass which weighed 5½lbs. This is the largest bass known to have ever been caught in these waters—a small-mouth, the only species we have. John E. Fry caught a leather carp in the dam on Saturday morning that weighed 6lbs. 2oz. This was taken in Doe Run, a small mill stream. We have not had the carp in our waters for much longer than five years, and the supply started only by means of specimens escaping from private ponds. Now they seem to be in most of our small streams and are getting abundant in the river. A 16-pounder was taken this spring from the latter stream at the Millerstown dam.—ONYJUTTA.

"OH, COME WITH ME."

One sayeth—

I prithee, let's a-fishing go,
It is the month of May,
On every hand the woods are decked
Out in their foliage gay.
The purling brook
Invites our hook;
See that trout dash!
Hear the brook plash!
While on green banks the lowing herds
Add volume to the songs of birds.

Another answereth—

I hear your words, you charming knave,
But I've been there before:
Six days we stayed, five days it rained,
The sixth day rain did pour.
The wary trout
Would not come out;
To every rise
Ten thousand flies!
With your soft words I'm not enthused.
I pray thee that I be excused.

J. B. BURNHAM.

Fishes of Lorain County, Ohio.*

Mr. McCormick presents a list of eighty nine species of fishes from Lorain county, most of which are found in Lake Erie or its tributaries. Notes on habits, distribution, etc., are given, and the principal species are illustrated with cuts lent by the U. S. Fish Commission. This county has a number of game fish, among them the two black basses, the rock bass, crappies, five kinds of sun fishes, the lake trout, the pike and muscalonge, and the yellow perch, pike perch and white bass. In the advertisement Prof. Wright says, concerning it in paper: "It is published in harmony with the conviction, here cherished, that one of the most important duties of any museum is to secure a full representation of the natural objects occurring in its own vicinity, and to make them available to the cause of science."

* Laboratory Bulletin No. 2. Oberlin College. Descriptive List of the Fishes of Lorain County, Ohio. By Lewis M. McCormick, Assistant in the Museum. Oberlin, Ohio. 1892.

Fishculture.

REARING FISH FOR DISTRIBUTION.

COLD SPRING HARBOR, N. Y.—*Editor Forest and Stream:* Under this heading last week you give a partial synopsis of my paper, which was read before the American Fisheries Society, and, omitting all that portion where I generously waive all other expenses, quote my very apparent arithmetical error, which any schoolboy could see was caused by a misplaced decimal point.

The only excuse, if such a blunder is excusable, that I can offer is that my duties had kept me away from home for two weeks preceding the meeting, and I rushed down and after a hard night's work tackled the problem after midnight and rushed off at 6 A. M. to the meeting without reading it over, but I hope to have a chance of correcting it before it goes in the Report.

As the error is so plainly one of punctuation, it would have been a friendly act to have called my attention to it before publishing it; yet I can hardly think that FOREST AND STREAM, although it has espoused the yearling heresy, is so partisan as to really wish to take advantage of a slip of the pen.

I will now take into consideration the other things thrown aside and say that attendance and transportation will make a yearling trout cost about ten cents when planted.

Leaving my poor paper entirely out, the advocates of planting fry routed the enemy, horse, foot and dragoons, as was evinced by the changed sentiment of many present. I cannot review the arguments now, life is too short and ink too high, but in the discussion following the papers some men took part on the yearling side whose opinions on any fish-cultural subject would have little weight. Mr. Clark is the only one on that side that we can consider "a foeman worthy of our steel," he is a practical fishculturist of great experience, and although he and I very seldom agree on any professional matter we get along very well.

On our side we had Mr. Whitaker, president of the Michigan Fish Commission, backed by Dr. Parker, who was present, and presumably by Supt. Walter D. Marks, who is a fishculturist with experience dating about a quarter of a century (about that of Mr. Clark and myself); Mr. Ford, president of the Pennsylvania Commission, and his colleague, Mr. Powell; Mr. Nevin, superintendent of the Wisconsin Commission, and others. Mr. Bowman, of the New York Commission, said that in his opinion it was too expensive to raise trout to be yearlings before distributing them, and others of the New York Board agreed to this, in private.

That the advocates of planting yearlings have had the floor for over a year without opposition, has caused people to say that yearlings are the things to plant, but those of us who do not believe in wasting money in that way were never heard from until last month, and in my opinion we "laid 'em out." If we didn't do it this time we will next year, for there is, in my opinion, no better way to squander public money than by rearing trout to be a year old before distributing them. No one denies that a yearling trout is better than many fry, that part is self-evident, but how many men in America are competent to express an opinion on the cost of raising that yearling, and then transporting one fish in a can where 100 fry could be carried. My men take 5,000 fry in a ten-gallon can, where but 30 to 50 yearlings, according to size, could be carried.

As I have said, the angling public cannot know of these details, and therefore are not judges of them, and the majority of practical fishculturists, men who deal with expense as well as with fish, are on our side, and against the rearing of trout to be yearlings before planting, because they are in position to correctly sum up the results and the cost. All other opinion is of little value. There are always men who take sides on subjects of which they know little, but the thinking man will not count them, if he knows them, but will rather judge a statement by his opinion of the one who says it, and of the knowledge of the person who claims to be an authority on which he speaks.

As this very important question was known to be the principal subject of debate at the meeting, it surprised me to see that FOREST AND STREAM reduced it to the form of a synopsis and gave other papers in full. Certainly it could not be that its previous editorial expressions in favor of planting yearlings led it to slight the main question of the meeting where the yearling men met with a Waterloo which foreshadows a Gettysburg next year.

There is no evidence that the result of planting yearlings in any stream has proved to be better than if fry were planted. Certainly, if fry cannot live in a stream, what is to become of those which the yearlings will produce? Are yearlings necessary to keep up the stock in future? If so, that stream had better be abandoned. FRED MATHER.

Salmon in the Hudson.

IN Mr. Stone's excellent paper entitled "A National Salmon Park," published last week, he says: * * * "Let me inquire what it was that destroyed the salmon of the Hudson * * * where they used to be exceedingly abundant?"

This must be a slip of the pen, for with the exception of an occasional stray salmon taken at intervals of years, it is well known that there were no salmon in the Hudson before they were planted there by the U. S. Fish Commission in 1882, and the succeeding year, in the face of opposition and ridicule by even the then Board of State Fish Commissioners.

Mr. Stone's suggestion for a National Salmon Park, a sanctuary for the salmon, where none could molest the spawning fish, is a most excellent one and well worth consideration by the Government. FRED MATHER.

The Kennel.

THE PEARL OF PEKIN INCIDENT.

Editor Forest and Stream:

There seems to be some doubt about the decision of the executive committee of the American Coursing Club regarding my protest in the Pearl of Pekin vs. Chicopee Lass case. I must confess that I am somewhat in doubt and am trying to find out the facts in the case and just how the matter stands. I find that the reports of FOREST AND STREAM and *Turf, Field and Farm* state that my protest had been sustained, while the *American Field* says it has been referred back to the club. Messrs. D. C. Luse and H. C. Lowe, both members of the present executive committee, the latter being a member of the exective committee of 1891, informed me that my protest had been sustained. Under date of March 11, 1892, Mr. D. C. Luse writes to me that "The executive committee has decided in your favor, and the money and the cup will be forwarded to you." On March 23 Mr. H. C. Lowe writes to me as follows:

"I did not want anything given out until it appeared in the *American Field*. Dr. Shaw had no business to say anything about it. The paper was signed by myself and Page and sent to Dr. Shaw to sign, which he has never done, and he will not return the paper. He has had it now two weeks. This obliges us to get out another form for myself and Page to sign and then forward it on to the *American Field*. * * * Do not say anything about the business until you read the decision in the *American Field*."

I waited for the decision to appear in the *American Field*, but it not appearing, I wrote to Mr. D. C. Luse asking him whether he had seen the decision, to which he replied on May 28: "Dr. Shaw showed me a decision from the executive committee signed by H. C. Lowe and C. G. Page." A few days ago I received a letter from Mr. C. G. Page stating that my protest had been referred back to the club.

Who am I to believe, Lowe and Luse on the one hand, backed up by FOREST AND STREAM and *Turf, Field and Farm*, or C. G. Page and *American Field* on the other? I would like to be enlightened and would like to know just how this matter stands. Also, whether or not the American Coursing Club has an officer whose duty it is to notify parties directly interested of any action taken by the club or its executive committee regarding their matter?

Any information on the Pearl of Pekin vs. Chicopee Lass case will be thankfully received by T. W. BARTELS.

DENVER, Col., June 21.

THE BEAGLE STANDARD.

Editor Forest and Stream:

As my name has frequently appeared of late in the discussion on the height question in the beagle standard, I feel that a statement of some of the reasons for a rigid limit might be proper just at this time.

When the Beagle Club was first contemplated, W. H. Ashburner called on me to confer as to its feasibility. We decided that it was first of all necessary to enlist the co-operation of the few beagle breeders then in the country, and I will here remark *en passant* that to Mr. Ashburner the beagle men of to day must award the credit of having greatly assisted in giving the breed its present prominence.

There was lots of correspondence to be done, and with sportsmen living wide apart, and details innumerable necessary to the organization of the club, all of which he painstakingly worked out.

In the conference above spoken of it was deemed imperative to have a standard of excellence. General Rowett, N. Elmore and myself were appointed to draft it. Gen. Rowett was just at that time very much occupied with his horse interests, and asked me to formulate a scale of points and submit it for revision if required. Mr. Elmore acquiesced, and I proceeded with the work. When finished it met with the entire approval of my colleagues; no change whatever being suggested by either gentlemen, so whatever mistake we have made "on our heads be it."

And now for the reasons for fixing the limit at 15in. In the old days anything a little smaller than a foxhound was by courtesy called a beagle; if a pure bred beagle dog was accessible he was crossed on small foxhound bitches, and if at all prepotent the produce showed enough beagle character, barring size, to pass muster and satisfy their owners. The result of this slipshod, ignorant method was that the country was filled with mongrel nondescripts posing as beagles; witness our earlier bench shows. It was to strike at the root of this evil and rescue the breed from utter extinction that I decided to draw the line rigidly at the limit fixed in the standard, knowing that the little thoroughbred could not be bred from the big mongrel, and that those who wanted the true beagle would have to hark back to the pure source to get him.

I will not go into an extended argument. The subject has been ably and thoroughly handled by Messrs. Chapman, Ashburner, "Bradley" and others, and little is left to say. The claim of the advocates of the large dog—that he is more enduring, should, however, be answered.

I grant that if a mixed pack, *i. e.*, one of say 16in. and 12 or 13in. dogs, are run together, the small dogs will be at a disadvantage, for the reason that the larger dogs, from their greater speed and stride, keep the little ones on the keen jump to stay with them. This being above their rating gait, of course exhausts and tires them in a protracted hunt.

The remedy is simply to assort the pack to as nearly one size as possible and weed out the overgrown dogs.

Thus selected the small dogs will be found to afford the best sport and prove the most killing pack, giving many more chances to the gun, as the rabbit stays longer above ground than if rushed at foxhound speed by beagles of nearly foxhound size.

In conclusion, I must thank the FOREST AND STREAM in the name of the beagle fraternity; it has fostered our interests as no other sportsman's paper in the country has, giving us a medium to ventilate our pet theories and hobbies relative to the breed, and a chance to interchange ideas, which must prove educators even to the "man who knows it all." L. H. TWADDELL.

WEST PHILADELPHIA, Pa., June 27.

POINTS AND FLUSHES.

CHICAGO, June 25.—In FOREST AND STREAM of June 16 I notice a most able letter from your correspondent "Tarquin," with whom I have but one fault to find, and that is that he did not begin to give the public the benefit of his views sooner, for he writes in a most logical, practical manner.

I wish to explain the apparent inconsistency which "Tarquin" deftly and delicately called my attention to, as follows:

"(e) He should retrieve. The reasons why are many. First, because he can do it easier, quicker and more effectively than the shooter; second, the bird may have fallen in grass or weeds where the powers of scent are necessary to its recovery; third, I shall insist upon the dog's retrieving until I learn to smell as well as him; fourth, it is nonsensical to talk of the average sportsman in this country keeping a special dog to do the retrieving; and last, but not least, the authorities on this subject all hold that retrieving is an essential.

"B. Waters * * * has written a work entitled, 'Modern Training, Handling and Kennel Management,' which the public have been pleased to adopt as the standard in this country. Now, there is a legal maxim that the record imports absolute verity on its face, and that you cannot go behind it. The record: 'Notwithstanding its indispensable value in successful field work, it at times in the first or perhaps also in part of the second season is the source of objectionable traits in relation to other parts of field work, which are more or less associated with it.' We are willing to stand by the record. We think it correct."

Now, the matter in relation to retrieving, as treated in "Modern Training, Handling and Kennel Management," relates to it as applied in actual field work, not in a field trial; and no one has insisted more firmly than I on the indispensable value of retrieving in field work. Turning now to other arguments urged in its favor.

A retriever is almost as necessary as a finding dog to make the sport at all enjoyable. Of all the field trial cranks of whom I have any knowledge I do not know of one who disputes the value of retrieving. While its necessity and usefulness are admitted in actual field work, many field trial men oppose it as a competitive quality in field trials, since it comes under the head of educational qualities; in fact it is an act which all dogs, curs included, can learn, and therefore is not a quality peculiar to setters and pointers.

But, it is argued and repeated at every turn of the discussion, retrieving at field trials shows whether the dog has the necessary intelligence and disposition to be a good retriever, and also that, if it is abolished at field trials, sportsmen at large will abolish it in practical shooting. Nothing is more improbable. The converse should hold true that, if it is still maintained as a part of field trial work, all sportsmen will have retrievers. There are some men who will not have retrieving setters or pointers, and there are others who will have nothing else, regardless of any field trial legislation.

Retrieving, being an educational quality, is in the same category with dropping to shot, turning to whistle, staying at heel, dropping to order, etc., acts acquired by education.

But, says the advocate of the retriever, the act should be required at field trials so that it could be determined which dogs performed it the best, and that by breeding it might become hereditary.

Any intelligent dog can be taught to retrieve passably well, or even may become a finished retriever. But does any man know of an educational act which has become instinctive? The horse has been more uniformly and persistently educated than the dog, and holds a large place in domestic life in nearly all countries, yet the horse of to-day has to be carefully educated to the bit, the wagon or saddle, as were his ancestors for centuries before him. Man, the highest type of animal life, has to be carefully educated on the same lines as his ancestors, heredity having no importance in respect to being born with a fixed lot of innate ideas. The language of the race is learned only by diligent study and constant repetition. Yet, by some mystic means, the dog is supposed to inherit a knowledge of retrieving from an ancestry of yesterday. To be more precise, it is assumed that he will do so. The laws of heredity are not established by off-hand assumption.

Undoubtedly education strengthens the brain and receptive powers of it from generation to generation, just as exercise and training develop and improve the physique; but I believe it only increases the capacity to receive an education and does not make an education by itself. It is true that the collie takes kindly to herding sheep and cattle, but it is equally true that a long, careful education is necessary to make his efforts of practical value. Naturally the collie has an aptitude for the work, but he has no education by inheritance.

But granting that retrieving is a field trial quality, it could not be tested properly at field trials as conducted at present. It would add greatly to the length of every heat, and therefore would prolong trials which already consume too much time. The tests of retrievers have been few and superficial, one test being usually deemed sufficient. An instance could be mentioned where a dog brought in a bird which, when shot, happened to fall near him, yet he had never retrieved. The act passed for a good retrieve. Had the trial been more thorough it would have been shown that the act was simply emotional or was simply similar to a retrieve, just as a dog will sometimes pick up a stick when it is thrown out.

From my knowledge of the views of field trial men, I feel certain that all advocate the necessity of retrieving in field work. I know of none who by voice or pen oppose it for actual utility when shooting. In this connection I may say that I do not know of one field trial man who approves of the wide, lawless, headstrong rangers which are the topic betimes. Yet it is assumed that field trial men do favor such, and the assumption is presented as a matter of fact.

The evolution of field trials in this country has shown a constantly growing sentiment against considering retrieving a competitive quality at field trials, and I believe that it will not be long before all clubs eliminate it from their scale of points. B. WATERS.

Central Field Trials Club Derby Entry.

Editor Forest and Stream:

We find that the subjoined entry was omitted from the list of Derby entries sent you last week:

REXICUS (Jas. N. Maclin), dog (Van Vleete—May).

This makes the total number of entries 108.

C. H. ODELL, Secretary and Treasurer.

NEW YORK CITY, June 24.

ANY CASE, AND "MOUNT ROYAL."

Editor Forest and Stream:

Knowing full well your repugnance to acrid personalities, I abstain from any such in replying to "Mount Royal's" letter in your issue of June 25, save one, which I do not see how I can avoid.

"Mount Royal" complains of my insulting him. In this same article, as well as one contributed to the *Kennel Gazette*, he charges, by the most direct implication, that Mr. Mercer has been guilty of lying, swindling or forgery, one, either or all. I challenge any man, anywhere, to produce the line in print written by me, at any time, anywhere, in any place or paper, in England or here, containing the one-hundredth part of such an insult as this. Take all the time you wish, employ as many searchers as you choose, and I will pay the bill if so monstrous an outrage can be traced to me. I will even advance this position, and say that within all my recollection of doggy strifes, I cannot recall such another outrage on truth, honor and public decency. I always have answered, and always will answer, blow for blow, scorn with scorn, but "Mount Royal" forces the claim from me that I never committed such an outrage or ever whined in response to personal attacks, either from personal enmities moving me, or from baffled spite. On the determination of this I rest my charge against "Mount Royal" of pedagogueism and autocratic deliverances.

So far I have subordinated defense of Mr. Mercer to attacks on "Mount Royal's" courses, holding them most mischievous to all kennel interests; now I may take up specific answer to silly assumptions against Mr. Mercer. As I understand, the Ottawa premium list contained a usual provision that certain classes would be divided by sex if a certain number of entries were received. The reason is evident, being that the entry money shall warrant the extra prize money, the offer in the premium list is distinct and unquestionably could be enforced in law, and it was thoroughly complied with by Mr. Mercer; every jot or tittle of the implied contract between show and exhibitor was fully met, the show made an offer and got the money on which the offer was based. In the name of common sense then, wherein was the Ottawa Club "swindled?" Does it enter into the contract that the money may not be paid by one man? It provokes me to hear a complete novice in dog show affairs building up a structure of "fraud," entirely evolved from his own mind, in ignorance that the practice of making entries of dogs to fill up classes without any intent of showing them is as old as dog shows, has been done hundreds of times, and I have never seen it condemned. As I have said dozens of times, Mr. Mercer made a great mistake in not securing Mr. Little's consent to his (Mr. M.'s) entering the dog, and in this and this alone was he to blame, and I merely give notice to "Mount Royal" that my head is ready for the club with which he proposes to "beat" his brilliant purism into dogmen's thick skulls, but he had better thicken his headgear before he essays his feat of knight errantry.

"He who seeks equity must do equity," and he who perches on a height of purity that Aristides never aspired to, must watch his front door. Is it consistent with so elevated a plane to seize a greyhound in the ring and unmercifully cuff the poor beast's ears because he pricks them before the judge? W. WADE.

HULTON, Pa., June 25.

[Both sides have had a hearing in this controversy and it must now cease.]

FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—What have the "men who keep just a dog" to grumble at about the Toronto license bye-law? They are in exactly the same position as before. If their "just a dog" happens to be of the female variety and is eligible for registration they save just $2.50; if a dog the fee is the same whether registered or not, $1. Surely this is low enough.

The dates of our Canadian bench shows are getting beautifully mixed up. Montreal has now jumped in and wants to hold a show in the same week as Kingston. Two shows in one week would doubtless prove fatal to both, and though the C. K. C. has no rule plainly stating two shows under kennel club rules may not be held on the same date, priority of claim should certainly give Kingston first place.

Mr. F. S. Wetherall, Compton, Que., is getting over a brace of wire-haired fox-terriers, of which breed he already has a strong kennel. The dog, Tinderbox, was bred by Mr. A. Duck, whelped July 28, 1890, and is by Jack the Bruiser (champion Bruiser—Carlisle Trick) out of Carlisle Rex (Carlisle Trick—May II.) In color he is white with a black spot over the left eye. His winnings are one second and two thirds, Wolverhampton; one first and two seconds, Minsbridge; third, Leeds; two seconds, Belfast; two firsts and second, Ripon. The bitch, Merit, was bred by Mr. F. Bagley, Stow-on-Wold, Gloucester, and has never been shown. She is by Daylesford Mike (Bushy Bruiser (E. 26,504)—Deacon Star) out of Daylesford Minka (champion Bushy Broom—Daylesford Luck). H. B. DONOVAN.

DOGMATICS OF DOGDOM.

WHEN a man finds that all reporters, editors, papers and shows are either foolish or unreliable, why does he not take himself hence?

—§—

Many dead dogs, if they could return to life, would be astonished inexpressibly if they could read their ornate, fulsome obituaries in a contemporary; but they would soon discover that the obituaries were written for the edification of owners and were in ratio to the size of stud cards present and prospective.

—§—

Somebody has well said, "Dogmatism is grown-up puppyism." You see it every day.

—§—

Now that the "recruits" are all accounted for, would it not be well for some statistician to compile a list of repudiated, cashiered, sick, crippled and discharged? It might be interesting. THE CYNIC.

MR. MIDDLETON AND THE C. K. C.

Editor Forest and Stream:

Your Canadian correspondent must have been misled in some manner as to the why and wherefore of the resignation from the Ottawa show committee of my partner, Mr. W. H. Middleton. I happen to know that Mr. Middleton intended resigning some months ago, and for entirely different reasons to those assigned in FOREST AND STREAM.

While on this question, permit me to say that the C. K. C. can have no jurisdiction in this case under Rule XXV., as the act for which I have been disqualified was not committed under the kennel name, nor was it in any way connected with the partnership. I, as an individual, entered another man's dog without authority. Mr. Middleton had no knowledge of what was done and is as innocent as an unborn babe. But that is beside the point, which is, that I, and I alone, am the one to blame for what was done, and Mr. Middleton has no more connection with it than has the restless "Mount Royal." The C. K. C. need not be worried over the matter of my partner's retirement from the Ottawa Executive. F. H. F. MERCER.

NEW YORK.

DOG CHAT.

IN that excellent publication on "The Scientific Education of Dogs for the Gun," a book that every sportsman should have in his library, the author gives some useful advice on feeding dogs. He says: "Feeding is a most important point. My habit has always been with regard to puppies up to four or five months old to feed three times a day. Breakfast at seven, bread and new milk; luncheon at twelve, strong soup, thickened with boiled oatmeal or biscuit; dinner at six, the principal feed, and nothing is better than Spratts biscuits soaked in cold water at night, boiled in the morning, and then mashed with the hand into a porridge. Give boiled cabbage minced up fine, and well mixed with this last twice or thrice a week. After four or five months omit the luncheon at twelve, and milk altogether, except occasionally, for variety. Give soup and bread, and all the moderate-sized bones you can get for breakfast, and after two or three months more you can omit the soup and give one biscuit, dry or soaked (I prefer dry) for breakfast. Make it a hard-and-fast rule never to allow any food of any sort, except a bone, to remain in a dog's pan uneaten; remove it at once as soon as he shows signs of having satisfied his appetite, or sooner if he is a voracious feeder. Never give any food of any sort which is not perfectly sweet and fresh, *i. e.*, in a condition in which you would eat it yourself. Every now and then give a dinner of well-cleaned and boiled paunches, or of fresh cooked meat instead of the biscuit."

Snap is the name of a fox-terrier who is devoting his young life to missionary work in the Harlem Hospital. He never misses an ambulance call, being always ready for the ride long before the doctor who answers the call, and when the injured person is once in the wagon he watches over him or her with unceasing vigilance. Only a few days ago he saved one of the doctors from serious injury at the hands of an insane patient. The doctor was sitting on the rear seat of the ambulance, while Snap watched the patient. By some means the man released the upper portion of his body from the restraining straps and was about to strike the surgeon on the head, when Snap saw the danger and jumped at the man. He bit his nose so badly that the doctor was made aware of the condition of affairs, and with the aid of a policeman again strapped the man down.

The collie does not often pose as a human life saver so we take this opportunity to give this breed its due meed of praise. The St. Louis *Republican* says: "A noble shepherd dog, the property of Joseph Langin, performed a remarkable feat yesterday afternoon that entitles him to wear a medal for bravery. The brave animal plunged from the foot of Soulard street into the raging torrent of the Mississippi and seizing a drowning man by the collar of his coat swam with him to the shore, thus saving him from certain death. The rescued man was Joseph Reinert, a German 21 years of age, who resides in the same house with Langin. Some words passed between them and Reinert, who had become very morose, vowed that he would commit suicide. He then left the house and ran down to the river. Langin followed but by the time he arrived on the levee Reinert had plunged into the water and was being swept rapidly from view. Langin was helpless to save him, as he could not swim, but his dog, who had followed unobserved behind, plunged into the rushing water and reached Reinert just as he was disappearing. The dog swam ashore with his burden with great difficulty. Reinert was revived at the Police Station and then sent home.

Continuing our account of the English Kennel Club show we remark that the mastiffs shown, though few in numbers were of fair quality, there have been so few young ones bred lately that the classes are not filled as they should be. Ilford County Member won this time in the open dog class and also the challenge dog cup. It is possible this dog may find a home in this country, though he seems to be a rather "see-saw" sort of a winner. Dr. Turner, however, showed a beautiful bitch in Seabreeze that is said to be without any serious defect and about the best now before the public. She won the challenge cup for the best bitch in all classes. She is a daughter of Beaufort and Cambrian Princess, the latter of which is now in this country. In St. Bernards the quality was good. Siegfried won in the open dog classes and is said to be much improved. He also won the 100-guinea challenge cup. Starboard, the second winner, is very well spoken of as a good all round dog. The bitches were not so good, Haidee being the best, though very straight-faced.

Newfoundlands were very good and so were the great Danes, and classes were well filled. "Borzois" have evidently caught on, but recent importations have mixed the question of type more than ever, and a big deerhound-like-looking dog would seem to be the correct article. Krilutt won in the challenge class, but Golub, the winner in the open class, is a dog of different type and not so distinctively Russian—and so it goes. Whirlwind, one of the Krilutt-Elsie litter that Mr. Wade bred, won the special as the best of the breed bred in England and is spoken of as a very good quality dog. The bitches were very good, Lebedka being the best. Henmore King was the king-pin in greyhounds.

Old Saddlebags was the champion in pointers and a dog called Graphic Secundus won in the open dogs. Devonshire Cream won in bitches. Ightfield Deuce, that is well known to our field trial men, won the field trial class prize. Mr. S. Potter's Geltsdale won in challenge English setters, and is said to be a grand specimen. Mr. R. B Lee showed the winner of the open class in Richmond, a wonderfully-coated dog with no particular faults excepting open feet. Mabel of Coleshill, as usual, won in bitches. Champion Heather Grouse was the challenge winner in Gordon dogs and Heather Blossom from the same kennel won in the corresponding class. The Irish setters only numbered thirty entries in all but the judge remarks that the quality has not depreciated. He adds that there seems to be a tendency on the part of breeders to go in for the darker colored ones of the breed and the Irish Setter Club's standard color, "golden chestnut," seems to be somewhat ignored. He also thinks the dark color is accompanied by light feathering, almost approaching whiteness. Fingal III. and Geraldine II. were the challenge winners and Harlech, a strongly, well-built dog pulled off the open dog prize. The winner in bitches, F. H. Bass's Blossom IV., the judge is evidently in love with—lovely head, orthodox color, good legs, plenty of bone, all the rest good, including expression and a beautiful profile. "It is very difficult to find a fault with her." Old champion Aveline won the field trial class prize.

Spaniels were very good, hardly a bad one among them. Champion Shaun and Harp were the challenge winners. Clumbers showed up well, with old champion Hotpot in the van. Holmes' Hermit was the open dog class winner. The judge says it is evidently difficult to keep the bitch class up to standard in head, muzzle and expression of eyes, and Di Friar is deficient in some of these, but her other good points fully make up for it. The judge adds that one observation seems to be called for, "that the markings appear to have become too dark; in fact, the real old lemon color was hardly to be seen, if at all." Beverley Comet and Beverley Topsey were the challenge field spaniel winners. In open dogs, Bridford Brilliant is described as a grand young dog, and the well-known Bridford Perfection, the winner in bitches, the judge says has extraordinary length, but with nothing of the "weasel" type about her. The cockers do not seem to be up to any great form.

Bull-terriers were represented by most of the well-known winners, Grand Prior and Greenhill Empress looking after the challenge classes. Streatham Monarch II., the open dog winner, is described as a "moderately good all-round customer." Lady Inez, that was thought so much of at one time, has gone off and was beaten by Lowland Kit and Jersey Lady; the latter is described as only needing age to fill out into a good one. These were heavy weights. Sherbourne Queen was the best of the light weights, a "good bodied, thickly set bitch with typical head."

Bedgebury Lion still occupies the pride of place in bulldogs. Guido won in the open dogs, his skull and foreface are said to be grand, but his faults lie in want of more ribs and more spring to stern. Mr. Cyril Jackson bought out a real good puppy in Carthusian Abbess, beating the others well in skull properties, and she has capital wrinkle, and in body is well made; altogether one that is said with luck will do well.

Irish terriers were not up to former years, probably owing to the cropping rule. Champion Brickbat scored again in his class, and Chutney, in fine form, added another two points to his score. The bitch class was a very strong one, E. A. Wiener's Dada Lufra being returned the winner. Dachshunds had some of the cream of the fancy on hand, Pterodactyl being still unapproachable, but Mr. Jones had to give way to others in the open classes, Mr. N. D. Smith's Stickleback being the best dog, and Mr. Taylor's Hypatia the best bitch. Mr. Jones running second in each class with Jump and Snipe. Several well-known names were absent from the list of collies, this being a bad time of year for their coats. The crack Ormonde again romped in a winner in his class. Newmarket Charlie, though well down the list, is well spoken of in *British Fancier*, as they say with age he will be one of the best next season, "beautiful head and very fair ears." The sixty guinea trophy for best collie in the show was an easy win for Ormonde. Messrs. Rae and Parsons took the Collie Derby from the Stretch Kennel with Newmarket Hector.

Fox-terriers were very strong and D'Orsay once more showed his supremacy by defeating Deputy, and later on won the challenge cup. Chattox won in challenge bitches, but she does not improve in head and eyes. There were seventeen open dogs shown and Vice Regal just managed to score first, and *Fanciers' Gazette* says but for his failing in legs and feet he is probably the best dog out. Blackrock Radiance, no matter who is judging, still keeps up her record and won again in bitches. There was no good youngster brought out this time. Wire-hairs were only a moderate group. The other terrier groups were well represented, excepting black and tans, and these were poor, Mr. Lacy's kennel being absent. Pugs were far from a brilliant lot. Mayor of Leeds, champion Stately and Princess Rose were the best, and were placed as named in both challenge classes. There were only three very moderate dogs in the open class and Haughty Madge was an easy winner in the bitch class. Laureate and Queen of the Toys were on hand to keep up the quality of the toy spaniels. The attendance at the show was not at all good, and this may be accounted for by the fact of London having had a surfeit of shows lately.

A California correspondent who has had experience with dogs and snakes tells us: Early in the '50s I often found a snake (a duplicate of the massassauger or prairie rattler, minus the rattle, in color and size) that would flatten its head and throw a secretion which would make a dog very sick if close to it, but the effect would soon pass off.

Mr. Daniel Costello, of San Francisco, Cal., now on his way to England, has been commissioned to purchase an Irish terrier bitch for Mr. Geo. Debenham, a fox-terrier breeder of San Francisco.

A California coorrespondent tells us that Judge McKenna, of the United States Circuit Court, has purchased of J. H. & J. A. Hunter, Sanborn, Ind., an English setter pup by champion Antonio out of Daisy Hunter. As both sire and dam are field trial winners of note, he naturally expects some great work from his purchase. A few more such purchases will bring the Coast field trials into the front rank in the quality of the performances.

We hear in an indirect manner that one of the best Clumber bitches in America, Mr. Mercer's Lady Bromine, is dead. This bitch was imported by Messrs. Bates & Geddes of Ottawa, Canada, in 1890, along with the noted Boss III., and until Lady Snow's importation, had no difficulty in winning all before her with, we believe, one exception, when Boss III. was placed ahead of her through lack of condition. Mr. Mercer has our sympathy, as the loss must be a severe one.

"I have now to inform you of the death of one of the loveliest bitches ever bred, not only in true type of beauty, but in loveliness of disposition." So reads a letter from Mr. Booth, the owner of Lady St. Gothard, the bitch we mentioned recently as having just been imported. She bled to death from an injury in the stomach; the network of it was burst, caused by a strain or kick. Mr. Booth left her at 2 A. M. Wednesday, all well, with the exception of appearing somewhat restless and her stomach a little swollen. At 6:30 A.M. the same morning he found her in a pool of blood and she died shortly after, just before the doctor arrived. The loss of the bitch is quite a severe one, as the day before she died Mr. Booth had refused $450 for her. Owing to the hot weather he had intended sending her back to England again. The Booths of Hull, England, had reared Lady St. Gothard and also her sire St. Gothard III. Mr. Moore's Saffron, a bitch of great quality, was her dam, and also came from the Hull kennel. Lady St. Gothard's fame rests on her being the dam of such noted animals as Kingston Regent, Marquis of Ripon, Lady Gladwyn and Lord Daute; the first three are now in this country. Empress of Contoocook's puppy is doing well, is perfectly marked, a very rich orange color, and promises to be a very good one. Empress was so heavy in whelp that they were led to expect a dozen pups at least, but we trust that this one will make up for the deficiency.

We have had several letters from kennel owners who express themselves as dissatisfied with the action of the Rochester Kennel Club in not showing a more generous spirit in the clash with the Hamilton Club. As a member of the A. K. C., the Rochester Club is of course acting within its rights, as we find that the Hamilton Club, contrary to last year, did not claim dates with the A. K. C. officially this year, and of course the secretary of the A. K. C. had no option in the matter and awarded the dates to Rochester. It would be better if the Canadian clubs would work more in unison with the A. K. C. regarding dates for shows. The Montreal Club has written Mr. Vredenburgh claiming the week after the Toronto show next year and the Hamilton Club writes claiming the dates for the week previous to the Toronto gathering. The secretary has written the Toronto people repeatedly inquiring for their dates, but can get no answer. One of the letters on the Rochester and Hamilton affair says: "Already I have heard expressions of some of the larger exhibitors that they shall not start until Toronto show, whereas the boys counting on a regular circuit would have been only too glad to have had the Rochester show start in a week previous. We should have sent a good entry. And then why couldn't they have waited until the return from Canada and have the first week in October? As it is the sympathy of all is with Hamilton, whose position was or should have been invincible." Although we have not heard anything from the Rochester club, nor have they advanced any reason why they could not alter dates, we understand that the rink will probably be used for campaign purposes and the proprietor would not guarantee the rink for a week to the club after the dates claimed. Another letter from a well-known exhibitor reads: * * * "It certainly is not the way the American club should treat their Canadian friends, we should be more generous and liberal toward them in order to create a stronger tie and a spirit of friendship, which should and must exist if our intentions are that the exhibitors should succeed on either side of the line. The Canadian breeders have patronized our shows in a most liberal manner in the past, and this important factor must not be forgotten, but it is very evident that Rochester has forgotten it." In publishing these extracts we do not in any way wish to prejudice the Rochester club, but rather to show in what light their action is received and keep our readers posted on every phase of the case.

The National Beagle Club is looking around for judges at their trials next fall. Mr. A. C. Krueger will most probably be one of the judges, but whoever they are they will require dogs to go into active training if our experience in 1890 is anything to go by. What's this rumor about the National Beagle Club amalgamating with the New England Field Trial Club? Such a family arrangement should be knocked on the head at once.

Mr. A. W. Smith, of Buffalo, N. Y., has lost his very promising young black and tan terrier bitch Buffalo Luce, by Broomfield Sultan ex Buffalo Lass, from epileptic fits. He writes: "She was the last of the Mohicans, and I am now without a dog for the first time in fifteen years." Mr. Smith intends to try again in time for New York show, and if the black and tans fail, greyhounds will be his next breed. We have already notified Mr. Huntington, who like the zealous secretary he is, likes to gather them all into his fold.

Mr. Eberhart, of pug fame, has recently leased a place just out of Cincinnati and has built new kennels for the pugs. The yard is 50x150ft., on a gentle slope, and with grass, shade and everything to make a dog happy. The main building will accommodate fifty small dogs; there is another building with separate yards for bitches in whelp, and another for those in season. There are now over thirty pugs in the kennels besides some boarders. The whole kennels are surrounded by a 7ft. fence with gates self-closing and locked. Visitors are always welcome, but they must remember that "silk is never sold for the price of calico."

It is always a pleasure to read anything from "Ashmont's" pen, and those who are familiar with his common sense writings will look forward to the publication of his new book, which will be in about two months. While on the subject of kennel writers we are surprised to hear that Mr. W. Tallman has so soon vacated the editorial chair which he has filled so acceptably to his friends, the dogmen.

The friends of Dr. T. G. Sherwood will be pleased to hear that he is convalescent and able to attend to his duties once more, though six weeks in a hospital has pulled him down considerably. If this young "vet." feels inclined to be ill again it would be well on his part to give his friends some inkling of it. In the absence of Dr. Giffen he will have charge of his practice.

Mr. A. J. Gosling has sold the best smooth St. Bernard bitch in England, Lola IV., by champion Watch out of Countess Grafenried, to Mr. J. F. Smith, of Sheffield, England. As her late owner put it in *Stock-Keeper*, "Really good stuff need not always leave the country," and this sale puts a damper on the efforts of some of our American breeders who were anxious to import this bitch.

Spratts Patent (Eng.) have shipped the bull bitch Rosie to Mr. S. K. Austin, Front street, New York city. She was purchased from Mr. G. R. Murrell, Peckham, England.

Mr. Redmond, in selling some of his fox-terriers, offers among several other good ones the well-known bitches Donna Dominie and Dominissa.

The noted English field trial winner, the English setter Fred, has joined the majority.

There seems to be a queer state of affairs in that Pearl of Pekin incident, according to a letter in another column from Mr. Bartels, and any one who can shed further light on the subject should do so at once. The purity of coursing management in this country must be upheld at any cost. In decisions which affect the public, self-interest must be given the go-by.

Last Saturday the Kingston Kennel Club, Kingston, Canada, agreed that the collecting committee endeavor to raise about $400 as a guarantee fund for the carrying on of the proposed dog show in September. If the canvassers are not successful in getting this amount the show will not be held.

There are several new kennel advertisements this week, and among them we notice that the Glenmore Kennels offer broken Irish setters, and puppies by Finglas for sale; Hercules Kennels, several mastiffs; Drake-Sefton Kennels, fine bred pointer pups; J. Hope, rough-coated St. Bernard bitch; Box 75, St. Bernards, bull-terriers and King Charles spaniels; H. V. Jamieson, broken beagle dogs; Stewart, pointer pups; A. P. Hull, Irish setter dog; Geo. Bell, prize-winning spaniels. In the Stud—Irish setters: Champion Beau Brummel. Glenmore Kennels will break a few dogs on prairie chickens.

The well-known bloodhound Cromwell is dead. He was the most wonderfully-headed dog of this breed known to the fancy. At the time of his death he was owned by Mr. Everett Millais, and breeders of the future will thank the latter for the pains he took to secure a *fac-simile* of this dog's wonderful head for them to look upon. The dog was put to a painless death, as he was suffering from incurable internal tumors, and died in ten seconds. Then a contrivance was put on the back of his head to throw the wrinkle, and when *rigor mortis* set in an excellent plaster cast was made, from which a bronze will be cast and be ready for exhibition in October next at the Crystal Palace show. Champion Cromwell was whelped July 30, 1884, and bred by Mr. W. Nash. His sire was Nestor and dam Daisy.

Business.

PHILADELPHIA, Pa., June 27.—One insertion did it. Please take out my advertisement of smooth-coated St. Bernard, as he was sold by telegram by Saturday noon to M. W. Sampson, Pittsburgh, Pa., and kindly insert the following advertisement, etc.—J. HOPE.

The Pacific Coast Field Trials Derby.

The following entries were received too late for last week's issue:

ENGLISH SETTERS.

BART (L. H. Clement), black, white and tan dog (Gladstone II.—Janet), July 25.

COUNTESS NOBLE (H. T. Payne), white and lemon bitch (Stanford—Lilly C.), March 11.

DUKE OF LAUREL (J. Downey Harvey), white and black dog (Luke—Dido), June 28.

IRISH SETTERS.

RUBY M. (H. F. Mann), red bitch (Mike T.—Lady Elcho T.), June 6.

HAMILTON AND ROCHESTER DATES CLASH.

HAMILTON, Canada, June 24.—*Editor Forest and Stream:* Since sending you the Hamilton-Rochester correspondence *re* our September bench show, two more letters have been interchanged between our respective clubs. I now inclose them, and this finishes the matter finally. Yours truly, A. D. STEWART, Hon. Sec'y H. K. C.

ROCHESTER, June 20.—A. D. Stewart, Hon. Sec'y Hamilton K. C. My Dear Sir: Your favor dated June 16 at hand and contents carefully noted. It is a matter of deep regret not only to myself, but to all the members of our club, that the Hamilton club compelled us to take the action we did, but we submitted this case to the A.K.C. and the reply we received left no grounds for arbitration that we could discover. However, to show you that we were working with a spirit of eminent fairness, I was instructed at a meeting held last Saturday (June 18) to communicate with your club inquiring what you would take in the shape of a moneyed consideration to withdraw your claim to the conflicting dates or, if you preferred, what you would give us to withdraw in your favor.

I inclose the letter from the A. K. C. secretary, on which we based our action, as per telegram, and the above seemed to us the only absolutely fair means of settlement. Your letter of course removes this possibility on your part, and we regret that our proposition had not reached you ere your letter was sent. Again assuring you that we heartily deplore the result of this conflict of dates, and hope to be able to make amends for our seeming discourtesy, yours etc., O. STEWART BAMBER, Sec'y R. K. C.

HAMILTON, Can., June 22.—Dr. O. S. Bumber, Rochester Kennel Club, N. Y.: Dear Sir—Your letter of 20th inst. is duly received. It is a most extraordinary communication and I hardly know how to answer it. Your expression of regret (?) that our club should have "compelled" your committee to take the action it did, is decidedly amusing. Allow me to say that our club "compelled" you in no way whatever to do anything. The letter you inclose from Mr. Vredenburgh, secretary of the A. K. C., only confirms us in our statement that your dates were claimed after ours; for his letter shows that your claim was made on March 24, while our official claim with the C. K. C. was made early in February, and publicly, though not officially, last October.

You say that your committee saw no ground for arbitration. All I can say is that I am sorry for it. It would not have hurt your club to have given its show the week preceding ours, as it forms no part of a circuit, whereas ours does. We could not possibly change our dates for the reason already fully and repeatedly given you, whereas your dates could have been changed very easily. You knew that we had the right of priority but you ignored that right; you knew that by adhering to the dates which you chose after ours had been claimed, you would drive us out of the field and break up the Canadian circuit, and yet your club could see no grounds for arbitration. There is no use of prolonging this correspondence between us; it can do no possible good, and had better therefore end at once. As to your request that we should name a sum of money which would compensate us for having to give up our show, I have to say that we are not in want of money from your club, and your offer only adds to the indignity which your committee has already heaped upon us. Your letter ends with the expressed hope that your committee may yet be able to make amends for its seeming (?) discourtesy; to this I can only say that the standard of honor, good fellowship, courtesy and fair play, as adopted by the Rochester Kennel Club, differs very widely from that laid down in Hamilton, and for this I can assure you, my committee is profoundly thankful. I am, dear sir, yours truly, A. D. STEWART, Hon. Sec'y H. K. C.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Frank Forest Kennels. By W. S. Gates, Chagrin Falls, O., for his kennel of beagles.

BRED.

☞ **Prepared Blanks sent free on application.**

Mable E.—Patsy Bolivar. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Mable E. (champion Kash—Lady Thurman) to their Patsy Bolivar (Eberhart's Cashier—Flossy II.), June 19.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Bessie K. C. Klocke's (Pittsburgh, Pa.) dachshund bitch Bessie K. (Feldmann K.—Lina L.), May 29, seven (two dogs), by E. A. Manice's Superlus II. (Superbus—Zitter); one dog since dead.

Lady Dinah. J. C. Mahler's (Pittsburgh, Pa.) bull-terrier bitch Lady Dinah (Rendigo—Flirt II.), May 23, seven bitches, by F. F. Dole's Gully the Great (Gladstone—Florie).

Scio Bell. A. E. Sykes's (Brooklyn, N.Y.) mastiff bitch Scio Bell (Berkshire Caution—Glendoria), June 1, fourteen, by C. Wallack's Merlin (Ilford Caution—Bess); one pup since dead.

Fleet. H. K. Devereux's (Cleveland, O.) pointer bitch Fleet (Dash II.—Spot), June 2, eight (five dogs), by his Tamarack (Tam O'Shanter—Croxteth's Rival Queen).

Marguerite II. J. H. Day's (Red Bank, N. J.) pointer bitch Marguerite II. (Mainspring—Marguerite) June 11, six (three dogs), by Westminster Kennel Club's King of Kent.

Vesta C. Willow Brook Kennels' (Ballston Lake, N. Y.) pointer bitch Vesta C., June 15, nine (six dogs), by Graphic Kennels' Ridgeview Donald.

Bess Graphic. F. C. Rochester's (Logan, O.) pointer bitch Bess Graphic (Graphic—White Rose), June 8, eight (three dogs), by Hempstead Kennels' Robert le Diable.

Su Gladstone. E. Huidekoper's (Meadville, Pa.) English setter bitch Su Gladstone, May 11, ten (six dogs), by Avent & Thayer's Roderigo.

Hera. E. Huidekoper's (Meadville, Pa.) collie bitch Hera, May 14, six (four dogs), by Chestnut Hill Kennels' Christopher.

Blemton Rapture. J. B. Martin's (San Francisco, Cal.) fox-terrier bitch Blemton Rapture (Regent—Rachel), May 11, six (two dogs), by C. D. Bernheimer's Woodale Rustic (Warren Jim—Warren Torment).

SALES.

☞ **Prepared Blanks sent free on application.**

Harry. Silver fawn pug dog, whelped Oct. 1, 1891, by Douglas II. out of Lady Verne, by Eberhart Pug Kennels, Cincinnati, O., to Mr. Magill, Avondale, O.

Clip Graphic. Pointer dog, by champion Bracket out of Sally Brass II., by C. A. Paetzel, Hope, Ind., to John Nelson, Bynum, Ind.

Frank. Liver and white pointer dog, by C. A. Paetzel, Hope, Ind., to J. F. Hazon, Cincinnati, O.

Brant. Liver and white pointer dog, by C. A. Paetzel, Hope, Ind., to F. W. Sparks, St. Louis, Mo.

Queen Phillo. Liver and white pointer bitch, by Bang Beaufort out of Waneta, by C. A. Paetzel, Hope, Ind., to C. W. Bocage, Houma, La.

Nelce V. Liver and white pointer bitch, by Robert Croxteth out of Nelce V. Croxteth, by C. A. Paetzel, Hope, Ind., to H. P. Dortch, Goldsboro, N. C.

Josie M. Liver and white pointer bitch, by C. A. Paetzel, Hope, Ind., to J. P. Hickey, Jr., Galesburg, Ill.

Nicodemus—Nelce V. whelps. Liver and white pointer dogs, whelped Sept. 9, 1890, by C. A. Paetzel, Hope, Ind., one each to W. L. Weaver, Millersburg, Pa.; W. E. Lippencott, Pittsburgh, Pa., and C. E. Taylor, Bath, Me.

Dr. Danford—Fan Bow whelp. Liver and white pointer dog, whelped Oct. 6, 1890, by C. A. Paetzel, Hope, Ind., to W. F. Marks, Hampton, Ia.

Clip Graphic—Huntress whelps. Liver and white pointers, whelped March 7, 1891, by C. A. Paetzel, Hope, Ind., a dog to W. B. Fowler, Earl Park, Ind., and a bitch each to G. T. Kerr, Idianapolis, and D. J. Temple, Sedalia, Mo.

Clip Graphic—Jessie M. whelp. Liver pointer bitch, whelped March 24, 1891, by C. A. Paetzel, Hope, Ind., to D. J. Temple, Sedalia, Mo.

Nellie Graphic. Liver and white pointer bitch, whelped May 13, 1891, by Clip Graphic out of Goldie Croxteth, by C. A. Paetzel, Hope, Ind., to J. E. Smith, Jacksonville, Ill.

Spot Cash. Black, white and tan English setter dog, whelped Jan. 8, 1891, by Vanguard out of Georgia Belle, by Dr. J. N. Maclin, Mason, Tenn., to H. K. Devereux, Cleveland, O.

Edelweiss. White greyhound dog, whelped Sept. 10, 1890, by St. Patrick out of Daisy Dublin, by St. Patrick Greyhound Kennels, Denver, Col., to Chas. Barron, same place.

Handy Andy. Greyhound dog, whelped Sept. 10, 1890, by St. Patrick out of Daisy Dublin, by St. Patrick Greyhound Kennels, Denver, Col., to F. A. Withers, Pueblo, Col.

Blizzard and Martin B. White and brindle and white and red greyhound dogs, whelped Sept. 10, 1890, by St. Patrick out of Daisy Dublin, by St. Patrick Greyhound Kennels, Denver, Col., to C. H. Bryan, Pueblo, Col.

Saint and Sinner. Red and white greyhound pups, whelped April 27, 1891, by imported Brabazoun out of Daisy B, by St. Patrick Greyhound Kennels, Denver, Col., to R. W. Porter, Longmont, Col.

P. D. Q. Red markings greyhound dog, whelped Feb. 8, 1890, by St. Patrick out of Daisy Dublin, by St. Patrick Greyhound Kennels, Denver, Col., to F. A. Withers, Pueblo, Col.

Blemton Shiner—Gyp whelp. White, black and tan fox-terrier dog, whelped April 3, 1892, by J. B. Martin, San Francisco, Cal., to A. Avery, same place.

Blemton Shiner—Sunbeam whelps. Fox-terriers, whelped April 21, 1892, by J. B. Martin, San Francisco, Cal., a tan and white dog to G. T. Allender, Watsonville, Cal., and a white bitch to A. B. Spreckles, San Francisco, Cal.

Mount Zion Baron. St. Bernard dog, whelped Jan. 10, 1891, by Scottish Prince out of Juno, by G. H. Boyd, Cleveland, O., to T. B. Fox, same place.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

L. M., Brooklyn, N. Y.—The symptoms you describe point to strychnine poisoning.

P. H., Philadelphia, Pa.—Please give extended pedigree of Bess, the dam of Duke, A. K. C. S. B. 574. Ans. Bess was from an imported brace and no names are given in the stud book.

M. N., Wickford, R. I.—Give me the names, pedigree and owners of the following registered dogs: Nos. 18,727 and 18,728 A. K. C. S. B. Ans. Without name or breed of dog required we can give you no information. Correspondents are required to send full name and address.

STEWART.—1. Who has the *American Kennel Register* now? I am informed it is no longer used. 2. Can you give pedigree of pointer bitch Jill II., A. K. R. 6,389? Ans. 1. The American Kennel Club, 44 Broadway, New York city. 2. Sire—Planter, by Sensation out of Black Rose. Dam—Nellie, by Sensation out of Lill.

A. C. COLLINS. Hartford, Conn.—What ailed my eight-weeks-old pointer pup? Monday he appeared a little dumpish, but playful. Tuesday quite dumpish, refusing to eat; frequent urinations, quite yellow. Wednesday very restless and weak, refusing to eat; urine and vomit orange-colored. Thursday, 4 A. M., he had a spasm which lasted a few minutes; three hours later another spasm, and died. What treatment should he have had? Ans. Probably some affection of the liver. Small doses of gray powder.

W. N., Philipsburg, Mont.—Give pedigree of lemon and white pointer dog Booth. He took first at Philadelphia, New York and Chicago in 1884, bench shows. Parties that owned him claim that he was bought from the Philadelphia Kennel Club or a Mr. Jordan, of Philadelphia, and owned up to the time of his death by a Mr. Marcus Daley, of Anaconda, Montana. Ans. Booth was shown at Philadelphia, Pa., in 1884, by G. F. Jordan, 612 Sansom street, Philadelphia, Pa., and won third prize. The pedigree given in the catalogue is, sire St. George, dam Dinah.

H. H. J., Wellesley, Mass.—I lost a dog in a rather curious way. The dog was a staghound, in perfect health. He was lying quietly by my side when a strange dog made its appearance, my dog jumped for him, the dog turned and ran, with my hound after him. My dog struck a tree a trifle back of the shoulder which knocked him over on his back. He got up and walked to me, but evidently suffering, and in two minutes was dead. Ans. First, either ruptured a large vessel leading to the heart, or, second, received a severe injury over the region of the heart which caused the heart's action to stop, or, third, the heart may have been diseased and the sudden exertion and excitement caused death.

J. J. C., Boston, Mass.—I have a collie dog eight weeks old troubled with worms; have been giving him castor oil and he has passed worms. Should I give him castor oil, and what is the best worm medicine? He seems to have no appetite and eats fish occasionally. Could you tell me of something that would improve his appetite, and what is the best time and when to feed him, if at any particular time or times? He is not lively and lies down all day as if pining away. Ans. For the worms give him five grains of powdered areca nut with two grains of powdered rhubarb; mix together and give in the morning before feeding. Feed on milk, stale bread, dog biscuits, cooked and raw meat, broth, fish, etc. Something different at each meal. Feed four times a day.

DOLPHIN, Hyattville, Ohio.—A number of our young dogs are afflicted with a dry husky cough, seemingly trying to retch up something from throat or wind pipe. I am positive it is neither cold nor influenza. Please prescribe. Ans. Give each dog (I take it they are setters) an aperient and then the following mixture:

Tr. opii camph	℥iv
Syr. ipecac	
Syr. scillæ	♏ā ℥ii
Ext. bellad. fld	♏i
Syr. tolu	♏i
Aqua ad	℥vi

Give one dessertspoonful three times a day.

Yachting.

FIXTURES.

JULY.

1. Miramichi, Cruise to Nequac.

OCTOBER.

1. Corinthian, Atlantic City.
15. Buffalo, Closing Cruise.

THE absence from the new Lloyd's Yacht Register of the dimensions of the yachts of this year is interesting as showing the present attitude of the designers toward the yachting world, to whom they are so much indebted. There can be no question as to the serious decline of yacht racing of late, or of the effect which this must have on the business of designing and building; but it evidently has not yet occurred to the clever and astute designers of America and Britain that they alone are responsible for much of this lack of interest.

The great majority of modern yachtsmen take a deep interest in all technical matters, of design and construction especially; and a great part of the popularity of racing is due to this interest. As a rule, yachtsmen care comparatively little whether a "creation" of Designer A beats a "production" of Designer B, or *vice versa;* but they want to know what the winning boat is, whether a little wider or narrower, deeper or shoaler, more or less displacement, than her opponent. Yachtsmen are being better educated each year in these technical points, and the demand for information is greater than ever in the past; while at the same time the supply has diminished until it is difficult to learn anything more of a yacht than the name of her designer and the class in which she will race.

There are times when men are interested in the mere competition of two rival designers, as in the case of Minerva and Gossoon, in which the technical points at issue were quite trivial, the sole question being whether Mr. Burgess could finally beat Mr. Fife. Such cases are exceptional, however, and in order to take a keen and vigorous interest in yachting a man must to know in a general way the dimensions and characteristics of the racing boats. The sole interest in the 46ft. class to-day lies in the fact that through the daily papers and yachting journals yachtsmen have learned by degrees the approximate details of Wasp, Gloriana and Harpoon. The abstract question whether Mr. Herreshoff's new boat can defeat his old one would awake little interest in the yachting world.

The present time is fruitful in experiments, the Herreshoff and Fife fin-keels, the Watson centerboard 60-footer, the Herreshoff centerboard Alpha and the rest of the 21ft. class, and the Gardner 25-footers; all embodying more or less important points of design. That yachtsmen know anything at all of these new craft is due very largely to the enterprise of reporters and to the impossibility of maintaining absolute secrecy, rather than to any information furnished by the designers. There is much of a private nature which a designer naturally desires to keep to himself; but at the same time there is a great deal of information which he might freely give out without injuring his own business or the speed of his boats; and with a decided advantage to the general interests of yachting on which his private interests so intimately depend.

THE Western yachtsmen who have lately established what is intended to be a permanent inetrnational trophy for the Great Lakes, might have found a much better model for the deed of conveyance than the new deed of the America's Cup; a document that has been roundly condemned by yachtsmen at large, both American and foreign. The different conditions of previous ownership make the action of the Western yachtsmen less objectionable than that of the New York Y. C., but at the same time many of the objections to the new deed apply to the last document. The legal verbiage of the new deed has been copied *verbatim*, at the expense of sense and brevity. The contest is limited to sloops, and it is no quibble to say that there is not a sloop on the Lakes to-day which is capable of contesting with such yachts as Yama and Zelma, which latter, by a literal construction, are barred from competition.

THE sequel to the Conqueror case, the award of substantial damages to her owner for the expense and trouble he was put to last year, is likely to exert a good influence on the over-zealous officials who so frequently annoy yacht owners in a small way. In most cases yachtsmen submit to such exactions quietly rather than involving themselves in an expensive legal contest; and it is rather unfortunate for the officials that they have at last forced an owner to seek his rights in the courts and so established the rights of other yachtsmen. There is comfort, too, in the thought that both Collector Fassett and Commissioner Bates, who were so active a year since in annoying yachtsmen, are now enjoying the ease and leisure of private life.

Brooklyn Y. C. Annual, June 25.

BENSONHURST—NEW YORK BAY.

THE thirty-fifth regatta of the Brooklyn Y. C. on Saturday promised to be the most successful since the club's reorganization, the arrangements being very complete, and a large fleet entered. Unfortunately, the very fluky weather robbed the race of much of its interest, the conditions varying from a flat calm to a strong breeze. The full times were:

CLASS B, MAINSAIL BOATS, 18 TO 21FT.

	Start.	Finish.	Elapsed.	Corrected.

Mull	12 47 06	4 30 15	3 43 09	Not meas.

Com. Sutton's Mull is probably the winner in Class 3. The regatta committee included Messrs. W. A. Taylor, F. W. Kearny and W. F. Miller.

New Jersey Y. C. Annual, June 20.

HOBOKEN—NEW YORK BAY.

THE 21st annual regatta of the New Jersey Y. C. was by no means the usual success in spite of particularly fine weather, a clear bright day and a rattling S.W. wind. The courses were from off Liberty Island around Buoy 9, 15 miles; and around Buoy 11 and Fort Lafayette. Out of an entry list of 32 yachts, but 7 yachts started, all carrying one reef and the catboats two. The times were:

CLASS B—CABIN SLOOPS AND CUTTERS, 27 TO 35FT.

	Length.	Elapsed.	Corrected.
Lottie, James E Drew	33.06	2 04 07	2 04 07

CLASS G.

Edith, E. T Fisher	15.06	Withdrew.	

The members and guests followed the race on the steamer Neptune. The regatta committee included Messrs. A. J. Prime, Yonkers Cor. Y. C.; Geo. E. Gartland and E. W. Ketcham.

Royal Canadian Y. C. June 18.

TORONTO—LAKE ONTARIO.

THE race of the 30ft. class of the Royal Canadian Y. C. on June 18, was the first of the new Fife 30 footer, Vedette, Messrs. Reed and Gray, the sailing against Erma and the old Fife 5 tonner, Cyprus, the latter over the class but racing in it as she has no competitors in her own class. The course was partly on Toronto Bay, but included the circuit of the Island. The wind was light. The times were:

	Corrected.		Corrected
Vedette	1 54 11	Erma	1 58 15
Cyprus	1 57 55		

Beverly Y. C. Special Regatta.

THE efforts of the Eastern Y. C. to secure the attendance of the New York yachts of 21 to 25ft. in the special regatta of July 28 have been supplemented by the Beverly Y. C., which has arranged a race under the following conditions for the next day, July 29, Friday. The trip around Cape Cod is a long one for such small craft, and takes some time, but the hospitable invitations of the Eastern and Beverly clubs call for some substantial recognition from New York, and we hope that they will be accepted. The Beverly Y. C. race will be open to all yachts not over 30ft. l.w.l. belonging to recognized yacht clubs.

The classes are over 25ft. l.w.l. and not over 30ft. to form first class; over 21ft. and not over 25ft. the second class; over 18ft. and not over 21ft. the third class; 18ft and under the fourth class.

Third class will be divided into sloops and cats, separate prizes being given in each division.

In order to give a race to New York yachts which may be present, a special class is arranged, open to sloops which are either not over 21ft. l.w.l. or not over 25ft. sailing length (Beverly Y. C. rules). This class will start with third class sloops and sail the same course.

In case the Eastern Y. C. race, already advertised for the 28th, is postponed to the 29th, this race will be sailed on Monday, Aug. 1, or in case of necessary postponement on account of the weather it will be sailed Aug. 2.

Entries can be made to W. Lloyd Jeffries, 78 Devonshire street, not later than 3 P. M. July 28, giving name, owner, club, length on waterline, and sailing length as per Beverly Y. C. rule, which is the same as that of the Hull, Larchmont, Seawanhaka-Corinthian, Massachusetts, and other clubs, except as regards spinnakers.

Measurements of other clubs using the same rules will be accepted, but club reserves right to remeasure in case of protest.

One man for every 5ft. waterline and fraction thereof.

The start will be a flying one, yachts crossing the line between mark boat and Marblehead Rock.

At 11:45 white flags with numbers of the courses will be hoisted on the judges' boat.

At 12 M., preparatory whistle; 12:05, whistle for first class; 12:10, whistle for second class; 12:15, whistle for third class sloops and for special class; 12:20, whistle for third class cats; 12:25, whistle for fourth class. Yachts will be timed from the whistles.

In case a sailing vessel is used as judges' boat, guns will be substituted for whistles.

All yachts will be furnished with numbers, which must be attached to the mainsail, above the reef points.

Yachts on their return will pass between the stakeboat and Marblehead Rock.

Yachts are requested to carry their private signals at the peak.

No change of weight of ballast allowed on the day of the race.

Race must be made by one boat, in First and Second Classes respectively, at the rate of 2¾ miles an hour; in Third, Special and Fourth Classes at the rate of 2½ miles an hour.

No restrictions as to sails in First or Second Class. In Third, Fourth and Special Classes, sloops may carry mainsail, forestaysail and jib; catboats, mainsail only. Jibs may be boomed out in Third, Special and Fourth Classes, but must be kept on the stay, or in the usual position, if set flying.

Prizes: First Class, first prize $40, second prize $15. Second Class, first prize $30, second prize $10. Third Class, sloops, first prize $30, second prize $15, third prize $10. Special Class, first prize $50, second prize $15, third prize $10. Third Class, cats, first prize $40, second prize $15. Fourth Class, first prize $20, second prize $10. No second prize will be awarded unless at least four boats start. No third prize unless six boats start.

Courses for First Class: 1. From starting point, leaving E. Y. C. Turning Buoy on starboard, Graves Whistling Buoy on starboard: Pig Rock Buoys, Roaring Bull, Tinker's Island, and Tom Moore's Rock on port, and return, about 24 miles.

2. Reverse of No. 1.

Courses for Second, Third and Special Classes: 3. From starting point, leaving E. Y. C. Turning Buoy on starboard, and return, 16 miles.

4. From starting point, leaving Graves Bell Buoy on starboard, and return, 16 miles; leaving Tom Moore's Rock, Tinker's Island, Roaring Bull, and Pig Rock Buoys on starboard going out, and on port in returning.

5. From starting point, leaving mark (buoy and red flag) anchored two and one-half miles S.E. by S. of Marblehead Rock on starboard, S.E. Pig Breaker Buoy (can) on starboard; Roaring Bull, Tinker's Island, and Tom Moore's Rock on port. Course to be sailed twice round, 15 miles.

6. Reverse of No. 5.

Courses for Fourth Class: 7. Same as No. 5, except course is to be sailed over but once, 7½ miles.

8. Same as No. 6, except course is to be sailed over but once, 7½ miles.

E. Y. C. Turning Buoy is a spar buoy anchored eight miles S.E. by S. of Marblehead Rock.

If no 25-raters over 21ft. w. l. enter, the Special Class will be abandoned and prizes in Third Class increased.

Regatta Committee: W. Lloyd Jeffries, N. H. Emmons, F. Elliott Cabot and John P. Cushing.

An International Trophy on the Lakes.

THE Detroit yacht City of the Straits, having been sold to Mr. William Moran, the association which owned and raced the yacht has made a final disposition of the handsome silver ship won by her, giving it as a perpetual challenge cup under the following conditions:

"This deed of gift, made the 20th day of May, 1892, between the City of the Straits Yacht Racing Association of the City of Detroit, party of the first part, and Bruce Goodfellow, Alex. I. McLeod and Charles D. Joslyn, parties of the second part, witnesseth:

"That the said party of the first part, for and in consideration of the premises and the performance of the conditions hereinafter set forth, has granted, bargained, sold, transferred, and set over, and by these presents does grant, bargain, sell, assign, transfer and set over unto the parties of the second part, their successors and assigns, the silver ship won by the yacht City of the Straits, and now owned by party of the first part.

"To have and to hold the same to the said parties of the second part, their heirs and assigns, in trust, nevertheless, for the following uses and purposes:

"This ship is donated upon the condition that it shall be preserved as a perpetual challenge prize for friendly competition between organized yacht clubs on the chain of lakes. Any organized yacht club on said chain of lakes, either in the United States or Canada, shall always be entitled to the right of sailing a match for this silver ship, with a yacht or vessel propelled by sails only, against any yacht or vessel belonging to or enrolled in the club holding the ship.

"The yachts shall be sloop yachts, and not less than 34ft. nor more than 46ft. in length on the load water line, provided that the trustees shall have power at any time they deem advisable to increase or reduce the limit of length on the load waterline of yachts competent to compete for this silver ship. But in case said trustees shall extend or reduce said limit, they shall give at least six months' notice to all recognized yacht clubs on the chain of lakes of such extension or reduction.

"The challenging club shall give three months' notice in writing, naming the days for the proposed races, but no race shall be sailed on any of the days intervening between Nov. 1 and May 30.

"Accompanying the three months' notice of challenge there must be sent the name of the owner and a certificate of the name, rig and following dimensions of the challenging vessel, viz.: Length on the load waterline, beam at load waterline, extreme beam and draft of water.

"Centerboard or sliding keel vessels shall always be allowed to compete in any race for said ship, and no restriction or limitation whatever shall be placed upon the use of such centerboard or sliding keel, nor shall the centerboard or sliding keel be considered a part of the vessel for any purpose of measurement.

"The club challenging for the silver ship and the club holding the same may, by mutual consent, make any arrangement satisfactory to both as to dates, courses, number of trials, rules and sailing regulations and any and all other conditions of the match, in which case also the three months' notice may be waived.

"In case the parties cannot mutually agree upon the terms of a match, then three races shall be sailed, and the winner of two of such races shall be entitled to the silver ship.

"All such races shall be sailed in the open lake, as follows: The first race, ten nautical miles to windward and return. The second race, an equilateral triangular course of 21 nautical miles, the first side of which shall be a beat to windward. The third race, if necessary, 10 nautical miles to windward and return. And one week day shall intervene between the conclusion of one race and the starting of the next race. These courses shall be practicable in all parts for vessels of 12ft. draft of water, and shall be selected by the club holding the silver ship, and these races shall be sailed subject to the rules and sailing regulations of the New York Yacht Club, so far as the same do not conflict with the provisions of this deed of gift.

"The challenged club shall not be required to name its representative vessel until the time agreed upon for the start, but the vessel, when named, must compete in all the races, and each of such races must be completed within five hours.

"Should the club holding the silver ship be for a cause dissolved, the custody of said ship shall at once revert to the trustees herein named, their successors or assigns.

"It is distinctly understood that said ship is to be the property of the club, subject to the provisions of this deed, and not the property of the owner or owners of the vessel winning the match.

"No vessel which has been defeated in a match for this silver ship can be again selected by any club as its representative until after a contest for it by some other vessel has intervened, or until after the expiration of two years from the time of such defeat. And when a challenge from a club, fulfilling all the conditions required by this instrument, has been received, no other challenge can be considered until the pending event has been decided.

"Any yacht club winning said silver ship, under the terms and conditions herein named, shall be entitled to hold possession of the same until 30 days prior to the date of any race which it may be challenged to sail, when the same shall be delivered to the trustees herein named, their successors or assigns. But prior to the delivery of said prize to any club, the trustees shall require said club to give a good and sufficient bond for the return of said prize when properly demanded by said trustees, and for the safe keeping of the same while in said club's possession.

"The trustees herein named shall have the power to name any club they may deem proper as the first holder and defender of said challenge prize.

"And the said parties of the second part hereby accept said silver ship, subject to the said trust, terms and conditions, and they hereby covenant and agree to and with said party of the first part, that they will faithfully and fully see that the foregoing conditions are fully observed and complied with by any contestants for said ship, and that they will deliver said ship up to any yacht club whose representative yacht shall have won the same, in accordance with the terms and conditions herein named, providing the same winning yacht club shall execute a satisfactory bond as provided in the preceding section."

Conqueror vs. Collector.

THE very brief term of office of Mr. J. Sloat Fassett as Collector of the Port of New York was marked by one particularly brilliant achievement—the seizure of Mr. F. W. Vanderbilt's large steam yacht Conqueror as having been smuggled, and the attempt to collect heavy duties on her under the clauses of the McKinley bill. The decision of the courts, which we published on Feb. 4, was in Mr. Vanderbilt's favor, and Samuel H. Lyman, United States Commissioner, was appointed to assess the damages to which Mr. Vanderbilt was entitled. His report, filed last week, includes the following items:

Loss of use of boat while detained by Fassett from Aug. 27, 1891, to Feb. 3, 1892, at $100 a day	$15,000 00
Interest on above from Feb. 3	337 50
Expenses during detention. Paid crew as follows:	
From Aug. 27 to Aug. 31	175 08
For month of September	1,101 17
For month of October	305 00
For month of November	210 00
For month of December	210 00
For month of January	210 00
From Feb. 1 to 3	21 72
Pay of master of vessel from Aug. 27, 1891, to Feb. 3, 1893, at $2,500 per annum	1,102 74
Total paid to men	$3,336 61
Interest on above from Feb. 3	75 07
Paid for provisions for crew as follows:	
Aug. 27 to Aug. 31, 1891	69 00
For month of September	425 00
For month of October	208 00
For month of November	175 00
For month of December	178 60
For month of January	178 00
From Feb. 1 to Feb. 3	18 19
Total	$1,251 19
Interest from Feb. 3	23 15
Medical attendance and medicine for men	30 10
For washing for men	26 86
Interest on above from Feb. 3	1 28
For wharfage	260 00
Interest on above	5 85
For towing Conqueror from Stapleton to Erie Basin	25 00
Interest on above from Jan. 3	56
For extra expense in boarding vessel	68 40
Interest on above from April 3	1 54
For shifting coal and additional expense in making subsequent repairs caused by detention of the vessel by the respondent	146 50
Interest on above from April 6, 1892	2 19
Paid night watchman Oct. 1, 1891, to Feb. 3, 1892	252 00
Interest	5 67
Total damages	$20,854 47

Though the decision is nominally against the ex-Collector, he will not have to pay the damages, as the Government assumes the responsibility for such blunders on the part of its agents.

Corinthian Y. C. Annual, May 30.

TIBURON—SAN FRANCISCO BAY.

THE first regatta sailed on the Pacific coast under the Seawanhaka rule was that of the Corinthian Y. C. of San Francisco, on May 30, the starters being as follows:

	L.W.L. Ft. In.	Seawanhaka sailing length. Ft.
Sloop Elia	33 11	40.2
Schooner Petrel	37 11	30.8
Sloop-keel Linda	37 04	36 8
Sloop Thetis	34 04	33.6
Sloop Freda	28 08	31.4
Cat Truant	25 00	24.8
Sloop Lapwing	21 06½	24.5
Sloop May	22 00	23 8
Sloop Norma	24 06	24.3
Sloop Fawn	24 10½	24.4
Sloop Ceres	19 02	21.5

Schooners are measured at 85 per cent. and yawls at 93 per cent. of sailing length.

The wind was W. by N., moderate, and the courses were from off Meigs's Wharf, past Presidio Shoal Buoy, past Blossom Rock Buoy, around a markboat 2⅜ miles distant, and then home by Presidio Shoal Buoy for the larger yachts, 12 miles, and directly home for the smaller, 9 miles. The times were:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS.				
Elia	12 45 42	3 40 35	2 54 54	3 54 54
Petrel	12 55 00	Withdrew.		
Linda	12 49 15	Withdrew.		
SECOND CLASS.				
Thetis	12 33 45	3 47 03	3 13 18	3 13 18
Freda	12 35 44	Withdrew.		
Truant	12 32 00	3 46 55	3 14 45	3 08 55
THIRD CLASS.				
Lapwing	12 18 00	3 27 19	3 09 19	3 09 19
May	12 25 00	3 26 07	3 01 07	3 00 18
Norma	12 18 19	3 36 37	3 18 18	3 18 04
Fawn	12 21 22	3 11 12	2 49 50	2 49 43
FOURTH CLASS.				
Ceres	12 05 26	3 34 25	3 29 56	3 29 59

Elia was disqualified, being sailed by a professional.

The judges were C. H. Crocker, H. J. Kelly and A. D. Cross.

Truant was built here from a design furnished by the Cape Cod Yacht Agency. The fleet has grown to 23 craft. Mr. H. H. Gorter, the obliging measurer of the club, has been putting in his spare time building a cutter after his own design. He hopes to have her in the water this autumn. She is 29ft. over all, 21.8ft. l.w.l., 8ft. beam, 5ft. draft. The lead keel of 30 1 10 tons forms 60 per cent. of the displacement. She will have about 700 sq. ft. of sail. The midship section is of the popular S-form, and with a pronounced clipper bow and a handsome overhang aft she is a shapely craft.

The damage to the Watson 40-rater Varuna proves to be less serious than the cabled reports stated; her mast went over the side in a bad sea about 15 miles from Dover and 3 miles from Cape Grisnez. She was taken in tow by the channel steamer Calais-Douvres, which was out as the club steamer, and towed into Dover. The mast and gear were parbuckled alongside, punishing the yacht somewhat in the long rough passage, while the jib flew loose from the bowsprit, but the hull comes out from all accounts with but little injury.

Ovicet is the name of a yacht lately launched at Cleveland, designed by Ethan Allen and owned by him and George Campbell. She is 58ft. over all, 16ft. beam, and 8ft. 6in. draft.

Corinthian Y. C. Annual, June 25.

STATEN ISLAND—NEW YORK BAY.

THE light wind of Saturday was especially unfortunate for the Corinthian Y. C. of New York, as its list of entries for the annual regatta included two of the largest yachts, the schooners Yampa and Alert. But few of the entries were present and a very small fleet started as follows:

First class, schooners, cruising trim: Yampa, Chester W. Chapin; Alert, J. N. Luning.

Sloops and cutters from 30 to 40ft.: Petrel, Wm. C. Hall; Delvyn, M. Roosevelt Schuyler.

Cabin cats: Superior, Stephen H. Brown; Dawn, C. F. Hicks; Nadine, Edwin Felt.

Open cats: Doctor.

The start and finish was off Buoy 11, the schooners sailing past S. W. Spit and around Sandy Hook Lightship, 33 miles, the cutters and cabin cats sailing the Point Comfort course, 19 miles, and the open cat around Buoy 12 on S. W. Spit, 11 miles.

There was the lightest S.W. breeze at the start at noon, the yachts barely drifting down to the Spit, where they were timed:

Alert	1 55 40	Dawn	2 18 00
Yampa	2 05 10	Delvyn	2 33 00
Doctor	2 05 10	Petrel	2 35 00
Superior	2 16 10	Nadine	Not timed.

The small fellows finally caught a breeze and a race began for Point Comfort Buoy, while later Yampa and Alert had a bit more wind, reaching the Lightship at 4:45:10 and 4:46:10 respectively. The fleet came home against a moderate N.W. wind, the times being:

	Start.	Finish.	Elapsed.
SCHOONERS.			
Yampa	12 05 00	7 06 10	7 01 10
Alert	12 05 00	7 16 27	7 11 27
CUTTERS.			
Delvyn	12 10 00	5 26 40	5 16 40
Petrel	12 10 00	5 34 19	5 24 19
CABIN CATS.			
Superior	12 10 00	5 20 00	5 10 00
Nadine	12 10 00	5 32 22	5 22 22
Dawn	12 10 00	5 21 02	5 11 02
OPEN CATS.			
Doctor	12 10 00	4 40 50	4 30 50

The corrected times were not calculated, as they would not change the results. The prizes were the usual pewter mugs given by the club to all amateurs in the winning yachts. The regatta committee included Messrs. C. S. Davidson, E. B. Clarke and G. C. Hall.

Indian Harbor Y. C. Sweepstakes, June 25.

GREENWICH, CONN.—LONG ISLAND SOUND.

THE Indian Harbor Y. C. celebrated the opening of its house at Finch's Island, Greenwich, Conn., on Saturday, by a special sweepstake race which brought together most of the crack catboats and jib and mainsail craft of the Sound. Sirene was not present, her new rig not being finished in time. The summary of the race was as follows: Course, from imaginary line from black buoy off eastern end Little Captain's Island and flagship Nirvana, 5 nautical miles to windward and return. Wind S.E. light, freshened after windward mark was turned. Stakeboat was about 1 mile E. of Center Island Buoy, distance 5 miles. Wind S.E. light at start, afterward fresh. Tide, ebb.

	Length.	Elapsed.	Corrected.
OPEN SLOOPS.			
Commodore, Francis Burrit	27.00	2 16 41	2 16 41
Tattler, E. B. Hart, Jr.	24.83	2 18 16	2 15 45
OPEN CATBOATS OVER 20FT.			
Pauline B. C. S. Raymond	22.53	2 40 13	2 34 50
Torment, W. M. Haughtwout	20.08	2 50 02	2 40 51
OPEN CATBOATS, 20FT. AND UNDER.			
Phyllis, W. J. & F. B. Jones	19.92	2 39 03	2 29 32
Ges So, F. Ellsworth	18.25	2 44 56	2 32 32
CABIN CATBOATS OVER 25FT.			
Nellie, M. F. Plant	26.65	2 51 38	2 51 16
Oconee, C. T. Pierce	26.30	2 50 49	2 50 03
Myrtle, Ayres & Sanger		2 47 33	
CABIN CATBOATS, 25FT. AND UNDER.			
Mischief, Clayton Rockhill		3 27 20	
Lestris, S. Williams		3 41 20	

Tattler wins cup for best corrected time; Phyllis wins cup for best corrected time of catboats. Regatta committee, F. S. Doremus, chairman; E. D. Cowman, D. M. Winne. The club has just elected 26 new members.

South Boston Y. C., June 25.

CITY POINT—BOSTON HARBOR.

The first championship race of the South Boston Y. C. was sailed on Saturday in cloudy weather, with a heavy shower which killed the wind. The times were:

	Elapsed.	Corrected.
FIRST CLASS.		
Quissett, William K. Taylor	2 29 36	2 01 13
Climax, M. F. Kelley	2 30 3s	2 02 44
Violet, H. McKee	2 34 50	2 12 56
SECOND CLASS.		
Good Luck, John B. Farrell	2 35 55	2 03 26
Arvilla, John Bligh	2 40 13	2 16 06
Julia, W. H. McLeod	3 48 03	2 15 52
Wapiti, J. Bertram	3 05 30	2 34 54
THIRD CLASS.		
Trifle, J. Cushing	2 59 02	2 30 34

The winners were: Quisset, Good Luck and Trifle. Two more races will be sailed to complete the series. The prizes in each class will be a spirit compass and set of colors.

The regatta committee included M. F. Kiley, H. W. Cherrington, John F. Berrigan, C. M. Dolbeare, William Allerton, N. B. Stone and J. B. McDonough.

The judges were: Hubert Pope, Thomas Christian, C. McKenna and George Crawford.

Rhode Island Y. C., June 22.

PROVIDENCE, R. I.—NARRAGANSETT.

THE ladies' day and regatta of the Rhode Island Y. C. took place on June 22, the races resulting as follows:

	Start.	Finish.	Elapsed.	Corrected
CLASS 1—SLOOPS.				
Mignon	1 43 43	4 00 51	2 17 08	2 17 08
Tomboy	1 44 31	4 25 38	2 41 17	2 35 13
CLASS 2—SLOOPS.				
Bertha May	1 38 06	4 29 25	2 51 19	. . ..
Mascot	1 48 58	Tore jib, withdrew.		
Diamond	1 47 19	5 01 33	3 14 19	. . ..
Regina	1 51 04	Withdrew.		
CLASS 3—CATS				
Curlew	1 51 47	3 14 06	1 22 19	1 21 37
Victor	1 52 30	3 20 37	1 28 07	1 27 10
Cocheco	1 52 59	Withdrew.		
Khedive	1 53 14	3 16 46	1 23 32	1 23 12
Edna	1 53 32	3 25 43	1 31 11	1 29 44
CLASS 4—CATS				
Rarus	1 57 06	3 40 07	1 43 01	1 43 01
Vera	1 57 40	3 53 04	1 55 24	1 54 38

Mignon sailed the wrong course and was disqualified. There was a concert at the club house in the afternoon and again in the evening, a display of fireworks, a reception to the captains on board the flagship Verena, and a dinner at Com. Austin's house. The regatta committee included Messrs. G. F. Brownell, E. E. Hubbard, A. D. Leete, A. B. Slater, Jr., C. E. Smith. Measurers—R. Stillwell, A. M. Black. Committee of Arrangements—Com. A. E. Austin, A. D. Rose, E. Howard Wright.

Eastern Y. C. Regatta.

WE are unable to give more than a brief summary this week of the Eastern Y. C. regatta of June 27 as follows:

	Length.	Elapsed.	Corrected.
FIRST CLASS—SCHOONERS.			
Marguerite, R. S. Palmer	83.75	4 34 47	4 27 54
Mayflower, W. A. Gardner	89.06	4 37 58	4 35 12
Merlin, W. H. Forbes	93.45	4 38 42	4 38 42
SECOND CLASS—SLOOPS.			
Wayward, D. Sears	65.77	4 58 37	4 57 30
Thetis, C. S. Dennison	66.95	5 01 24	5 01 21
FIFTH CLASS—SLOOPS.			
Wasp, A. Rogers	55.27	4 40 11	4 40 11
Barbara, C. H. W. Foster	52.86	4 52 12	4 57 05
SEVENTH CLASS—SLOOPS.			
Handsel, J. R. Hooper	32.22	3 28 15	3 19 30
Fancy, C. F. Lyman	36.67	3 38 45	3 38 45
Hawk, G. Dexter	36.85	Disabled.	

Yonkers Cor. Y. C. Annual, June 25.

YONKERS—HUDSON RIVER.

THE fourth annual regatta of the Yonkers Corinthian Y. C. was sailed on Saturday in a light breeze; the courses being from off the club house around a stakeboat off Tarrytown for the larger yachts and a stakeboat off Hastings for the cats. The elapsed times were:

SCHOONER CLASS.

	Elapsed.
Edith, G. W. Poucher	7 33 08

SLOOPS 30FT. AND OVER.

H. W. Beecher, J. S. Warren	5 47 52

SLOOPS UNDER 30FT.

Bertha, A. L. Skinner	6 46 47

CLASS E—CABIN CATS.

Ella F., John Dickson et al	6 18 56

CLASS F—OPEN CATS.

Edna, Robert Kellock	Not given

CLASS G—OPEN CATS.

Dolphin, C. M. Brooks	4 51 52½

The judges were George E. Gartland, Robert T. Dennis and Thomas McDonnell.

Winthrop Y. C.

The race of the Winthrop Y. C. for classes 3 and 4, sailed on June 25, was not started until 7.45 P. M. The times were:

THIRD CLASS.

Elapsed.		Elapsed.
Harriet, L. T. Harrington, 0 55 30	Fancy, S. L. Cade	1 05 10
Perdita, Milton & Cnoever 0 56 10	Margie, H. P. Otis	Disabled.
Marion, A. W. Chesterton, 0 56 55	Eclipse, Wm. Myrick,	Disqualified.
Mattie G., W. A. Garratt, 1 04 50		

FOURTH CLASS.

Scud, L. S. Meston	30 25	Magpie, H. G. Otis Withdrew
Modoc, H. M. Belcher	28 48	Fancy, Geo. L. Cade Withdrew

Eclipse was disqualified for not going the course. The judges were Messrs. E. A. Cook and W. A. Bakeman.

Hull Y. C. Open Sweepstakes, June 25.

HULL—BOSTON HARBOR.

THE Hull Y. C. sailed an open sweepstakes race for 21-footers on Saturday, b t in a rather light breeze from S.W. The course was a triangle, two rounds, from club float past Pig Rock Beacon and buoy off Bumpkin Island, 7 miles in all; the first leg to windward. The times were:

	Length.	Elapsed.	Corrected.
Alpha, Dunne, Brown & Hunt	23.10	1 31 45	1 08 23
Catspaw, W. O. Gay	26.07	1 32 18	1 11 01
Vanessa, A. Bigelow, Jr	24.03	1 34 39	1 11 36
R. D., James McIntyre	25.04	1 41 25	1 19 14

The judges were Messrs. J. R. Chadwick, E. C. North, Franklin Adams, John Stetson and J. J. Souther.

Alpha wins first prize, $25; Catspaw second, $15, and Vanessa third, $10.

Crank Navigators.

THE little boat Montana lies at the packet company's warehouse in charge of its owner and commander, Capt. R. C. Hite, of Bozeman, Mont. Capt. Hite started from Bozeman Sept. 16, 1890, bound for the mouth of the Mississippi River. Bozeman is 400 miles above the head of navigation of the Missouri River. Between Bozeman and Fort Benton, the head of steamboat navigation, there are three falls. The Montana had to be taken around these falls on trucks—a tedious and expensive operation.

The Montana was a steamboat when the start was made, but in going over the unnavigable part of the river it became necessary to take off the machinery in order to lighten the craft so it could get over the rapids. It is now propelled by oars.

Capt. Hite spent the winter of 1890-91 at Williston, S. D., and last winter at St. Joseph. He expects to complete his trip by the time next winter begins. The Montana is 23ft. long, 5ft. wide, and 30in. deep in the center, and 36in. at the stern and bow. It is built of mountain fir, and is conveniently arranged with a sleeping apartment, oil cooking stoves and provisions in lockers.

Capt. Hite is making the trip for pleasure. He is 67 years of age, and was formerly an alderman in Bozeman. When he completes his voyage he will have traveled in his little boat more than 4,000 miles.—*Kansas City Star.*

FRESNO, June 7.—Miss Lilian Smith is building a small boat of tule reeds, in which she will embark in the San Joaquin next Saturday, and go by water to San Francisco. She is 18 years old. The boat is modeled after the ark in which Moses floated on the River Nile. In length it is 6ft. and in width 3. It is only large enough to carry her and a supply of provisions for the journey. She will take her rifle along and shoot birds on the way.

The San Joaquin River is deep at present, and the voyage will be accompanied with danger from sunken snags and bars. Miss Smith expects to make the journey to San Francisco in five days. She will use an umbrella for a sail when the wind is favorable, and when there is no wind she will use a paddle.—*San Francisco Chronicle.*

Abona.

THIS handsome steam yacht, whose sail and interior plans appeared in the FOREST AND STREAM of March 3 of this year, was recently completed. The following account is from the *Field*: "The new steam yacht Abona, of 104 tons yacht measurement, was tried on the Clyde, on Saturday, June 4. She has been built for Mr. Thomas Sheldon, from designs by Mr. A. H. Brown, by Messrs Loonitz and Co., Renfrew. She has the highest class in Lloyd's both for hull and machinery. The mean speed was 10¼ knots in most unfavorable weather. Remarkably roomy and well-arranged accommodation characterizes the Abona. The saloon is fitted in dull polished oak, with silk tapestry panels, and the owner's cabin, which extends right across the vessel, has white enameled walls, with polished American walnut fittings and handsome silk hangings. Abaft the machinery space the cabins are most roomy and comfortable, and are fitted in a similar manner to the owner's berth. On deck the Abona has a large and commodious deckhouse of polished teak, with promenade above surrounded by teak rail with brass stanchions. The bridge is fitted with steering wheel, glazed chart table, telegraph, &c. The engines, which are compound surface condensing, have cylinders 13in. and 24in. diameter by 18in. stroke, with balanced cranks, and, during a trial of four hours continuous steaming, averaged 180 revolutions without vibration, indicating over 200 horse power. Besides the bridge gear there is screw steering gear aft, and the yacht has steam windlass and all the most modern improvements."

Lloyd's Yacht Register.

THE volume of Lloyd's Yacht Register for 1892, just received, is uniform with that of last year, but somewhat larger, the total number of yachts listed being 6,466 as compared with 6,179 last year. The rules for building accompany the Register in a separate volume, the large book containing an alphabetical list of all yachts measured by the society's rule, another list of American yachts not measured by the rule, a list of clubs with their flags, a list of racing flags, list of signal letters, list of yachts arranged according to tonnage, list of builders and designers and yachts built by them, and an alphabetical list of yacht owners. The information given is most complete and the Register is indispensable to yachtsmen, a fact appreciated in this country as well as abroad. We note, however, one important omission, for which the compilers of the book are not responsible, the fault evidently lying with the designers and builders. The dimensions of all the new yachts are very carefully omitted, the waterline length being given in some cases, but neither beam nor depth. These dimensions have appeared in previous years and there is no good reason why they should not be given now.

YACHT NEWS NOTES.

The special sailing regatta of the American Y. C. will be held off Milton Point on Wednesday, July 6, open to yachts of the New York, Larchmont, Eastern, Seawanhaka Corinthian, Atlantic, New York Corinthian, Oyster Bay Corinthian, New Haven, New Rochelle, Riverside, Indian Harbor, Corinthian of Marblehead, Mass., and New Bedford yacht clubs. Judges' steamer Daizell will leave club house 10:30 A. M., and carry a limited number of members. Tickets (at $1 each) can be had upon application to Mr. George W. Hall, No. 115 Broadway, Mr. W. S. Alley, No. 70 Broadway, or at the club house on the morning of the race. Arrangements will be made to provide refreshments on board the steamer. Trains leave Grand Central Depot for Harrison's Station at 9:04 A. M., where conveyances will be provided to convey members and their guests to the club house. The regatta committee includes Messrs. George W. Hall, Ezra S. Connor, W. S. Alley, J. H. Wainwright, Stephen Roach.

Last week was marked by three serious capsizes of shoal centerboard craft in the ordinary summer squall, involving the death of one person and the narrow escape of a number of others. On June 23 a thunder storm swept over the Lower Bay and Sandy Hook, the wind blowing very heavily for a time. On the Shrewsbury River, near Red Bank, Thomas Davis was out in a catboat, in company with his wife and child, Mr. and Mrs. T. Corlies, Mr. and Mrs. T. Smack and the child of the latter couple. The boat capsized when the squall struck her, throwing all hands into the water. Mr. Smack reached for his child as it was thrown from the boat. All clung to the bottom of the boat until help arrived in rowboats, when they were taken ashore safely. A very similar mishap occurred about the same time to the cabin sloop James Carroll of Keyport, N. J., owned by T. L. Seabrooke and having on board besides him, A. Morris of the same place, and Mrs. Bella Holmes and Miss Ellen Rue of Hightstown, N. J. The party had sailed from Red Bank to Staten Island and were returning when the squall struck them off Elm Tree Beacon, South Beach. The women were in the cabin, out of the rain, when the squall overturned the boat. She floated for a time, the two men rescuing the women from the cabin and helping them on to the bottom of the boat. They were exposed to the storm for some time, being taken off by a rowboat just before the boat sank. Mrs Holmes, an elderly lady, was injured internally by being thrown against the boat, and died on the following day at South Beach. At the same time, and near the Carroll, the sand schooner Alex. Frazer was capsized, her crew saving themselves in the yawlboat.

Com. Colt, Larchmont Y. C., has appointed Mr. Randolph Harry as fleet captain for the season of 1892. The annual cruise of the club will begin on July 9, the rendezvous being at Larchmont Harbor on July 8. The annual regatta will be sailed on Monday next, starting at 11:30 and open to yachts of the New York, Eastern, Seawanhaka Corinthian, Atlantic, New York Corinthian, American, New Haven, New Rochelle, Corinthian of Marblehead, Hull, New Bedford, Douglaston, Indian Harbor and Riverside yacht clubs. The classes and prizes will be as usual, but the regatta will be sailed under a handicap, to be announced on the morning of the race. A special prize will be given for cutters and sloops of 50 to 60ft. sailing length under the regular club allowance. The steamer Albertina has been chartered for the use of the members of the club and their guests and will leave the foot of East Thirty-first street, New York, at 8 A. M., sharp, and the club house at 10:15 A. M. Each member is entitled, upon application, to a ticket admitting himself and ladies to the Albertina. Extra tickets, admitting a gentleman and ladies, can be obtained upon application at the club house at the price of $2 each. No tickets will be sold for the judges' steamer. Train leaves Grand Central Depot at 9:03 A. M. Messrs. John F. Lovejoy, Otto Sarony and Clarence L. Burger constitute the regatta committee.

The twenty-second annual regatta of the Seawanhaka Corinthian Y. C. will be sailed over the new club course off Oyster Bay on July 2, starting at 11 A. M.; open to yachts of the Atlantic, Beverly, Corinthian of Marblehead, Corinthian of New York, Eastern, Knickerbocker, Larchmont, Massachusetts, Marine and Field, New Haven, New York yacht clubs, and Royal Nova Scotia Yacht Squadron. Will leave foot Twenty-sixth street, East River, on Saturday, July 2, at 8 o'clock A. M. promptly; returning steamer will stop at the same places. Members may obtain their tickets from the stewart at the club house at Oyster Bay, or at the office of the treasurer, Mr. W. C. Hubbard, Cotton Exchange Building. Each member will be entitled to one member's ticket—which cannot be transferred—and three lady's tickets. A limited number of extra tickets, admitting either ladies or gentlemen, can be obtained by members or by owners of yachts entered for the race, at $2 each. The regatta committee includes Messrs. Walter C. Kerr, chairman, 17 Cortlandt street; R. C. Townsend, secretary, 345 Broadway; R. W. Gibson, William A. Haines, Walter C. Tuckerman.

We had occasion to comment last year on a decision of the New Haven Y. C. in regard to the right of a yacht going up temporarily into a class to take a special challenge cup offered for yachts in the larger class only. Our remarks at the time met with disapproval from some members of the club; but at a special meeting of the New Haven Y. C., on June 15, the following resolutions were adopted: "*Resolved*, That division C of the regatta and sailing regulations be amended to read: Cabin sloops, cutters and yawls. *Resolved*, That the following be added to the rules and regulations governing challenge cups: In case of a yacht of a smaller class entering in a race in a larger class, she can in no wise compete for any challenge cup given to the larger class. *Resolved*, That division C of the regatta and sailing regulations be amended as follows: Class 2, open sloops measuring 24ft. and less than 31; class 3, open sloops measuring 15ft. and less than 24. *Resolved*, That division E be amended as follows: Class 1, catboats measuring 24ft. and over; class 2, catboats measuring 15ft. and less than 24." The second amendment above is directly contrary to the decision which we questioned last year; and is a fair and reasonable regulation.

The seventh annual regatta of the New Rochelle Y. C. will be sailed on July 2, starting at 11 A. M., and will be open to yachts of the following clubs: American, Atlantic, Coriathian of Marblehead, Cherry Diamond, Douglaston, Eastern, Marine and Field, Jersey City, Knickerbocker, Larchmont, Massachusetts, New Jersey, New York, New York Athletic Club, New York Corinthian, Oyster Bay, Pavonia, Riverside, Seawanhaka Corinthian. The iron steamboat Cephens has been chartered by the club for the use of club members and their friends, and will leave foot of West Twenty-third street, New York, at 7:30 A. M. sharp; Pier 1 at 8 A. M., and Hudson Park dock, New Rochelle, at 10:30 A. M.; returning to New York after the race. Trains leave Grand Central Station for New Rochelle at 7:01, 8, 9:04 A. M. The regatta committee includes Messrs. Philip J. Krackel, F. W. Schoonmaker and Edward H. Sturges.

Thetis, steam yacht, built by Murray Bros., Dumbarton, Scotland, in 1887, has been chartered by Ogden Goelet, owner of the schooner Norseman, and was recently at Cowes, Isle of Wight, in charge of Capt. Curry. She is a steel vessel, of 511 tons, 177ft. 0in. length, 25ft. 1in. beam and 14ft. 5in. depth. Her engines are 14, 23 and 36x27in. She was designed by her original owner, John Donaldson, of London.

The spring work at Bristol is about finished, only the large steel steam yacht remaining. Last week the half rater Wee Win was sent to New York for shipment to England, a 17ft. fin-keel was sent to Auburn, N. Y., a 16ft. cat-yawl to Lake Minnetonka, Minn., and a 23ft. cat-yawl to Conanicut Park; while the 30ft. centerboard Edith M. was launched.

The Hull Corinthian Y. C. sailed its first championship race on June 25 under very unfavorable conditions, a light air followed by a heavy squall. In class 2 Caprice was first and Nina second; in class 3 Marjorie won; in class 4 Mab was first and Don second; in class 5 Victor was first and Phyllis second. The judges were H. Ware Lincoln, N. S. Kelly and Winthrop Nevins.

The racing of small raters is under full swing on the Clyde, to the neglect of the larger yachts, and the Herreshoffs seem likely to come in for a large share of the honors, as the 21½-rater fin-keel Wenonah has thus far won two firsts and one second for three starts out of a large fleet.

The sweepstakes race of the Chelsea, Mass., Y. C. on June 25 resulted as follows:

	Elapsed.		Elapsed.
Holy Smoke, Geo. Barrie	1 00 00	Ann R., M. Ryan	Withdrew
Tot, Al Barrie	1 11 00		

The usual Boston City regatta will be sailed on July 4 on Boston Harbor. All entries are free, and may be made at the office of the clerk of committees, City Hall, where numbers can be obtained until 12 o'clock Friday, July 1. Entries for the Whitehall class must be made to Mr. Joseph O'Hare, at Atlantic Y. C., end of Commercial Wharf.

The keel catboat Marguerite, a new boat, lost her mast on June 22, on her way through the Sound to Greenport, and was beached at Riverside, Conn. The mast in breaking set her leaking, and she was towed back to Bay Ridge for repairs.

Rebecca, schr., Mr. E. Dudley, was in collision with the working schooner Hester, of Port Jefferson, off Oldfield Point on June 21. The yacht lost her bowsprit and sustained other damage, putting into Port Jefferson for repairs.

Trinket is the name of the Waterhouse 21-footer for Mr. Young of the Seawanhaka C. Y. C.; and Typhoon is the name of the Stewart & Binney cat for John H. Taylor, both of which were launched at Lawley's last week.

Gleam, slp., built for N. D. Lawton in 1883, and illustrated in the FOREST AND STREAM and "Small Yachts," is now in Lake Champlain, having been recently purchased by W. B. Foore, Jr., of Port Henry, N. Y.

The annual regatta of the Sing Sing Y. C. was sailed on June 20 in strong N.W. wind over a 10-mile triangle on the Hudson River. Pauline B. won, with Madge second, Irex springing her mast.

THE winner in the seventh class of the Marine and Field Club regatta of June 11, proves to be Oconee and not Truant, measurement giving her the race by 1m. 15s.

Since her recent trials about the Bay, the rebuilt schooner Comet has been hauled out and eight tons of lead have been placed on her keel in addition to that already there.

The first regatta of the Keuka Y. C., of Penn Yan, was sailed on June 16, the winner being Wanita, A. H. Wagener, with Juno, W. H. Whitfield, second.

Chispa, cutter, has been sold by N. D. Lawton to F. L. St. John, former owner of Marjorie.

The sloop yacht Bermuda, Mr. Wm. Myer, of Bermuda, announced as sailing from St. George for New York, arrived on June 28, and proceeded up the Hudson, bound for Buffalo. She is 46ft. long.

On June 20 the small schooner Caprice, of Detroit, Mich., capsized in Lake St. Clair and drowned three persons out of a party of 23 who were returning from a picnic.

The Greenville (N. J.) Y. C. sailed a sweepstakes race on June 20 on Newark Bay, the winner being Anita, W. P. Vreeland, with First Attempt, H. Queen, second.

The Lake Champlain Y. C. has opened its house for the season, the first reception being on June 24. A ladies' reception will be held on June 29.

Alcae, schr., has been at Tebo's since her arrival from Boston, where her masts have been taken out and shortened and her rig reduced.

A new yacht, the Hattie, built for Thomas Bradwell, of Chicago, was launched on June 18. She is 55ft. over all, 14ft. beam, and 7ft. draft.

White Cap, yawl, has been sold by E. A. Rothrock, of Philadelphia, to Winthrop Thayer, of the Hull Y. C., and will once more hail from Boston.

The annual regatta of the Portland Y. C. on June 16 was not held, owing to a lack of entries.

The A. C. A. Meet.

ON June 25-26 Com. Winne and a party of canoeists visited Willsborough Point to re locate the camp and make the final arrangements for the coming A. C. A. meet from Aug 4 to 23. On Saturday morning Com. Winne left Albany with Messrs. Huntington and Christie, of the Camp Site Committee, G. P. Douglas and W. P. Stephens. A stop was made at Saratoga for a drive out to the lake and through the city, meeting the afternoon train north, on which were Sec'y-Treas. Wackerhagen and Mr. W. Howard Brown, of the Camp Site Committee. At Willsborough Station a team was in waiting, carrying the party to the Willsborough by 7 P. M., after a delightful drive along the ridge overlooking Lake Champlain and Willsborough Bay. The hotel has been open for some time, and Mr. Otis was on hand to welcome the arrivals. After supper Messrs. Christie, Brown, Douglas and Stephens made a trip to the camp site, in spite of a threatened shower and very wet grass. Late at night Mr. H. S. Miller, of the Mohican C. C., joined the party, and Mr. Baber, the owner of the property, also arrived.

Early next morning the whole party visited the Point, going over the whole camp site very carefully. As the result of their discussion, it was decided to locate the headquarters at the fence corner on the east of the main camp of last year, on the site of the Puritan C. C. tent, the commodore's, secretary's and signal officer's tents being pitched here, with the private tents of these and other officers in the rear. A landing will be built in front of these tents, while a larger dock than that of last year will be built somewhere south of the former site, being made substantial enough to permit large steamers to land.

The little grove in which the Brown University men camped last year will be cleared of underbrush and used as a general rendezvous, just in front of headquarters, and the pretty point to the west where Mr. Buddington's tent stood will also be kept open. The large open space on the hillside between the old and new headquarters will be kept free of tents, the desire of the committee being to have the main camp as large and compact as possible in the ample space within and behind the grove on Indian Bay.

The Ladies' Camp will remain as before but probably extending further toward the end of the Point, as it promises to be much larger. The new location of headquarters places it between the main and ladies' camps, accessible from the latter without passing through the former.

The water at present is much higher than last August, some 25ft. of the beach then exposed being covered. Though the level is certain to fall more or less by August, there is every probability that the extreme low stage of last year will not be reached.

The Delaware & Hudson Canal Co. has been most accommodating, and will in all probability put up a platform and stop several important trains just opposite to the camp, canoeists being landed at headquarters dock by a steamer in a few minutes.

The various roads about the Point have been neatly gravelled, the walking being much improved. The mess will be in the hands of Mr. Otis, served in the same pavilion, a guarantee of its excellence. The arrangements for steamer and rail service are much superior to those of last year.

Late in the afternoon the party was increased by a delegation from the Bulwagga C. C., of Port Henry, headed by Mr. Witherbee and Dr. Nelde, who sailed up in the sloop yacht Gleam. The B. C. C. will bring a large number to the meet, all camping together. In the evening the canoeists drove back to Willsborough station, favored by a glorious sunset over the Adirondack Mountains, and took the express for Albany and New York after a most delightful outing.

Francis J. Baxter.

THE blue burgee of the Puritan Canoe Club of Boston has been lowered half way for the past week in deference to the memory of the late Francis J. Baxter, who died on June 23, 1892.

To those who knew the late ex-commodore of the P. C. C., this news will be read with sorrow. Ever thoughtful of others, an ardent canoeist, and always a good companion on a cruise, his presence will be greatly missed by his fellow club-men. Mr. Baxter was an old canoeist and an A. C. A. man of some years (No. 945). Through his efforts was largely due the formation of the club of which he was a member, and through his influence was it domiciled in its present unexcelled quarters. He was also one of the older members of the Boston Yacht Club, having been elected a member of that organization in February, 1874.

No more around the A. C. A. camp-fires will the familiar stories, "Uncle Billy," and the "Schermerhorns" be heard, and Mr. Baxter's venerable form will never more fill the seat in the craft of his choosing, the canoe. The vacant cockpits of the Puritan and Camille will stand as an ever present remembrance of their skipper who is no more. The Puritan C. C. extend their sincerest sympathy to his family in their bereavement, which alone is paramount to their own.

JAMES W. CARTWRIGHT, JR., Sec'y Puritan C. C.

BOSTON, June 25.

Cruising Sail Plans.

Editor Forest and Stream:

In your last issue, in speaking of the cruise at the A. C. A. meet, a correspondent urges that cruising sails only be allowed, and suggests a limit of 70sq. ft.

Are the cruisers obliged to use Rob Roys or some such style of canoe that they are only to be allowed 70ft. of sail? For the modern cruising canoe, 16×30, I consider 100ft. of sail is small enough. The best cruising sails I ever had were 125ft. on a Vesper model, and I cruised on Lake Hopatcong, Lower New York Bay and Long Island Sound with them for several seasons.

Last year, because my mate had small ones, I was inveigled into using a set of so-called cruising sails of 85ft. I had a ten-day trip on Long Island Sound, and if I ever get caught trying to cruise with less than 110sq. ft., I hope it will blow great guns every day.

In my opinion, a cruising sail depends more on being able to reef quickly down to a very small area, rather than on mere size.

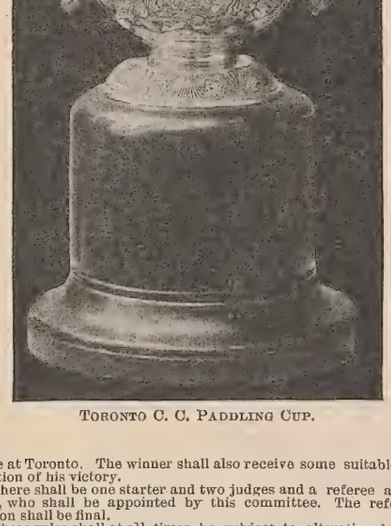
BRIDGEPORT, Conn. IDLEMERE.

Toronto C. C. Paddling Trophy.

THE accompanying cut shows the handsome cup recently made for the Toronto C. C., who offer it as a perpetual paddling trophy, to be raced for and held under the following rules:

1. This Trophy shall be known as "The Toronto Canoe Club International Paddling Trophy.

2. It shall be open for competition to any member in good standing of any recognized aquatic club or association, or of the A. C. A., W. C. A. or B. C. A.



3. It shall be raced for on Toronto bay, or in such waters in the immediate vicinity as this committee may suggest.

4. The race shall be paddled on a mile course straightaway.

5. The class of canoe in this race shall be the class third or fourth of the A. C. A. and must not be more than 16ft. long nor less than 28in. beam, by a minimum depth of 9in.

6. Entries may be made with the secretary of this committee not later than three weeks before the date of race. The entry fee shall be $5, which shall be returned to each starter immediately after the race.

7. The Cup shall at all times remain the property of the Toronto Canoe Club, but may be held by the winner upon suitable security being given, and must be returned in good condition at least four weeks before the date of the next race to the secretary of this committee at Toronto. The winner shall also receive some suitable recognition of his victory.

TORONTO C. C. PADDLING CUP.

8. There shall be one starter and two judges and a referee at the finish, who shall be appointed by this committee. The referee's decision shall be final.

9. These rules shall at all times be subject to alteration by this committee with the consent of the club at a general meeting at least two months before the date of the race, notification of which shall be given through the official organs forthwith after such amendment.

10. Any matter which may arise, and not covered by the foregoing rules, shall be settled by a majority of the committee.

The Toronto C. C. has also sent out to all canoe clubs the following invitation:

Dear Sir —The attached code of Rules will govern the races for the above Cup; the first of which will be held at Hanlan's Point, Toronto Bay, on Saturday, July 9, 1892, at the Club's Annual Regatta. We will be pleased to receive entries from any members of your Club. A handsome gold medal will be awarded the winner of the first race. The Cup is now on exhibition in Toronto, and is of sterling silver of beautiful design, and altogether a very handsome and valuable article. Any competitor from a distance who wishes to practice on Toronto water for a short time before the race will be allowed the use and privileges of the club and house. The Trophy Committee have made all necessary arrangements for carrying out the race successfully, and would be pleased to see a large entry list. The last quarter of the course will be boomed in such a way as to prevent spectators from interfering with the contestants. Any further information will be cheerfully furnished. Yours truly,

FRED WOODLAND, Hon. Sec. Com.

Entries are expected from Messrs. Tilley, Muntz, Johnson, MacKendrick, Carnegie and other Canadian paddlers, and the race is likely to be a notable one, the course being accurately measured and the racers timed so that the record will stand without question.

New York C. C. Challenge Cup.

THE second and final race between Messrs. Oxholm and Jones for the possession of the challenge cup of the New York C. C. was sailed on June 22 over the same 3-mile course as the race of the day before. The wind W. by S. was stronger, Glenwood carrying 73sq. ft. and Canuck 88sq. ft. In the second half of the race the wind fell somewhat. The tide was running flood. The two had an even start, Glenwood to windward. She ran ahead and held her lead easily until the finish. The full times were:

Start 3.02 P. M.

	1st.	2d. Home.	1st.	2d. Home.	1st.	2d. Finish.
Glenwood	15 10	24 30 30 47	46 45	55 05 1 00 38	1 17 55	1 26 20 1 31 35
Canuck	17 30	27 19 33 49	51 10	58 40 1 04 23	1 21 22	1 20 05 1 35 33
Lead	2 20	2 49 3 02	4 25	3 35 3 45	3 27	2 45 3 58
Time	15 10	9 20 6 17	15 58	8 20 5 33	17 17	8 25 5 15
Time	17 30	9 49 6 20	17 21	7 30 5 43	16 59	7 43 6 38
	Beat.	Run. Reach.	Beat.	Run. Reach.	Beat.	Run. Reach.

Mr. Jones will not contest again for the cup.

Corinthian Canoe Club.

TORONTO, June 27.—The first sailing race of the club was sailed over the club course on Toronto Bay on Saturday, June 25, in a stiff northwest breeze. At the signal the Rush was first over the line, closely followed by Eel and Waif. Rush maintained her lead until the first buoy dead to windward was reached; here both Eel and Waif forged ahead, Waif taking the lead and keeping it through the race, Eel and Rush fighting hard for second place. The former, however, pulled ahead of the latter on last round, finishing a good second to Waif, Rush being third. Robert Tyson sailed his Proa against the canoes, but although doing better than was expected, was never in it with the little boats. Three or four other club flyers were unable to be present, thus thinning down the entry considerably.

Waif, D. B. Jacques	1
Eel, J. W. Sparrow	2
Rush, W. C. Lee	3
Proa, Robert Tyson	4

WILLIAM C. LEE, Secretary.

The W. C. A. Meet.

SEC.-TREAS. WOODRUFF starts this week for Lindenwald Point, Lake Winnebago, to arrange for the building of docks, kitchens, etc., and laying out of courses for the W. C. A. meet, which will be held from July 9 to 25. All arrangements have been completed, and there is now every promise of a very large attendance and a successful meet. The camp may be reached by steamer from Oshkosh, Wis. Canoes and duffle may be shipped to Mr. F. H. Gary, Oshkosh C. C. A large mess tent will be erected in which meals will be served at $1 per day.

A. C. A. Prize Flags.

THE following additional prize flags have been promised through Com. Winne, one each from Arlington C. C., Mrs. I. V. Dorland, Mrs. Frederick G. Mather, Miss Gertrude V. Fredericks, Miss Mary Warren Fuller, Miss Edith P. Draper, Miss Ellen Douglass, Mrs. J. R. Bomann.

The committee wishes to acknowledge the above with thanks to the donors.

A. C. A. Membership.

THE following gentlemen have applied for membership in the A. C. A.: Eastern Division: Joseph C. Staples, Hartford, Conn.; J. Frank Perry, Barre, Vt.

CANOE NEWS NOTES.

A FIRM of Western canoe builders is now advertising that it has in its employ the designer of the canoe Bat. The Bat was designed by W. P. Stephens, in 1889, and built from moulds furnished by him, by the St. Lawrence River S., C. and S. L. Co., the firm alluded to above having nothing to do with the canoe.

The many friends of Mr. J. Z. Rogers—"Col. Jim"—will learn with regret of the very serious business loss sustained by him recently in the burning of the shops of the Ontario Canoe Co., at Peterborough, of which he was the head. The firm had added this spring a large amount of new and costly machinery, and were doing a prosperous business; but the shops, machinery and all the moulds for canoes were entirely destroyed. The company has resumed work in one of the buildings which was saved, but the loss in every way is most severe.

The year book of the Northern Division of the American Canoe Association is a credit in every way to its compilers, being very neatly made and containing a great deal of interesting information about the Division and the coming meet at Geneva Park, Lake Couchiching. At the same time there is one omission so remarkable as to call for comment. Although the full lists of all Division officers present and past, are given, there is not a word concerning the American Canoe Association, the general meet, the other divisions or the Association officers. The date and place of the general meet are not alluded to, while an advertisement on the cover is so worded as to convey the idea that the general meet of the Association will be held at Geneva Park, Lake Couchiching. In a small programme such omissions would not be remarkable; but in a large and elaborate pamphlet, carefully prepared and with much descriptive matter and illustrations, it would seem that a few lines at least might be devoted to the Association at large and the general meet, while a mention at least of the commodore's name would be a very slight recognition of the interest he has displayed through the winter in the Northern Division.

Rifle Range and Gallery.

New Jersey Rifle Shooting.

[*Specially Reported for Forest and Stream.*]

Miller Rifle Club, Hoboken, N. J., June 22.—The scores made tonight are appended below. The conditions were 10 shots, off-hand, American 25-ring target, possible 250:

Geo W Plaisted...240	E Fischer.....235	F Kloepping.....231
D Miller.....240	F Brandt 235	H Vanderheyden.228
L Sohl.....240	A Meyers..... ...234	A Stadler.....225
F Meyer.....238	J J Devitt.....233	F Dunsteadt.....220
G Schlicht.....238	J M Back..... 233	F Kammel.....214
F Liell. 237	A Thurk 232	H Grimm.....210

Excelsior Rifle Club, Jersey City, Tuesday, June 21.—The scores of to-night are below. The conditions of the shoot for the weekly class medals were 10 shots off-hand, 25-ring target, possible 250:

W J Hennessy....236	C Bauchle.....233	C L Pinney.....225
L P Hansen.....234	J Hughes.....232	

The medal winners were: First class, W. J. Hennessy; second class, C. Bauchle.

Lady Miller Rifle Club, Hoboken, Thursday, June 23.—The scores made in the prize shoot to-night are below: Ten shots, rest, 25-ring target, possible 250:

Miss M Miller..243	Miss T Schneider.237	Miss A Siva.....231
Mrs J Vogel.....240	Mrs M Wendle....236	Mrs A Cordts.....231
Miss K Born.....239	Mrs D Miller 233	Mrs E Pettry.....230
Miss L Prien 238		

A team match will soon be arranged between the married and the single members of this rapidly rising shooting club.

Charles E. Bird, the genial secretary of the Hudson Rifle Club, of Marion, contemplates a trip down South. He will then "take in" several shoots should there be any at the time. His trip will probably last for a period of two months.

Greenville Rifle Club, Greenville, N. J., Captain William H. Robidoux; Friday, June 24.—The scores made in the handicap tournament, to-night are below. The conditions were: ten shots off-hand, 25-ring target, possible 250:

Capt Robidoux....236	J Spahn.....230	C Scheelein. 228
C Bong.....233	H Gotthardt.....229	J Hill.... 219
G Purkess.....230		

Hoboken Rifle Club, Captain John Yeck; Monday evening, June 20.—The scores made to-night are below. The conditions were: ten shots, off-hand, 25-ring target, possible 250:

C Paasch.....227	H Wirth.....218	J Schauer, Jr.....217
W F Dilger.....225	J Stein.....218	C Kennedy.....216
M Roediger.....220	F W Krueger.....217	O Keller 210

A five men team match is being arranged with the Hansen Rifle Club. Also a fifty shot match between J. H. Kruse of the Hobokens and Otto Schmidt of the Hansen Club. Both matches will probably be decided in ten days time.

Genial "Joe" Schauer, Jr., will leave for a foreign clime Sunday next, at least he will join the army of benedicts. The lady in question is a leading belle in Hoboken. Good luck, "Joe."

Hansa Rifle Club, Hoboken, N. J., Wednesday, June 22.—To-night's scores are below. The conditions were 10 shots off-hand, 25-ring target, possible 250:

O Schmidt..... ...226	A Selter.....215	L Stohrman.....208
J Hespe.....223	H Stiehl 210	L M Harksen.....207
G Wangersheim...220	J Sessmann... ...210	

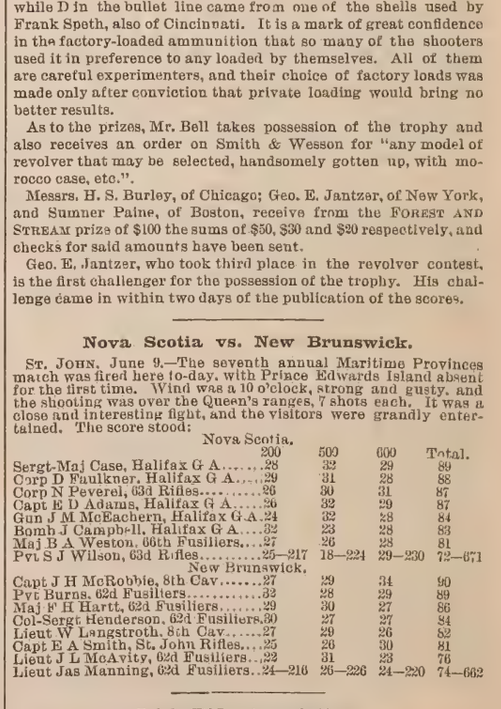
A challenge from the Hoboken Rifle Club for a 5-men team match will probably be accepted.

Charles Langmaack and Charles Prien have been proposed for membership in the Hoboken Rifle Club.

The Hansa Rifle Club held a small but well attended shoot at headquarters, Wisch's Hall, Third and Adams street, Hoboken, Sunday, June 26. The prize winners were: First, gold ring, Henry Stiehl, Hansa Rifle Club, 74, 72, total 146; second, gold ring, Otto Schmidt, 73, 70, total 143; third, gold ring, J. H. Kruse, Hoboken Rifle Club, 71, 70, total 141; fourth, gold ring, A. Selter, 72, 69, total 141; fifth prize, gold scarfpin, William Forkel, Miller Rifle Club, 71, 69, total 140. Gold scarfpins were also awarded to J. Messner, 70, 69, total 139; Cornel Burger, 69, 69 total 138; Wm. Dilger, 69, 67, total 136; J. Hepke, Hansa Rifle Club, 69, 67, total 136. The ties between J. H. Kruse and A. Selters and Wm. F. Dilger and J. Hepke were shot off with this result: J. H. Kruse, 24, 25, 24—73; A. Selters, 24, 25, 18—68; Wm. F. Dilger, 22, 23, 25—69; J. Hepke, 21, 20, 21—62. The medal offered to the shooter making the most points was won by Wm. Forkel with a total of 1,538; J. Hepke secured the second prize, a gold ring, with a total of 1,289. Otto Schmidt captured the medal offered in the premium bullseye shoot with the best shot.

The Hoboken Rifle Club is making arrangements for a money prize shoot to take place at headquarters, Wisch's Hall, Third and Adams street, Hoboken, in a month's time.

A match took place last Monday evening between Chas. Paasch and Christy Kennedy, of the Hoboken Rifle Club. The scores were:



C Paasch	226	219	227	226	226	—1124
C Kennedy	220	216	218	223	224	—1101

The Hoboken Schuetzen Corps, Capt. John Schueman, held its 21st annual shoot and festival at the Union Hill Schuetzen Park, Monday and Tuesday, June 20 and 21. On the target of honor Charles Hoffman held the highest score and was crowned King. His three shots counted 65 out of a possible 75. John Heipert and Ernest Fischer came next with scores of 61. Ernest Heckman was fourth with 59. On the ring target Ernest Fischer secured first prize with a score of 70, Henry Cordts, David Miller and Fred C. Ross divided second, third and fourth prizes with totals of 69 each. Ernest Fischer also secured the premium offered to the holder of the best five tickets. George Schlicht secured first prize for the most bullseyes with 17. E. Fischer second with 12 and L. P. Hansen third with 11.

JAY H. KAY.

THE REVOLVER CHAMPIONSHIP.

THE announcement of results in the opening shoot for the Winans Trophy, in the FOREST AND STREAM, closed up a long and interesting contest. Figures and scores were given with the report. Herewith are given diagrams of the cartridges and bullets used, shown full size. The majority used the round bullet, G, fired from the short cartridge case, 3. When the .32cal. was used bullet F was the favorite with shell 4. Yost and Dr. Gardner, of Philadelphia, used the Colt revolver with cartridge No. 5, firing the bullet E. This is the only cartridge showing the bullet projecting from the shell. All the others with the low powder charges employed had the bullet seated low down in the shell. Bullet A was fired from shell No. 1 by Jantzer and Hoffman; bullet C was selected by Roundsman Petty and was fired from shell

No. 2; bullet B was the choice of Chas. Wellinger, of Cincinnati, while D in the bullet line came from one of the shells used by Frank Speth, also of Cincinnati. It is a mark of great confidence in the factory-loaded ammunition that so many of the shooters used it in preference to any loaded by themselves. All of them are careful experimenters, and their choice of factory loads was made only after conviction that private loading would bring no better results.

As to the prizes, Mr. Bell takes possession of the trophy and also receives an order on Smith & Wesson for "any model of revolver that may be selected, handsomely gotten up, with morocco case, etc.".

Messrs. H. S. Burley, of Chicago; Geo. E. Jantzer, of New York, and Sumner Paine, of Boston, receive from the FOREST AND STREAM prize of $100 the sums of $50, $30 and $20 respectively, and checks for said amounts have been sent.

Geo. E. Jantzer, who took third place in the revolver contest, is the first challenger for the possession of the trophy. His challenge came in within two days of the publication of the scores.

Nova Scotia vs. New Brunswick.

ST. JOHN, June 9.—The seventh annual Maritime Provinces match was fired here to-day, with Prince Edwards Island absent for the first time. Wind was a 10 o'clock, strong and gusty, and the shooting was over the Queen's ranges, 7 shots each. It was a close and interesting fight, and the visitors were grandly entertained. The score stood:

Nova Scotia.	200	500	600	Total.
Sergt-Maj Case, Halifax G A	28	32	29	89
Corp D Faulkner, Halifax G A	29	31	28	88
Corp N Peverel, 63d Rifles	26	30	31	87
Capt E D Adams, Halifax G A	26	32	29	87
Gun J M McEachern, Halifax G A	24	32	28	84
Bomb J Campbell, Halifax G A	32	23	28	83
Maj B A Weston, 66th Fusiliers	27	26	28	81
Pvt S J Wilson, 63d Rifles	25—217	18—224	29—230	72—671
New Brunswick.				
Capt J H McRobbie, 8th Cav	27	29	34	90
Pvt Burns, 62d Fusiliers	32	28	29	89
Maj F H Hartt, 62d Fusiliers	29	30	27	86
Col-Sergt Henderson, 62d Fusiliers	30	27	27	84
Lieut W Langstroth, 8th Cav	27	29	26	82
Capt E A Smith, St. John Rifles	25	26	30	81
Lieut J L McAvity, 62d Fusiliers	22	31	23	76
Lieut Jas Manning, 62d Fusiliers	24—216	26—226	24—220	74—662

Irish Rifle Association.

THE annual prize meet of the Irish Rifle Association was held June 6-10 at the Raheny Range near Dublin. Major Fenton, Capt. Milner and Messrs. Smith, Ganly, Cooper and Braithwaite won places on the Irish Eight, but John Rigoy, who came from London to shoot fell ill. The score for places on the Eight, 25 shots each day at 900 and 1,000 yards, making a daily possible of 250, stood:

	1st Day.	2d Day.	Tot.		1st Day.	2d Day.	Tot.
Fenton, Major	235	239	474	Hamilton, C	217	211	438
Smith, R	239	235	473	Coghlan, H	224	213	437
Ganly, A	238	235	472	Henry, F W	211	218	428
Cooper, F C	235	228	463	McConnell, J	215	199	414
Milner, Cap	220	235	455	Hamilton, Wm	220	194	414
Lauder, Lieut	231	218	449	Sullivan, D	215	195	410
Braithwaite, W T	229	215	445	Thynne, H	208	200	408
Whitestone, B W	231	212	443	Massy, R	220	w	
Caldwell, T	231	211	442	McKenna, J	202	w	
Wilson, James	226	213	439				

Another important event on the programme was for the American Cup and championship of Ireland. Presented by the American Rifle Team to the riflemen of Ireland for annual competition, as a memorial of the first international rifle contest on Irish soil, June 29, 1875. For the best aggregate in all the any rifle competitions during the meeting:

Smith, Robert	649	Ganly, Andrew	646
Fenton, Major	647	Cooper, F C	642

Garden City Rifle Team.

THE Garden City Rifle Team met for their weekly contest Tuesday evening, June 21, at George McCune's shooting gallery, 146 South Halsted street, Chicago. Conditions were 25yds., 25 shoots each, open sights, free off-hand position, Massachusetts paper target, possible 300 points:

W J Gibbs	266	Geo McCune	258	W Frisbie	253
R McBean	266	Jos Hosie	250	F Erickson	250
C A Hankle	264	J Politre	255	T Ford	250
H S Burley	260	M Tatro	254		

Massachusetts Rifle Association.

BOSTON, June 25.—The Massachusetts Rifle Association held its regular weekly shoot at its range to-day. The weather conditions were unfavorable to high scores. The attendance of shooters was good. Following are the scores made to-day, distance 200yds., on standard American target, all being re-entry matches:

All-comers' Rest Match.

H L Williard	10	11	10	11	12	11	11	11	12	9—108
S Wilder	10	12	8	10	10	12	11	10	11	11—105
W P Thompson	10	10	9	10	11	12	12	11	8	11—104

B E Hunter	101	A N Gun	93	A S Hunt	81
M T Day	98	J B Hobbs	93	D B Shaw	82
T Havens	97	F T Woodchuck	86		

Military Match.

G Durward	5	4	4	5	5	4	4	4	4	5—44
W L Swan	4	5	5	4	4	4	4	4	4	4—42
T H Nason	4	4	4	4	4	4	4	5	4	4—41

All-comers' Pistol Match—50yds.

S C Sydney	9	9	8	9	9	8	10	9	10	8—89
L Bell	7	9	8	8	10	10	8	10	7	10—87

B E Hunter	85	A D Stevens	79	D N Winn	76

Rensselaerwyck.

Scores made at Rensselaerwyck by members of the Third Brigade Rifle Association, 400yds., Creedmoor (Carton) target; weather conditions were unfavorable for high scores:

L Geiger	2	2	0	0	5	5	3	5	3	4—29
	3	5	4	5	5	5	3	4	3	5—42
	4	4	4	2	2	4	5	4	6	5—40
Major Chas H Gaus	4	3	3	0	4	4	3	6	4	5—36
	3	5	4	5	6	5	5	5	4	5—47
	6	6	6	6	6	5	2	3	5	6—51
	6	6	5	6	6	4	6	5	5	5—54
Chas P Frey	5	3	4	4	4	4	5	4	5	5—43
	5	5	4	5	5	3	4	4	5	4—44
	5	5	5	6	5	5	3	5	4	0—43
Wm T Mayer	5	0	4	5	0	5	4	5	4	3—35
	2	5	5	2	5	5	5	4	5	4—42

Quick Revolver Work.

THE new revolver range at the South London Rifle Club's grounds at Bainham, is not yet completed, so the members are behindhand in their practice for Bisley this year. The club generally furnishes the winners of first, second and third prize at Bisley. Practicing on his private grounds for the quick-firing competition on May 16, Mr. Walter Winans made a highest possible score for five shots in ten seconds at 20yds. on the new Bisley 2in. bullseye. He was using a Smith & Wesson with the English Army regulation sights, trigger pull and ammunition (bead sights are not allowed in the military revolver competitions). He shot before a representative of Messrs. J. Purdey & Sons, the celebrated London gun makers. This is believed to be the best five-shot score ever made in ten seconds with a revolver at 20yds. The pistol, which he had never shot before, was a new one just imported. MON.

Empire Rifle Scores.

NEW YORK, June 23.—The following scores were made by the members of the Empire Rifle Club June 21, at their headquarters, 12 St. Marks Place, distance 100ft., 25-ring target:

A Rosenstraus	231	C Zettler	224	H Zettler	220
B Zahn	230	W Meisenholder	222		

A Crack Regiment.

DURING the past week the Seventh Regt. of the N. Y. S. N. G. had possession of Creedmoor for stated rifle practice. Out of 954 men practicing 946 won marksmen's badges. Last year, under the old conditions, 638 men qualified during general practice and 409 in supplementary matches.

Trap Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

July 3-5.—Willamette Rod and Gun Club tournament, Portland, Oregon.
July 4.—Machimoodus Gun Club, tournament at Moodus, Conn.
July 4.—Connecticut Shooting Association, sixth contest for Keystone trophy, South Norwalk, Conn.
July 4.—Towanda Rod and Gun Club monthly shoot. Sweepstake shooting at artificials, commencing at 1 P. M., Towanda, Pa.
July 4.—Peekskill Gun Club tournament, Peekskill, N. Y.
July 4.—Kirtland Gun Club tournament, at Cleveland, O.
July 4-5.—Wheel Works Gun Club first annual tournament, Kalamazoo, Mich.
July 4-6.—Louisiana Gun Club tournament, Louisiana, Mo.
July 4-7.—Atlantic City Gun Club's tournament, at Atlantic City, N. J.
July 5-6.—Niles Gun Club tournament, Niles, Ohio.
July 6-8.—Lafayette Gun Club tournament, at Lafayette, Ind.

The Shoot of the Season.

NEVER before in the history of shooting tournaments has anything attracted so much attention as the second annual tournament of the Atlantic City Gun Club, which is to be held in Atlantic City on July 4 to 7. Communications have been received from all sections of the country asking for programmes and hotel rates, and the management have been at their wits' end to give them proper attention.

Several of the hotels have offered two days' free board to the man making the highest score during the team shoot, where the whole team of five men are stopping at their hotel.

On the night of July 5 there will be a bowling match between visitors from New York and members of the Atlantic City Gun Club. The New York team will be captained by the ever popular Tom Keller, and the Atlantic City team by L. R. Adams, and the New York boys will have to get their "good right arm" in fine condition, as Adams bowls a "strike" every trip.

On the night of July 6, there will be a swimming contest in Kipple & McCan's pool, under the management of "Father Time" (Thurman).

Applications for the team shoot are rapidly coming in, but the list is not yet completed, and all teams desiring to enter should send in their names at once, accompanied by $2 forfeit. Applications should be made to J. Howard Brouse, Atlantic City Gun Club, Atlantic City, N. J.

Every effort is being made to make this shoot one that will long be remembered as the "Model Tournament." North's electric pulls and Keystone targets will be used, and there will not be a "duffer" in the lot, so get your shells well primed.

One peculiar feature of the shoot is the interest manifested by the residents of Atlantic City, and old residents have brought forth from dark recesses of the attic, muskets which have not seen service since the war, and by a vigorous application of sand-soap and kerosene, they are now brigut as a new dollar, and the owners are anxious and ready for the fray.

New Utrecht Gun Club.

THE members of the New Utrecht Gun Club held their initial shoot for the new $150 trophy on June 25, at Woodlawn Park, Long Island. The conditions called for 10 birds per man, modified Hurlingham rules. The scores follow.

Regular club shoot, 10 live birds, modified Hurlingham rules: L. G. Mitchell 7, M. Van Brunt 9, J. Adams 7, R. R. Street 9, C. E. Morris 8, D. Deacon 10, D. Bennett 9, G. Nostrand 9, P. Adams 5, C. A. Sykes 9, W. F. Sykes 10, P. A. Hegemann 9, C. E. Harvey 7, Dr. Shiels 9, Dr. Islip 9, G. Cropsey 10.

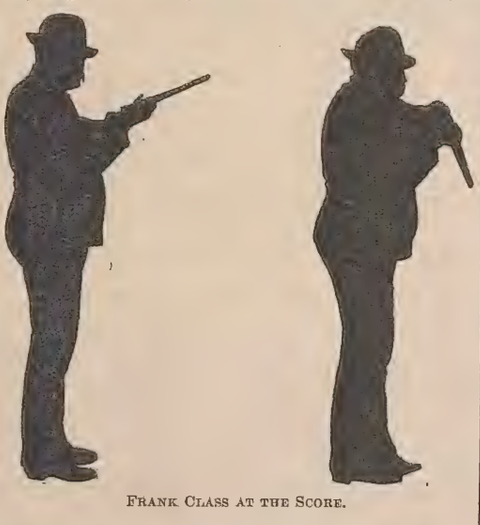
First sweepstakes, 6 birds, club rules, 3 moneys: Dr. Shiels 6, D. E. Bennett 6, P. A. Hegemann 6, D. Deacon 6, W. F. Sykes 6, div. first money; R. R. Street 5, C. E. Morris 5 and C. A. Sykes 5, div. second money; Dr. P. J. Adams 4, third money; Dr. Van Ord 3, G. E. Nostrand 3, P. Adams 3.

Sweepstakes, miss and out, 7 entries: W. F. Sykes, Dr. Van Ord, Dr. Shiels, R. R. Street, C. A. Sykes and C. M. Meyer had to div. after killing 8 each, as the birds had given out. C. E. Morris shot out on the second round.

Class and Mitchell in Great Form.

BEFORE an audience of barely half a hundred people was one of the most stubbornly contested pigeon matches on record shot at Woodlawn Park on Tuesday, June 28. It was surprising, too, to see such a small turnout of sportsmen at a match between men of such national reputation as these two, who struggled for two hours to obtain a lead one over the other, and were finally compelled to see the match end in a dead heat. The day was a favorable one both for shooters and birds. Favorable for the former because the sun threw warmth enough to enable them to dress in cool raiment, and favorable for the birds because the wind was just strong enough to infuse them with life and help them to cut a good clip.

One of the principals in the contest was J. Frank Class, of Pine Brook, N. J., who holds the title of champion live-bird shot of the State, and who in five consecutive matches previous to the one on Tuesday has scored 90 or better. About 5ft. 7in. in height, with a stocky form, turning the scales at close to 180lbs., with a dark and ruddy face and a keen, alert, deep gray eye. Mr. Class is every inch a shooter; and as he steps to the score and calls "Pull!" a novice could tell that the Pine Brook man is one with nerve and skill.



His opponent was William Tell Mitchell, of Lynch Station, Va., who is noted through the South and North not only for his superior skill as a trap and field shot, but as well for his thorough knowledge of dogs and their habits. Mr. Mitchell in connection with Chas. Heath, of Newark, N. J., controls the Graphic Kennels, from which hail the winning strains of Graphic pointers, renowned throughout dogdom. Mr. Mitchell is in person about 6ft. in height, of spare frame, weighing but little if anything over 160lbs. His face, devoid of beard or moustache, is deeply bronzed from constant exposure to the elements, and around the corners of his mouth is always lurking a pleasant smile. Cool and collected under the most trying circumstances, he is a dangerous antagonist at the traps, as many an expert has ascertained in days gone by.

WILLIAM TELL MITCHELL.

"What's in a name?"

The conditions of the match called for 200 live birds per man, Hurlingham rules to govern, for a purse of $250 a side. One-half of the match was shot at Woodlawn Park on Tuesday. It was 2:35 P. M. when the match began, the officials being as follows: Referee, Harry Piper, of Morristown, N. J.; official scorers, Frank Mason, of the *American Field*, and C. H. Townsend, trap editor of FOREST AND STREAM; trap puller, Al. Heritage ("Old South Paw"), of the Jersey City Heights Gun Club. When the match started there were not more than thirty people all told inside the inclosure and only about a score arrived afterward. Among those on hand beside the ones above mentioned were Chas. Delar, Long Island correspondent for FOREST AND STREAM; R.

FRANK CLASS AT THE SCORE.

Hooper, of Brooklyn; Gustav Freche and Chas. Heath, of the Newark (N. J.) Gun Club; Fred Piper, of Morristown, N. J.; Herman Blattmacher, Barney Koenig and Dr. Van Ord, of Brooklyn. The several hundreds of sportsmen who were conspicuous by their absence missed a rare treat.

At this season of the year good birds are the exception rather than the rule, and no one expects to see a large number of "hummers" in a day's shoot. The birds used in this match, while soft and not of the style that are likely to carry away a load of lead, were still a clean, fair lot of flyers. Out of the 200 shot at none were "called," only four had to be "flushed", and of these two proved to be good flyers once they caught their wings. As a whole the birds can be classed as an average lot. The very fact that half a dozen slow ones would be succeeded by a lot of "clinkers" made the shooting the more difficult, as one is very apt to shoot ahead of one and behind the other, where they alternate in this fashion.

The Pine Brook expert man was first to face the trap, and as he called "pull," over went No. 3 trap, out and down as quickly went a dun-colored hen as the first barrel cracked. Then the Virginian called "pull," and got a fairly-good left-quarterer from No. 5, which he sent to grass with a neat second. Thus the game progressed until Class stepped to the score for his twenty-first round. He caught a light bird from No. 4 trap that caused him to put in one of his old-time "bang-bang" killers, but it was of no avail, as the bird struggled and kept in the air until it reached the fence, its wings brushing the top board as it fell dead—just over. Mitchell had a similar experience on his twenty-second bird, which fell dead less than 2yds. outside the fence. There were no more misses on the quarter, which ended in a tie on 24 kills each.

On the second quarter Class lost his 15th a hot left-quartering blue bird, and his 20th, an awfully tricky right-driving zig-zagger which flew a dozen different ways in as many yards. Mitchell's only loss was of his 18th, a fast left-quartering driver which caught both loads but had conscientious scruples against dying. Score, 48 for Mitchell, 47 for Class and a perceptible uplifting of the eyebrows of the latter's friends who thought Frank had a "sure thing" when he stacked against the man with the historic Swiss cognomen.

Third quarter.—Twenty-four straight kills for Class, then the loss of the 25th, a driving zig-zagger that any one would be likely to let go. The Virginian lost his 1sr, a very fast left-driver and his sixth, a zig-zagging incomer with a tricky move but still one which he should have mastered at the distance. A too quick second was accountable for this. Score at the three-quarters, 71 each and hopes for both sides without any odds.

On the last quarter it could be seen that both men were out for business, pure and simple. Mitchell killed 19 straight and lost his 11th, a terribly fast right-driver, which carried out a double allowance of shot. Class grassed 22, and had his 23d, a left-quarterer, light on top of the fence, close its wings and die—dead out of bounds. These were the only loses, and the race ended with a tie score of 95 kills for each.

The better than average birds of the two men were as follows: Class—24, 27, 30, 31, 39, 40, 43, 46, 49, 58. 64, 67, 74, 75, 77, 79, 86, 93, 94, 95 and 96. His 40, 43, 64, 75, 79 and 94 birds were as good as ever left a trap.

Mitchell—10, 13, 18, 19, 31, 32, 38, 41, 43, 49, 50, 53, 55, 59, 62, 86, 87, 90, 94 and 98; superior birds, 32, 43, 47, 49, 50, 55, 87, 90 and 94.

To say that the result was a surprise would be putting the case very mildly. While it was canceded that Mitchell was capable of crowding 90, it was not supposed that he could shoot Class to a finish, especially when he was obliged to kill 95 to do so. He proved his ability, however, and in future will not be likely to be classed as a novice. In former years he shot rather a careless first barrel and placed the most dependence on a safe second, but he has learned wisdom in his old age, and now wields an effective first, as well as putting in his second much quicker than formerly.

Both men used 12-bore W. W. Greener ejector guns, Class's weighing 7lbs. 10oz., and Mitchell's 7lbs. 8oz. Class used Trap shells and Mitchell used the new Smokeless shells of the U. M. C. Co. make, which he declares are "dandies." The loads, which were identical with both men were 3½drs. Schultze powder and 1¼oz. Tatham's No. 7 chilled shot.

As it had been previously arranged to shoot the second half of the match at the Driving Park, in Morristown, N. J., on June 29, the tie on the first half was not shot off on Tuesday, but was to be settled on the following day.

Below will be found the detailed scores of the match as only FOREST AND STREAM is able to give them. The first line of figures shows the trap from which each bird was sprung; the second line shows the line of flight of the birds and the third line shows the barrel used. T denotes a towering bird, H a hoverer (or one killed close to the traps), * denotes dead out of bounds.

Trap score type—Copyright, 1892, by Forest and Stream Publishing Co.

Shooting at Plainfield.

THE tournament of the Independent Gun Club held at Plainfield, N. J., on June 23, was a very pleasant affair with a good attendance. There were ten events at bluerock targets, numbers 1, 2, 3, 5 and 8 being at 10 singles each; Nos. 4 6 and 9 at 15 singles; No. 7, at 20 singles and No. 10 at 25 singles. The results follow:

	1	2	3	4	5	6	7	8	9	10
Breintnal	8	10	10	15	9	13	18	9	11	21
Hedden	7	8	10	12	9	13	17	9	14	24
Van Dyke	8	10	10	14	8	15	18	10	13	23
Ruppell	9	9	9	12	8	13	19	10	14	23
Smith	10	9	8	13	9	12	17	10	14	21
Keller	6	6	7	..	..	..	..	6	13	24
Mason	7	9	6	9	7	8	14	10	12	21
Stryker	9	7	3	10	9	11	11	..	..	18
Brantingham	6	7	10	14	9	15	17	9	15	..
Soper	7	8	7	12	8	..	..	..	..	..
Manning	9	9	5	12	8	14	16	10	8	..
Hughes	6	8	8	7	6	12	13	8	6	20
Simpson	..	..	..	3	..	..	..	..	..	..
Voorhees	..	..	..	..	..	..	..	5	7	..
Pierson	..	..	..	..	..	..	..	6	10	18

The rest of the day was spent in live-bird shooting. Event No. 1 was at 4 birds, $3 entry; No. 2 at 5 birds, $5 entry; No. 3 at 6 birds, $6 entry, and No. 4 a $1 miss-and-out. The results:

	No. 1.	No 2.	No 3.
Smith	11c1—3	01111—4	210101—4
Van Dyke	0121—3	11010—3	.....
Mason	0112—3	11212—5	.....
Hedden	1121—4	1111o—4	122212—6
Brant	2200—2	21110—4	121100—4
Stryker	1201—3	10J11—3	.....
Pierson	00o1—1	00111—3	112222—6
Force	0120—2	.....	.....
Ruppell	2122—4	12o22—4	.....
Breintnall	1022—3	11221—5	222221—6
Soper	1111—4	12121—5	.....
D Terry	1112—4	11112—5	111010—4
P Jay	2211—4	12111—5	121222—6
Manning	2112—4	11211—5	011111—5
Scott	1112—4	12000—2	.....
Keller	1100—2	01102—3	.....
Trust	...	...	122111—6

In the miss-and-out the pot was taken by Pierson on the seventh round, on which McCullough and P. Jay miseed. Smith went out on the sixth round, Trust on the fourth and Terry on the first.

Sportsmen's Association of the Northwest.

SEATTLE, Wash., June 17.—The eighth annual shooting tournament of the Sportsmen's Association of the Northwest opened under very favorable auspices. The attendance was larger than ever before and the contest for the championship was hotly fought. There were 30 entries. W. A. Eberly, P. A. Kinzel and C. E. Hughes tied for the medal on 20 breaks each. On the shoot-off Eberly won on the thirtieth round.

The following were the scores in the match for the *Globe* trophy, at 10 live birds, ties shot at 15 live birds:

S Meek	2221122211—10	"Oregon"	1211112211—10
P A Kinzel	1111112122—10	J C Eberly	2111111112—10

California Wing Club.

SAN FRANCISCO, June 19.—The weather was simply perfect to-day for the medal shoot of the California Wing Club at the Oakland race track. It was a 12-bird contest with a 30yds. rise, and some splendid shooting was witnessed. After the main event of the day seven sweepstakes were shot off. In the first pool Haas and Slade divided first and second prizes, each killing all 6 birds. Robinson captured the second pool with a score of 6. Robinson, Golcher, Haas and Ned Fay tied with a score of 6 birds each in the third match, and agreed to decide it by their scores in the fourth pool. Robinson and Haas scored 6 each in this, and consequently divided both pools. Robinson killed all his birds in the fifth match. Haas and Fay divided second prize with 5 birds each. Robinson and Maas divided the sixth match, neither missing a bird. The seventh sweepstake was at 12 birds. Robinson, shooting in splendid form, carried off first honors, Fay and Haas tieing for second prize.

The following is the official score for the medal shoot:

Robinson	111221111112—12	Pelton	001212121200— 9
Slade	000101101111— 7	Haas	121211111111—12
Golcher	1122221*2222 —12	Schroder	101111111021—10
Liddle	101211021211—10	Randall	010011121212— 9

Robinson, Golcher and Haas shot off their ties at 6 birds, Haas winning with a score of 6, Robinson second with 5, and Golcher third with 5.

Sweepstakes at Guttenberg.

GUTTERBERG, N. J., June 22.—The following scores were made here to-day by members of the Union Hill Gun Club, in a sweepstake at five live birds per man, under Long Island rules:

John Waller	11212—5	J Hughes	12010—3
P Sullivan	12121—5	T Hughes	02010—2
C Woolmington	10212—4	J Menill	02001—2
J Berkeley	12011—4	H Lang	00201—2
J Woolmington	21001—3	W Burns	20000—1
E Hall	00212—3		

Tie—J Waller, 11111. P Sullivan, 11212.

The supply of birds being exhausted, Waller and Sullivan divided first money on the shoot off.

Wilmington Rod and Gun Club.

THE Wilmington (Del.) Rod and Gun Club held a shoot at its grounds, near Front and Union streets, on June 23, the scores being as below:

Fifty bird match: Burroughs 38, Cooper 32, Hartlove 30.

Twenty-five bird match: Fehrenbach 18, Hartlove 11, Byrne 9, Ocheltree 19.

Twenty-five bird match: Fehrenbach 13, Hartlove 16, Byrne 14.

Washington City Rod and Gun Club.

ON June 24, after a hot and dusty ride from Winchester, Va., the writer, in company with Arthur W. DuBray, the popular "Gaucho" who looks after the Southern interests of the Parker gun, and Bryan Talliaferro of the Jacksonville (Fla) Gun Club, stopped off at Washington to make a call on the Washington City Rod and Gun Club who were to hold their regular weekly shoot on that day. It was almost 9:30 when the party stepped off the B. & O. train at the Capital City, and the weather even at that early hour was intensely hot, there being scarcely a breath of air. The first move of the trio was of course in the direction of Andy Hancock's, where they were refreshed by one of "George's" famous decoctions. After this my two companions repaired to Willard's to take a much needed rest.

After a long search the writer by great good fortune succeeded in finding Joseph H. Hunter, he of the short stature and great talent for finding good dogs and shooting a great pace at the traps. Next in order was lunch, then a call on M. F. Tappan, the well known sporting goods man of Pennsylvania avenue, and next a ride past the white-domed capitol to the store of Billy Wagner. We found Billy up to his eyes in business, but as usual he promised to let business go by the board and beat the shooting grounds in the evening to help entertain the trio of travellers. After a pleasant chat and a cool-off in Billy's workshop Mr. Hunter took the writer to his residence and initiated him into the mysteries of his "den," where was found about every part of the paraphernalia of a shooter and fisherman. An elegant painting of Mr. Hunter's famous prize pointer Black Wonder was also exhibited. This picture is life-size and is a magnificent picture of one of the most famous dogs of the day.

About 4 P.M. we went speeding away behind Hunter's roan roadster "Jim," which has a penchant for giving the dust to other animals on the road, and about 20 minutes later pulled rein in rear of the 20×30 shooting box of the Washington City Rod and Gun Club. Here the FOREST AND STREAM received a hearty greeting from the shooters present, who comprised Messrs. Steele, Doyle, Peyton, Schroth, Rothwell, Denonet, Finley, Wanstell, and, last but not least, fat, fair and past forty "Uncle Dicky" Jones, one of the old-time shots of the District, who is still able to move about the thicket as spryly as in his younger days and who keeps the younger men guessing when he does to the score.

The grounds of this club are situated within a sixteenth of a mile of the historic Potomac River, and from the club house verandah can be obtained a full view of the Capitol, the Washington monument and many other objects of interest. Directly in front of the house and extending to the river is a dense undergrowth and to the right a heavy wood. Here it is that "Uncle Dicky" spends his evenings looking for the gay and festive woodcock. Underneath the rear part of the house flows what was once the famous Cumberland Canal, but which since war times has degenerated into a mere ditch. In its waters, however, are myriads of carp and goldfish, some of the latter reaching three or more pounds in weight. The property on which the house stands is supposed to belong to the Government, although the title is disputed by others. So long as the shoots hold their lease, however, the question of ownership does not worry them. As I have stated, the club house is 20×30ft. It is one story in height with a 15ft. porch.

On the day of my visit the members were using five experts' traps and throwing bluerock targets. They have screens for ten traps if needed. While shooting from the regulation angles no fault could be found with the foreground, but as soon as unknown angles come in play and the targets begin to go toward the trees on either side, the chances for clean scores are greatly decreased. A right-quartering target from No. 5 trap has to be "snuffed" else it has a good chance to get in the woods.

The premier event of the day was at fifty targets per man for the original medal, this being contested for weekly, the medal finally becoming the property of the member winning it the most number of times during the season. The shoot resulted in favor of W. H. Hunter, who broke 47. Steele scored 45, *DuBray 40, Doyle 38, Rothwell 36, *Talliaferro 35, Wagner 33, Schroth 31, Wanstell 24, Finley 22, Hancock 22. * Not members.

Wagner experimented with a 20-bore Parker which he had just received and by the time he had "caught on" to its shooting he was out of the medal race. This gun, by the way, is a beauty, both in hang and workmanship. Billy says he will push some of the big-bore men before he lays his "baby" aside.

After the medal shoot the party shot several ten-target sweeps, the scores made by members going to their credit for a number of special medals offered for the highest aggregate number of breaks out of the first 500 targets shot at during the club season. Jones broke 19 out of 20, Steel 9 out of 10, Hunter 27 out of 40, Doyle 29 out of 40, Wagner 30 out of 40.

This wound up the shooting, and after a series of experimenting on patterns by DuBray and Wagner, the party wended its way back to Washington, which they reached just as the shades of night were falling. After "Jim" was returned to his stable the inner man was looked after at Hancock's, after which another call was made on Mr. Wagner, at whose store we had the pleasure of shaking hands with Mr. John Hart, of the Capital City Gun Club, whose acquaintance we had made during the recent four days' tournament of that club, when Mr. Hart officiated as cashier. Here we were also treated to a glance at Billy Wagner's famous cartridge loader which is destined to create a furore as soon as it is placed on the market. It was getting along well toward midnight when we reluctantly shook hands and said "Good-by" to Billy, and a few moments later we went through a like performance with Joe Hunter, not, however, until both of those genial companions had faithfully promised to meet us at Atlantic City next week. The visit to Washington was a pleasant one, and FOREST AND STREAM left the city with the kindliest feelings for those who had granted its representative such a cordial reception.

C. H. TOWNSEND.

A Voice from Lynch's Station.

In a recent issue of your journal I noticed your comments on the North system of handicapping, and beg to differ from your conclusions. The question naturally presents itself, what is a handicap for, to equalize the winning chances of shooters of different degrees of skill. If such is the case, does the North system accomplish this end? I think not, as it forces the amateur to compete on even terms with the expert in every instance where the expert has failed to win a part of first or second money of the preceding event, and is he any less an expert and superior to the amateur from such failure? I think not, and the amateur who contests with him at known angles is simply putting up his wealth for the expert to pocket, and as we know, it is seldom the case at our large tournaments that all of the experts get a part of first or second money. The amateur will in nearly every instance find himself forced to contest with his superiors on even terms, and what does it matter to him whether Bull Jones wins his money in one shoot or Tom Jones in the next, so long as the Jones's get what he should have a living show for under an equitable system of handicap based on the respective skill of the contestants. You may say, Mr. Editor, that amateurs win under this system, which may be so occasionally, but you overlook the fact that all who win as amateurs are not amateurs, but experts who have some pull with the management, and can keep out of the expert class thereby, as was the case at Staunton, Va., and Washington, D. C. At Staunton, I think eleven men qualified as semi-experts when only three were advanced, and one left in amateur class was three per cent. better in average than an advanced, while at Washington Hunter and Happer averaged over ninety per cent., and yet shot with the amateurs, notwithstanding this club's programme said all who average ninety per cent will be advanced to the expert class, and while I think the Keystone the fairer system to the amateur, no system will protect him as clubs fail to live up to their published programme.

W. T. MITCHELL.

DRIVERS AND TWISTERS.

The new club house and grounds of the Belfast (Me.) Rifle, Rod and Gun Club are now ready for use. The grounds contain three acres of level land, in the rear of lower Congress street, overlooking Penobscot Bay. The site cannot be surpassed in the city. The club house is 14×20ft., with a broad veranda on the west side. The side of the building next the veranda contains three large doors that hang from the top. When up these doors completely open that side of the house and make a covering for the veranda. The house contains racks for guns and all the conveniences for apparatus. The club has five bluerock traps, which are ranged in the arc of a circle sixteen yards from the shooting point. A trench 2ft. deep is dug in front of the traps, which with a screen completely protects the man manipulating the traps from the shooters. The club numbers eighteen members, and has as good quarters as any club in the State. The club is indebted to C. R. Coombs for its excellent quarters.

* * *

Arthur W. DuBray, the well-known Southern representative of the Parker Gun Company, won a prize at Winchester which he values highly. It was a carving knife and fork made from wood taken from old Fort Loudon, which fort was built in the early Indian days. It was cut by hand and presented by John W. Nail, of Winchester. Mr. Nail is an all around artist, being able to perform creditably on nearly every kind of musical instrument, possessing an enviable amount of skill with the brush, and more than an average skill in carving. In his store is a gun, caisson and pair of horses, and the figure of a man holding the reins, every part of which is made from the wood mentioned above. The gun barrel was turned on a lathe, but every other part was shaped with a jack-knife. From muzzle of gun to the horses' heads is about 4ft. This fine piece of work will be exhibited in Chicago during the World's Fair.

* * *

The Forester Gun Club will hold a tournament at Flemington, N.J., on Tuesday and Wednesday, July 26 and 27. Experts will be barred. On the second day the North handicap system will be enforced, otherwise American Shooting Association rules to govern. There will be four events at 10, three at 15 and one at 20 singles each day, the entries to be $1, $1.50 and $2. A Thurman shooting blouse, Heikes hand protector and Ferris gun cleaner will be given to the shooters making the first to the third best average in all events each day. There will also be cash prizes of $4, $3, $2 and $1 for the first to fourth best average in all events during the two days.

* * *

Sportsmen all over the country will be pleased to know that fat, fair and forty A. G. Courtney, of Syracuse, has entirely recovered his health and has resumed his position as general agent for the Lefever guns. Mr. Courtney was rather unfortunate in being placed on his back several months ago by a severe attack of illness, and then just as he was almost to resume business he fell and broke his leg, his giving him another vacation of several weeks. Now he is back to his old form both as a shooter and hustler, and will soon begin to worry the trade. It is safe to say that genial "Court." will be given a hearty welcome wherever he goes.

* * *

From time to time FOREST AND STREAM receives from correspondents complaints in regard to improper working of targets, traps, ammunition, guns, rifles, pistols, etc. While our columns are always at the disposal of our readers for the discussion of any subject of interest, we must positively refuse to give room to these complaints. In the majority of cases the fault is not with the articles complained of, but is caused by improper manipulation. The proper thing to do instead of rushing into print and perhaps giving a "black eye" to a really meritorious article would be to refer the complaint in all its details directly to the manufacturer, who in all cases may be depended upon to place matters right.

* * *

The Manhattan Gun Club, through its president, ex-Alderman Flegenheimer, of Brooklyn, has issued an invitation to the clubs shooting at Dexter Park, L. I., to shoot there Aug. 3. J. B. Hoffman, M. Richtenberg and D. Meyers are the committee appointed to carry out the arrangements. There will be a band of music present and the shooters will be expected to bring their friends.

* * *

The Johnson City (Tenn.) Gun Club has issued a fine programme for its tournament, to be held the last week in July. It has added $500 in cash to the purses and will have several hundred dollars worth of merchandise as well. The programme is fully as attractive as the one which brought such a big crowd to Knoxville last month.

* * *

It was unfortunate that the Winchester Gun Association did not have a better turnout at last week's tournament. The members are a genial, whole-souled lot and did all in their power to cater to the comfort of the visitors. The bulk of the work was done by C. F. Nelson, H. McVicar, J. P. and G. W. Haddox.

* * *

Summerson and Wayman from Staunton, Va., Wagner and Hunter from Washington, D. C., Hughes, Millspaugh, Warford and Abercrombie from Williamsport, Pa., Matz, from Reading, Pa., Brelsford, Fuller Worden, Budd, Kinzer and James Wordon from Harrisburg, Pa., say they will be at the Atlantic City shoot.

* * *

Minard's Hotel will catch a large number of the shooters at Atlantic City next week. Charles C. Minard, the proprietor, is captain of the Atlantic City Gun Club, and is a popular sporter as well as boniface. Mr. Minard offers free board to the man making the highest score in the team match, provided the team boards at his hotel.

* * *

A big shoot will be held on July 4 and 5 by the Spartanburg (S. C.) Gun Club. During the shoot an Inter-State Association will be formed, to include South and North Carolina, Georgia and Florida. The programme team and individual contests at both live birds and bluerock targets.

* * *

The following are the Directors of the Lowell (Mass.) Rod and Gun Club: Dr. D. D. Snyder, George V. Gregg, Henry Burton and Mr. Knowles. Dr. Snyder is president of the club, L. A. Derby, Secretary, and G. V. Gregg, Treasurer.

* * *

H. A. Penrose informs us that at the fifth annual tournament of the Standard—Keystone Target and Trap Co., to be held at New London, Conn., Aug. 16 19, there will be $1,000 in guaranteed purses and $700 in merchandise prizes.

* * *

The Michigan State Trap Shooters' League has arranged for a series of tournaments to be held semi monthly at various places throughout the State. The first will be held at Battle Creek on July 12 and 13.

* * *

A match was shot between teams of thirteen men each from the Penn and Hillside gun clubs at Morristown, Pa., on June 11. Each man shot at twenty-five Keystone targets, the Penn team breaking 199 to their opponents' 177.

* * *

A bowling match will take place on the Brunswick Bowling Alleys in Atlantic City on next Tuesday night between teams of five men each captained by "Tee Kay" Keller of Plainfield and L. R. Adams of Atlantic City.

* * *

FOREST AND STREAM was the only paper to publish pictures of the winning teams in the Dean Richmond and New York State Championship matches at Syracuse.

* * *

The Lynchburg (Va.) Gun Club will have a big time on July 4, when it will hold its fourth annual picnic and invitation shoot. A number of valuable prizes will be contested for during the day.

* * *

The sixth contest for the Keystone trophy, open to teams of three men each from any club in Connecticut, will take place at South Norwalk on July Fourth. A fine programme of open events has also been arranged.

* * *

Old Sol got his work in in great shape during the Winchester tournament. The mercury reached 97° in the shade on Tuesday and Wednesday.

* * *

The Interstate Manufacturers' and Dealers' Association will hold its next tournament at Watertown, N. Y., on July 26. 27 and 28. This place should attract a big entry list.

* * *

R. H. Brientnall, of the Essex and South Side Gun clubs, of Newark, has been commissioned lieutenant-colonel of the First Regiment, N. G. N. J.

* * *

The Myrtle Gun Club is the title of an organization recently formed in Irvington, N. J. It has grounds on Myrtle avenue.

* * *

Kingbird targets will be thrown during the Interstate shoot in Auburn, N. Y., the second week in September.

* * *

The great tournament of the Saratoga Gun Club will be held in September instead of July, as previously announced.

* * *

The Penrose Gun Club, of Staunton, Va., is to be reorganized. The club may possibly run a big tournament this fall.

* * *

Enoch D. Miller has recovered from his recent illness and will be in his old form at Atlantic City.

* * *

The Wyandotte Gun Club will dedicate its new house and grounds, at Kansas City, Mo., on July 4.

* * *

Standard Keystone targets and Keystone traps were used during the Winchester tournament.

* * *

The Field Club, of Pottstown, Pa., will hold an all day tournament at artificials on the Fourth.

* * *

Members of the Brooklyn Bicycle Club are organizing a gun club.

* * *

Nearly every club in the country will hold a shoot on July 4.

* * *

The Dexter Park Team Trap-Shooting League will hold its next shoot on July 29.

* * *

The challenge issued by President C. P. Morris, of the Atlantic Rod and Gun Club, to shoot a team match, 15 men on a side, 10 birds a man, modified Hurlingham rules, against any club shooting on Long Island, will probably be accepted by the Emerald Gun Club, which won the State championship at Syracuse. C. H. TOWNSEND.

Yellowstone National Park.

HAVE you ever seen this world's wonderland? If not and you contemplate a trip to it the coming summer, it is well to bear in mind that the Wisconsin Central Lines is the through car route from Chicago and Milwaukee via the Northern Pacific R. R., running through Pullman Vestibuled and Tourist Sleepers without change. Meals served en route in dining cars. The Wisconsin Central Lines is also the best route from Chicago to all the delightful cool summer resorts in Wisconsin and the Northwest. Pamphlets containing valuable information will be sent free upon application to Geo. K. Thompson, C. P. & T. A., Wis. Cen. Lines, Chicago., Ill., or to Jas. C. Pond, G. P. & T. A., Chicago, Ill.—*Adv*

Great Shooting in Michigan.

LANSING, Mich., June 24.—Inclosed I send you a brief statement and scores made at the tournament held in this city under the auspices of the Lansing Rod and Gun Club, June 22 and 23. The shoot was a success from the beginning, there being shooters from Detroit, Kalamazoo, Hastings, Battle Creek, Manchester, Jackson, Ovid, Morenci, Mason, Dansville, Stanton and various other places in the State of Michigan.

During the first day's shoot the Paul North handicap was used, but it was thought at a meeting of the sportsmen held on the evening of the first day that the handicap was not severe enough, and by an unanimous vote of the sportsmen at that meeting the club were requested to increase the handicap and make it more severe for the better shots. The second day's tournament was shot under the following handicap, which has been adopted by the Michigan State Trap-Shooters' League as the handicap of that organization.

In the first event all contestants shoot from known traps and known angles the same as in the ordinary rapid-firing system. In the second event and all subsequent events every contestant winning or tieing for first money are classed as experts in the next event and shoot from three unknown traps and unknown angles, and must shoot in the following squad of the following event. All persons in the first event or any subsequent event winning or tieing for second money are classed in the next event as semi-experts, and must shoot from known traps and unknown angles in the second squad or immediately following the experts; all others shooting as amateurs with known traps and known angles. This handicap was found to work very successfully indeed, and to the satisfaction of all, both experts and amateurs. Too much cannot be said in favor of the new expert traps and the Paul North electric pull and the bluerocks manufactured by the Cleveland Target Co. The management of the traps and of the electric pull was very satisfactorily and successfully looked after by John Parker, of Detroit, who is a gentleman in every sense of the word. The handicap and the sameness of the event as to number of birds and entries, eliminate entirely that very objectionable feature that is sometimes seen at tournaments, that of shooters waiting until the last squad and then shooting or dropping for place. No tournament was ever attended by the writer where there was as little jockeying as at this one.

After several preliminary shoots, the following event, 10 singles, entrance $1. 5 moneys: Searles 9, Carpenter 7, Parker 8, Osgood 8, Cooley 7, Holt 3, Burgess 8, Haladay 8, Geer 7, Hubbard 4, Hanna 7, Howes 4, Schelling 8, Franklin 4, W. Cole 8, J. Cole 8, Wright 10, 10, Sweet 9, Carey 6, Thorburn 2.

Second event, same as first.—Semi-experts: Wright 7, Nichols 7, Searles 9, Sweet 8. Amateurs: Parker 10, Cooley 9, Howes 5, Hubbard 4, Schelling 8, Holt 6, Osgood 8, Geer 6, Hall 10. Carpenter 7, Burgess 8, Haladay 8, Tucker 10, Hanna 7, Aldrich 8, J. Cole 7, W. Cole 8, Carey 6.

Third event, same as others.—Experts: Barker 10, Cooley 10, Searles 7, Hall 7, Tucker 8. Amateurs: Grant 3, Bates 5, Howes 7, Osgood 9, Carpenter 8, Holt 7, Sweet 9, Burgess 9, Geer 5, Bower 7, Nichols 9, Haladay 8, Hanna 8, Schelling 8, Aldrich 7, Wright 10, Wm. Cole 7, J. Cole 6, Seagrist 7, J. Sweet 5, Cary 5, Drew 9.

Fourth event, same as others.—Experts: Parker 9, Carey 7, Wright 6, Osgood 6, Sweet 8, Burgess 7, Nichols 8, Drew 7. Amateurs: Searles 8, Waters 7, Hall 9, Howes 7, Tucker 8, Carpenter 8, Haladay 8, Hanna 7, Bates 8, Bower 9, Grant 5, Holt 9, Geer 6, Schelling 7, Beardsley 6, Seagrist 5, Dowding 5, Carey 6.

Fifth event, 25 singles, experts:

Parker	1011111001111111111111111—22
Carpenter	1111111111111101110111111—22
Tucker	1111101111011111111100110—21

Sixth event, 15 singles.—Experts: Nichols 13, Searles 13, Wright 15, Hall 5. Amateurs: Tucker 13, Houghton 12, Cooley 15, Schelling 13, Burgess 13, Howes 8, Parker 15, Schelley 13, Haladay 13, Carpenter 13. Holt 11, Bower 13. Seagrist 12, Cole 9, Grant 11, Drew 12, Beardsley 6.

Seventh event.—Experts: Wright 11, Cooley 12, Parker 14, Bower 3. Amateurs: Sponigle 12, Hall 13, Bates 8, Halladay 12, Schelley 12, Holt 8, Searles 11, Burgess 9, Davis 13, Waters 13.

Eighth event.—Experts: Parker 12, Tucker 15, Nichols 11. Amateurs: Osgood 13, Searles 13, Hall 11, Drew 10, Carpenter 12, Wright 12, Sponigle 15, Schelling 10, Cooley 15, Schelley 11, Davis 4, Holt 11, Halladay 11.

Ninth event, 10 singles.—Experts: Tucker 10, Cooley 8, Searles 8, Sponigle 7. Amateurs: Hubbard 5, Davis 3, Tompson 7, Haughton 5, Bower 8, Sweet 8, Hall 5, Dowding 2, Waters 7, Schelling 9, Nichols 10, Holt 9, Carpenter 8, Halladay 8, Geer 7, Beardsley 7, Parker 9, Bates 4, Searles 10, Osgood 9, Bolter 5, Cole 6, Wright 6, Bell 6.

Tenth event.—Experts: Nichols 8, Tucker 10, Searles 7, Schelling 6, Parker 9, Holt 10. Amateurs: Cooley 8, Sponigle 8, Hall 7, Geer 7, Waters 10, J. Sweet 4, Tompson 5, H. Sweet 8, Halladay 8, Carpenter 8, Bolter 7, Aldrich 8.

Eleventh event.—Experts: Parker 9, Tucker 8, Waters 7, Holt 8. Amateurs: Bower 9, Haladay 7, Houghton 6, Thorburn 3, Nichols 10, Cooley 10, Searles 10, Sponigle 10, Howes 6, Schelly 9, Wright 9, Tompson 5, Hall 7, Geer 8, Sweet 9, Bolter 5, Huntley 8, Fishburn 7, Carpenter 7.

John Parker, of Detroit, won the first prize for best general average, and J. E. Nichols, of Lansing, the second prize for best general average.

Following the programme were three sweeps of 5 birds each: Haladay 4, Davis 3, Cooley 2, Holt 3, Bell 2, Aldrich 2, Schelling 4, Tucker 3, Sponigle 3, Nichols 3, Searles 5, Parker 2. These were shot at unknown traps and unknown angles.

Another event of 5 pairs was shot: Parker 6, Nichols 8, Schelling 7, Sponigle 4, Cooley 7, Holt 5, Aldrich 7.

Second Day.

This proved to be a very fine day for trap-shooting. For about one hour the first day it rained in torrents, but as the shooters were amply protected from the rain the shooting continued unabated.

The first four events of the day were 15 bird races, and resulted as follows: Parker 14, Searles 11, Nichols 10, Tucker 13, Wright 13, Holt 14, Shiefler 14, Drew 11, Cooley 8, Ettiene 11, Scheeling 13, Sponigle 13.

Second event.—Experts: Holt 11, Shiefler 13, Parker 15. Semi-experts: Tucker 11, Wright 12, Schelling 13, Sponigle 13. Amateurs: Ettiene 12, Cooley 12, Drew 14, De LaVergne 13, Nichols 13, Huntley 13.

Third event.—Experts: Drew 10. Semi-experts: Shiffler 12, Schelling 13, Sponigle 11, DeLaVergne 12, Nichols 10. Huntley 10. Amateurs: Tucker 15, Parker 13, Hall 11, Searles 13, Ettiene 12, Holt 9, Cooley 12, Carey 7, Fishburn 9, Wright 11.

Fourth event.—Experts: Tucker 12. Semi-experts: Searles 11, Amateurs: Sponigle 12, De LaVergne 12, Nichols 14, Parker 14, Cooley 10, Shiffler 8, Drew 13, Ettiene 12, Wright 11, Schelling 11, Huntley 10, Hall 6, Holt 11.

The fifth event was a three-men team race, $3 entry, 30 birds to each man. The teams were made by placing the names of each shooter in a hat and drawing three names therefrom to make the first team and so on until the names were exhausted, in all 18. The first team was:

Shiffler	111011111011101111—17	Holt	111101111111101111110—17
Hanna	101110110101111101111—15	Ettiene	110011010101111111111—14
Cooley	111101101101111011110—15	Tucker	111111111111101110111—18
	—		—
	47		49
Drew	111010110111101111111—16	Hall	111101111110101010111—16
Thorburn	111001101111111111111—17	Wright	111111111111011111011—18
Parker	111111111111111111111—20	Huntley	101111111111111111011—18
	—		—
	53		52
L'Vergne	111111111111111111110—19	Scarles	111011111110110111111—17
Fisburn	111101111111111110011—17	Nichols	111111111111111111011—19
Schelling	110111111011001111111—17	Sponigle	101111011111111110111—17
	—		—
	53		53

Sixth event, 20 singles.—Experts: Nichols 17, Parker 16. Semi-experts: Drew 17. Amateurs: Shiffler 18, Searles 16, Cooley 16, Tucker 19, De LaVergne 15, Holt 14, Schelling 20, Sponigle 18, Scheller 15, Wright 14, Ettiene 15, Hall 15, Davis 12, Huntley 17, Fishburn 14.

Seventh event, 10 singles.—Experts: Schelling 9. Semi-experts: Tucker 7. Amateurs: Searles 10, Hughes 9, Bolter 5, Hanna 4, De LaVergne 8, Hall 6, Parker 9, Ettiene 6, Shieffler 7, Nichols 8, Scbelley 8, Holt 6, Wright 10, Cooley 7, Sponigle 6, Aldrich 9, Drew 10, Sparrow 7, Cole 7, Carey 8, Fishburn 8, Huntley 7.

Eighth event.—Experts: Searles 8, Wright 7, Drew 9. Semi-experts: Schelling 9, Hughes 7, Parker 9, Aldrich 7, Nichols 8, Ettiene 9, Sparrow 9, De LaVergne 10, Schelley 9, Holt 7, Shieffler 9, Tucker 8, Cooley 8, Carey 6, Sponigle 9, Bolter 4, Hughes 8, Akers 8, Houghton 8.

This ended the programme events. After which the following extra sweeps were shot with no handicap: Parker 9, Schieffler 8, Cooley 7, Tucker 8, Schelling 9, Holt 9, Ettiene 5, Drew 9, Wright 6, Thorburn 6, Nichols 8, Huntley 8.

Second extra event: Parker 4, Tucker 9, Schelling 8, Shieffler 9, Cooley 10, Holt 7, Ettienne 6, Drew 9, Carey 5, Searles9, Hanna 9, Sponigle 10, Nichols 10.

Third extra event: Searles 8, DeLaVergne 9, Schelling 10, Cooley 9, Sparrow 7, Drew 10, Sponigle 8, Hall 6, Parker 8, Nichols 9, Wright 9, Holt 5.

Fourth extra event: Nichols 9, De La Vergne 10, Cooley 9, Sparrow 8, Schelling 9, Holt 9, Sponigle 10, Drew 7, Searles 10, Bell 4, Wright 9. Hall 7.

Fifth extra event: Nichols 9, Schelling 9, Cooley 10, Sparrow 9, Parker 8, Holt, 6, Drew 10, DeLaVergne 8, Sponigle 9, Davis 9, Searles 9, Carey 7.

Sixth extra event: Nichols 9, Drew 10, Sparrow 5, Cooley 9, Searles 9, Holt 9, Schelling 9, DeLaVergne 9, Sponigle 10, Shubel 5, Bell 6, Hall 8.

Extra team race, teams of three men, 10 birds, each team selected as before by placing all names in a hat and drawing therefrom. First team:

Schelling	1111101111—9	Nichols	1111111111—10
Holt	1111011101—8	Sparrow	1111111110—9
Drew	1001111111—8—25	Sponigle	1011111100—7—26
	Hall	0101100111—6	
	Cooley	1111111111—10	
	Parker	1111111111—10—26	

Ties shot off at three birds each.

Nichols	4	Hall	4
Sparrow	5	Cooley	2
Sponigle	4—13	Parker	5—11

Ninth event: Nichols 10, Sponigle 8, Sparrow 10, Schelling 7, Cooley 8, Holt 10, Parker 8.

Schelling and Parker issued a challenge to the crowd to shoot any two men a race. Of course the challenge was at once taken by Cooley and Nichols:

Schelling	1110101111—8	Cooley	0111111111—9
Parker	0111111011—8—16	Nichols	1111101111—9—18

As the last shot was fired the sun was sinking behind the dome of the Capitol building. And thus ended the third annual tournament of the Lansing Rod and Gun Club. A very pleasant shoot. And the handicap adopted by the Michigan State Trap Shooters' League gave entire satisfaction the last day of the shoot, the Paul North handicap not proving severe enough. The club anticipates holding another shoot in the fall, the latter part of September, under the auspices of the Michigan State Trap Shooters' League. J. E. N., Sec'y.

Waverly Gun Club.

WAVERLY, Ia., June 17.—The tournament of the Waverly Gun Club, held at this place June 15, 16 and 17, was fairly attended. The weather was warm and sultry, and the scores fairly good. Among those in attendance were E. E. Hageman, Independence; George Henderson, Bob Wolverton and Noah Watkins, Cedar Rapids; C. W. Grubb, representing Montgomery Ward & Co., Chicago; Edmonds, Hollister and Cleveland, of Manchester; C. Legg, J. E. Fuzzell and C. A. Smith, Dunkerton; Hon. J. G. Smith, Algona, and C. W. Budd; Des Moines. The officers of the club are: C. R. Travers, President; W. H. Babcock, Secretary; Guy Vandevere, Treasurer. They made it pleasant for the visiting sportsmen.

No. 1, 10 singles, $1.50 entrance:

J J Smith	1111111111—10	Taylor	0010000010— 2
Henderson	1111111111—10	Steineck	1101111011— 8

The Linden Grove Gun Club.

THE members of the Linden Grove Gun Club faced the hot sun on June 25 at Dexter Park and had some good shooting at both five birds and targets. In the regular medal shoot at 7 five birds, Hurlingham rules, the scores were:

Regular club shoot, 25 birds, rise: P. J. Eppig 6, W. Kelly 4, J. Lisy 5, F. Ibert 6, C. Horney 4. S. Hesbach 6, L. Neir 4, H. McLaughling 7, W. Cunningham 6, J. Birmel 7, I. Martin 4, T. Eich 3, F. Weissenborn 5, W. Follmer 4.

Regular bluerock match, 10 targets: P. J. Eppig 5, W. Kelly 0, F. Ibert 5, C. Horney 5. S. Hesbach 0, L. Neir 2. H. McLaughlin 2, W. Cunningham 4, J. Birmel 8, I. Martin 5, T. Eich 5, F. Weissenborn 5, W. Follmer 4.

First sweepstake, 10 bluerocks each: P. J. Eppig 7, F. Ibert 5, F. Weissenborn 3, C. Horney 2, T. Eich 2, J. Birmel 7, H. Greenville 7, S. Hesbach 1, Fordell 9, J. Link 8. Ties for third money, miss and out: H. Greenville 3, P. Eppig 2, J. Birmel 0.

Second sweepstake, 5 live birds: S. Hesbach 5, P. J. Eppig 8, F. Ibert 2.

Third sweepstakes, 5 live birds: S. Hesbach 5, P. J. Eppig 4, F Ibert 3.

Fourth sweepstake, 5 live birds: S. Hesbach 5, F. Ibert 4, P. J Eppig 2.

Down in Hunterdon County.

FLEMINGTON, N. J., June 23.—The following scores were made here to-day by three members of the Flemington Gun Club in a match at 25 Keystones each, 3 traps, rapid-firing system, under American Shooting Association rules. The wind blew a gale from the northwest, and as the central score line points due east, the shooting was very difficult:

Lott (Ithaca, 7lbs. 12oz., 12g.)	1110111111010011111100111—19
Hyde (New Baker, 7lbs. 9oz., 12g.)	1101110111111100110010111—18
Scott (New Baker, 7lbs. 9oz., 12g.)	0001011101111111101100111—17

U. S.

The Union Gun Club.

THE sixth monthly shoot of the Union Gun Club took place at Springfield, N. J., on June 22, the day being an intensely hot one. In the members' class shoot at 25 Keystones each, the following were the winning scores:

Class A.

Breintnall	1111111111110111011111—23
Sigler	1010011111101011111111110—19
W Smith	1100110101101111101011—18

Class B.

A Sickley	0110111111111111111110—22
Drake	0010101111111111111111111—21
Pudney	1010111110101011111111—20
J Briant	0011100000111111110011111—16

A number of ten target sweeps, $1 entry each, resulted as follows:

	1	2	3	4	5	6	7
Breintnall	6	8	6	..	8	..	..
Sigler	10	8	7	8	7	7	9
Smith	8	8	9	8	8	9	10
Drake	9	7	5	7	10	9	9
Miller	10	8	10	10	10	9	9

No. 2 and 3 were at 5 pairs each.

In the Shenandoah Valley.

"OH for a whiff of Arctic air," sighed the participants in the tournament of the Winchester Gun Association last week. But the whiff came not until after the shoot was ended.

It was 5 P. M. on Monday, June 20, when the writer left New York for Winchester, and then the air was close and sultry, it being impossible to sleep even on a Pullman. After passing Washington the weather was hotter than at the start, and beyond Harper's Ferry it was impossible to keep anywhere near comfortable, despite the aid of open windows and fans. At Harper's Ferry I was joined by Arthur W. DuBray, the well-known traveling man for the Parker Gun Company, his being the only familiar face seen en route. When Winchester, Va., was reached there was a quick moving to the Hotel Michigan, a refreshing washdown and change from boiled shirts to flannels, after which a pleasant drive of about two miles over a well-kept pike brought us to a bluff on the summit of the Shenandoah Mountain, where the shooting grounds are situated.

The Winchester Gun Association has no regular club house, but on this occasion it had improvised a shooting box from a combination of wood and canvas, which served its purpose of keeping the shooters in the shade. The grounds are situated in one of the garden spots of the Shenandoah Valley, in the heart of the region where some of the heaviest battles of the civil war were fought. Sherman, Banks, Early, Jackson, Stuart, and other noted generals had a number of pleasant (?) meetings in this vicinity, and it was here that Reed received the inspiration which materialized into the famous poem known the world over as "Sheridan's Ride." When it is remembered that no less than sixteen times did Winchester change ownership during the war, it is not surprising to hear even the youngsters of the town talk glibly of the stirring times from '61 to '65.

Upon reaching the ground I found that the sport had already begun, although the turnout was not as heavy as was anticipated. This applies only to the sweepstakes, in which cash entrances were exacted. In the merchandise events, with no entry fee beyond the bare cost of the birds, the entries ran as high as thirty-six, while in none of the others did they exceed a baker's dozen. Among those present on the opening day were Arthur W. DuBray, of Cincinnati, O.; Bryan Talliaferro, of Jacksonvilla, Fla.; Chas. E. H. Brelsford, H. M. F. Wordon and Budd Kinzer, of the Harrisburg (Pa.) Shooting Association; Wm. F. Summerson, Dr. E. F. Wayman and Wm. McDonald, of the Penrose Gun Club, Staunton, Va.; L. C. Gurley, C. J. Thatcher, J. W. Burkhardt and J. S. Bowers, of Martinsburg, Va. It was rather hard that right here in a place where every man and boy owns and knows how to properly handle a gun the turnout of local shooters should have been so lamentably small. Had it not been for the visitors there would have been a bare squad in each event.

The members of the local club who were present did all in their power to make the visitors feel at home, and they succeeded admirably. To make any one feel comfortable, however, was out of the question, as from early morn until it disappeared over the mountain peak, the sun threw out a scorching heat and there was no breeze to counteract its effect.

The most interest during the day was centered in contests Nos. 3, 6 and 8, in which merchandise prizes were awarded. In No. 3, Henry M. Vicar of the local club won first prize, a sole leather gun case; second prize one gallon of old gray whiskey, was won by C. E. H. Brelsford. In No. 6, Budd Kinzer won first prize, $5 cash. In No. 8, Wm. McDonald won a half-dozen silver-plated knives and forks.

Below is a summary of the day's work; the conditions being as follows:

No. 1, 10 singles, sweepstake, entrance $1; No. 2, 15 singles, sweepstake, entrance $1.50; No. 3, 15 singles, merchandise event, no entrance; No. 4, 20 singles, sweepstake, entrance $2; No. 6, 20 singles, merchandise event, no entrance; No. 7, 20 singles, sweepstake, entrance $2; No. 8, 15 singles, merchandise event, no entrance; No. 9, 15 singles, sweepstake, entrance $1.50; No. 10, 10 singles, sweepstake, entrance $1.

Talfo.....1111111111111111—15—26	J Haddox.1111011101011111—12—25

Extra events.—No. 1, 10 singles, $1: Talfo, McVicar 9 each, Summerson, G. W. Haddox, DuBray 8 each, H. H. Baker, McDonald, P. Miller 7 each, Zerkle, Wayman 5 each.

No. 2, same: Wayman 9, G. W. Haddox, DuBray, J. Haddox 8 each, McDonald, Summerson 7 each. Talfo, McVicar 6 each, Anderson, Fuller 5 each, H. Baker, P. Miller 4 each.

No. 3, team race, 10 targets per man:

G Haddox	8
Talfo	9
J Haddox	8
McVicar	8—33
DuBray	7
Wayman	9
Summerson	10
McDonald	7—33

On shoot off, same conditions. DuBray's team won by 29 to 33.

No. 4, 10 singles: Anderson 10, G. Baker 8, Zirkle 7, L. Miller 5, P. Miller 5, Wiggington 4, J Miller 3.

The Second Day

was another scorcher, with no air. The attendance was a little better than on the opening day, but still did not come anywhere near the expectations of the management. Among the new comers were Dr. Warfield and Messrs. Peter and West, of Rockville, Md.

The event of the day was regular No. 5, at 25 targets per man for a handsome silver cup, emblematic of the championship of Virginia. This cup was presented by Wm. F. Summerson, of Staunton, Va. This match is open only to *bona fide* residents of the State, the winner of the cup to hold it subject to rules formulated by the donor. There were fourteen entries, the result being a victory for J. P. Haddox by the appended scores:

J P Haddox	1111111111111001111111101—22
F F Wayman	1111101101111111011111110—21
C F Nelson	1111111110101111111111001—21
G W Haddox	1111111111111100111001—20
H H Baker	1110110111010111111111001—19

F. O. Miller 16, J. Polhemus 13, G. Wigginton 15. J. D Miller 9, G. Zerkle 10, L. Miller, Wm. McDonald and H. McVicar withdrew.

Below are the conditions and results of the events shot to-day: No. 1, 10 singles, sweepstake, entrance $1: No. 2, 15 singles, sweepstakes, entrance $1.50; No. 3, 15 singles, merchandise shoot, no entrance; No 4, 10 singles, sweepstake, $1; No. 6, 20 singles, merchandise event, no entrance; No. 7, 20 singles, sweepstake, trance $2; No. 8, 15 singles, merchandise event, no entrance; No. 9, 15 singles, sweepstake, entrance $1.50; No. 10, 10 singles, entrance $1:

Extra No. 1. 15 singles, $1.50: West 13. Summerson 12, McVicar 12, Wayman 11, G. Haddox 10. Fuller 9. Du Bray 9, Talfo 8, Brelsford 8, J. Haddox 8, McDonald 8, Kinzer 7.

No. 2, 10 singles, $1: Wayman 9, Kinzer 9, Polhemus 8, J. Haddox 8, McVicar 8, West 9, Seal 7, McDonald 7, Jones 5, H. Baker 7, Du Bray 7, Summerson 6, Talfo 6, Breisford 6, G. Haddox 7, Fuller 6.

No. 3 same: Wayman 10, Brelsford 10, McVicar 9, Kinzer 9, G. Haddox 9, J. Haddox 8, West 8, Anderson 8, Fuller 7, Sommerson 7, Baker 7, Talfo 7, Seal 5, Warfield 5, Heater 4.

No. 4, 10 singles, $1: McVicar 10, G. Haddox 9, Kinzer 7, Brelsford 7.

No. 5, 15 singles, $1.50: Brelsford 13, G. Haddox 12, McVicar 10.

The Third Day.

Another scorching-hot morning, but toward noon a breeze came along which made breathing easier. The attendance had simmered down once more and only a few enthusiasts were on hand.

No. 1, at 10 singles, $1, had six entries. The scores were: Wayman 10, McVicar 9, Summerson 8, West 8, G. Haddox 8, J. Haddox 7.

No. 2, 15 singles, $1.50: Fuller 13, Summerson 12, McVicar 12, Brelsford 12, Kinzer 11, J. Haddox 11, West 11, Wayman 10, Talfo 10, G. Haddox 9, Du Bray 9.

No. 3. 20 singles, $2: Fuller 19, Kinzer 17, Wayman 17, West 17, Brelsford 16 J. Haddox 16, McVicar 16, Summerson 14, Nelson 13, G. Haddox 13, Du Bray 11, Talfo 8.

No. 4, 15 singles, $1.50: McVicar 14, Wayman 13, Brelsford 13, Kinzer 12, Fuller 12, Nelson 11, Talfo 10, West 10, Du Bray 9, J. Haddox 7.

No. 5, 10 singles, $1: West 10, Kinzer 9, G. Haddox 7, McVicar 7, Du Bray 7, J. Haddox 7, Fuller 7, Talfo 6, Wayman 5, Brelsford 5.

No. 6, extra merchandise shoot, 15 singles:

J P Haddox	...111101110000111—10
Polhemus	...111100111111100—11
West	...111111111111110—14
McDaniel	...010101110111010— 9
DuBray	...111111111111111—15
W Alexander	..101010010010000— 5
Fuller	...000101011111110— 9
P W Miller	...100001100000101— 5
Wayman	...110110111111111—13
Nelson	...101110101011011—10
Dusing	...011101111111110—12
Brelsford	...110001010111011— 8
F Anderson	...111010100101111—10
Wigginton	...110101001000000— 5
G Haddox	...101000111110000— 8
Thatcher	... .111111111111111—15
Kinzer	...001111111111100—11
Talfo	...011101001111110—10
H H Baker	...110111010111101—12
Sommerson	...111101111111111—14
J B Brown	...000010000000000— 1

On the shoot-off of the ties Thatcher won first prize, one year's subscription to FOREST AND STREAM; E. M. West won second, same as above; Wayman won third; Polhemus fourth; Baker fifth and Talfo sixth.

This wound up the regular programme, being followed by the monthly medal shoot of the club, at 25 singles. This was also made a sweepstake event in order that the visitors might have a share of the sport. The scores follow:

Summerson	1111101101010111111101110—19
Wayman	0111011100100010011101111—15

*DuBray	1110010101110111001111110—16

*Non members. †Re-entries. McVicar won the club medal.

Next came a drawing for a high-grade L. C. Smith gun, presented by the Hunter Arms Company. Every squad ticket issued during the tournament had been numbered and coupons corresponding with these numbers were placed in a satchel and thoroughly shaken. Then little Miss Haddox, the 12-year-old daughter of G. W. Haddox, inserted her hand in the satchel and drew forth one coupon. Upon comparing numbers it was found that the gun had become the property of Henry McVicar.

Just about the time the drawing was completed occurred an incident which had not been included in the programme. When it was decided that no more events would be shot Wm. F. Summerson discovered that his gun, a high grade Parker, could not be found. A thorough search was made without avail. Then some of the party bethought themselves that a stranger had been loitering about the grounds during a portion of the day and that just as the shooters were interesting themselves in the drawing the stranger had been seen to stroll to the gun rack, look over the lot and finally pick up one with which he leisurely walked toward the entrance and then down the lane. It was noticed that the fellow appeared to be tipsy. At once a hue and cry was raised and two parties started to overhaul the stranger, one party following in his footsteps and the other going across the fields to intercept him before he could get into town. The latter party accomplished its object, Mr. F. Anderson coming up with the sneak thief and demanding the gun. The marauder demurred, claiming that the gun was his own property, having been won by him at the shoot that day. This was rather a comical stand to take as on the stock of the gun was a gold plate bearing Mr. Summerson's name. The gun was taken from the chap, who was marched back to the shooting grounds. As Mr. Sumerson was entirely satisfied to recover his property he insisted that the thief be let go, with the understanding that he be given two hours in which to leave the town. A short time afterward, however, some of the town officials arrested the fellow and notified Mr. Summerson to appear against him. This the Staunton man refused to do, so the thief was again released and ordered from town. He was not a native of the town and was unknown to any one there.

Lynn Annual.

LYNN, Mass., June 18.—The Lynn Game and Fish Protective Association, organized some months ago, held their third annual tournament at the club grounds, Swampscott, yesterday. It was a day of excellent shooting, some fine scores being made by resident and visiting sportsmen. The delegation was somewhat small in the morning, owing to the intense heat.

At 9 o'clock shooting began from two sets of three traps each. All birds were thrown at unknown angles. The Boston "Hub" target and Keystone traps were used and gave excellent satisfaction. Among the visiting sportsmen were noticed George Godfrey, representing the Newburyport Gun Club; W. F. Brown, the Worcester Sportsmen's Club; Messrs. Beck and Rowell, of the Seabrook Gun Club. Mr. John Dorg captained all matches of the day, while Oscar J. Purdy filled the position of scorer. The club members did finely in entertaining their guests. Dinner was served at noon by the famous "Night Owl."

The highest averages of the day were made by W. F. Brown, with 86 per cent. Mr. Godfrey closely followed, with 84 per cent.; Dorg, 82 per cent.; Forbes, 78 per cent.; Alley, 68 per cent.; Beck, 64 per cent., and Ulman, 60 per cent. Following are the scores:

Nos. 1, 2 and 3, at 3 bluerocks each:

The Emerald Gun Club.

THE monthly shoot of the Emerald Gun Club drew a fair number of members to Dexter Park on June 22. The day was warm but nevertheless the birds flew well.

Before the regular club shoot the ties for the second medal at the last shoot of the club were shot off. A bird killed with a second barrel counted as one-half. H. Thau won with a straight score of 5; R. Regan 4½; W. Hartie 1; J. Moore 0.

The regular club shoot followed at 10 live birds, in three classes: A, B and C. Class A at 28 and 30yds.; B and C, 25 and 21yds. The first medal was won by E. Doeinck with a straight score of 10. The second medal was won by W. Hogan with 8. Score of shoot:

E. Doeinck, 23yds. 10; Col. J. H. Voss, 30yds. 9; W. Hogan, 21yds. 8; J. Maesel, 28yds. 8; Dr. Hudson, 28yds. 7; H. Thau, 25yds. 7; W. Hartie, 25yds. 7; R. Regan, 21yds. 7; W. Thompson, 25yds. 7; M. J. Quinn, 25yds. 7; L. Henry, 30yds. 6; G. Nowak, 25yds. 6; J. H. Moore, 25yds. 6; N. Maesel, 25yds. 6; Dr. Loveridge 28yds. 6; L. C. Gehring, 30yds. 6; P. Butz, 28yds. 5; Dr. Horn, 25yds. 5; J. Borel, 25yds. 4; C. Gwindell, 25yds. 4; T. Barnes, 25yds. 3; J. Porter, 21yds. 2;

A sweepstake at 5 live birds, 28 and 30yds. rise, was won by Col. Voss with 5 straight. E. Doeinck, L. Henry, W. Thompson and M. Hayden divided second money.

Passaic City Gun Club.

PASSAIC, N. J., June 18.—Enclosed you will find the scores of a match between this club and the Woodside Gun Club of Newark, N. J., held at the Woodside grounds this afternoon, resulting in a victory for the Passaic Club by 180 to 172.

Passaic Club Score.		Woodside Score.	
B. F. Abbott	15	F. Walters	21
Chas. Vermad	21	P. H. Cockafeir	15
I. H. Hall	17	Carl Von Lengerke	13
H. K. Beatty	15	C. Byram	11
A. W. Shaw	20	S. Cockafair	22
L. M. Stone	15	Oustertrant	17

Lynchburg Gun Club.

LYNCHBURG, Va., June 21.—The gun club held its weekly shoot this P. M. While the shooting was going on the "saucer smashers" were surprised by a treat in the shape of raspberries, cream and cake, served in elegant style, by Mrs. Geo. W. Langhorne, whose residence is near the club grounds. The capacity for eating that those tobacco chewers developed at short notice was something wonderful. However, they lived to finish the following scores:

No. 1, 5 bluerocks each man:

Terry .....10111—4 Smith.....10101—3
Nelson .....01010—2 Dornin.....10111—4
Moorman.... .. ..11100—3 Cleland.....11111—5

No. 2, 10 bluerocks:

Terry .....1111111111—10 Smith.....1101111111— 9
Nelson.....1100000010— 3 Dornin.....1101111111— 9
Moorman.....1110111111— 9 Cleland.....1111111110— 9

No. 3, for badge, 9 singles and 3 pair:

Dornin.....111011111 01 00 00—10 Withers...110100001 00 10 10— 6
Nelson.....100010111 10 10 00— 7 Adams ....001101011 10 11 10— 9
Terry.....110111111 10 10 10—11 Cleland... 111111111 11 00 10—12

Dornin..... 8 9 Terry.....10 10 Nelson..... 7 6
Cleveland..... 8 8 Moorman..... 8 9 Clark 7 6
Durphy..... 5 5 Adams.... ..... 7 6 D.

The Summer Season at Hollywood.

THE Hollywood Gun Club opened its summer season at Long Branch, N. J., on June 24, the initial contest being the Overture Prize shoot, first prize being a magnificent silver pitcher valued at $200, second prize value $50, and third prize value $25. The conditions were 15 live birds each, Monaco boundary, the handicaps ranging from 26 to 31yds., five traps, $15 entrance fee. John S. Hoey was referee and Harold B. Wallack, of the Central Gun Club, official scorer. It was 2 P. M. when the contest began, there being seventeen entries as follows: Fred Hoey, 31yds.; Moore, 26; Thompson, 31; Kittridge, 28; Doland, 29; Capt. Money, 31; Ladew, 27; Davenport, 30; Duryea, 28; Brokaw, 28; Harrold, 28; Work, 30; N. Money, 28; P. Daly, Jr., 28; Dr. Wilson, 28; Williams, 30; Post, 26.

Under the rules the shooter missing two birds drops out until the contest is finished, and then if he has an opportunity of winning he has the privilege of making an effort. Fred Hoey was the first to drop out. Moore, Thompson, Kittridge, Dorland, Davenport, Daly, Wilson and Williams dropped out on the seventh round. Capt. Money retired with one miss in the eighth round, Brokaw with four in the eleventh, Harrold with four in the fourteenth, and Post with three in the thirteenth round.

This left Duryea, Work and Noel Money in with fourteen straight kills. Work was the first of the trio to miss. Duryea followed next. This left Money in alone and he had only to kill his twenty-third straight to win, which he did easily. The three prizes were then awarded to these gentlemen: First, to Noel Money, of Oakland, N. J.; second, to H. L. Duryea, of Red Bank, N. J., and third to George Work, of New York.

Big Tournament in Newark.

THE Newark (N. J.) Shooting Society will hold its forty-first annual prize and King shoot at the Newark Shooting Park on July 4 and 5, the following prizes being offered:

Ring target, open to all, any rifle. Tickets (3 shots), for $1. Re-entries unlimited. Aggregate of three tickets to count for first three prizes; two tickets for next three prizes; one ticket for all other prizes. No shooter to take more than one prize and one premium. Ties to be divided. Twenty prizes, $50 to $1. Premiums for best five tickets, $10, $7, $3.

Bullseye target, open to all comers, any rifle. Tickets (10 shots), for $1. This target has a black of 12in. diameter, bullseye in center of 3in. diameter. Only shots in the bullseye count. Re-entries unlimited. Prizes to be awarded for the best center shots. Fifteen prizes, $25 to $1. Premiums, $10, $6, $4, $2, $1.

Target of honor, open only to members of the Newark Shooting Society. Prizes—The annual King's medal, presented by the Society to the member making highest score who has not already won a King's medal, and all prizes offered by members and their friends.

The Boston Shooting Association.

WELLINGTON, June 25.—There was a fair attendance at the regular weekly shoot of the Boston Shooting Association this afternoon and good scores were made Merchandise match, 15 singles and five pairs. Class A—Stanton 24, Bradbury 23, Comee and Jones 22, Stone and Sanborn 20. Class B—Daniels and Bradstreet 22, Gale and Warren 20, Gove and Amsden 19. Class C—Parker 20.

A Reply to "Rustic."

HUTCHINSON, Kans., June 13.—In your last issue I noticed a communication from "Rustic," in which he seems to think that the State Association made a mistake in locating their State tournament for '93 in McPherson. Now, I wish to state as a member of the McPherson Gun Club that I have attended every tournament held by the association since its organization, and our club has always been well represented, too. We have a representation of twelve members this year, and most of them shooters who took part in nearly all the events, as the scores will show. I will say this to "Rustic"—if Kansas City, Kans., or any of the other large cities of Kansas want the State shoot, why don't they come after it? I expect the tournament next year will be the grandest meeting ever held by the association. Although I do not live in McPherson, but at Hutchinson, 27 miles from there, I am a member of their club, and will say that McPherson has as good grounds and as fine a set of sportsmen who are well up in the "art" as you will find anywhere. Your worthy correspondent also states that trap shooters in the eastern part of the State can better afford to shoot than their western brethren. Granting this to be true how would we poor Westerners be able to get to Kansas City, Kans.? If Brother Rustic will take the trouble to carefully look the scores over he will find that the poor "starvelings" from the West greatly outnumbered the bloated bondholders from the effete East. Now, if Kansas City, Kans., wants the State tournament in '94 let her come after it, and no one will be more willing to see it go there than yours respectfully. WILL ALLEN.

HUTCHINSON, Kans.

New London.

NEW LONDON, Conn., June 22.—Inclosed we hand you scores made at the regular weekly shoots of the New London Gun Club during the past month or so, which we will be pleased to have you run:

April 22.—Club race, 25 Keystones: Penrose 24, Cady 22, Strong 21, Ames 23, Dunbar 20, Clinton 17, Bush 21.

May 6.—Club race for medal, 25 singles: Ames 22, Dunbar 20, Hibbard 19, Bush 21, Clinton 20, Conner 20.

May 13.—Club race: Penrose 24, Strong 20, Ames 22, Hibbard 17, Connor 20, Bush 15, Clinton 14.

May 20.—Club race: Penrose 20, Cady 21, Strong 17, Ames 18, Bush 13, Clinton 18, A. Hebbard 17, Dunbar 20, G. Dart 11.

June 17.—Club shoot for medal: Ames 18, Penrose 21, A. Hebbard 22, Bush 22, C. Ames 18, D. Atwood 16, Clinton 11. Tie: Hebbard 14, Bush 15.

Team shoot, expert rules:

Blooming Grove Summer Tournament.

THE Blooming Grove Park Association will hold its mid-summer tournament at its park, in Pike county, Pa., on July 2 and 4, the events to be as follows:

Live bird contest, two prizes, 15 birds, handicap rise, 28, 27, 26 and 25yds., men allowed one miss to be scored as no bird; ties at 3 birds, no allowance; entrance fee $6, 10 entries required, double entries allowed.

Clay bird contest, new subscription cup: 25 clays, ties at 5 clays, entrance free to all those who have subscribad for this cup, all other members may enter upon subscribing $5; handicap distance 10 and 12yds., one trap; 14, 16 and 18yds., three traps, unknown angles, winner to go back 2yds. each time. The person winning this cup three times retains it. It has been won once by Mr. Cruger, score 21.

Rifle contest, three prizes: 200yds. off-hand, only open sights allowed, 10 shots, Creedmoor target; ties 5 shots; 10 entries required, entrance fee $5, double entries allowed.

Fly-casting, three prizes: Each contestant handicapped by his best record at any of the club's previous tournaments, entrance fee $2.

The Wilkesbarre Gun Club.

WILKESBARRE, Pa., June 25.—Following are the scores made at the practice shoot of our new gun club on Saturday June 25. All are beginners at trap shooting with the exception of Park and Ely. The grounds are situated near the Wilkesbarre gun factory. Bluerock targets were used and thrown hard. First match, 25 singles, known angles:

T Ely.....1111111111111111111111110—23
W K Park.....1111101101111111011111011—21

W. BARRE.

Sykes Wins the Newton Badge.

The Atlantic Rod and Gun Club held its regular shoot at the West End grounds, Coney Island, on June 23, eighteen members reporting for the shoot for the Newton badge and extra prizes. Each man shot at ten live birds, club handicap, modified Hurlingham rules. The scores follow:

Regular Shoot, 10 birds each: A. Boyle, 8, J. Voorhees, 9, T. Buckley, 8, W. Boyle, 9, C. Furguesen, Jr., 9, G. Nostrand, 8, D. Monsees, 9, H. Kronika, 9, M. Bonden, 6, W. Sykes, 9, R. R. Street, 10, H. Balzer, 9, Chris. Meyer, 9, R. Dwyer, 10, C. E. Morris, 10. G. Kleist, 8, W. Weber, 6, C. A. Sykes, 10.

Ties for Newton Badge and First Prize: R. R. Street, 3, R. Dwyer, 15, C. E. Morris, 7. C. A. Sykes, 16.

Ties for Second Prize: J. Voorhees, 18, C. Furguesen, Jr., 17, W. F. Sykes, 13, D. Monsees, 4, H. Balzer, 4. H. Kronika, 1, C. Meyer, 1.

Ties for Third Prize: A. Boyle, 5, W. Boyle, 5, G. Kleist, 5, T. Buckley, 2, 2, G. Nostrand, 1.

Referee, Mr. W. Weber. Scorer, Mr. C. A. Dellar.

The Trap at Hamilton.

HAMILTON, Ont., June 18.—At the regular monthly shoot of the Hamilton Gun Club to-day Hunt won the challenge medal for the third time in succession, defeating Parker with a score of 20 to 12. The conditions for the medal are 15 singles from 5 unknown traps and 5 pairs from 3 traps. For the club medal Allen won in first class and Parker in second, making Allen's first win and Parker's second. These medals are to be won four times before claiming ownership.

First sweep, 5 birds, rapid firing:

Bowron.....3 D Smith.....3 Clifford.....4
J Smith.....4 Spencer .....2 Parker 3
Wilson.....5 A Smyth.....4 Bowman 3
John Smyth.....4 H Smith.....4 Hamilton.....1
C Hunt.....4 Allen.....5

No. 2, 10 singles, rapid firing.

Bowman..... .... 8 John Smith..... 6 A Smyth..... 8

Bowron.....17 John Smyth.....19 H Smith... 18
Clifford.....16 Parker.....18 Eby.....w

Ties on 22 won by Allen. WILSON.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. M. S, Camden, N. J.—Are pike and pickerel the same? Ans. No. The true pike is a much larger fish than the pickerel; it has no scales on the lower half of the gill-cover, and is light spotted on a dark body color. The pickerel has the cheek bone and gill-cover fully scaled, and is covered with a network of narrow, dark lines on a greenish body color. The differences are clearly shown in FOREST AND STREAM of April 2, April 9 and May 14, 1891, by means of descriptions and illustrations.

V. L. T., Buffalo, N. Y.—I send this day per U. S. Express paid box with fish caught by me at Lewiston, N. Y., in Niagara River. It is a hard fighter and sharp biter, not very well known here, so please let me know what it is? Ans. The fish is usually called the mudfish or bowfin (*Amia calva*). It is known also as lawyer, grindle, John A. Grindle, brindle-fish, dogfish and *poisson de marais*. The name lawyer, it is suggested, was applied to the fish because it is bull-headed and slippery. The flesh of the mudfish is soft and pasty and worthless for the table; but the animal is noted for its game qualities and its young make excellent live bait for pike and pickerel. The mudfish will live longer out of water than a catfish, owing to the lung-like structure of its air-bladder, by means of which it is able to breathe air without the intervention of water. Full accounts of this venerable but inferior fish are given in the Fishery Industries, U. S., page 659, plate 241, in Dr. Jordan's paper on the fishes of Ohio, Geological Survey of Ohio, Zoölogy, Vol. IV., page 777, and in all other systematic works on fishes. FOREST AND STREAM also has given frequent notices of the *Amia*. The fish is common in the Great Lake region and throughout the Mississippi Valley to Texas, and in the East from Pennsylvania to Florida.

CORRESPONDENCE.

Wants and Exchanges.

Advertisements under this head, strictly limited to WANTS AND EXCHANGES, will be inserted at the special rate of three cents a word each insertion. The money must accompany the order.

BEAUTIFUL BIRD PICTURES.

I have several plates of Audubon's Birds which I will sell cheap. These are the edition of 1856, on heavy paper, and give the birds the size of life and in their natural colors. Among the species represented are: White-headed eagle, price $12; duckhawk, $10; pine grosbeak, $7; kingbird, $4; wood wren, $4; black duck, $12; and some others. These when framed would make superb ornaments for a sportsman's dining room. Address J. J. A., FOREST AND STREAM office.

FOR SALE.—A FIRST-CLASS SPORTSMAN'S goods business and gun store in the most thriving city in California, and right in the center of the best hunting and fishing grounds. Established 23 years. Only object in selling is owner's declining years and desire to enjoy the money he has made in the business. Refer to S. A. Tucker, Meriden, Conn., and Schoverling, Daly & Gales, New York. Address this office for principal's name and address.

WANTED.—LIGHT PADDLING CANOE, Vaux model preferred. Give full particulars. C. R. GROUT, 123 Fifth ave., Chicago, Ill.

PEDIGREE BLANKS, 6 GENERATIONS, 10 cents dozen. EBERHART-PUG KENNELS, Cincinnati.

FOR SALE.—PAIR YOUNG PRAIRIE wolves, very tame. W. L. BASS, Ithaca, Neb.

ARISTOCRAT
(Ch. Pinlimmon ex Lady Adelaide.)
Winner of forty first and special prizes, including five first and four specials this season, won almost consecutively. The tallest and heaviest son of Pinlimmon. He is the sire of Lord Courtenay, winner of second prize at the late St. Bernard Club show, Birmingham, also Baronet, winner of over forty prizes and specials, and numerous others. The above named progeny proves him to be one of the most successful stud dogs of to-day.
Fee $50.

YOUNG KEEPER
(Keeper ex Surprise, by Guide.)
This young dog has a massive and typical head. This with his superb breeding should be of especial value to bitches weak in that respect.
Fee $25.
